INTRODUCTION	i

PART I

German War Policy and the Soviet Union 1940-1941

I. HITLER'S DECISION IN FAVOUR OF WAR AGAINST THE SOVIET UNION	
BY JÜRGEN FÖRSTER	13
1. The Situation after the War in the West	13
2. The Turn to the East: Hitler's Decision of 31 July 1940 and its Consequences	25
3. Programmatic Objectives <i>vis-à-vis</i> the Soviet Union and their Acceptance among the German Officer Corps	30
4. Euro-Asian Continental Bloc and Maritime Strategy: Alternatives to the Turn to the East?	38
5. German-Soviet Relations from Molotov's Visit to the Beginning of the War	42
II. THE SOVIET UNION UP TO THE EVE OF THE GERMAN ATTACK	
BY JOACHIM HOFFMANN	52
1. Origin and Development of the Red Army	52
2. The Red Army until the Beginning of the German-Soviet War	72
3. Soviet Aid to Germany	94
III. FROM ECONOMIC ALLIANCE TO A WAR OF COLONIAL EXPLOITATION	
BY ROLF-DIETER MÜLLER	118
1. War-economy Aspects and Consequences of the Alliance with the Soviet Union 1939-1940	118

(a) German-Soviet Trade Exchange and Hitler's War Policy up to the Summer of 1940	120
(b) The Concept of Large-space Economy and the Russian Problem	128
2. Economic Preparations for the War against the Soviet Union	136
(a) Economic Aspects of the Operational Plan	136
(b) First Preparatory Steps by the War Economy and Armaments Department	142
(c) The Thomas Memorandum and its Consequences	150
(d) The Establishment of the Economic Organization East	154
(e) The Involvement of Private Enterprise	161
(f) Economic Objectives of the Campaign	170
3. Economic Framework for Military Planning	187
(a) The German War Economy until the Spring of 1941	187
(b) Intensification of German-Soviet Trade	191
4. The Equipment of the Eastern Army	199
 IV. THE MILITARY CONCEPT OF THE WAR AGAINST THE SOVIET UNION	 225
1. Land Warfare	
BY ERNST KLINK	225
(a) The Red Army in the Judgement of the Army High Command after September 1939	226
(b) Early Phases in Planning within the Army High Command up to July 1940	240
(c) Army Group B as 'Security against the East'	255
(d) The Operational Studies by Marcks and Löffberg	257
(e) Planning by the Army General Staff and Directive No. 21	275
(f) The Deployment Directive for the Army	285
(g) The Preparations of the Quartermaster-General	292
(h) The Structure of the Army in the East and Deployment	305
(i) The Assessment of the Red Army before the Attack	320
2. The German Air Force	
BY HORST BOOG	326
(a) The Luftwaffe between the Battle of Britain and Barbarossa	326
(b) Assessment of the Soviet Air Forces 1939-1941	336
(c) Preparations for Deployment	353
3. The German Navy	
BY ERNST KLINK	376
 V. GERMANY'S ACQUISITION OF ALLIES IN SOUTH-EAST EUROPE	 386
BY JÜRGEN FÖRSTER	
1. Romania in the Political and Economic Field of Force of the Great Powers	386

2. The Vienna Arbitration Award of August 1940 and the Dispatch of a German Military Mission	393
3. Military Aspects of Romania's Inclusion in the Barbarossa Plan	398
4. The Position of Hungary and Slovakia in the Preparatory Phase of Barbarossa	409
(a) Hungary	409
(b) Slovakia	424

VI. THE INVOLVEMENT OF SCANDINAVIA IN THE PLANS FOR BARBAROSSA

BY GERD R. UEBERSCHÄR

429

1. Finland's Place in Hitler's Calculations at the Time of the Resumption of his 'Eastern Programme' in the Summer of 1940	429
2. Finland as a Political and Economic Sphere of Interest between Stalin and Hitler	436
3. Military Aspects of Finland's Inclusion in the Plans for Barbarossa	443
4. German-Finnish Arrangements and Measures for Finland's Participation in the War against the Soviet Union	455
5. Sweden's Position during the Preparatory Phase of the War against the Soviet Union	471

VII. OPERATION BARBAROSSA AS A WAR OF CONQUEST AND ANNIHILATION

BY JÜRGEN FÖRSTER

481

1. Plans and Preparations for Securing 'Living-space'	481
2. Hitler's Ideological Intentions Translated into Orders	491
(a) The Regulation of SS Activity in the Operations Area of the Army	491
(b) The Limitation of Military Jurisdiction	496
(c) The 'Commissar Order'	507
3. Propaganda Preparations for the War of Annihilation and the Attitude of the Military Leaders	513

PART II

The War against the Soviet Union until the Turn of 1941/1942

I. THE CONDUCT OF OPERATIONS

525

1. The Army and Navy

BY ERNST KLINK

525

(a) The Opening of the Campaign

525

(i) The offensive of Army Group Centre until the capture of the 'land-bridge' between Vitebsk and Smolensk

525

(ii) The offensive of Army Group North

537

(iii) The battles at the frontier in the sector of Army Group South and the German advance into the Ukraine	546
(b) Disputes about the Further Conduct of Operations	569
(i) The question of the deployment of forces for the second phase of the campaign	569
(ii) Vacillation in the directives for the conduct of the war from 19 July until the end of the month	572
(iii) The assessment of the enemy at the beginning of August	581
(iv) Hitler's acceptance of the need to eliminate Moscow	588
(c) The Battle of the Ukraine and the Crimea	594
(i) The advance to the Crimea	611
(ii) The advance to the Don	613
(iii) The conquest of the Crimea	627
(d) The Attack on Leningrad	631
(e) The Actions of German Naval Forces in the Baltic until the End of 1941	654
(f) The Attack on Moscow	664
(i) The double battle of Bryansk and Vyazma	672
(ii) Plans for the resumption of the offensive	684
(iii) The failure of the second offensive	693
(g) The Repulse of the Winter Offensive of the Red Army	702
(i) Assessment of the situation and directives for the winter war	702
(ii) The crises in Army Group Centre and their effects on the command of the army	707
(iii) The fighting retreat of Army Group Centre until the stabilization of the front	725
(iv) Winter fighting in the area of Army Group North until the re-establishment of a solid front	734
(v) The defensive battles of Army Group South	751
2. The Luftwaffe	
BY HORST BOOG	763
(a) The Surprise Attack against the Soviet Air Force	763
(b) Ground Support	768
(i) II and VIII Air Corps and the battles of encirclement of encirclement of Bialystok and Minsk	768
(ii) The battle of encirclement at Smolensk	770
(iii) II Air Corps in the area of Gomel, Bryansk, and Roslavl	773
(iv) The use of the anti-aircraft units	774
(v) The conduct of the air war in the Baltic until the beginning of August	775
(vi) The thrust towards Leningrad	776
(vii) V Air Corps support for Armoured Group 1 and Sixth Army to the Stalin line	778
(viii) The breakthrough of the Stalin line	778
(ix) IV Air Corps on the right wing of Army Group South	779
(x) The Luftwaffe in the battle of encirclement at Uman	780

(xi) The repulse of the Soviet thrust at Boguslav and Kanev	781
(xii) Mopping-up operations in the southern Dnieper bend	781
(xiii) Anti-aircraft units in the south	783
(xiv) The battle of encirclement at Kiev (28 August-26 September)	783
(xv) Support for the advance of Seventeenth and Sixth Armies by V Air Corps	785
(xvi) IV Air Corps and the conquest of the Crimea	786
(xvii) The setback at Rostov	787
(xviii) The Luftwaffe on the Volkhov and at Tikhvin	789
(xix) Air Fleet 2 and preparations for the attack on Moscow	790
(xx) The double battle of Bryansk and Vyazma	793
(xxi) The crisis west of Moscow	794
(c) The Air War at Sea	799
(d) Attempts at an Independent Strategic Air War against the Sources of Soviet Strength	802
(e) The Situation of the Luftwaffe at the Turn of 1941-1942	814
II. THE CONDUCT OF THE WAR THROUGH SOVIET EYES	
BY JOACHIM HOFFMANN	833
1. The Beginning of the War	833
2. The Reorganization of the Supreme Command	836
3. The 'Fatherland War': Fight against Disintegration. Mobilization of Material and Manpower Reserves	840
4. The Struggle for Leningrad	858
5. The Battle of Smolensk	865
6. The Fighting for the Ukraine	870
7. The Partisan War	876
8. The Repulse of the German Autumn Offensive at Leningrad and Rostov	882
9. The Repulse of the German Attack on Moscow	885
10. The Red Army's Counter-offensive at Moscow, December 1941	896
11. The Red Army's Counter-attacks at Leningrad and in the Crimea	903
12. Methods of a War of Annihilation	906
13. The Red Army's General Offensive in the Winter of 1942	919
14. The Establishment of the Anti-Hitler Coalition	928
III. STRATEGY AND POLICY IN NORTHERN EUROPE	
BY GERD R. UEBERSCHÄR	941
1. German Operations in the 'Finland Theatre'	941
(a) Operation Platinum Fox ('Platinfuchs') against Murmansk	941
(b) Operation Arctic Fox ('Polarfuchs') against the Murmansk Railway	945

(c) Problems of German Naval and Air Operations in the Far North	953
(d) Balance Sheet of Military Operations in Northern Finland to 1941-1942	960
(e) New Strategic Deliberations after the Turn of 1941-1942	966
2. Finnish Army Operations	972
(a) Recovery of the Former Finnish Territories in Ladoga-Karelia and on the Karelian Isthmus	972

Schnabel (Freiburg, 1985); *Deutschland am Abgrund*, jointly with Rolf-Dieter Müller (Konstanz, 1986); *Geschichtswende? Entsorgungsversuche zur deutschen Vergangenheit* (co-author) (Freiburg, 1987); (French edn. *L'Histoire escamotée* (Paris, 1988)); *Das Dilemma der deutschen Militäropposition* (Berlin, 1988); *Freiburg im Luftkrieg 1939–1945* (Freiburg, 1990); *Generaloberst Franz Halder* (Göttingen, 1991); editor, with Wolfram Wette, of *Stalingrad: Mythos und Wirklichkeit einer Schlacht*, 2nd edn. (Frankfurt, 1993); *Kriegsende 1945*, jointly with Rolf-Dieter Müller, 2nd edn. (Frankfurt, 1994); editor of *Der 20. Juli 1944: Bewertung und Rezeption des deutschen Widerstandes gegen das NS-Regime* (Cologne, 1994); *Germany's War against the Soviet Union, 1941–1945*, jointly with Rolf-Dieter Müller (Oxford, 1995).

Note on the Translation

PART I was translated by Ewald Osers, Part II.i by Dean S. McMurray, Part II.ii by Ewald Osers, Part II.iii-vii, as well as the Conclusion, by Louise Willmot. The translation as a whole was revised and edited by Ewald Osers.

In the Bibliography information has been added concerning English translations of German and other foreign-language works. These translations are cited in the footnotes and have been used whenever possible for quotations occurring in the text.

Personal and geographical names in the text and the maps—except those for which established English names exist (e.g. Warsaw, Moscow, Archangel)—have been given in the form laid down by the British Standard and by *Official Standard Names Approved by the US Board of Geographic Names* (US Department of the Interior, Office of Geography).

In the footnotes and the Bibliography Russian sources are given in accordance with the International System of transliteration.

Abbreviations

Note. This list serves mainly as a key to the many abbreviations found in archival sources, but does not reflect the full range of variation in pointing etc. encountered in the citations given in the footnotes.

AA (1), Ausw. Amt	Auswärtiges Amt: ministry of foreign affairs
AA (2)	anti-aircraft
Abt.	Abteilung: section, department, unit, detail, battalion (armoured forces), battery (artillery)
Abw.	Abwehr: foreign intelligence
ADAP	<i>Akten zur deutschen auswärtigen Politik</i> : Documents on German Foreign Policy (cf. <i>DGFP</i>)
AEG	Allgemeine Elektrizitäts-Gesellschaft: General Electric Company
AFV	Armoured fighting vehicle(s)
AG	Aktiengesellschaft: joint stock company
AHA	Allgemeines Heeresamt: general army office
AK	Armeekorps: army corps
Amt Ausl./Abw.	Amt Ausland/Abwehr: foreign intelligence department in the High Command of the Armed Forces
Anh.	Anhang: annexe, appendix
Anl.	Anlage: enclosure
AO	Abwehroffizier: security officer
AOK	Armeeoberkommando: army headquarters staff
AO Kraft	Armee-Kraftfahr-Offizier: army motor-transport officer
AR	artillery regiment
Art.	Artillerie: artillery
Art.Kdr.	Artillerie-Kommandeur: artillery commander
Art.Rgt.	Artillerie-Regiment: artillery regiment
ASMZ	<i>Allgemeine schweizerische Militärzeitschrift</i>
Ast	Abwehrstelle: military security control centre
Att.Abt.	Attaché-Abteilung im GenStdH: attaché section in the Army General Staff
Aufkl.Abt.	Aufklärungs-Abteilung: reconnaissance unit
Ausb.Abt.	Ausbildungs-Abteilung im GenStdH: training department in the Army General Staff
AWA	Allgemeines Wehrmachtamt: general Wehrmacht office
BA	Bundesarchiv: Federal German archives, Koblenz

B-Abt.	Beobachtungs-Abteilung: artillery survey unit
BA-MA	Bundesarchiv-Militärarchiv (Federal German military archives), Freiburg im Breisgau
Battr.	Batterie: battery
BdE	Befehlshaber des Ersatzheeres: commander of the training army
BdK	Befehlshaber der Kreuzer: commander of cruisers
BdS	Befehlshaber der Schnellboote: commander of motor torpedo-boats
Befh.	Befehlshaber: commander
Befh. rückw. H.Geb.	Befehlshaber des rückwärtigen Heeresgebietes: commander of Army Group L of C District
Bef.St.	Befehlsstelle: command post
Bes. Ostgeb.	Besetzte Ostgebiete: occupied eastern areas
besp.	bespannt: horse-drawn
BG	Bomber Geschwader
Bibl.	Bibliothek: library
Br.B.Nr.	Briefbuchnummer: correspondence log number
Brig.	Brigade: brigade
Brü.Bau-Btl.	Brückenbau-Bataillon: bridge-building battalion
Brüko	Brücken-Kolonnie: bridging column
Bv.TO	Bevollmächtigter Transportoffizier: authorized transport officer
ChfcdGenSt	Chef des Generalstabes: chief of the general staff
ChfcdSt.	Chef des Stabes: chief of staff
ChfHRü u. BdE	Chef der Heeresrüstung und Befehlshaber des Ersatzheeres: head of army equipment and commander of the training army
Chefs.	Chefsache: to be seen by senior officer only
ČK	Črezvyčajnaja Komissija po bor'be s kontrevoljuciej i sabotazem: Extraordinary Commission for the Struggle against Counterrevolution and Sabotage
CP(B)	Communist Party (Bolsheviks)
CPSU	Communist Party of the Soviet Union
CPSU(B)	Communist Party of the Soviet Union (Bolsheviks) (earlier name)
CSIR	Corpo di Spedizione Italiano in Russia: Italian Expeditionary Corps in Russia
DBG	Dive-bomber Geschwader
DEV	División Española de Voluntarios: Spanish Volunteer Division
d.G.	des Generalstabes: of the general staff
DGFP	Documents on German Foreign Policy (translation of ADAP; see the Bibliography)

DHM	Deutsche Heeresmission: German Army Mission
Div.	Division: division
DLM	Deutsche Luftwaffenmission: German Air Force Mission
DMM	Deutsche Marinemission: German Naval Mission
DNB	Deutsches Nachrichtenbüro: German News Agency
DNSAP	Dansk National Socialistik Arbejderparti: Danish National Socialist Workers' (Nazi) Party
Dt.Ges.	Deutsche Gesandtschaft: German embassy
Dulag	Durchgangslager: transit camp
Dv.	Dienstvorschrift: military manual
DVK	Deutsches Verbindungskommando: German liaison HQ
eb	einsatzbereit: combat-ready
Eisenb.Pz.Züge	Eisenbahn-Panzer-Züge: armoured railway trains
EM	Ereignismeldung: incident report
Entgift.Abt.	Entgiftungsabteilung: decontamination battery
Erg	Ergänzungs-: reserve
(F)	Fernaufklärungs-: long-range reconnaissance
FaBG	Fast Bomber Geschwader
Fallsch.Brig.	Fallschirmbrigade: paratroop brigade
F-Aufklärer	Fernaufklärer: long-range reconnaissance aircraft
FdT	Führer der Torpedoboote: leader of torpedo-boats
Feldkdr.	Feldkommandantur: field HQ established in rear areas
FG	Fighter Geschwader
FH	Feldhaubitze: field howitzer
FK	Feldkommandantur: field HQ in rear areas
F.Kapt.	Fregattenkapitän: commander (navy)
FlaBtl	Flugabwehr-Bataillon: AA battalion
FlakRgt	Flakregiment: AA regiment
Flamm	Flammenwerfer: flame-thrower
Fl.Korps	Fliegerkorps: air corps
FrdHeere Ost, Fr.H.Ost	Abt. Fremde Heere Ost im GenStdH: department Foreign Armies East in the army general staff
Fhr.	Freiherr (title equivalent to 'baron')
FRUS	<i>Foreign Relations of the United States</i> (see the Bibliography)
Fü.Abt.	Führungsabteilung: operations department
G, Geschw.	Geschwader (q.v. in Glossary) 3 Gruppen and a staff unit
GAC	German Africa Corps
Geb.	Gebirgs-: mountain
geh.	geheim: secret

Gen.	General: general
Gen.Adm.	Admiral-General (equivalent to Admiral of the Fleet)
Gen.d.Art.	General der Artillerie: artillery general
Gen.d.Fl.	General der Flieger: air force general
Gen.d.Geb.Tr.	General der Gebirgstruppe: mountain troops general
Gen.d.Inf.	General der Infanterie: infantry general
Gen.d.Kav.	General der Kavallerie: cavalry general
Gen.d.Pz.Tr.	General der Panzertruppe: armoured forces general
Gen.Feldm.	Generalfeldmarschall: field marshal
Gen.Kdo	Generalkommando: corps HQ
Gen.Lt.	Generalleutnant: lieutenant-general
Gen.Maj.	Generalmajor: major-general
Gen.Oberst	Generaloberst: colonel-general
GenQu	Generalquartiermeister: quartermaster-general
GenSt	Generalstab: general staff
GenStdH	Generalstab des Heeres: Army General Staff
Gen. z.b.V.b. ObdH	General zur besonderen Verfügung beim Oberbefehlshaber des Heeres: general (special duties) attached to the commander-in-chief of the army
gep.	gepanzert: armoured
GFP	Geheime Feldpolizei: secret field police
GK	Generalkommissar: commissioner-general
g.Kdos., g.K.	Geheime Kommandosache: top secret (military)
GL	Generalluftzeugmeister: director general of air armament
gmsd	gvardejskaja motostrelkovaja divizija: motorized Guards rifle division
GOC	General Officer Commanding
GPU	Gosudarstvennoe Političeskoe Upravlenie: State Political Directorate
Gr.	Gruppe(n) (q.v. in Glossary)
Gr. R.Wes.	Gruppe Rechtswesen: Legal Matters Group
g.Rs.	Geheime Reichssache: top secret (political)
GZ	Zentralabteilung im GenStdH: central department in the Army General Staff
H	Heeres(Nah)aufklärung: army short-range reconnaissance
HaPol.	Handelspolitische Abteilung im Ausw. Amt: trade policy department in the ministry of foreign affairs
Haub.	Haubitze: howitzer
H-Aufklärer	Heeres(Nah)aufklärer: army short-range reconnaissance aircraft
H.Dv.	Heeresdruckvorschrift: army manual
H.Geb.	Heeresgebiet: army area

H.Gr.	Heeresgruppe: army group
H.Küst.Art.Abt.	Heeres-Küsten-Artillerie-Abteilung: army coastal artillery battery
Höh.Art.Kdr.	Höherer Artillerie-Kommandeur: higher artillery commander
Höh. Kdo.	Höheres Kommando: higher command
HSSPF	Höherer SS- und Polizeiführer: senior SS and police leader
HTO	Haupttreuhandstelle Ost: Central Trustee Agency East
HV, H.Vers.	Heeresversorgung: army supply
HVBl.	Heeresverordnungsblatt: Army Orders and Gazette
HWesAbt	Heerwesen-Abteilung im GenStdH: army affairs department in the Army General Staff
HZ	<i>Historische Zeitschrift</i>
IfZ	Institut für Zeitgeschichte: Institute of Contemporary History
i.G.	im Generalstab: in the general staff
IG, Inf.Gesch.	Infanteriegeschütz: infantry (close support) gun
IKL	Isänmaallinen Kansan Liike: People's Patriotic Movement, Finland
IMT	International Military Tribunal (see <i>Trial of Major War Criminals</i> in the Bibliography)
Inf.Div.	Infanteriedivision: infantry division
JCH	<i>Journal of Contemporary History</i>
JG	Jagdgeschwader: fighter Geschwader
JGr	Jagdgruppe: fighter Gruppe
JWG	<i>Jahrbuch für Wirtschaftsgeschichte</i>
K.Adm.	Konteradmiral: rear-admiral
Kalib.	Kaliber: caliber
Kan.Abt.	Kanonnen-Abteilung: gunnery battery
Kav.Div.	Kavalleriedivision: cavalry division
Kdo	Kommando: command, HQ
Kdr.	Kommandeur: commander
Kdt.	Kommandant: commandant
Kfz.	Kraftfahrzeug: motor-vehicle
KG	Kampfgeschwader: bomber Geschwader
Kgf.	Kriegsgefangenen-: prisoner of war
KGzbV	Kampfgruppe zur besonderen Verwendung (Transportfliegergruppe): special duties bomber Gruppe (transport Gruppe)
Koluft, Ko-Luft	Kommandeur der Luftwaffe: Luftwaffe commander with an army group or army
Komandarm	army commander (Soviet general's rank)

Kombrig	brigade commander (Soviet general's rank)
Komdiv	divisional commander (Soviet general's rank)
Komkor	corps commander (Soviet general's rank)
Komm.Gen.	general commanding
KONR	Komitet Osvoboždenija Narodov Rossii: Committee for the Liberation of the People of Russia
Korück	Kommandant des rückwärtigen Armeegebietes: commandant of rear army area
Kp.	Kompanie: company
KP	Kommunistische Partei: Communist Party
KPD	Kommunistische Partei Deutschlands: German Communist Party
KTB	Kriegstagebuch: war diary
KTB OKW	<i>Kriegstagebuch des Oberkommandos der Wehrmacht</i> (see the Bibliography)
K.Ver.	Kriegsverwaltung: war administration
Kw.K. (t)	Kampfwagenkanone (tschechisch): tank gun (Czech)
Kzg.	Kraftzug: tractor-drawn
L	Abteilung Landesverteidigung im WFA (WFSt): home defence department in the Wehrmacht operations department (Wehrmacht operations staff)
l., le., lei.	leicht: light
La	Landwirtschaft: agriculture
Ld.Schtz.	Landesschützen: local defence units
L.Dv.	Luftwaffendruckvorschrift: Luftwaffe regulations
Leg.Rat	Legationsrat: legation counsellor
leiFlakAbt	leichte Flakabteilung: light AA battery
l.FH	leichte Feldhaubitze: light field howitzer
Lfl.	Luftflotte: air fleet
LG	Lehrgeschwader: training Geschwader
LGL	Large Glider
Lkw	Lastkraftwagen: truck
LLG	Luftlandegeschwader: airborne Geschwader
LVF	Légion des Volontaires Français contre le Bolchevisme
Lw	Luftwaffe: air force
Lw.Fü.Stab	Luftwaffe operations staff
Maj.	Major: major
Mann.	Mannschaft: men, other ranks
Mar.Gr.	Marinegruppe: naval group
M.Dv.	Marinedruckvorschrift: naval regulations
MG	Maschinengewehr: machine-gun
MGFA	Militärgeschichtliches Forschungsamt: Research Institute for Military History

<i>MGM</i>	<i>Militärgeschichtliche Mitteilungen</i>
<i>M.i.G.</i>	Militärbefehlshaber im Generalgouvernement: military commander in the Government-General
<i>Mil.</i>	Militär: military
<i>Mil.Att.</i>	Militärattaché: military attaché
<i>Mil.Geo.</i>	Militärgeographie: military geography
<i>Min.Dir.</i>	Ministerialdirektor: senior civil service rank
<i>Min.Rat.</i>	Ministerialrat: senior civil service rank
<i>Mörs.Abt.</i>	Mörser-Abteilung: mortar battery
<i>mot.</i>	motorisiert: motorized
<i>mot.mech.</i>	motorisiert-mechanisiert: motorized mechanized
<i>MP-1941</i>	mobilizacionnyj plan 1941: mobilization plan
<i>MR</i>	<i>Marine-Rundschau</i>
<i>M.Sg.</i>	Manuskriptsammlung: manuscript collection
<i>MSR</i>	Mouvement Social Révolutionnaire
<i>MTB</i>	motor torpedo-boat
<i>Mun</i>	Amtsgruppe für Industrielle Rüstung—Munition—im Heeres-Waffenamt: section for industrial rearmament—ammunition—in the army ordnance department
<i>N</i>	Nachlaß: papers
<i>Nachr.Rgt.</i>	Nachrichtenregiment: signals regiment
<i>Nbg.Dok.</i>	Nürnberger Dokument: Nuremberg document
<i>Nb.Rgt.</i>	Nebelwerfer-Regiment: smoke regiment
<i>NJG</i>	Nachtjagdgeschwader: night fighter Geschwader
<i>NKGB</i>	Narodnyj Komissariat Gosudarstvennoj Bezopasnosti: People's Commissariat of the State Security
<i>NKVD</i>	Narodnyj Komissariat Vnutrennych Del: People's Commissariat of the Interior
<i>NS</i>	National Socialist
<i>NSDAP</i>	Nationalsozialistische Deutsche Arbeiterpartei: National Socialist German Workers' Party (Nazis)
<i>NSKK</i>	Nationalsozialistisches Kraftfahr-Korps: National Socialist Motor Corps
<i>OB</i>	Oberbefehlshaber: commander-in-chief, GOC,
<i>ObdH</i>	Oberbefehlshaber des Heeres: commander-in-chief of the army
<i>ObdL</i>	Oberbefehlshaber der Luftwaffe: commander-in-chief of the Luftwaffe
<i>ObdM</i>	Oberbefehlshaber der Kriegsmarine: commander-in-chief of the navy
<i>Oberstlt.</i>	Oberstleutnant: lieutenant-colonel
<i>Ob.Kdo</i>	Oberkommando: high command
<i>o.D.</i>	ohne Datum: undated

Offz.	Offizier: officer
OGPU	Ob'edinennoe Gosudarstvennoe Politicheskoe Upravlenie: United State Political Directorate
OK	Ortskommandantur: local commandant's office
OKH	Oberkommando des Heeres: Army High Command
OKL	Oberkommando der Luftwaffe: Luftwaffe High Command
OKM	Oberkommando der Kriegsmarine: Navy High Command
OKW	Oberkommando der Wehrmacht: High Command of the Armed Forces
Op./op	Operations-: operational
Op.Abt.	operations department in the army General Staff
OQu	Oberquartiermeister: deputy chief of the general staff
Org.Abt.	Organisations-Abteilung im GenStdH: organization department in the Army General Staff
Osoaviachim	Obščestvo sodejstvija aviacii i chimičeskoj oborony: Society for the Promotion of Aviation and Chemical Defence
OT	Organisation Todt: Todt Organization
PA	Politisches Archiv des Auswärtigen Amtes (political archives of the foreign ministry), Bonn
Pak	Panzerabwehrkanone: anti-tank gun

RMfBO	Reichsminister für die besetzten Ostgebiete: Reich minister for the occupied eastern territories
RMfBuM	Reichsminister für Bewaffnung und Munition: Reich minister for armament and ammunition
RNP	Rassemblement National Populaire
Ro	Rohstoffabteilung im Wehrwirtschafts- und Rüstungsamt: raw-materials section in the war economy and armaments department
ROA	Russkaja Osvoboditel'naja Armija: Russian Liberation Army
RSFSR	Russian Soviet Federation of Socialist Republics (= Russia)
RT	Radio-telegraphy
Rü	Rüstungswirtschaftliche Abteilung im WiRüAmt: armament economy section in the war economy and armament department
RüIn	Rüstungsindustrie: armaments industry, munitions
RWM, RWiM	Reichswirtschaftsminister/ministerium: Reich minister/ministry of economic affairs
s., schw.	schwer(e): heavy
SA	Sturmabteilung: storm troopers
schw.Fl.Feuer	schweres Flachfeuer: heavy flat-trajectory fire
SD	Sicherheitsdiens: security service of the SS
s.FH	schwere Feldhaubitze: heavy field howitzer
Sich.Div.	security division
SKG	Schnellkampfgeschwader: fast bomber Geschwader
SkI.	Seekriegsleitung: naval war staff
SS	Schutzstaffel ('guard detachment'): élite Party troops
Stabia	Stabsbildabteilung: staff photographic section
StG	Sturzkampfgeschwader: dive-bomber Geschwader
St.S.	Staatssekretär: state secretary
Stuka	Sturzkampfflugzeug: dive-bomber
Sturm-Gesch.Abt.	Sturmgeschützabteilung: assault-gun battery
(t)	tschechisch: Czech (origin)

takt.	taktisch: tactical
TB	Tätigkeitsbericht: activity report
T-boot	Torpedoboot: torpedo-boat
Tel.	Telegramm: telegram
TFG	Twin-engined Fighter (Zerstörer) Geschwader
Tgb. Nr.	Tagebuch-Nummer: diary number
TLR	Technische Luftrüstung: technical air armament
T-Minen	Torpedo-Minen: torpedo-mines
tmot.	teilmotorisiert: partially motorized
Trg G	Training Geschwader
TrSt	Transportstaffel: transport Staffel
U.St.S.	Unterstaatssekretär: under-secretary of state
VAA	Vertreter des Auswärtigen Amtes: representative of the foreign ministry
Verb.Offz., VO	Verbindungssofizier: liaison officer
Verf.	Verfasser: author
Vermess.Abt.	Vermessungs-Abteilung: survey unit
Vers.Bez.	Versorgungsbezirk: supply district
Vers.Fühhrg.	Versorgungsführung: supply management
VfZG	Vierteljahreshefte für Zeitgeschichte
VIZ	Voenno-istoričeskij žurnal
VKP(b)	Vsesojuznaja Kommunističeskaja Partija (bol'sevikov): Soviet Communist Party
VLR	Vortragender Legationsrat: senior civil service rank
VP	Vierjahresplan: Four-year Plan
VS	Verschlusssache: secret matter, locked file
WaA	Heeres-Waffenamt: army ordnance department
WaStab	Stab des Heereswaffenamtes: staff of army ordnance department
W.Befh., WB	Wehrmachtbefehlshaber: commander-in-chief of the Wehrmacht
Wekusta	Wettererkundungsstaffel: meteorological reconnaissance Staffel
WFA	Wehrmachtführungsamt: armed forces operations department
WFSt	Wehrmachtführungsstab: armed forces operations staff
Wi	Wirtschaft: economy
WiIn	Wirtschaftsinspektion: economic inspectorate
Wi.Pol.Abt.	Wirtschaftspolitische Abteilung: economic-policy department
WiRüAmt	Wehrwirtschafts- und Rüstungsamt: war-economy and armaments department
WiStabOst	Wirtschaftsstab Ost: economic staff East

WK	Wehrkreis: military district
WO	Wehrwirtschaftsoffizier: war economy officer
WPr	Abteilung für Wehrmachtpropaganda im WFA (WFSst): Wehrmacht propaganda department in the armed forces operations department (staff)
WR	Wehrmachtsrechtsabteilung im OKW: Wehrmacht legal department in the Wehrmacht High Command
WStb	Wehrwirtschaftsstab im WiRüAmt: war economy staff in the war economy and armaments department
WStK	Waffenstillstandskommission: armistice commission
WuG	Amtsgruppe für Industrielle Rüstung—Waffen und Gerät—im WaA: section for industrial armament—weapons and equipment—in the army ordnance department
WWi	Wehrwirtschaftliche Abteilung im WiRüAmt: war economy section in the war economy and armaments department
WWR	<i>Wehrwissenschaftliche Rundschau</i>
z.b.V.	zur besonderen Verwendung (Verfügung): for special duties
ZfG	<i>Zeitschrift für Geschichtswissenschaft</i>
ZG	Zerstörergeschwader: Geschwader of 'destroyer' aircraft
ZHO	Zentralhandelsgesellschaft Ost: Central Trading Company East
ZK	Zentralkomitee: Central Committee
z.T.	zum Teil: partly

Short designations for departments in the army's operational staffs

Ia	Führungs-Abteilung: operations department
Ib	Quartiermeister-Abteilung: quartermaster department
Ic	Feindaufklärung und Abwehr; geistige Betreuung: reconnaissance concerning the enemy and counter-intelligence; spiritual care
Id	Ausbildung: training
IIa	1. Adjutant (Offizier-Personalien): 1st adjutant (officer personnel)
IIb	2. Adjutant (Unteroffiziere und Mannschaften): 2nd adjutant (NCOs and men)
III	Gericht: court of law
IVa	Intendant (Rechnungswesen, allgemeine Verwaltung): official in charge of financial matters, general administration

IVb	Arzt: medical officer
IVc	Veterinär: veterinary officer
IVd	Geistlicher (ev.: evangelisch; kath.: katholisch): chaplain (ev.: Protestant; kath.: Roman Catholic)
IV Wi	Wehrwirtschaftsoffizier: war economy officer
V	Kraftfahrwesen: motor transport

Glossary of Foreign Terms

<i>Anschluss</i>	The union of Austria with Germany, 1938
<i>Außenpolitisches Amt</i>	Foreign affairs office of the Nazi Party
<i>Gau</i> (pl. -e)	Regional administrative division of the Nazi Party
<i>Geschwader</i> (pi. same)	Air-force unit consisting of 3-4 Gruppen (q.v.)
<i>Kette</i> (pi. -n)	Formation of 3 aircraft
<i>Komsomol</i>	Communist Youth Organization
<i>Lebensraum</i>	'Living-space' for Germany, with connotation of conquest in the east
<i>Luftwaffe</i>	German air force
<i>politruk</i>	Red Army political officer, subordinate to commissar
<i>Rotte</i> (pl. -n)	Formation of 2 aircraft
<i>Rückwärtiges Armeegebiet</i>	The area behind the sector held by an army [Armee], line of communication area
<i>Rückwärtiges Heeresgebiet</i>	The area behind the individual armies' rear (or line of communication) areas, rear army [Heer] area
<i>Schwarm</i> (pl. Schwärme)	Formation of (usually) 4 aircraft
<i>Staffel</i> (pl. -n)	Unit of 9 aircraft, plus 3 in reserve
<i>Wehrmacht</i>	German armed forces
<i>Wilhelmstrasse, the</i>	Term denoting the German ministry of foreign affairs (from its address in Berlin)

Introduction

IN the appraisal of Operation Barbarossa military and historical research has hitherto been marked by two diametrically opposed views. One of these proceeds from the argument that Hitler's programme, as developed in the 1920s in *Mein Kampf* and *Hitler's Secret Book*, has to be taken seriously. In these programmatic books Hitler saw the decisive tasks of future German policy in the conquest of living-space in the east and in the destruction of 'Jewish Bolshevism'. These two objectives had been linked by him in such a way that the concept of a racial-biological basis of his anti-Soviet living-space policy has been developed. Historical studies inclining towards that view regard the Barbarossa plan as intimately connected with such programmatic ideas, without falling into the error of denying that Hitler's decision was, in addition, motivated by foreign-policy and military considerations. This 'programmatic' explanation of Operation Barbarossa finds itself confronted by a view which assigns to Stalin a major role in the development which led to war. According to that school of thought it was Stalin's aggressive policy in eastern central Europe, as well as his vigorous rearmament, that provoked Hitler into reacting. This thesis of a preventive war was first put forward by the German side for propaganda reasons during the war—not only in order to convince Europe of the danger threatening the West from the East, but also for purposes of domestic propaganda. Stiffening of the German people's readiness for war and the creation of a crusading atmosphere in Europe were part of the massive propaganda effort which was, to a large extent, aimed also at the German troops who were to implement Hitler's goals. A third interpretation proceeds primarily from the strategic constraints after Germany's victory over France and defeat in the Battle of Britain.

Among Anglo-American researchers these diverse attempts at explanation first appeared in the 1950s. German authors concurred with Anglo-American historians such as Hugh R. Trevor Roper, Alan Bullock, and Gerhard L. Weinberg on the point that Hitler's policy could only be understood in the light of his programme. Mention should be made here of Andreas Hillgruber and Eberhard Jäckel. However, there have also been attempts in Britain to interpret Hitler's foreign policy as, in the strict sense, an aimless vacillating or a mere response to given situations—a view that could be supported by numerous statements by Hitler at various phases of the war. Historians such as A. J. P. Taylor and F. A. Hinsley adopted this view at an early stage.

Among Anglo-American historians such controversies were argued out like any other scholarly disputes. In the Federal Republic, however, there is often more at issue than mere historical interest: in the case of Barbarossa, judge-

ment on Hitler's objectives inevitably simultaneously implies a judgement on the opinions of the 'conservative élites', on those circles among the generals, the top judiciary, and experts from the business world who had, in the spring of 1940 or shortly afterwards, been informed of what Hitler was aiming at and of what methods he intended to see practised.

So far the differing points of view have not yet been sufficiently assembled within an overall scholarly treatment of the structure and policy of the National Socialist state for a universally accepted explanation of the causes of the war against Russia to be achieved. With regard to Hitler—that much has become obvious—a purely psychological approach or a purely descriptive one would be insufficient. Serious consideration of Hitler's programmatic concept, on the other hand, has been beneficial to research in the fields of military and foreign policy, as has since been proved by numerous studies.

The authors of this volume had before them this briefly outlined plurality of interpretations. Their researches have discovered no basis for the assumption that Hitler had, in a manner of speaking, been manipulated by circumstances. After the victory over France there was no opposition to his decisions on how the war was to be continued. But just because it was he who determined the new objectives the question arose of how his assessment of the strategic situation and his racially motivated concept of living-space combined as factors in his decision to go to war and in his planning of that war.

No doubt the situation following the French campaign and the subsequent defeat in the Battle of Britain confronted Hitler with a strategic dilemma. It would nevertheless be facile and one-sided to regard this as the sole motivation for the attack against the Soviet Union. In fact it can be seen—and the present fourth volume of the account of the Second World War follows this realization—that a whole string of reflections, obsessions, misjudgements, and long-term ideas were factors in Hitler's decision in favour of war. One of these reflections was the strategy, much discussed in the literature, of using a German victory over the Soviet Union to compel Britain to recognize German hegemony on the Continent and to force her out of the war—all that in order to gain a vital breathing-space for the conflict with the United States. This is what Hitler tried to explain to his top generals in the autumn of 1940; by the spring of 1941 his 'programmatic' campaign of persuasion had moved to the centre of his endeavours. For no other of his campaigns had he so consistently explained to the military leaders its significance and its objectives, for no other campaign had he put forward such precise demands concerning the methods of conducting the war. Thus, an overall appreciation of the present volume could scarcely arrive at the conclusion that the war against the Soviet Union represented merely an attempt to escape from a strategic dilemma. That war was Hitler's real war. This judgement agrees with that of those authors who are willing to see a link between 'programme' and realities while, at the same time, conceding that there can be no question of compulsive implementation of a programme. Hitler was still dependent on whatever opportunities the

course of the war offered him. In the summer of 1940 he believed the moment had come for preparing 'his' war. Even then he did not tie himself down to a final timetable; by November, however, the separate elements of his estimation of the situation had hardened into a definitive decision.

In view of the material and psychological underestimation of the enemy, including his political stability, both by the German military and by Hitler, the plans which began to be drawn up after July 1940 were based on an operational period of a few weeks. The general staff, while beginning to doubt whether the intended indirect elimination of Britain would work, found a long-cherished hope moving nearer fulfilment—Germany's achievement of immunity to blockade, the precondition for a protracted war, through the occupation of the Ukraine and the industrial regions, as well as through command of the Baltic. Halder's concept and plan for this war envisaged victory by means of rapid and decisive operations towards Moscow. He believed that the success of his strategy would convince Hitler. This subject will be discussed in the operational section of this volume. It goes beyond any subjective problems stemming from the character of the chief of the general staff, who no longer wielded the decision-making military authority which, in the First World War, characterized the Hindenburg-Ludendorff team. Concealed behind the relationship between Halder and Hitler lies the diminution of the position of the general staff in the Prussian-German military state, a position achieved by Moltke and his successors. The dubious construct of the old political-military twin summit of the Reich was, oddly enough, broken asunder in the most highly militarized state edifice, the National Socialist Führer state. Since the victory in the west, if not earlier, Hitler had been 'his own Ludendorff', who let the general staff do the planning work but who alone took the strategic decisions. What Beck had failed to achieve in 1938—a decision-sharing role for the most senior military advisor—his successor was even less able to achieve in 1941. His attempt to gain shared military rule—dominance, at least, in the operational field—failed miserably. He was reduced to resorting to indirect methods, to concealment, and to the hope that the magnificent victory sought by the general staff in the direction of Moscow would eventually also convince Hitler and carry him along. Hitler had never shared the view that a great battle outside or for Moscow could bring about the overall decision. He attached greater importance to gaining control of the major industrial regions, the oilfields, and other economic centres, in order thereby to reduce the enemy's vital strength. Halder failed to convince him with his massive effort against Moscow: this did not give enough weight to the problems on the southern wing of the eastern front, where the objectives of the first phase of the advance were not achieved on time. The eventual failure of his concept outside Moscow was a factor in raising Hitler to the sole commanding position in the army. This process within the command system of the war in the east will be described in detail. During the planning phase and during the first few weeks of the advance the solution envisaged by the general staff seemed to be the

right road to a rapid victory. The Wehrmacht now demonstrated on a large scale the mobile warfare it had conducted in Poland, France, Yugoslavia, and Greece. The Luftwaffe, after its sobering experience in strategic aerial warfare against Britain, was once more offered a chance of recording major successes as an ancillary arm of the ground forces. All these efforts, however, were marked by a high degree of attrition of German fighting strength and did not pay off in terms of the war economy. On the contrary, the loss of Russian deliveries, the huge requirements of the Wehrmacht, and the fact that no end was in sight to the enterprise in the east made Germany's strategic, economic, and political position at the end of the year appear less positive than before the start of the Barbarossa war.

The findings in this volume go beyond the first scholarly West German overview by Klaus Reinhardt. Above all they show the very limited value, in many respects, of the 'Studies' produced under Halder's general editorship on behalf of the American army.

Another decisive aspect, indeed one crucial to an overall strategic examination, arose inevitably in the late summer of 1941 with the realization that Operation Barbarossa could possibly fail: the danger, in the near future, of a perceptible American participation in the war. It was then that the compulsions first felt in the summer of 1940 clearly emerged with all their consequences and that it became obvious that the exhausted army was no longer capable of bringing about any military situation which might avert a crushing war on two fronts.

At a time when suggestions of the mood after the battle of the Marne or of Verdun were beginning to be mooted among the German military leadership, it was still believed, in total misjudgement of the overall strategic conditions of German warfare, that in 1942 the balance could be restored by cutting off the Soviet Union from its vital economic bases in the south and from its communications with Persia. At the same time, however, it became clear that there could be no relief in the east and that the army would continue to be tied down there.

As in the First World War, it became obvious that Germany was a central European rather than a world power. Yet that continental power was not even able, because of its incredible overestimation of its own capabilities, to give its army winter protection for a war in the east which was protracting beyond the originally envisaged timetable. With all that thrust towards the east it had also omitted to establish rallying-positions for the forces which had burnt themselves out before Moscow. The turning-point in the war was heaving into view.

Another matter clearly documented in the present volume is concurrence between Hitler and the top military in the OKW (the High Command of the armed forces) and the OKH (the High Command of the army) on the meaning of that war. It was to be, simultaneously, a war of annihilation and of conquest of living-space. These categories were familiar to military thinking.

Even before the First World War, military leaders—and certainly not only on the German side—tended to discount the requirements of international law. Military interests, power politics, and scant regard for international law were the obverse of Wilhelminian assurance of strength and power. The Great General Staff's directive on international law of 1902 contained the statement that humanitarian requirements could only be considered to the extent permitted by the nature and objective of the war: 'A vigorously conducted war cannot be aimed solely against the combatants of the enemy state or its fortifications, but will and must equally seek to destroy the entire moral and material resources of the same.' Such a concept of 'total war' explains the readiness to carry the war, as outlined by Hitler in 1941, to the east, especially as that opponent was the enemy *par excellence*—Bolshevism, on the disastrous influence of which the German defeat in 1918 was blamed. For that reason this war acquired a higher degree of inevitability than the war in the west, as well as a character which suppressed any moral scruples. Thus, the political significance with which Hitler endowed this war also far exceeded military and economic objectives, important though these were in the given situation, with the fight against the Anglo-American powers still lying ahead. It far exceeded the objectives of dominion of ordinary imperialism on a Wilhelminian scale, which Hitler had castigated in his *Secret Book*. Particularly significant evidence of this may be found in the plans for Russia's colonial exploitation, for a racial land consolidation in the east, plans which were grossly disproportionate to the basically inadequate military preparations for an 'ideological war'. The economic exploitation of the Soviet Union was planned not just for supplying the Wehrmacht, but already for the period 'after Barbarossa', when a gigantic rearmament drive, primarily for the air force and the navy, was to be launched against the Western powers. Economic experts and Hitler, as the present volume will show, were already planning 'in anticipation of victory'. This was not a case of a preventive strike against the Red Army. Time and again estimates of the enemy's position and assessments of Stalin's intentions suggested, both to Hitler and to the military planners, that for the time being there was no danger of an attack by the Red Army. At the same time, now that Britain had been driven from the Continent, there seemed once again to be an opportunity of defeating the Soviet Union in—at least as far as land operations were concerned—a *war on a single front*, of ending an increasingly expensive German dependence on Soviet readiness for economic co-operation, of gaining a free hand for a future shift of emphasis in armaments towards the navy and the air force, and simultaneously, by the annihilation of the 'Jewish-Bolshevik' arch-enemy, of gaining elbow-room for a racially and ideologically founded living-space policy.

Hitler had at an early date informed those generals earmarked for the war in the east of his political and ideological objectives, well beyond the 'continental sword' argument. After March 1941 they could no longer have been in any doubt about the background of the imminent operation. Halder, as well as

other officers and lawyers in the OKW and OKH, participated at that time, either as authors or by approval, in the formulation of the relevant orders. On this point the present volume furnishes further material both on the planning phase and on the measures implemented in 1941 in the areas of economic warfare, of co-operation with *Einsatzgruppen* (special-purpose squads), and of the partisan war. The character of the war as a war of annihilation was preplanned. It would be a mistake to attribute the prime responsibility for this to Russian resistance, which, on the other hand, resulted in the Wehrmacht being drawn into a pattern of action and reaction that made the war an ideological struggle for both sides. Stalin, moreover, had immediately assumed it to be just that. There had been nothing comparable in the west, the south, or the north. In the east, action was shaped by a different view of the enemy and by different military circumstances. Important new sources have become available in these areas. It has become clear that political, military, and economic expectations in this war, which outclassed all prior misplannings in German political and military history, had been illusory. Warning voices carried no weight in the German Führer system: they were effortlessly supplanted by optimistic forecasts.

Careful study of the sources has revealed the extent to which military and economic or technological inadequacies mutually conditioned and magnified each other. The main reason for the failure of the Barbarossa plan was undoubtedly the material and structural inferiority of the aggressor in virtually all the essential fields from the very outset; after a few months he was no longer able, even in terms of personnel, to fill the gaps which had been inflicted. This statement may seem paradoxical in view of the initial military superiority of the Wehrmacht in the area of the main thrusts chosen by it, but it becomes comprehensible in a comparison of the war-economy capacities of the two sides. The section on the Red Army enables the reader to make that comparison. Faith in superior German command ability should likewise have been shaken, if not indeed destroyed, with the onset of the Soviet winter offensive.

The present volume further shows, on the basis of extensive new source material, that, even more or less independently of the aspects mentioned above, contributory causes for the grandiose fiasco may be found in inadequate preparation for this war. For a 'campaign' scheduled for a few weeks a thorough preparation in terms of armaments and economics did not seem necessary. The advance was to have been accomplished, by and large, with the forces available. But concealed behind the statistics was often the fact that only a limited number of first-rate divisions was available, certainly of motorized formations. One armoured division was not the same as another armoured division. The Wehrmacht had not really been 'equipped', in the proper sense of the word, for war against the Soviet Union. Frequently the only equipment available was captured weapons and vehicles. This process is here for the first time coherently documented from the sources.

All the decisive aspects of the war ultimately resulted from the fact that the anticipated rapid collapse of the Soviet Union did not take place: there was the attrition of German human and material potential, inability to utilize the country economically on the planned scale, and finally also the mass deaths of Soviet prisoners of war. The Soviet Union's power of resistance, which, at enormous sacrifice and despite serious initial errors by the command, caused the foundering of the German leadership's operational and economic aims towards the end of 1941, dispelled Hitler's illusion of being once more able to conduct a war on one front only. By the end of the year all that was beyond discussion for the top leaders in the OKW and the OKH. This meant basically that—in spite of later partial successes and in spite of subsequent upswings in the war economy—the decision had already gone against Germany. The army of the summer of 1941 no longer existed. Thenceforward Germany's scant manpower reserves were no longer sufficient to meet the requirements of both the economy and the armed forces.

This development is illustrated here also from the Red Army's point of view. It is explained by an account of the development of the Red Army and of Soviet rearmament efforts. For that part, unfortunately, with the exception of a few captured documents, statements could rarely be supported by documents. The subject is nevertheless presented comprehensively, showing that Hitler was confronted by an equally ruthless dictator and generalissimo, capable of organizing the economic power of the Soviet Union, forcing armament production into high gear, accepting an ideological war, and repaying in like coin. In the massive crescendo of the disastrous battles of encirclement Stalin succeeded, at the price of hecatombs of victims, in rallying his vital reserves for a counterstroke at Moscow. Opponent, geographical expanse, and climate brought the Wehrmacht to the brink of disaster, robbing it for the year ahead of the breath for a second comprehensive operational strike.

The present volume not only illustrates the command principles and practices of the antagonists, but also attempts to portray the expenditure and attrition of the forces. For both sides the conflict was a war of attrition and exhaustion on a vast scale. Even in its first year it had called for almost unbelievable efforts and improvisation. By the end of 1941 it was clear that it was in the eastern theatre that the war would be decided and the map of Europe redrawn. Participation by Germany's allies was tied to their expectations of that future reshaping. The war of the German coalition became an anti-Soviet struggle of but loosely linked interests and selfish considerations. The present volume discusses in some detail the positions of Finland, Rumania, and Hungary. The interests of the wider Balkan area, together with Italy and Turkey, were presented more fully in Volume III of this account of the Second World War.

There is probably no better point in German political or military history than the turn of 1941–2 to illustrate the fact that the aspirations and capabili-

ties of the German national state were no longer able to be reconciled. By the time the plans for 1942, in the direction of Stalingrad and the Caucasus, were formed with a view to cutting off the Soviet Union from its links with the Anglo-Saxon naval powers in the south, while at the same time securing for Germany the unimpeded utilization of the oil, coal, iron, and agricultural produce of the Soviet south, the failure of Barbarossa had created the prerequisites for the switch of the initiative to the anti-Hitler coalition, now enlarged by the United States. That turn actually came about at the end of 1942. It became obvious that the pattern of Germany's operational options was insufficient for the huge expansion of the theatre of war. Hitler committed the same mistake as the German political leaders in the First World War by exceeding and exhausting the capabilities and potential of a continental central-European great power in the dimensions of a world war against the superpowers of the future. That effort was possible only within the framework of an ideology of force which suppressed reality, which suggested that the impossible was feasible, and which, to that end, had to employ a ruthless discipline of faith in final victory.

Thus, in the very first year of the war against the Soviet Union, this was not merely a struggle for military victory and economic gain, or for new space for German colonization, but also a last attempt by the immanent drive of the German national state finally to achieve the configuration it believed to be its due. Into that effort it invested its national egotism in boundless over-exaggeration.

The first wave of West German accounts, more especially the military memoirs of the postwar period, failed, with a few exceptions, to bring out the dimensions of that war. In them, Hitler frequently appeared as an amateur who messed up the victory for the military men. Manstein spoke of 'lost victories'. Such an approach is inappropriate in every respect. Since then a broadly based process of detailed research has thrown light on military and political aspects of the war in the east, and occasionally produced shock waves. In addition to evaluating new sources, the present volume also seeks to sum up the latest state of research. It has been found that in many fields there is a need for new foundations to be laid, such as in the presentation of war-economy issues. Even on questions of the strategic conduct of the war and of relations between Hitler and his chief of staff the authors have proceeded from the belief that essential aspects have to be presented in an entirely new way.

This fourth volume of *Germany and the Second World War* is once more no 'official' publication. For that reason also it cannot be compared with the fourth volume of the Soviet 'History of the Second World War 1939-1945', which bears the title 'The Fascist Aggression against the USSR: The Collapse of the Blitzkrieg Strategy'. The internal development of military and economic conditions on the German side has, naturally enough, not been covered as extensively or in such detail in the Soviet publication. It may therefore be assumed that the findings here presented will supply new elements to take into

account in assessing the official view of the Barbarossa war as stated by historians of the former Soviet state.

It is my hope, along with the authors and with the head of the project, Wilhelm Deist, who took a major part in the preparation and organization of this volume, that their work will not only stimulate discussion of the war against the Soviet Union, but also encourage future research. This may well happen for the very reason that a variety of approaches have been considered—something which itself afforded considerable difficulty to the team of authors. Whether the co-ordination aimed at has sufficiently succeeded it is up to the reader to judge. The overall project of *Germany and the Second World War* will certainly benefit from the broad range of comment expected.

I. Hitler's Decision in Favour of War against the Soviet Union

JÜRGEN FÖRSTER

I. THE SITUATION AFTER THE WAR IN THE WEST

NINE months after the beginning of the war Poland, Denmark, Norway, Belgium, Luxemburg, and the Netherlands were occupied, and France was laid low. German hegemony, west of the German-Soviet boundary of interests, thus extended over the major part of Europe, from the North Cape to the Bay of Biscay.¹ The importance which the swift victory over France had for the Reich in psychological, strategic, military, and historical respects should not be underrated. Owing to the triumph of *his* style of warfare Hitler in the summer of 1940 was carried on a wave of enthusiasm; concord between population and regime was assured. To Hitler and to those Germans who had experienced defeat in the First World War, the victory over France represented the expunging of a stain, of the 'disgrace of November 1918'. That 'worst disgrace of all time' had been felt so deeply that it had to be mitigated by the legend of the stab in the back. Now the escutcheon of German honour was once more clean. The security service of the SS observed among the population 'an unprecedented inner unity and close ties between front and homeland'.² Hitler not only stood on the pinnacle of his popularity in Germany, but his 'personal rule' in foreign and strategic issues was assured to a degree rarely equalled. Emotionally overcome, Walther von Brauchitsch, the commander-in-chief of the army, in an order of the day praised Hitler as 'the first soldier of the German Reich', around whom everyone was rallying 'in boundless confidence'.³ The Führer would safeguard Germany's future for all time. The military leadership's earlier reservations 'over Hitler's war policy seemed refuted by its brilliant success; opposition no longer had a leg to stand on. Scarcely anyone felt scruples at a time when services were being rewarded and rich spoils awaited distribution.'⁴ German war policy was determined by

Hitler's ideological fixations and political calculations even more forcefully than in 1939.

What was entirely overlooked amid those nationalist noises was the fact that Germany's position on the continent of Europe was by no means secure. It depended, above all, on Britain's readiness to come to terms or on her defeat. While the public cherished the hope that the attack against Britain would start immediately, with the British being defeated in six months at the most,⁵ Hitler believed that, in view of its military weakness, London would give in. In the event that Britain decided to continue the war, he suggested that this would be based on the hope of holding out and drawing the Soviet Union and the United States into the conflict.⁶ This mood among the German leadership had been summed up as early as the end of May 1940 by Hasso von Etzdorf, the German foreign office representative with the Army High Command, in the sentence 'We are seeking to arrive at an understanding with Britain on the basis of a division of the world.'⁷ Ernst von Weizsäcker, secretary of state in the ministry of foreign affairs, had also regarded a British surrender as a certainty: 'The outcome will probably be that we shall offer the British the chance of getting out of the continent of Europe with their skin intact, leaving the Continent to us.'⁸ Because Hitler was firmly convinced that an 'arrangement' between Britain, the naval power, and Germany, the continental power, was a historical necessity, no attempt was made to test the readiness for peace of the new British national government headed by Churchill. Instead, in a euphoria of triumph and a sense of unlimited capabilities, not only was an immediate start made with the territorial and political reorganization of Europe, but, as 'the most important building task of the Reich', a number of cities were to be architecturally reshaped by the year 1950 in a manner lending appropriate expression to the 'magnitude of our victory'.⁹ Behind this stood the dogmatic idea that Britain's 'true' interests—her imperial and maritime interests—were threatened more by that naval and mercantile power, the United States, as well as by Japan, than by German hegemony over Europe. Hitler expected 'congenial' statesmen in London to come to a worldwide political arrangement with him. This would not only have confined Britain to the preservation and development of her Empire—while Germany would concentrate on 'further development' eastward—but also assign to London the role of a 'junior partner'.

Although this decree lists only Berlin, Munich, Linz, Hamburg, and the Party Rally buildings in Nuremberg, the cities of Königsberg, Oldenburg, Posen (Poznań), Saarbrücken, as well as the Wewelsburg castle were included in these building projects on 12 July 1940, RGBl. 1940, i. 989 ff.

Although Britain's failure to give in soon resulted in a muting of German euphoria, the triumph over France continued to prevent a rational appraisal of Germany's strategic position between the Anglo-Saxon naval powers and the Soviet Union. On 9 October 1939 Hitler justified his decision in favour of swift action against the Western powers by the argument that, with the United States becoming an enemy in the future and the essentially uncertain attitude of the Soviet Union, it was necessary to take advantage of the moment.¹⁰ He was convinced that time was working for his opponents, who, both in terms of personnel and armaments, were inferior only for the time being. On 21 July 1940 Hitler, addressing the top leaders of the army, navy, and air force, made it the duty of the German leadership 'thoroughly to consider the American and Russian question'.¹¹ Judging the time factor against the background of the situation in the First World War, he believed it to be more favourable now that the western front had disappeared and Germany was armed in all spheres even for a protracted war. This turn in Hitler's estimation of the situation resulted from Britain's resolve to hold out. On 19 July 1940 Hitler, 'as the victor', had addressed to London one final 'appeal to reason': to put an end to the war.¹² His address to the Reichstag, postponed several times, with its attribution of responsibility for the war to 'Jewish-capitalist warmongers' on the one hand, and on the other its prophecy addressed to 'the so-called statesman' Churchill that Germany was assured of final victory, was planned for its propaganda effect on the German public rather than as a peace offer to Britain. The security service of the SS reported a few days later that the offer of peace to Britain had been received by the public with 'surprise'. The predominant view was that this appeal would be rejected with 'typically English arrogance, so that Britain would after all receive her deserved punishment'.¹³ Although Hitler's speech was regarded by the Foreign Office as a serious invitation to a compromise peace,¹⁴ it was uncompromisingly rejected by Lord Halifax, the British foreign secretary, on 22 July. With explicit reference to the programmatic speech made by Franklin D. Roosevelt, the American president, on 19 July he proclaimed, on behalf of the British government, an implacable struggle against the Axis. Hitler's unceasing hope that Britain would yield thus proved to be an illusion, and his assurances that London was already defeated and only failed to realize it proved to be wishful thinking.

For Hitler and the leadership élites in the forces, the administration, and the economy the principal question now was why Britain was continuing the struggle and how the war could be concluded. At his above-mentioned confer-

ence with the top commanders of the army, navy, and air force on 21 July 1940 Hitler listed these reasons for London's unexpected attitude: '1: hope of a turn-round in America . . . 2: hope of Russia.'¹⁵ Was this analysis of British policy correct? Churchill had indeed been hoping since the middle of May 1940 that the United States would abandon its neutrality in favour of non-belligerency and that it would support Britain 'with everything short of actually engaging armed forces'.¹⁶ The seriousness of Britain's determination was emphasized by Churchill not only in his public speeches but also by his action against the French fleet at Oran.¹⁷ In his uncompromising attitude towards Hitlerite Germany Churchill was in tune with the mood among the British public and the government.¹⁸ Matters in London were by no means 'balanced on a knife-edge'¹⁹ before the 'peace-minded' Foreign Office eventually yielded to Churchill's 'hard line for war'.²⁰

Admittedly, the war cabinet had discussed the possibility of concluding the war by negotiation. But the discussion had been 'academic' because no one had thought an offer by Hitler that was acceptable to Britain likely to be forthcoming. Churchill's public pronouncement of 17 June 1940 that he would continue the war until victory over Germany was achieved was no one-man show. Sir Alexander Cadogan, under-secretary of state at the Foreign Office, eloquently reflected the militant mood in his diary: 'Everything is awful, but "Come the three corners of the world and we will fight them". We'll fight like cats—or die rather than submit to Hitler.'²¹

Unlike his military advisers, Roosevelt had believed since June 1940 that Britain was not only willing but also able to stand up to the German challenge.²² But for the time being he adopted a temporizing attitude towards Britain's wooing for massive support. In view of the prevailing isolationist mood in the Congress and his own candidacy for a third term in the White House he confined himself to the public statement that he would 'extend to the opponents of force the material resources of the nation',²³ and speed up America's defence efforts. This attitude to the war in Europe, clearly pro-British while avoiding open conflict, was in line with the mood of the American public. The problem for Roosevelt and the 'internationalists' was to prepare the country for political confrontation with the Axis and with Japan. With their global understanding of the 'national interests' of the United States they regarded that confrontation as unavoidable. As early as January 1939

Roosevelt had stated to the Senate military affairs committee that Germany, Italy, and Japan were striving for world domination and that, while the United States' first line of defence was in the Atlantic, it also included the existence of eighteen independent countries from the Baltic across the Balkans to Turkey and Persia.²⁴ Despite the changes in the European scene, violently brought about by Hitler since March and September 1939, the American government had not ruled out the possibility of negotiated peace between Germany, France, and Britain—as evidenced by the mission of Under-Secretary of State Sumner Welles. The defeat of France and the weakening of Britain brought Roosevelt's policies back to their starting-point. 'Anticipation of the consequences' of the German-Italian and Japanese sphere of power for the spiritual, economic, and military position of the United States was the decisive motive for the president to keep Britain and her Empire in the war—not any selfless interest in the preservation of Britain's position as a world power.²⁵ Roosevelt relied on a swing of public opinion in favour of intervention in the European war and of the deterrence of Japan. This situation, Roosevelt believed, would arise as soon as it was realized that American interests were being challenged by the political, economic, and military aggression of the Axis in Europe and of Japan in South-East Asia. Following his nomination as the Democratic Party's presidential candidate he declared in a keynote speech on 19 July 1940 that the totalitarian countries were the enemy of the United States. His election platform, admittedly, ruled out any American intervention in wars outside the western hemisphere, 'except in the case of attack'.²⁶ In Berlin Roosevelt's speech was understood as 'a clear challenge' to Germany. His rejection of National Socialism, according to the judgement of Hans Heinrich Dieckhoff, the former German ambassador to Washington, was explained by the 'English ideological' and 'New York Jewish atmosphere'. It had progressively intensified into fanatical hatred. Roosevelt's 'ultimate goal', according to Dieckhoff, was 'to assume the leadership of the democratic forces in the struggle against Germany'.²⁷

Hitler had also been correct on 21 July 1940 about British hopes of a change in Soviet policy towards Germany. Although the dispatch of Sir Stafford Cripps as the new ambassador to Moscow in the first half of June 1940 was due to a proposal by Clement Attlee, the leader of the Labour Party and a member of Churchill's war cabinet, it was in line with Churchill's long-standing concept—which had failed in August 1939—of a 'grand alliance' between Britain and the Soviet Union to confront the challenge of Hitlerite Germany. Moreover, the British chiefs of staff in their analysis of the situation after the

elimination of France on 25 May 1940 had made calculated allowance for Soviet alarm over the possible effect on Soviet interests of Germany's increase in power. Stalin, however, as early as 1 July 1940, had rejected the British government's attempt to drive a wedge into German-Soviet co-operation.²⁸ He had emphasized to Cripps that the Soviet Union had no interest in the restoration of the old political balance of power in Europe. That reply was not surprising, considering the advantage which the Soviet Union, too, was deriving from the German-Soviet non-aggression pact with its secret protocol. Also, Stalin did not share the British appraisal of the situation following the German victory over France. In his opinion Germany was not strong enough to dominate the whole of Europe, since she lacked the requisite sea power. Stalin had, moreover, immediately informed Hitler of his conversation with Cripps.²⁹ Although on 21 July Hitler described the rejection of the British ideas as 'welcome', this did not dispel his mistrust of Stalin's intentions. He instructed the commander-in-chief of the army to start work on the 'Russian problem'.³⁰ The Soviet foreign minister, in a major foreign-policy speech to the Supreme Soviet on 1 August 1940, declared that the 'neighbourly and friendly Soviet-German relations' were based 'not on accidental considerations of temporary advantage, but on fundamental state interests' on both sides.³¹ Among the German public, on the other hand, there was a conviction that the Soviet Union 'as a final neighbour on Germany's frontier' was scarcely acceptable to Germany, and there was some doubt that the German-Soviet alliance 'under the present circumstances', i.e. after the German victory in the west, 'could really be of long duration'.³²

The reports of the security service of the SS were not just propaganda efforts. There was disquiet also among the divisions earmarked for safeguarding Germany's eastern frontier. In mid-July 1940 the commander-in-chief of the army felt compelled to counteract rumours about German-Soviet tensions.³³ Brauchitsch dismissed the rumours as British propaganda. The Soviet Union, he said, had 'loyally' fulfilled its economic obligations and so far also kept to 'political agreements'. 'In so far as German interests had been in danger of being encroached upon within the framework of its policy', for instance by the planned annexation of the whole of the Bukowina, 'the Russians had shown understanding in agreeing to German suggestions.' The move of the Eighteenth Army into occupied Poland should likewise not be seen as a sign of worsening German-Soviet relations nor as a preparation

for 'active military measures'. The commander-in-chief of the army wished all officers and other ranks to be instructed along those lines. But what did German-Soviet relations really look like? How had they developed since 1939?

As a result of Hitler's readiness to start the war for 'living-space' in spite of the British guarantee to Poland, the Soviet Union because of its strategic position had found itself fulfilling a spectacular role in the early summer of 1939.³⁴ Though unloved by the Western democracies and painted as the Devil by National Socialist Germany, Stalin had been courted by both sides. 'Totalitarian diplomacy of the purest kind'³⁵ had resulted in an alliance between two arch-enemies, in the German-Soviet non-aggression treaty of 23 August 1939 with its secret protocol, and in a total reversal of propaganda. Although that treaty had opened the door to a German policy of expansion through war, it had also cleared the road for the Soviet Union towards the territorial and political reorganization of eastern Europe. Hitler had concluded a pact 'with Satan' in order to 'cast out the Devil',³⁶ i.e. to deter the Western powers from fulfilling their obligations to Poland. When this gamble had failed, Germany found herself in, as it were, 'a reversal of fronts'³⁷ compared with the jumping-off position envisaged in Hitler's 'programme'. Britain, wooed to the last moment, had declared war on him, placing him in a position of strategic and economic dependence on the state whose annihilation was his central objective, the Soviet Union. Hitler left neither the commanders-in-chief of army, navy, and air force nor the senior line officers in any doubt³⁸ that he regarded the German-Soviet agreement purely as a short-term necessary 'tactical manoeuvre'.³⁹ Treaties were observed only as long as they served a purpose. Permanent neutrality of the Soviet Union could not be ensured by any agreement but only by a swift demonstration of German strength. Germany could confront the Soviet Union only when she was secure in the west. Hitler was considering a German 'further development' towards the east and described occupied Poland as a future German deployment area.⁴⁰ Diplomats and economists, on the other hand, had prepared for long-term co-operation with the Soviet Union, with an informal economic hegemony in mind.⁴¹ The Soviet Union was to function as a willing source of war supplies. That purpose was to be served also by the German-Soviet economic agreement of 11 February 1940. Soviet deliveries were regarded as of decisive importance to the

war. The military triumph in the west was thought to have opened for Berlin the road towards utilizing the Soviet Union as a supplier region. This euphoric assessment was at variance with the fact that Germany was not in a position to counterbalance Soviet deliveries by exports of her own, so that Moscow could call in its advances at any time. But how was the Soviet Union to be coerced into its assigned supplementary role in a unified European large-scale economic region for Germany's benefit, an economic region the creation of which had begun immediately after the conclusion of the French campaign? That question, based as it was on imperialist conceptual categories, had to be left open until the strategic situation in the west was finally settled in favour of the Reich, i.e. until Britain had been forced to her knees. What proposals to solve that problem were being worked out by the military staffs?

Major-General Alfred Jodl, chief of the Wehrmacht operations staff, submitted on 30 June 1940 a memorandum on the continuation of the war.⁴² On the assumption that political measures were unable to compel Britain to give in, he proposed a direct military assault on the English mother country. This should open with the 'struggle against the British air force', as German command of the air was the prerequisite of a landing.

On 2 July 1940, therefore, the OKW instructed the three services to make preparations for a landing operation, but pointed out that this was merely a preparation for one possible option. In line with these reflections Field Marshal Hermann Göring, commander-in-chief of the Luftwaffe, declared that attack against enemy air-force formations both in the air and on the ground, by day and by night, was the supreme principle of air warfare against Britain. British supplies to Russia were to be cut off by attacks on supply-ports and port installations, as well as on freighters and warships.⁴³

General of Artillery Franz Halder, chief of the army general staff, bluntly observed at the end of June 1940 that in the west there were no more victories to be won by the army for a long time.⁴⁴ The main burden of future operations, the defeat of Britain, would for the time being be borne by the air force and the navy. The scope of the army should therefore be cut back to 120 divisions; 35 divisions should be dissolved in favour of the economy or for the rehabilitation and reorganization of the remaining formations.⁴⁵ On the other hand, in view of the Red Army's entry into the Baltic States as well as into Bessarabia and the northern Bukowina, Halder saw a need for 'striking-power in the east'.⁴⁶ The transfer of the Eighteenth Army to the eastern defence districts and to occupied Poland meant the building up of offensive frontier protection. On 3 July 1940 Halder instructed Colonel (General Staff) Hans von Greiffenberg to examine 'the requirements of a military intervention which will compel Russia

to recognize Germany's dominant position in Europe'.⁴⁷ On these lines the army chief of staff informed Eighteenth Army headquarters on the following day of its newly formulated task in the east: 'to take measures for all eventualities'.⁴⁸ This task therefore exceeded offensive frontier protection so as to include a preventive strike against the Soviet Union, designed to reduce it to a second-rate power. Halder thereby set in motion an offensive military plan against the Soviet Union, aimed at a limited campaign for the occupation of the Baltic countries, Belorussia, and parts of the Ukraine. The enlargement of the strategic deployment area of the Red Army was not, on its own, sufficient to explain that decision by the Army High Command, since a direct military threat to Germany was not assumed to exist, only one to Romania. Here some earlier concepts were playing a part. Halder's decision sprang not only from his fundamental anti-Bolshevik attitude but also from the steady growth of the Soviet military potential, as well as from his understanding of the role of chief of the general staff. It is also possible that the army command—in contrast to the patent situation after the Polish campaign—was anxious to prove its efficiency in advance and not once more be left empty-handed. The first instruction to the Eighteenth Army also suggests that Weizsäcker had no real need to inform Halder that, after the defeat of Britain, Hitler was thinking of striking towards the east.⁴⁹

The Army High Command—on this point it agreed with Hitler—could only explain London's rigid attitude by assuming that Britain still reposed some hope in Russia. Any understanding between 'the bear and the whale',⁵⁰ however, threatened Germany's hopes of hegemony over Europe. A blow against the Soviet Union would put an end to British hopes of a successful continuation of the war.

The German political and military leadership was determined to control future developments. The reduction of the ground forces, already started, was halted and preparations were put in hand for a landing in Britain. Hitler, too, now believed that an invasion was the most effective means for a quick end to the war. He certainly realized the risks involved. The prerequisites of 'Operation Sea Lion', Hitler declared on 21 July 1940, were total command of the air and completion of preparations by the beginning of September. Unless both conditions could be met 'other plans' would have to be considered. At the end of the conference, presumably after Grand Admiral Raeder, the commander-in-chief of the navy, had left, Hitler instructed the commander-in-chief of the army to start dealing with the 'Russian problem'. Initial studies on this had been carried out by the Army High Command since the end of June. On 21

⁴⁷ Ibid. 490 (3 July 1940).

⁴⁸ BA-MA, 18. Armee, 17562/2. Halder's reflections and his instruction to Eighteenth Army are first comprehensively discussed in the section by Klink, sect. I.IV.1(b). Hartmann, *Generalstabschef Halder*, 342 ff., arrives at a different assessment.

⁴⁹ Halder, *Diaries*, 487 (30 June 1940). On this see sect. I.IV.1(b) n. 65 (Klink).

⁵⁰ Halder, *Diaries*, 508 (13 July 1940), 503 (11 July 1940).

July Brauchitsch reported on them to Hitler.⁵¹ The following day he informed Halder of Hitler's instructions and of his own report to him on the feasibility of a campaign against the Soviet Union. 'The various points of Halder's notes on the report of the commander-in-chief of the army make it clear that what Hitler had sketched out was not a "great war" for the defeat of the Soviet Union, but a military concept which seemed to agree with Halder's present ideas as well as with the deployment orders to Eighteenth Army.'⁵² Hitler's directive to the Army High Command to start considering such an operation was understood by Halder as an instruction for a comprehensive strategic study. He therefore entrusted Major-General Erich Marcks, chief of the Eighteenth Army general staff, with its execution. On 29 July Jodl informed his closest collaborators in the Wehrmacht operations staff that Hitler had decided 'to eliminate once and for all the danger of Bolshevism by a surprise attack on Soviet Russia at the earliest possible moment'.⁵³

The day before the conference called by Hitler for 31 July 1940 to review the overall situation of the war the army commander-in-chief and the chief of the general staff once more co-ordinated their views face to face. The naval operations staff had meanwhile come to the conclusion that it would have to advise against operation 'Sea Lion', at least for 1940.⁵⁴ Brauchitsch and Halder both saw the greatest danger in waiting for better conditions for an invasion of Britain, in that the military and political initiative might slip from Germany's hands. Along with the planning for a limited war against the Soviet Union they saw yet another possibility of holding on to the initiative against Britain—in military co-operation with Italy in the Mediterranean area and in a Soviet thrust towards the Persian Gulf. The Army High Command was thus taking up a proposal by Jodl of 30 June 1940. As an alternative to a direct strategy he had suggested an extension of the war against Britain along the periphery, with the help of all those states that might derive advantage from the break-up of the Empire. In order to escape the risk of a war on two fronts, a risk which would arise if London allied itself with Moscow and if Germany were first to attack the Soviet Union, four weeks later the Army High Command came out in favour of a continuation of German-Soviet co-operation worldwide. 'This being so, could deliver the British a decisive blow in the Mediterranean, shoulder them away from Asia, help the Italians in building up their Mediterranean Empire, and, with the aid of Russia, consolidate the Reich which we have created in western and northern Europe. That much accomplished, we could confidently face a war with Britain for many years.'⁵⁵

Prior to an account of that decisive conference at the Obersalzberg it is

necessary to deal with the navy's ideas on the strategy of the Reich in the summer of 1940. The great success against France and the prospect of peace with the Western powers had given rise within the naval operations staff to two memoranda, designed, beyond purely naval policy questions, to influence German foreign policy.⁵⁶ The reflections 'on the building up of the navy after the war' (4 July 1940) and on 'space extension and naval-base issues' (3 June 1940) went back to a directive by Raeder.⁵⁷ The formulation of a peacetime naval construction programme was naturally linked with the prerequisite geographical conditions. 'For the protection of the greater German living-space and for the discharge of its task in protecting maritime communications with a German colonial empire in central Africa' the naval command staked out claims to, among other places, Dakar, Conakry, and Freetown on the west coast of Africa, Zanzibar, Dar es Salaam, and Mombasa-Kilindnii on the east coast of Africa, as well as, in the Atlantic-European sphere, not only Iceland and the Faeroes but also the Azores. Some figures in the naval command rejected the idea of any 'compromise peace' with Britain which would let her keep her navy for the protection of the Empire. The officer in charge of strategic questions in the naval operations staff, Commander (*Fregattenkapitän*) Frank Aschmann, declared himself in favour of a peace through victory, which would deprive Britain of the chance of renewing her 'struggle of annihilation against Germany in the future'. 'The realization that America will be our next opponent must urge us on to achieve Britain's total defeat as quickly as possible. The destiny of her heritage [the Empire] should only be of secondary interest to us.'⁵⁸ Here issues were touched upon which subsequently, in September 1940, resulted in the development of a comprehensive naval strategy which would enable Germany also to face the United States in a global confrontation. Admittedly, the naval operations staff was somewhat reluctant to devote itself to the preparations it had been ordered to make for an invasion of Britain. A landing of German troops in England was to Raeder, as it was to Hitler, only the *ultima ratio* of German strategy towards Britain.⁵⁹ While the interests of the navy lay in other areas—U-boat and auxiliary-cruiser warfare, as well as questions of bases—Hitler, as an 'offended admirer of the British Empire' (K. D. Bracher), could see no advantage to Germany from the smashing of Britain and the resulting break-up of the Empire. 'German blood would be shed to accomplish something that would benefit only Japan, the United States, and others.'⁶⁰ These reservations could be perceived in his 'Directive No. 16' of 16 July, in which he informed the three services of his decision 'to prepare a landing operation against England and, if necessary, to carry it out'.⁶¹ Hitler's statement of 21 July 1940 that, along with the American question, the 'Russian question' should also be 'thoroughly

⁶¹ *Hitler's Directives*, No. 16 (author's italics).

considered⁶² presumably induced Raeder to have a memorandum prepared on it. On 28 July 1940 Rear-Admiral Kurt Fricke, chief of the operations department in the naval staff, submitted his 'Observations on Russia'.⁶³ He proceeded from the premiss that Germany's opponent 'now and in future' remained Britain and her potential allies, the United States and the Soviet Union. Fricke saw a danger to the Soviet Union's neighbours 'in the spirit of Bolshevism! It is in the interest of Europe that this chronic danger should be eliminated, one way or another, before long.' To him the justification for a war against the Soviet Union stemmed both from Soviet expansionism, especially in the direction of access to the Baltic and from Germany's objectives.

The safety of our homeland, however, also demands in the future the development of spatial unassailability, i.e. an expansion that would prevent any unchecked surprise penetration of vital parts of German soil, a deep forefield . . . which would at the same time provide the necessary living-space for the German nation in the future . . . It moreover demands the greatest possible economic autarky, especially in commodities vital in wartime (e.g. oil, foodstuffs). The further development of Germany requires raw materials and also, to the same extent, markets for her manufactures. For both these purposes Russia is ideally suited . . . The Baltic *must* become Germany's 'Mare nostrum'.

The powerful Soviet fleet in the Baltic and a Red Army capable of any kind of military operation seemed to Fricke to represent a permanent threat to Germany, placing a burden on her 'development at home and overseas'. The German Wehrmacht, in his estimation, was 'vastly superior' to the Soviet forces. Although the memorandum did not support any immediate German offensive action against the Soviet Union, it nevertheless regarded a war in the east as promising once the war against Britain had reached some kind of conclusion. This sentence was thickly underlined by Raeder. The memorandum reflects an increased assurance of power after the victory over France as well as a blending of traditional political ideas with National Socialist thinking. At the same time it shows that initially Hitler's 'programme' did not necessarily meet 'with opposition, and certainly not with incomprehension' by the navy.⁶⁴

How then was Hitler going to react to the strategic situation into which he had manipulated the Reich? What possibilities did he see of eliminating the 'reversed fronts' now that Britain was not yielding? Was Hitler prepared to stake the position of power Germany had gained up to the summer of 1940 and risk war with the Soviet Union, his crucial foreign-policy objective, even though Germany was strategically tied down in the west? It would be a misjudgement of Hitler's dogmatism to believe that he had abandoned his 'programme', his ideas revolving around war, living-space, race, Jewry, economic self-sufficiency, and world-power status, or his grandiose alternative: victory or annihilation. From the beginning he had ruled out capitulation, i.e.

⁶² See sect. 1.1.

⁶³ Salewski, *Seekriegsleitung*, iii, No. 6.

⁶⁴ *Ibid.* i. 358.

submission to his opponent's will. His living-space programme contained all the factors which, individually or collectively, figured also in the reflections of military leaders, diplomats, and economists. Expansion of living-space 'towards the east', in Hitler's opinion, not only promised the safeguarding of Germany's economic existence within a blockade-proof greater European economy—because of the 'foodstuffs and raw materials to be found in the Soviet Union—but would also afford an insuperable defence in depth, absolute political freedom of action, and independence from international ties and obligations. Only the creation of a continental empire which included the 'Russian space' would, he firmly believed, enable him to conduct policy on a global scale. Inseparably linked with these political, military-geographical, and economic motives in Hitler's living-space programme were his racial ideas concerning the necessary annihilation of 'Jewish Bolshevism'.

2. THE TURN TO THE EAST: HITLER'S DECISION OF 31 JULY 1940 AND ITS CONSEQUENCES

The military outcome in the west had failed to yield the expected political success. Britain, considered the principal enemy since the autumn of 1939, was not inclined to conclude a compromise which would have left Hitler with the Continent from the North Cape to the Bay of Biscay. London would have been ready to negotiate only if Hitler surrendered himself and his 'programme'. For London, just as for Berlin, this war, which had long become total war, was now about victory or defeat; initiatives aiming at a compromise peace no longer had any hope of success. 'Britain fought on in the hope of American support and of a change in German-Soviet relations.'⁶⁵ What conclusion did Hitler draw in view of the long-term threat to Germany's position from the Anglo-American naval powers and from the Soviet Union? At the end of July 1940 he summoned the top leaders of the OKW, the army, and the navy to the Obersalzberg for a conference on the overall situation of the war. These talks centred, initially, on the planned landing in England.⁶⁶ Against his own better judgement and that of the naval operations staff, Raeder did not urge a postponement of Operation Sea Lion. Although the commander-in-chief of the navy listed numerous maritime difficulties, he declared the operation to be feasible after mid-September, provided preparations were not upset in some unexpected way by the weather or by enemy measures. Raeder made a note of Hitler's decision that the base date for a landing in England should be 15 September. Admittedly, Hitler made the decision on whether 'Sea Lion' was to be implemented then or deferred until May 1941 dependent on the effect of the planned air offensive against Britain.⁶⁷

⁶⁵ *Germany and the Second World War*, ii, 418.

⁶⁶ Halder, *Diaries*, 530 ff. (31 July 1940); 'Führer Conferences', 122 ff. (31 July 1940).

⁶⁷ 'Führer Conferences', 124 (31 July 1940); *Hitler's Directives*, No. 17. The battle for air superiority over England began on 15 Aug. 1940 and was presently extended into strategic aerial

It appears that Raeder did not participate in the subsequent talks at the Berghof. From Hitler's arguments about a strategy for finishing the war against Britain, which was 'in fact won', by an actual victory the chief of the Army General Staff took down the following notes:

Britain's hope lies in Russia and the United States. If Russia drops out of the picture America, too, is lost for Britain, because elimination of Russia would tremendously increase Japan's power in the Far East. Russia is the Far Eastern sword of Britain and the United States pointed at Japan . . . Russia is the factor on which Britain is relying most. Something must have happened in London! . . . With Russia smashed, Britain's last hope would be shattered. Germany then will be master of Europe and the Balkans. Decision: Russia's destruction must therefore be made a part of this struggle. Spring 1941. The sooner Russia is crushed, the better. Attack achieves its purpose only if Russian state can be shattered to its roots with one blow. Holding part of the country alone will not do. Standing still for the following winter would be perilous . . . Resolute determination to eliminate Russia . . .⁶⁸

Hitler defined his war aim as the 'liquidation of Russia's manpower'⁶⁹ and the conquest of the Ukraine, the Baltic States, and Belorussia.

Neither during nor after the conference of 31 July 1940, which marked the turn to the east, was there any 'argument about the basic decision or the operational plan as a whole'⁷⁰ that could be compared to the period leading up to the offensive in the west. Even though the Army High Command had on the day before expressed the view that it would be better to 'keep on friendly terms with Russia'⁷¹ in order to eliminate the risk of a war on two fronts, it did not put forward that argument when facing Hitler at the Berghof. It would be too simple to explain Brauchitsch's and Halder's behaviour simply as a lack of moral courage. Instead it has to be assumed that both of them agreed with Hitler's assessment of the situation. Because the German claim to hegemony in Europe appeared to be threatened in the long term by the Soviet Union, the army command concurred with Hitler on the need for offensive action against the Red Army. There was also agreement on the view that there was no direct military threat to the Reich from the Soviet Union in the immediate future, although there was such a threat, to a diminished extent, to Romania and Finland. At the same time, information available to OKH on the Red Army seemed to indicate that this was beginning to develop into a modern army, in

warfare against Britain's industrial potential. Even though the proposed landing in mid-Oct. 1940 had to be postponed until spring 1941, the 'fiction of invasion' was maintained by a war of attrition from the air, by diversionary manoeuvres in the Mediterranean area, and by propaganda deceptions. See *Germany and the Second World War*, II, 374 ff., and sect I.V.2(a) in the present volume (Boog).

⁶⁸ Halder, *Diaries*, 533-4 (31 July 1940).

⁶⁹ Although the war aim proclaimed by Hitler resembles his intentions before the campaigns against Poland and France, his programmatic objectives lead one to assume a different significance, one which therefore also differs from Clausewitz's much-quoted war aim: not to reach a certain line on the ground but to pursue the annihilation of the opponent, i.e. of his army.

⁷⁰ Hillgruber, *Strategie*, 211.

⁷¹ Halder, *Diaries*, 530 (30 July 1940).

terms of leadership, inner structure, and equipment, one that would later be in a position to conduct major offensive mobile-warfare operations even against the Reich.⁷² Hitler's decision to secure his domination in Europe by smashing the Soviet Union was therefore in line with the Army High Command's own views. The German Army High Command's appraisal of the Soviet potential, especially the presumed inferiority of the Soviet leadership, was compounded of an exaggerated belief in Germany's military strength after her rapid victory over France, the 'historical enemy', a sense of cultural superiority *vis-à-vis* the Slav world, and an anti-Bolshevik estimation of the enemy, coloured by a latent anti-Semitism.

How is this turn to the east in the summer of 1940, when Hitler proceeded from a global political appraisal of the situation, to be judged? Was there really, in view of Britain's intransigent attitude and refusal to surrender, no other way than to attack the Soviet Union?⁷³ Is it a fact that Hitler, while returning to his political axiom, the conquest of 'living-space' in the east, actually put forward strategic justifications to his military leaders?⁷⁴ Did Hitler want to destroy the Soviet Union because it might be used by Britain as a continental sword both against Germany and against Japan?⁷⁵ Should the decision of 31 July 1940 not be interpreted instead in the sense that war against the Soviet Union was being planned not *because* of the continuation of the conflict but *in spite* of it? Or did annihilation of the Soviet Union, the main goal of his political and racial 'programme', become for Hitler, in the summer of 1940, also a means of forcing Britain to make peace?⁷⁶

In the summer of 1940 Hitler linked the realization of his twenty-year-old living-space programme—which united expansion towards the east, annihilation of Bolshevism, and extermination of Jewry⁷⁷—with the strategic necessity of securing the German sphere of power against the growing challenge by the Anglo-American naval powers. Not least because of Roosevelt's 'clear challenge' of 19 July 1940, the United States now moved into the focus of Hitler's strategy. The American president was unmistakably backing Churchill's course and arming his nation for what he believed to be inevitable conflict with the Axis and Japan. For the time being Berlin could meet only indirectly the danger represented by the United States to the German position. That purpose was served by the 'Tripartite Pact', concluded between Italy, Japan, and Germany on 27 September 1940, which was designed to warn Washington

⁷² See sects. I.iv.1 (Klink) and I.ii.2 (Hoffmann).

⁷³ Thus D. C. Watt in the *Times Literary Supplement*, 3879 (16 July 1976), in his review of Cecil, *Hitler's Decision*.

⁷⁴ This is how Haffner, *The Meaning of Hitler*, 115, and Cecil, *Hitler's Decision*, 68 ff., interpret Hitler's remarks.

⁷⁵ *Germany and the Second World War*, ii. 29. Schustereit, *Vabangue*, likewise perceives no programmatic aims of Hitler. A similar argument in Koch, 'Hitler's "Programme"'

⁷⁶ Thus Hillgruber, *Strategie*, 200, and Hildebrand, *Das Dritte Reich*, 63-4.

⁷⁷ Erdmann, *Zeit der Weltkriege*, 337, 522; Carr, *Poland to Pearl Harbor*, 121-2. Mayer, *Why Did the Heavens Not Darken?*, on the other hand, emphasizes the theme of the crusade against 'Jewish Bolshevism'.

against extending the war.⁷⁸ If Hitler was to hold on to 'the law of action' and if the Reich was to be able in the long term to stand up to the global challenge of the United States, he had, in view of his war dogma of victory or defeat—'all or nothing'—no other choice than a further rapid campaign to overthrow the last remaining great power on the Continent, the Soviet Union. The compulsion to swift action sprang from the steadily increasing American potential, even though Hitler did not believe the United States would be ready for war until 1942. Before the increasing co-operation of the Anglo-American naval powers and a heavily armed Soviet Union were able to restrict Germany's external freedom of movement, the conquest of the European regions of the Soviet Union was to enable Germany to gain a strategic and economic position that would convince Britain of the hopelessness of her struggle and make confrontation with the United States seem no great danger. His political interest in successfully coming through the overall war was linked in Hitler's strategy with his programmatic goals *vis-à-vis* the Soviet Union. The global political justification for his decision of 31 July to attack the Soviet Union in the spring of 1941 should not lead us to overlook the links between calculation and dogma, between will to power and ideology, in Hitler's war policy. The turn to the east was neither the final, as it were logical, step on the road towards the creation of an autarkic German colonial empire, nor 'mere compulsion to act in order to escape the waiting-war of the summer of 1940 and to reach a decisive conclusion to it'.⁷⁹ Hitler's living-space programme must be seen as an equally substantive basis for his decision to hold on to the military and political initiative by smashing the Soviet Union as it was for his directives of March 1941 to conduct Operation Barbarossa as an uncompromising war of annihilation.⁸⁰ As in the summer of 1940, Hitler again fused ends and means. Not only was any potential resistance to German rule in the east to be eliminated by the extermination of 'Jewish Bolshevism', but the Germanic race was to be given the chance of a 'pure' development. Only the symbiosis of rational thought and dogma can be viewed, in Max Weber's sense, as an 'adequate cause' of the decision of 31 July 1940 and of the directives of March 1941.

Even though the turn to the east in the summer of 1940 cannot by any means be regarded as irrevocable, as a 'point of no return', it nevertheless immediately triggered political, military, and armament consequences which presently developed a dynamic of their own. Hitler's decision of 31 July 1940, unlike his instruction to the commander-in-chief of the army ten days earlier, for the first time set in motion the entire apparatus of Wehrmacht operations. In strategic terms it affected only the army. Along with other departmental heads in the Army General Staff, Halder issued new instructions also to Major-General Marcks.⁸¹ For the armaments industry the enlargement of the army field forces to 180 divisions with the corresponding troops gave rise to

⁷⁸ See sect. I.1.4.

⁸⁰ See sect. I.vii.

⁷⁹ As Broszat, 'Motivation', 408, believes.

⁸¹ See the sect. I.iv.1(d) (Klink).

numerous problems of personnel and equipment. On 2 August 1940 Field Marshal Wilhelm Keitel, the OKW chief of staff, justified Hitler's decision to General of Infantry Georg Tomas, chief of the war economy and armaments department, as due to the fact 'that (1) Britain's collapse in 1940 could, in the circumstances, no longer be counted on, (2) an intervention by America was feasible in 1941, (3) relations with Russia might undergo a change in 1941'.⁸² While OKH initially assumed that the framework of the armaments programme of 9 July 1940 would not have to be substantially extended, the manpower problem soon gave rise to the most serious problems for armament planning in the army. An order signed by Keitel on 28 September 1940 for a stepping up of armaments defined the principal task for the army as the provision of armaments for 180 field divisions and appropriate occupation divisions by the spring of 1941. In order to maintain or even increase the performance of armament plants, it was decided to withdraw 300,000 trained workers from the army and make them available to the armaments industry.⁸³

A change was perceptible also in the foreign policy of the Reich. The war Hitler envisaged against the Soviet Union demanded the availability of lesser states and nations in northern and south-east Europe, as called for by German strategic and economic interests. These interests had now to be safeguarded in Romania and Finland, i.e. in countries which, in the Soviet interpretation of the Hitler-Stalin pact, belonged to the Soviet Union's sphere of interest. Renewed Hungarian claims to Transylvania, following the Red Army's invasion of Bessarabia and the Bukowina, were jeopardizing 'tranquillity in the Balkans' and increasing the danger of Soviet intervention. Hitler was therefore anxious to terminate the Hungarian-Romanian conflict as speedily as possible. His initial idea was a bilateral agreement between Budapest and Bucharest. However, on 30 August 1940, when these negotiations had reached an impasse, Hitler, with Mussolini's support, imposed on Hungary and Romania an arbitration, albeit one which provided no more than a superficial resolution of the Hungarian-Romanian quarrel. Romania's newly defined frontiers were guaranteed by Germany and Italy.⁸⁴ This second 'by-passing' of the Soviet Union—after the Munich agreement of 1938—was perceived by Moscow as an affront against the spirit of the Hitler-Stalin pact.

This political check on a possible realization of Soviet interests was covered, on the military plane, by the creation of a mobile reserve group in the Vienna area. The XXXXth Army Corps was in readiness to thrust across Hungary within a matter of days in order to occupy the Romanian oilfields ahead of a Soviet coup. Whether that objective could have been achieved in the event of

an armed conflict between Hungary and Romania must remain in doubt. Hitler at any rate was prepared to throw Germany's political weight into the balance in order to secure Romania's supposedly 'vital' mineral oil.

A similarly clear consequence of the decision of 31 July 1940 may be discerned in German-Finnish relations. Hitler—in contrast to his earlier policy towards Helsinki, which had been entirely in line with the German-Soviet partnership—was now showing interest in political support for Finland and her rearmament. Here too the switch in German foreign policy was accompanied by precautionary military measures. Deployment of a force was prepared in northern Norway, so as to occupy the nickel region of Petsamo in the event of Soviet action.⁸⁵

Although the military leadership was claiming a position of hegemony in Europe for the Reich, and although the military leaders believed they had understood the need for a timely elimination of the Red Army, these rather imperialistic ideas differed from Hitler's programmatic aims *vis-à-vis* the Soviet Union and from the 'constants of his picture of the world'.⁸⁶

3. PROGRAMMATIC OBJECTIVES *VIS-À-VIS* THE SOVIET UNION AND THEIR ACCEPTANCE AMONG THE GERMAN OFFICER CORPS

Concepts such as 'programme' and 'step-by-step plan', and adjectives such as 'programmatical' or 'axiomatic', may suggest a high degree of systematic thinking in Hitler's war policy. Used as heuristic tools, however, they assist in an understanding of Hitler's motivations and goals, which, regardless of any tactical improvisations, represented the permanent basis of his political actions as Reich Chancellor.⁸⁷ An interpretation of Hitler's policy as a symbiosis of dogma and rational judgement, of ideology and will to power, counteracts any tendency to dismiss his dogmatic ideas as phantasms and to explain his deeds as acts of aimless opportunism. Hitler's 'programme' slots into the continuity of German history. It should be seen as a subjectively moulded conglomerate of political visions articulated in German society since the end of the nineteenth century, of ideological persuasions, and of lessons learnt from the military defeat of 1918, the German revolution, and the Versailles peace treaty of June 1919. Constants in Hitler's view of the world were the social-Darwinist conviction that the struggle for survival governs not only the life of the individual but also, as a universal principle of life, the development of nations; the belief that this struggle for survival can be won only by a people of superior racial quality under an outstanding leader, as well as a radical anti-Semitism

'of reason', that would ensure a racially 'pure' flowering of 'Germanism'. His fundamental foreign-policy objective, the conquest of 'living-space' in the east, likewise derived from that ideological basis.

Thereby we National Socialists deliberately draw a line under the foreign-policy development of the pre-war period. We start where an end was made six centuries ago. We stop the eternal Germanic drift to the south and the west of Europe and turn our eyes towards the land in the east. We put a final end to the colonial and trade policy of the pre-war period and switch over to the soil policy of the future. But if in Europe today we speak of new land and soil we are, above all, thinking of Russia and the marginal states subjected to it.⁸⁸

Once the German people understood this far-sighted spatial policy, whose aim was a 'healthy' ratio between population total and land area, German foreign policy—of this Hitler was convinced—would acquire stability and the sterile 'economic and frontier policy' of Wilhelminian Germany would be finally overcome.⁸⁹ Only an operation which guaranteed security and land for the German people could justify the sacrifice of blood necessary for war. For that reason Hitler saw no solution to Germany's economic or political problems in a mere revision of the treaty of Versailles. Only the expansionist living-space concept could, in his opinion, ensure for the German people independence and power and their 'daily bread'—not the development of a modern industrial and export economy.⁹⁰ The natural leadership role of the 'Germanic-northern race' in the international struggle for survival and the unique 'racial quality' of the German people justified, in Hitler's eyes, the conquest of the necessary 'living-space' at the expense of other, racially inferior, nations, in particular the Slavs, for the establishment of a Greater Reich of all Germans and the racial reshaping of Europe. 'The struggle for world hegemony will be decided for Europe by the possession of Russia's space: this will make Europe the most blockade-proof spot in the world.'⁹¹

Germany's forcible expansion at the expense of the Soviet Union seemed to him so promising because the 'Jewish-Bolshevik' revolution of 1917, together with 'Slav racial instincts', had exterminated the last remnants of the formerly leading Germanic elements in Russia. Slavdom had since been disintegrated by Jewry, that 'ferment of decomposition'. That was why Hitler believed the 'gigantic empire in the east' to be 'ripe for collapse. And the end of Jewish rule in Russia [will] also be the end of Russia as a state.'⁹² In view of this 'racially ideological diagnosis of weakness' (M. Messerschmidt) Hitler declared that it was fortunate for the future of the German nation that such a development had taken place in Russia. As a result the spell had been broken 'which might have prevented us from seeking the goal of German foreign policy where alone and solely it can lie: space in the east.'⁹³

⁹² Id., *Mein Kampf*, 952.

⁹³ Id., *Hitler's Secret Book*, 139.

From the natural claim of the 'Germanic-northern race' to world hegemony Hitler also derived the need for a revolutionary struggle against 'Jewry', which he accused of striving on its part for world domination. To prevent this was to him a 'mission' of the German people, and he saw himself as the protagonist against that 'world corrupter': 'By opposing the Jew I am fighting for the work of the Lord.'⁹⁴ Jewry was declared to be everyone's enemy' because, as a parasite, it was 'corroding' the 'racial quality' of every nation. Jewry's ultimate aim was the 'denationalization, the inter-bastardization, of the rest of the nations, the lowering of the racial level of the highest, the extermination of national intelligentsias, and their replacement by members of their own people'.⁹⁵ Because Bolshevism to Hitler represented the most extreme form of 'world Jewry', because Jewish rule and Bolshevism were to him identical, he called the 'decomposition' of a nation by Jewry its 'blood Bolshevization'. So as not to expose his own nation to any 'decomposition of its blood' he wanted to exterminate the 'cancer' root and branch.

Hitler's fanatical hatred of Jews is attributed by recent psycho-historical research to a precisely datable key experience at the army hospital of Pasewalk in November 1918.⁹⁶ Hitler is thought to have transferred his personal hatred for a particular Jew to Jews in general, and to have blamed them for the German defeat. That personal trauma, it is thought, was only subsequently transformed by Hitler into a racial attitude and 'rationalized' as a negative objective. He now saw his task as preventing the 'Jewish world conspiracy' for the extermination of all 'Aryans'. This psycho-historical interpretation is not accepted by all historians. Some of them continue to believe that 'the Siamese twins of anti-Semitism and anti-Marxism' moulded his ideas from 1919-20 onward, 'without it being possible to determine whence or when Hitler adopted them'.⁹⁷ Although Hitler himself differentiated his own anti-Semitism of 'reason' and action from that of mere 'sentiment',⁹⁸ he later managed to exploit other forms of anti-Semitism, such as religious anti-Judaism or competition-motivated anti-Semitism, for the satisfaction of his own obsession: the persecution and extermination of the Jews as the prerequisite of a racially 'pure' development of Germandom in Europe. The postulate of certain laws of history, e.g. the world-moving principle of the racial idea, in a sense removed his actions from personal individual responsibility for the planned extermination of 'Jewish Bolshevism', for the decimating and expulsion of the Slavs from the territories to be conquered.

In the realization of his 'programme' Hitler attached overriding importance to relations with Britain,⁹⁹ as he was anxious to avoid a war on two fronts. War

with France, the 'perpetual disturber of world peace', he regarded as indispensable anyway, and this was to precede the struggle in the east. His assessment of Britain's reaction to the establishment of a German continental empire was causing Hitler some difficulty because he allowed himself to be guided by wishful thinking and ideological premisses. On the one hand Hitler firmly believed that an 'arrangement' with Britain was possible, a delimitation of interests between a naval and mercantile power and a continental military power, co-operation on a world scale. On the other hand he saw his policy of German hegemony in Europe threatened by the fact that 'world Jewry' with its 'Bolshevik disintegrating tendencies' might determine British policy and eclipse 'ancient British traditions'. In contrast to Russia, where the decision had already gone in favour of Jewry, it seemed to Hitler that in Britain the struggle for power was still undecided. In his wishful image of Britain her imperial and maritime interests occupied a higher position than her interest in maintaining a balance of power in Europe. The latter, however, was diametrically opposed to his expansionist aims. That was why hypotheses on possible modes of action were brought into Hitler's calculations as if they were political realities. If London did not act as expected, it meant that 'the Jew' had won over 'the Briton'.¹⁰⁰

The question of the relationship between illusion and reality in Hitler's concept of Britain up to his attack on Poland has already been answered in the sense that this was a process of his wishful thinking gradually giving way to an acknowledgement of facts.¹⁰¹ This interpretation needs some amplification: even beyond 3 September 1939 Hitler still believed in the possibility of a delimitation of interests between Britain and Germany, so that one has to speak of a 'continuity of error' (F. Fischer). Hitler's belief in an arrangement with Britain had by no means been undermined by the British declaration of war. After the German triumph over France Hitler therefore confidently expected Britain to come to terms. In the summer of 1941 he then believed that victory over the Soviet Union would mark the beginning of a durable friendship with Britain, one that would endure even in a future war against the United States.¹⁰² At the beginning of 1942 Hitler revealed the whole contradiction of his 'policy of alliance' with London when he declared that he did not *know* whether Britain would drop out of the war against Germany, but he *thought* so.¹⁰³ It was Hitler's 'most sacred conviction' that after the loss of Singapore to the Japanese the British would at long last come to their senses and depose Churchill, the warmonger.¹⁰⁴ When that too failed to materialize, Hitler—as he had done in 1939—attributed the responsibility to 'world Jewry', which had always fought against German-British understanding.

Ideologically founded convictions made any realistic appraisal of British policy impossible: they must be seen as the reason why Hitler's policy *vis-à-vis* Britain had been ambivalent from the outset. Rational judgement and dogma,

racial and world policy, were too closely interwoven.¹⁰⁵ Whereas in the long term Hitler was interested in freedom for his racially based, expansionist military strategy against the Soviet Union, the British had a marked interest in the maintenance of peace in Europe. Although British appeasement policy was primarily a defensive strategy for safeguarding Britain's position as a world power,¹⁰⁶ London also showed itself ready to take on Hitler's challenge in order 'to check and defeat Germany's attempt at world domination'.¹⁰⁷ Britain's refusal to tolerate Germany's expansion towards the east compelled Hitler, on the one hand, to improvise in his foreign policy and, on the other, to engage in a political and military gamble in line with the slogan 'Germany will either be a world power or she will not be at all'.¹⁰⁸ The racial-policy version of that social-Darwinist alternative in the struggle against the 'Jewish-Bolshevik world enemy' was: 'Either victory for the Aryan side or else its annihilation and victory for the Jews'.¹⁰⁹

These doctrinaire ideas of Hitler should not be underrated, in spite of their often untenable premisses. Nor should they be seen as 'predominantly functional, but primarily and in their own right as political objectives'.¹¹⁰ They were faith and estimation of the enemy at the same time, they can be traced in Hitler's remarks to the very end, and they should be viewed as the basis of his political decisions. From this ideological basis of social Darwinism, of the racial theory, of anti-Bolshevism, and of anti-Semitism sprang also his principal foreign-policy objective—the conquest of new 'living-space' for the German people in the east, its traditional sphere of expansion. To this Hitler adhered inflexibly, in spite of numerous tactical vacillations.

This axiom of future German policy was not only expounded by him in abstract terms in *Mein Kampf* and *Hitler's Secret Book*, but also aggressively championed by Hitler after his appointment as Chancellor. This is proved not only by his well-known statements of 3 February 1935, 5 November 1937, 23 May, 22 August, and 23 November 1939, by his memoranda on the deployment of the economy of August 1936 and on the continuation of the war of 9 October 1939, but also by a hitherto little-quoted address to the commanding officers of the army on 10 February 1939.¹¹¹ With it he intended, in a specific political situation, not only to solicit confidence in his risky expansionist strategy, but also to 'expound the fundamental National Socialist ideas to the Wehrmacht's top leaders in a manner in which, for understandable reasons, this could not be done in public'. A general needed to know the categories of

his policy, in order to comprehend the further actions of the politician. One could champion with 'special boldness and vigour' only what one had understood. For that reason Hitler expounded his belief that its present living-space was too small for the German nation because its people could not be fed and its industry could not be supplied with the raw materials it needed. The alternative solutions on offer were either to ensure the necessary imports of foodstuffs and raw materials by increased exports or to adjust the living-space to the growing population figures. Hitler openly stated that he proposed to take the latter road only. He had determined to solve the problem of German space, and that idea now dominated his entire existence. Although the Soviet Union was not mentioned by name, this was no more than a repetition of his programme of 3 February 1933: 'Perhaps the capture of new export facilities, perhaps—and probably better—conquest of new living-space in the east and its ruthless Germanization.' Nor did Hitler in February 1939 leave his officers in any doubt over the character of the impending war. Because people were now driven into battle by racial realizations, the next war would be 'a purely ideological war, i.e. consciously a national and racial war'. Hitler demanded that the officers should see in him not only the supreme commander of the Wehrmacht, but also the supreme ideological leader, to whom, as officers, they were likewise pledged for life or death. That conviction was heightened by Hitler into the demand 'that even if, in my struggle for this ideology, I am abandoned by the rest of the nation in its entirety, then, more than ever, every German soldier, the entire officers' corps, man by man, must stand beside me and by me'. The reaction of his listeners was 'in part enthusiastic, in part very sceptical'.¹¹²

Hitler's concept of the officers as the 'very last guard' in the realization of his ideologically coloured objectives derives its importance for relations between National Socialism and Wehrmacht also from the fact that, a mere fortnight earlier, he had declared in a Reichstag speech: 'If international financial Jewry within and outside Europe were to succeed in once more hurling the nations into a world war, then the result will be not the Bolshevization of the earth and thus the victory of Jewry, but the annihilation of the Jewish race in Europe.'¹¹³ And in his address to the commanders-in-chief of the Wehrmacht services on 23 November 1939 Hitler declared: 'The safeguarding of living-space can be solved only by the sword. A racial struggle has erupted about who is to dominate in Europe and in the world.'¹¹⁴ Once the preparations for the war in the east were fairly advanced, the self-appointed 'supreme ideological leader' clarified this axiom in March 1941. The 'Jewish-Bolshevik intelligentsia [must] be exterminated';¹¹⁵ this was a 'war of extermination' against a hostile ideol-

ogy, a war in which the officers must overcome their soldierly scruples and be leaders.¹¹⁶

The real problem, however, with the declaration of a war of annihilation against the Soviet Union is not 'Hitler's personal psychopathology' (H.-U. Wehler), but the answer to the question 'How was it possible for such a "programme" ever to come within the realm of realizability?' In addition to the frequently mentioned co-operation between the Party, the Wehrmacht, industry, and the state apparatus in the reconquest of great-power status for Germany, in addition to the policy concerning the European countries and the ideal of a 'people's community' [*Volksgemeinschaft*], Hitler's living-space programme has to be understood as an integrating factor for the leadership groups. Not only the economic and military justification for extending German rule towards the east, but also the radical concepts of Bolshevism and Jewry as the enemy, as well as belief in the overriding right of the strong in the struggle for survival—all these contributed to making the National Socialist 'programme' realizable in terms of practical politics. 'Domestic and foreign Bolshevism'¹¹⁷ was regarded among the military leadership class not only as a threat to the bourgeois national state, but 'was a natural component also of the military concept of the enemy' in 1940–1.¹¹⁸ The idea which the military leaders, who were planning the attack against the Soviet Union, had of Russia was based on experiences, reports, and assumptions going back, for the most part, to the First World War. 'Bolshevism' was held responsible not only for the German collapse of 1918, but also for the undermining of discipline in both the army and the navy. The councils of soldiers, 'the darling children of Bolshevik-inspired revolution', were seen as the originators of the 'disintegration of the fighting forces'.¹¹⁹ The Jews in particular were regarded as the 'principal exponents of Bolshevik propaganda'.¹²⁰ It was through this combination of different national and ideological views that National Socialism, among the German leadership élites in the Wehrmacht, in industry, and in the diplomatic service, was able to achieve the effect which has been described as a 'partial identity of objectives' (M. Messerschmidt). Thus Colonel-General Werner von Fritsch, the former commander-in-chief of the army, who fell victim to an intrigue of the National Socialist regime, wrote in a private letter a few weeks after the 'night of shattered glass':

Shortly after the war I came to the conclusion that three battles had to be fought and won if Germany was to be powerful again: (1) the battle against organized labour, this Hitler has fought and won; (2) against the Catholic Church, or rather against Ultramontanism; and (3) against the Jews. We are still in the midst of these battles.

And the struggle against the Jews is the most difficult. I hope that the difficulty of that struggle is realized everywhere.¹²¹

At the end of July 1940 Rear-Admiral Fricke believed it necessary in the interest of Europe to liquidate the chronic danger of Bolshevism 'one way or another'.¹²² And within the staff of the German army mission in Romania, too, an ideological definition of the enemy was issued in October 1940: Germany was at war not only against Britain, but also 'against the world of money and finance, against Freemasonry, and—both in finance and propaganda—against worldwide Jewry, incited by our emigrants, who are adding fuel to the flames everywhere'.¹²³ Colonel-General Georg von K  chler, commander-in-chief of the Eighteenth Army, defined the purpose of the overall war as 'bringing about a long-term pacification of Europe, in which the German people controls a space that will ensure its food supplies and those of the other European states'. That, however, was not conceivable without a conflict between Germany and the Soviet Union.

We are separated from Russia, ideologically and racially, by a deep abyss. R[ussia] is, if only by the mass of her territory, an Asian state . . . The F  hrer does not wish to palm off responsibility for Germany's existence on to a later generation; he has decided to force the dispute with R[ussia] before the year is out. If Germany wishes to live in peace for generations, safe from the threatening danger in the east, this cannot be a case of pushing R[ussia] back a little—or even hundreds of kilometres—but the aim must be to annihilate European Russia, to dissolve the Russ[ian] state in Europe.¹²⁴

In a note of July 1941 on Germany's strategic position Major (General Staff) Bernardis, 3rd general staff officer at LIst Army Corps HQ, remarked that the conflict with Britain, conducted 'for political, ideological, and economic reasons (democracy, Jewry, and capitalism)', was now taking second place. Germany was at present fighting against the Soviet Union, fighting

for her existence and future . . . I am convinced that these considerations were in the F  hrer's mind even before the beginning of the war, and that the war in the west had to be fought in order to gain complete freedom in the rear. The F  hrer would certainly have been ready at any time for an arrangement with Britain. He had to wage the war against Russia in order to free the German people from that danger once and for all.¹²⁵

Germany's adversary in the struggle for a new order in Europe, for the security of its living-space and of its people's vital strength, was Jewry.¹²⁶ Major (General Staff) von Coelln, 1st general staff officer, viewed the Soviet Union

as the 'vanguard of Asia'. It was Germany's enemy because Germany was 'the last shield-bearer of the white race, of European culture'.¹²⁷

The German officers were favourably disposed towards major parts of Hitler's 'programme'. That was why they found the assertion credible that a preventive war was necessary in 1941, and why they had no difficulty in giving their consent. Evidence that Hitler's living-space policy was still able to convince senior commanders in the field at a time when the turning-point of the war had long been passed is provided by Colonel-General Wolfram von Richthofen, chief of staff of Luftflotte 4: 'Rereading the chapter on policy towards Russia and the east in "Kampf". Still very interesting and, even in today's situation, providing the answers to nearly all questions. Shall see to it that these observations are given greater prominence among the forces in the whole area.'¹²⁸

4. EURO-ASIAN CONTINENTAL BLOC AND MARITIME STRATEGY: ALTERNATIVES TO THE TURN TO THE EAST?

After victory over France, was there among the German leadership groups an alternative foreign-policy and/or strategic concept to the 'brute-force solution' (A. Hillgruber) proposed by Hitler on 31 July 1940? An answer in the affirmative would not only prevent a 'Hitler-centred approach' in German historiography, but it would also be indirect proof that Hitler's globally designed racial policy and plan of conquest had a character of their own that 'destroyed any political calculations that might have been usefully open to discussion'.¹²⁹ Two concepts are regarded in the literature as fully valid alternatives to Hitler's offensive in the east: (1) the Atlantic-Mediterranean-African strategy proposed by the navy command to defeat Britain, even though this accepted as inevitable the United States' entry into the war;¹³⁰ and (2) Ribbentrop's idea of an anti-British Euro-Asian continental bloc which would also neutralize the United States.¹³¹ The peripheral strategy for the war against Britain, considered by the Army High Command at the end of July 1940 but not put forward at the Berghof, cannot be considered as an alternative to the war in the east.

In September 1940, following the postponement of the invasion of Britain, the navy saw a need to establish a comprehensive maritime strategy against Britain because 'the overall problem had long exceeded the framework of military operations and moved into the sphere of European-wide grand policy'.¹³² It called not only for the utmost support for Germany's Italian ally,

but was interested also in a Spanish entry into the war and in an arrangement with France. Behind this was the intention to topple Britain's position in the Mediterranean by the seizure of Gibraltar and Suez, and to acquire bases for German naval warfare against British supply-lines in the Atlantic also (Dakar, Casablanca, Atlantic islands). Moreover, German control of Egypt and the creation of a land and sea link with Italian East Africa were to shake the British position in the Indian Ocean too. 'Such a jumping-off situation, however, also reduced the American threat—in the eyes of the navy command—to such an extent that an entry into the war by the United States could be envisaged with equanimity.'¹³³

Raeder repeatedly proposed this strategy to Hitler. On only one occasion was the commander-in-chief of the navy able to record Hitler's agreement in principle with his line of argument (26 September 1940). But this did not mean that Hitler was prepared to renounce his intended aggression against the Soviet Union and to make the navy command's strategy his own. He was interested only in cover for his southern flank, which he hoped to achieve by political means through tying Spain and Vichy France more firmly to the Axis. Nevertheless, the Mediterranean area took on a new strategic quality for Hitler after the autumn of 1940, when, in consequence of the Italian military defeats, measures to stabilize the Italian position became necessary. In addition, there was concern that the Romanian oilfields might be bombed by the British air force.¹³⁴

Although the fundamental decision to attack the Soviet Union had just been taken in Directive No. 21, at the end of December Raeder once more registered 'serious doubts' about Operation Barbarossa before Britain had been fought to the ground. But Hitler brushed these aside with the argument that 'it is necessary to eliminate at all costs the last enemy remaining on the Continent before I can collaborate with Britain'.¹³⁵ The fact that Hitler's concept of an ideological war of annihilation evidently impressed the navy commander-in-chief less than the planned enlargement of the navy after victory over the Soviet Union,¹³⁶ and that the naval staff eventually allowed itself to be convinced of the absolute necessity of a 'preventive war'¹³⁷ to eliminate the 'chronic danger' of 'Bolshevism',¹³⁸ was probably due to the existence of a basically anti-communist attitude, and to geopolitical ideas, as well as to social-Darwinist and racial beliefs within the navy.

The strategy of the naval staff, based as it was on the continued existence of the German-Soviet alliance, would have easily slotted into Ribbentrop's concept of an anti-British Euro-Asian continental bloc from Madrid to Tokyo. Ever since 1937, the 'year of the turning-point' (K. Hildebrand) in Britain's

attitude towards Germany's expansionist ambitions, Foreign Minister Joachim von Ribbentrop had tried to develop the 'anti-Comintern pact', signed by Germany, Japan, and Italy in 1936, into a political alliance that would threaten the British Empire from all sides.¹³⁹ Despite his fundamentally anti-communist attitude, Ribbentrop was convinced 'that foreign policy can be conducted without ideological considerations'.¹⁴⁰ That was why in his global concept of an anti-British political triangle Rome-Berlin-Tokyo he had banked on Soviet neutrality and hence regarded the German-Soviet alliance of summer 1939 as his crowning achievement. However, the anti-British orientation and the obvious turning away from the anti-Comintern pact did not then suit Japan's aims. Tokyo had been interested in seeing the anti-Comintern pact developed into a military alliance between Italy, Germany, and Japan, directed against the Soviet Union, and not in its extension against Britain.¹⁴¹ That was why the Hitler-Stalin pact had come as a shock to Japan and resulted in a reorientation of Japanese policy. Admittedly, the new course of strict neutrality in the European war was abandoned as soon as the German offensive in the west began: Japan now wished to have some say in the fate of the Dutch and French colonies in East Asia. The Yonai government put out feelers in Berlin to discover Germany's attitude towards Japan's political, military, and economic interests in that region.

That about-turn in Japan's foreign policy induced Ribbentrop in the summer of 1940 to dust off his old anti-British plan of a global political triangle. In view of the changes in the international situation, the German foreign minister tried not only to revive the tripartite alliance, but, by the hoped-for inclusion of the Soviet Union, to develop it into a genuine Euro-Asian continental bloc. Moreover, its original purely anti-British character was now to be transformed so as to secure American non-belligerency. 'Proceeding from different motivations and objectives, Hitler and Ribbentrop were thus able to decide in favour of a close military alliance with Japan.'¹⁴² On 8 July 1940 Hitler declared to the former Japanese foreign minister, Naotake Sato: 'In the new world order Japan would call the tune in East Asia, Russia in Asia, Germany and Italy in Europe; and in Africa, too, Germany and Italy, possibly with some other interested parties, would exercise exclusive hegemony.'¹⁴³ A week later the Japanese leadership adopted a detailed plan for closer relations with the Axis powers. The ensuing negotiations resulted on 27 September 1940 in the conclusion of the 'Tripartite Pact'. Ribbentrop's prolonged wooing of Japan was at last successful because the elimination of France and Holland, as colonial powers, had opened up unexpected perspectives to Japan's expansionist aims in South-East Asia. The thought that Germany might gain a foothold in the French and Dutch colonies persuaded Tokyo that a renewed

rapprochement with Berlin would be advisable. After Ribbentrop's statement that Germany had no interest in any European possessions in the Far East the new Japanese government under Konoye, in an official declaration on 1 August 1940, made the unification of Greater Asia under Japanese leadership its foreign-policy programme.

The purpose of the much-publicized 'Tripartite Pact' was to warn the United States against widening the war.¹⁴⁴ However, the pact had the opposite effect on the Anglo-Saxon powers, a 'crystallizing effect' (Th. Sommer), as evidenced by the American embargo against Japan and the co-ordination of British and United States policy in East Asia. Roosevelt's re-election on 5 November 1940 enabled him to continue his policy of support for Britain and of preparing the United States for war. From November 1940 American military leaders were working on the problem that the Axis powers could ultimately be overthrown only by a British offensive on the ground, and that, to accomplish this, Britain needed the support of American ground forces.¹⁴⁵

Ribbentrop's and Hitler's strategies converged also on another point: the creation of a political bloc against Britain. Both were trying to win Spain and Vichy France over to the idea of an anti-British 'continental coalition'.¹⁴⁶ Both of them opened a diplomatic offensive designed to create 'Europe's counter-deployment against the Western democracies'.¹⁴⁷ The settlement of the clashing interests between French hopes of preserving their possessions and Spanish territorial ambitions was to be primarily at France's expense. This task, difficult enough as it was, was further complicated by Italian claims to French territories in Europe and Africa. But the talks with the Spanish head of state Franco and the French head of state Pétain in October 1940, planned as a 'gigantic fraud',¹⁴⁸ produced no results.¹⁴⁹ This was due not only to the conflicting interests of the countries earmarked as potential satellites, but also to the fact that Hitler's European programme was almost exclusively based on force. Not even the slogans of anti-Bolshevism, anti-Semitism, or the bogey of Western plutocracy succeeded in disguising the fact of Britain's continuous resistance.

Ribbentrop's and Hitler's strategies, however, differed with regard to their thrust. To Ribbentrop the envisaged arrangement between Spain and Vichy France merely represented the first step towards the creation of a world-encompassing continental bloc—which would include the Soviet Union—against the Anglo-American naval powers. To Hitler the wooing of Franco and Pétain was governed by the 'primacy of his eastern policy'.¹⁵⁰ The creation

of a political bloc in western Europe was to facilitate the impending military conflict with the Soviet Union. That objective was served also—after the postponement of 'Sea Lion'—by the air war against Britain, which increasingly assumed 'the character of a war of terror and exhaustion'.¹⁵¹ As, however, Britain's determination to resist was not broken even by ceaseless attacks, especially on the 'disgruntled mass of London's eight millions',¹⁵² the focus of the German air offensive against Britain shifted to operations against her supplies. Priority was no longer given to 'smoking her out', but to 'starving her out by a blockade'.¹⁵³ The air war in the west, however, was no longer thought capable of bringing about the decision in the war; it was merely as an aspect of the overall war. The focus of German strategy had shifted to preparations for a rapid campaign against the Soviet Union, which would also decide the overall war in favour of the Reich.

5. GERMAN-SOVIET RELATIONS FROM MOLOTOV'S VISIT TO THE BEGINNING OF THE WAR

In order to strengthen the thrust of the Tripartite Pact, Ribbentrop hoped to extend it into a 'quadrupartite pact' by the inclusion of the Soviet Union. Ribbentrop saw the 'historic mission' of Germany, Italy, Japan, and the USSR as 'to adopt a long-range policy and to direct the future development of their peoples into the right channels by delimitation of their interests for the ages'.¹⁵⁴ Although the living-spaces of the four partners would touch, they need not cut across one another.

The German concept of a 'quadrupartite pact' not only met with interest in Japan, for whose planned southward expansion an agreement with the Soviet Union and peace on her northern front were indispensable prerequisites, but also fell on fertile ground in Moscow. The German offer happened to coincide with a renewed attempt by Britain to drive a wedge into German-Soviet co-operation,¹⁵⁵ and Stalin, just as in 1939, now found himself courted from all sides. In pursuit of his basic foreign-policy line the Soviet dictator once more gambled on the German card. Stalin's foreign policy, too, was based on an ideological axiom. He saw the Soviet Union, the 'first socialist state in the world', as encircled by a fundamentally hostile 'capitalist world' which threatened the survival of the communist regime.¹⁵⁶ He regarded a military conflict with the capitalist states as inevitable, and he endeavoured to delay it until the potential of the Soviet Union equalled that of its enemies. This was the objective of the five-year plans launched in 1929. The Soviet planned economy

developed into a purely rearmament economy, which fundamentally transformed the equipment of the Red Army.¹⁵⁷

This strengthening of his own military power, however, stemmed not only from defensively understood Soviet security interests,¹⁵⁸ but was determined also by power-political calculations which did not rule out an offensive. In the event of conflict within the capitalist-'imperialist' outside world the Soviet Union should not have to stand idly by. For the purpose of achieving a fundamental shift in the ratio of forces Stalin was entirely prepared to intervene in such an 'imperialist war'. As early as 1925 he had stated to his party's central committee that the Soviet Union would move in as the last power, 'in order to throw the decisive weight on to the scales'.¹⁵⁹ His fears, following British, French, and German collusion in 1938-9, that these capitalist powers might jointly act against 'the first socialist state' were dispelled only by the treaty with the Reich and by the outbreak of war in Europe. Now Stalin believed that he could, for some time to come, adopt 'the coveted role of an observer of the self-laceration of capitalism and its "fascist afterbirth"',¹⁶⁰ National Socialism. The booty he had secured since 1939 had not only advanced the Soviet Union's strategic forefield to the west and south-east, but was accompanied also by a growth in armament production and by the full utilization of the military manpower of his own as well as the occupied countries. As Britain was offering no more than recognition of the Soviet Union's *de facto* sovereignty over the territories occupied since 1939 until an agreed postwar settlement, Moscow was willing to continue its profitable co-operation with National Socialist Germany. There was, however, a need to discover whether Berlin still respected the 'security interests of the Soviet Union'¹⁶¹ in the Baltic area and in the Balkans, which had admittedly been recognized in the summer of 1939 but must now be regarded as threatened by the German engagement in Finland and Romania. The extension of the German-Finnish transit agreement at the end of September and the nickel-for-arms barter agreement of 1 October, as well as the dispatch of a German military mission with army instructors to Romania after 12 October 1940, had all resulted in increased Soviet mistrust of German policy. Just because it was aware of Hitler's anti-Soviet policy, the Soviet leadership was interested in 'a long-term delimitation of mutual interests'.¹⁶²

On 12 November 1940 Vyacheslav Mikhaylovich Molotov, the Soviet foreign minister, arrived in Berlin. During his three-day visit he had two conversations each with Hitler and Ribbentrop. However, these were not discussions aiming at compromise, but in Hitler's case simply monologues, time and again

interrupted by Molotov's searching questions. These, as well as Hitler's evasive replies, clearly revealed the incompatibility of their points of view.¹⁶³ Molotov, for instance, showed less interest in the creation of a new community of interests for sharing out the 'gigantic worldwide bankrupt estate' of the British Empire than in the 'new order in Europe'. Each time Hitler mentioned the creation of a 'worldwide coalition of interested parties' in the British bankruptcy assets Molotov turned the conversation back to specific problems of the spheres of influence agreed in 1939. He stressed Soviet interests in Finland and the Balkans. The Soviet Union was interested in an annexation of Finland and of southern Bukowina, in a revocation of the German-Italian guarantee to Romania, in a treaty of alliance with Bulgaria, and in military bases on the Dardanelles and the Bosphorus, and had also given notice of aspirations in the direction the Persian Gulf and northern Sakhalin. The German side, on the other hand, emphasized a considerable economic interest in Finland and Romania; both these countries, moreover, were earmarked as allies in the war against the Soviet Union. Bulgaria was needed as a deployment basis for an operation against Greece. On the issue of the straits Hitler offered only a contractual assurance of free passage for Soviet warships. Beyond his direct demands, Molotov also informed Ribbentrop of Soviet interest in Romania, Hungary, Yugoslavia, Greece, and in the fate of Poland. The issue of passage out of and into the Baltic would also need to be discussed between Germany and the Soviet Union.

What is one to make of this Soviet list of desiderata? Were these actual long-term objectives, whose realization presupposed Germany's defeat by the Western powers,¹⁶⁴ or were they tactical maximum demands for the forthcoming negotiations?¹⁶⁵ In the light of the conditions which Molotov submitted on 25 November to the German leadership for political co-operation between the Soviet Union, Germany, Japan, and Italy¹⁶⁶—a minimum programme—the listing of much more far-reaching wishes of the Soviet Union ten days earlier must be seen as a tactical manoeuvre. The point to remember is that accession to the Tripartite Pact did not seem unacceptable to the Soviet Union, though with the proviso 'that Russia would co-operate as a partner and not be a mere object'. The Soviet minimum programme of 25 November 1940, however, also proves—contrary to present-day interpretations from the Marxist point of view—that Moscow was perfectly ready to 'join a conspiracy' with the 'Fascist aggressors against the interests of other states'. The Soviet Union was in fact not so much conducting a foreign policy of 'rigid principle' designed 'to prevent an extension of the war'¹⁶⁷ as a policy of maintaining a completely free hand and of safeguarding for itself an extensive sphere of influence. In Bul-

garia Moscow tried to create a *fait accompli* by simultaneously submitting to that country a proposal for a Soviet-Bulgarian treaty of assistance.¹⁶⁸

Nor should the second German-Soviet economic agreement of 10 January 1941 be seen solely against the background of the two parties' economic interests.¹⁶⁹ It too was embedded in the political negotiations between Moscow and Berlin. The Soviet side was trying to reach a more durable delimitation of interests than that of 1939 and, by way of advances favouring the Reich, to induce Berlin to make political concessions. That was why Stalin accepted the uncovered German cheque and was ready to pay the price of British annoyance. A few days after the conclusion of the economic agreement Molotov demanded a German reply to the Soviet conditions for joining a 'quadrupartite pact'.¹⁷⁰ But Berlin remained silent. It was probably because of his political refusal that Hitler called for a smooth fulfilment of German economic obligations towards the Soviet Union, even though those deliveries were at the expense of Wehrmacht orders from the armament industry.

In this connection the important question arises of whether Hitler really believed that the Soviet Union would join the continental bloc favoured by Ribbentrop, which would indeed have 'represented a significant alternative to a German attack' on that country.¹⁷¹ Must not Hitler's readiness to conclude a 'quadrupartite pact' in November 1940 be interpreted as a tactical move, considering his 'programme', his aggressive policy towards Finland and Romania—a policy violating the agreement of the summer of 1939—and his anti-Soviet remarks shortly before Molotov's visit? Were calls to respect the Soviet spheres of interest not simply useful demonstrations that Germany and the Soviet Union were standing 'shoulder to shoulder' rather than 'back to back'?¹⁷² On 4 November 1940 Hitler, speaking to OKH and OKW top leaders, observed that the Soviet Union remained the 'great problem of Europe'. Everything had to be done 'to prepare for when the showdown comes'.¹⁷³ That was why, even before his first talk with Molotov, he signed Directive No. 18, which stated: 'Political discussions for the purpose of clarifying Russia's attitude in the immediate future have already begun. Regardless of the outcome of these conversations, all preparations for which verbal orders have already been given will be continued. Further directives will follow on this subject as soon as the basic operational plan of the army has been submitted to me and approved.'¹⁷⁴ This was done on 5 December 1940. Against the background of the bloody struggle for hegemony in Europe between National Socialist Germany and the Bolshevik Soviet Union—a struggle already decided upon by Hitler—the German concept of shared rule

on a world scale at the expense of the British Empire must be judged as a tactical manoeuvre. Moreover, the Soviet maximum programme was bound to be seen by the German side as extortionist and as a long-term threat to the hegemony of the Reich. That threat had to be eliminated. The day after Molotov's departure Raeder found Hitler 'still inclined towards a confrontation with Russia'.¹⁷⁵ Hitler had opted from the outset in favour of the campaign against the Soviet Union, which he saw both as a war aim and as an instrument of war; he had regarded a political solution to the conflicting German and Soviet interests in Europe as impossible. A military decision also seemed to be pressing because the expectations which he and Ribbentrop had placed in the Tripartite Pact with regard to America's policy had proved illusory.

The quasi-alliance between the United States and Britain had grown ever closer since the autumn of 1940. The destroyers-for-bases exchange agreement of 2 September 1940¹⁷⁶ marked a turning-point in American foreign policy. Roosevelt was not intimidated by the threat of a war on two oceans, as implied by the Tripartite Pact, and agreed to Churchill's proposal for British-American co-operation in East Asia.¹⁷⁷ A few weeks after his re-election for a third term Roosevelt, under the slogan of 'Germany first', authorized secret staff talks with Britain, which, however, only began two months later. At the end of December, in response to a renewed call for help from Churchill, Roosevelt declared that the United States represented the arsenal of the democracies, and a few days later introduced the 'Lend-Lease' Bill in Congress.¹⁷⁸ With this formula Roosevelt no doubt deliberately responded to Hitler's characterization of the war, in a speech to Berlin armament workers, as a struggle between the National Socialist and the democratic capitalist world.¹⁷⁹ Hitler realized that, once all his makeshift constructs ('Tripartite Pact', 'continental bloc') for improving Germany's strategic situation had failed, the greater potential of the Anglo-American sea powers, together with an intensifying American rearmament drive, must in the long run result in Germany's defeat. That was why Hitler's political reaction was a 'redefining of the function' of the Tripartite Pact as a 'regional European system of alliances' directed against the Soviet Union and oriented exclusively along German interests.¹⁸⁰ With the accession of Hungary, Slovakia, and above all Romania—which had a German-Italian guarantee against Soviet aspirations, reinforced by the dispatch of a German army and air-force mission—the end of Novem-

¹⁷⁵ 'Führer Conferences', 153 (14 Nov. 1940), emphasis added. It is simply not correct to say that Hitler's final decision to attack the Soviet Union dated only from 26 Nov. 1940, as stated by Robertson, 'Hitler', 378.

ber 1940 saw the formation of the 'Hitler coalition', which was subsequently to give rise to the 'anti-Hitler coalition'.

In military terms, on 5 December Hitler opted for the army's operations plan, ready since July 1940;¹⁸¹ this was to defeat the Soviet Union in a swift campaign. His strategic analysis, designed to justify this fateful step, contained the same arguments as on 31 July 1940: 'The decision on hegemony in Europe' would be made in the struggle against the Soviet Union as this would deprive Britain of her 'continental sword'. The purpose of the operation was the annihilation of 'Russia's manpower'.¹⁸² 'Once the Russians are eliminated, Britain has no hope left of defeating us on the Continent, the more so as any effective intervention by America would be rendered difficult by Japan, who will then have a secure rear.'¹⁸³ Finland and Romania were counted on as partners in the alliance.

After a further report by Jodl on Directive No. 21, on 17 December 1940 Hitler summed up his global political estimation of the situation underlying his decision to go to war against the Soviet Union in the remark that 'all continental European problems' would have to be solved in 1941 since 'after 1942 the United States would be in a position to intervene'.¹⁸⁴ Reaching for the east, Hitler's great foreign-policy goal ever since the 1920s, had now become for him also the means of getting Germany out of the impasse in which she found herself because of his axiomatic ideas, his political gambles, the unyielding attitude of the British government, and Roosevelt's consistent global policy. Hitler refused to give up; he was determined to implement his 'programme' despite America's foreseeable entry into the war. After the autumn of 1940, therefore, the alternative was not between a maritime strategy and a military solution in the east, nor between a 'quadrupartite pact' and Operation Barbarossa, but between the destruction of the Soviet Union as the prerequisite of a decisive turn in the overall war and Germany's ruin,¹⁸⁵ because for a prolonged war of attrition like that of 1914-18 against the naval powers with their long-term planning the territorial and economic position which Germany had gained by 1940 was too weak. 'The military solution in the east had thus become Hitler's great "chance" to bring about the "turn" and to finish everything at one blow.'¹⁸⁶ Smashing Russia, Hitler expounded to the top leaders of OKW, army, navy, and air force at the Berghof on 9 January, 'would represent a great relief to Germany—and to Japan... After Russia's destruction Germany would be unassailable. Russia's expanses contained immeasurable wealth. Germany must dominate them economically and politically, but not annex them. Thus she would have all the potential for waging war even against continents in the future.'¹⁸⁷

On 18 December 1940 Hitler signed 'Directive No. 21: Operation

¹⁸⁷ *KTB OKW* i. 257 (9 Jan. 1941); 'Führer Conferences', 172.

Barbarossa'. This demanded that the Wehrmacht should 'crush Soviet Russia in a rapid campaign'.¹⁸⁸ While the Army High Command incorporated the changed tasks for Army Groups North and Centre—changed as against the conference of 5 December 1940—with insignificant amendments into its 'Deployment instruction Barbarossa' of 31 January 1941, for Army Group South it adhered to an offensive thrust out of Romania.¹⁸⁹ The diverging operational dispositions for Barbarossa were eliminated by Hitler in a decision towards the end of March 1941.

About the end of January 1941, however, the army command began to have doubts about Hitler's strategic justification for war against the Soviet Union. 'Barbarossa: purpose is not clear. We do not hit the British, That way our economic potential will not be substantially improved. Risk in the west must not be underestimated.'¹⁹⁰ Whether it would be possible to smash the bulk of the Red Army in the west of the Soviet Union and prevent the pull-back of effective formations to the east was another question on which the army command was no longer as optimistic as it had been in the summer and autumn of 1940. Talking to Field Marshal Fedor von Bock, the commander-in-chief-designate of Army Group Centre, Halder had to admit on 31 January 1941 that he was by no means certain that the Red Army would accept combat forward of the Dnieper–Dvina line.¹⁹¹ But there was no opposition to Hitler's decision, such as there had been before the war in the west. Planning for Operation Barbarossa simply assumed that the enemy would act in the manner hoped for, having denied the Wehrmacht the 'favour'¹⁹² of himself launching an attack. If, however, the intended 'swift campaign' against the Soviet Union were to fail, then not only a battle 'but the whole war would be lost'.¹⁹³

The attempt by Friedrich Werner Graf von der Schulenburg, the German ambassador in Moscow, to persuade Hitler of the advantages of continuing the German–Soviet economic alliance was taken up by Weizsäcker in a memorandum. In it he fully agreed with Schulenburg's line of argument and regarded 'war with Russia as a disaster'.¹⁹⁴ Tempting though it may seem, Weizsäcker argued, to deal the mortal blow to the communist system and, in the logic of things, 'now mobilize the European–Asian continent against the Anglo-Saxons and their followers', the crucial question was solely whether such a war would accelerate Britain's fall. Weizsäcker did not share Ribbentrop's justification of an attack on the Soviet Union. He believed that the German–British conflict could actually be prolonged by Operation Barbarossa instead of being shortened.¹⁹⁵ His arguments, however,

failed to change the German foreign minister's mind. Instead, at the beginning of May 1941 Ribbentrop fully supported the attack against the Soviet Union, even though it ran counter to the foreign policy he had pursued since 1937.¹⁹⁶

Contrary to Stalin's assessment of the situation—that Hitler would not dare to attack the Soviet Union while the war against the Anglo-American sea powers continued, and would in consequence continue to be economically dependent on the Soviet Union—Hitler was prepared to open the war on two fronts. Hitler's rejection of the Soviet demands that the provisions of the secret protocol on northern and south-east Europe should be fully applied 'undoubtedly came as a serious disappointment to Stalin'.¹⁹⁷ While Hitler was simply trying to face his ally with *faits accomplis* in northern Europe and the Balkans, Stalin was not prepared to give up Soviet 'security interests' in those regions. The consequence was a Soviet policy of 'pinpricks', designed to induce Hitler to change his mind and agree to a clear delimitation of the several spheres of interest.

Just as the conclusion of a Yugoslav-Soviet friendship and non-aggression treaty on 5 April 1941 merely heightened Hitler's mistrust of Stalin's loyalty as a treaty partner, so the surprisingly rapid conclusion of the Balkan campaign resulted in a tactical switch of Soviet foreign policy.¹⁹⁸ The Soviet Union's attempt to establish its claim to a sphere of interest in south-east Europe had failed. Germany would now have to be placated by a deliberate policy of neutrality and prompt deliveries of raw materials, and the former good relations would have to be restored. Although Stalin tried in a great variety of ways to prevent potential conflicts from even arising, he did not, on the other hand, take the initiative for direct diplomatic negotiations. He felt convinced that such a gesture would be interpreted by Hitler as a sign of Soviet weakness and might lead to increased German demands. Stalin judged the German deployment on the Soviet western frontier to be no more than a means for a 'political purpose'.¹⁹⁹ He adhered to that assessment in the spring of 1941 in the face of every detailed warning he received from the Western powers and from his own intelligence of a German attack. At the same time, an increasing scepticism about his ability to delay much longer the unavoidable conflict with National Socialist Germany is reflected in two of his remarks. As recently as the end of January 1941 he had told Kirill Afanasevich Meretskov, deputy people's commissar for defence, that it was not impossible 'that we may keep the peace until 1942'.²⁰⁰ At the beginning of May, one day before he also assumed governmental office, the Party general secretary assured graduates of the military academies that it was necessary to avoid a German-Soviet war in 1941, because it

could be waged under more favourable conditions for the Soviet Union in 1942.²⁰¹

So as not to provide Hitler with any grounds for an attack Stalin avoided anything that could suggest a British-Soviet *rapprochement*, even though the British government displayed considerable interest along those lines. In particular the flight to Britain by Rudolf Hess, Hitler's deputy, and his correct treatment intensified Stalin's distrust of London's policy. On 2 June 1941, when Anthony Eden, the British foreign secretary, drew the attention of Ivan Mikhaylovich Mayskiy, the Soviet ambassador in London, to the German deployment in the east, Mayskiy dismissed it as part of a 'war of nerves'.²⁰² The clearest demonstration of Stalin's wish for improved German-Soviet relations was given by him following the signing of a treaty of neutrality with Japan on 13 April 1941. At the farewell ceremony for Yosuke Matsuoka, the Japanese foreign minister, at Moscow's railway station Stalin, in the presence of the entire diplomatic corps, demonstratively assured the German ambassador Schulenburg and the deputy military attaché Colonel (General Staff) Hans Krebs of his friendship for Germany. Even though the Soviet-German treaty could not disguise that fact that Moscow and Tokyo continued to mistrust each other, it nevertheless represented a strengthening of the Soviet Union's position *vis-à-vis* Germany, as Japan had undertaken to preserve her neutrality in the event of a German attack.²⁰³

Further evidence of Soviet endeavours to placate Germany may be seen in the appointment of an ambassador to the French government in Vichy and of a minister to the *coup- d'état* government in Iraq, as well as the expulsion of the diplomatic representatives of countries occupied by Germany: Norway, Belgium, Yugoslavia, and Greece. Among all the gestures of good will to avoid war Germany benefited most from the fact that the Soviet Union was punctiliously fulfilling its obligations, entered into on 10 January 1941, for the delivery of urgently needed raw materials and foodstuffs.

On 13 June 1941 the official Soviet news agency Tass contradicted rumours of an imminent war between the Soviet Union and Germany in a radio and press statement. Both sides were consistently implementing the conditions of the non-aggression treaty of 23 August 1939; neither was Germany planning an attack against the Soviet Union, nor was the latter preparing for war with Germany.²⁰⁴ That communiqué was undoubtedly issued in the hope that Germany would confirm this interpretation of the tense situation. But Hitler remained silent. The Tass denial of German troop concentrations on the Soviet frontier was certainly also a factor in the Red Army being surprised by the German attack. Stalin persisted to the very end with his policy of placation, which was served also by the final soundings of Molotov and the Soviet ambassador Vladimir Dekanosov on 21 and 22 June 1941. The Soviet Union

²⁰¹ See sect. I.1.2 (Hoffmann); Werth, *Russia at War*, 122-3.

²⁰³ See Herde, *Pearl Harbor*, 36. ²⁰⁴ DGFP D xii, No. 628.

probably harboured no specific aggressive intentions in the summer of 1941, though the deployment of Soviet troops on the Soviet western frontier suggests that measures had been taken 'for all eventualities'.²⁰⁵ However, the Soviet deployment worried the German command, even though Halder, at a conference with army group and army chiefs of staff on 4 June 1941, played it down. He judged the Soviet deployment to be defensive and regarded a full-scale offensive by the Red Army as 'rather improbable'.²⁰⁶ According to the notes of another participant, Halder dismissed an offensive as 'nonsense'. Unlike Hitler, he did not even believe in the likelihood of a partial offensive against the Romanian oil region. Hitler's main worry, just as it had been before the attack on Poland, was that the opposite side might wreck his concept at the last moment by some gesture of concession.²⁰⁷ He wanted to solve Germany's strategic dilemma, in which she had landed through his policy, by a further warlike action. On 22 June some six and a quarter million soldiers were deployed along both sides of a front from Petsamo to Galati, including, on the German side, just short of six hundred thousand Romanians and Finns.

²⁰⁵ See Sect. I.11.2 (Hoffmann). On Soviet defence plans see Ziemke and Bauer, *Moscow to Stalingrad*, 18 ff., and Volkogonov, *Stalin*, 546 ff. Not even the renewed argument about responsibility for the German-Soviet war, rekindled by Viktor Suvorov in 1985, added any appreciable impetus to historical research, as no evidence was adduced for offensive intention on the Soviet side. The Red Army's capability of waging war had long been known. See Pietrow-Ennker, 'Deutschland im Juni 1941', and Gorodetsky, 'Stalin'. It is also unscholarly to draw conclusions about an aggressive foreign policy directed against the Third Reich simply on the grounds of Stalin's brutal domestic policy.

For an interpretation of Operation Barbarossa as a preventive measure we therefore so far lack not only the objective facts on the Soviet side, but also the indispensable prerequisite on the German side: a sense of Germany being directly threatened by the Red Army as a factor in the German supreme leadership's decision to attack the Soviet Union.

II. The Soviet Union up to the Eve of the German Attack¹

JOACHIM HOFFMANN

I. ORIGIN AND DEVELOPMENT OF THE RED ARMY

ON 22 June 1941 the world found itself faced with a war machine about which, generally speaking, only the vaguest ideas existed—the Red Army. Information on the development and organization of the Soviet armed forces was full of gaps, even in military circles. That was hardly surprising, considering that anything connected with their structure, or indeed with questions of Soviet national defence generally, was surrounded by a veil of absolute secrecy, a veil which even the military intelligence services and the military attachés accredited in Moscow only rarely succeeded in lifting.² As for the Red Army itself, it had by then shown only sporadic instances of its efficiency. The performance of the Soviet troops during the attack on Poland in 1939 had been completely unimpressive. Its initially not very distinguished operations in the Winter War against Finland had merely confirmed an unfavourable assessment of command and troops. Engagements such as those at Lake Khazan and Khalkhin-Gol in Mongolia in 1939, where the Red Army operated successfully against the Japanese and came out on top, had been in remote regions where non-Soviet observers had no chance of forming a judgement. Although it was realized in the Western countries that this was a mass army of considerable numerical strength, and more or less well equipped with material, its operational efficiency was not rated very high.³ The reason was, as Colonel-General Halder, chief of the Army General Staff, recorded,⁴ that it suffered from serious weaknesses of command and training, and also that its weaponry and equipment were regarded as deficient, if not in quantity then certainly in quality. The German military leadership therefore had no doubts that the Red

¹ *Preliminary Note.* The subject-matter of the present section makes it inevitable, as far as the attitude of the USSR is concerned, to rely predominantly—with the exception of a few accidentally discovered records and some published documents—on Soviet secondary literature. This, despite its diversity, reveals some common characteristics: anything of any advantage to the Soviet Union is invariably presented in a favourable light, and anything that might in any way be detrimental to its interests is invariably presented unfavourably. However, the Party-coloured picture of history, as painted by Soviet historiography, has never been 'monolithic', as may also be seen in the continuous use of circumlocutions. Comparative study of the literature published in the Stalin era, the Khrushchev era, and the Brezhnev era actually reveals remarkable differences. In particular, the works published after the Twentieth Party Congress until about the end of the 1960s offer quite a number of interesting insights and also provide a starting-point for critical historiography.

Army would not be able to stand up for long against the German Wehrmacht with its experience of war and habit of being victorious. Such views, moreover, were not confined to Germany. Military experts and staffs in Britain and the United States likewise credited the Soviet Union with no more than a slight power of resistance.⁵ The British War Office, for instance, proceeded from the assumption that the Soviet Union would be defeated within ten days at the most. Henry L. Stimson, the American defence secretary, Frank Knox, the American secretary for the navy, and General George C. Marshall, the US army chief of staff, expected the war to last no more than a few weeks. In the most favourable circumstances, Western military circles believed, the Soviet Union would be able to continue resisting for six months.

The underrating of the Red Army reflected in such judgements contrasts so strikingly with the ability it eventually demonstrated to accept the most serious defeats and yet offer growing resistance to the aggressors that it is appropriate to examine more closely the real nature of those troops and their strength and potential. Naturally, the real nature of the Red Army at the time of the German attack cannot be explained from that moment alone. An answer to the question of the specific character of the Soviet armed forces requires a survey of the entire period from their birth in revolution and civil war to their emergence as a modern force.

This process was initiated and promoted by the conviction, always held by Vladimir Ilyich Lenin and the leaders of the Bolshevik Party, that their position of power, captured by the Revolution, could not be safeguarded by ideological but solely by military means. Although from the start the greatest attention was devoted to the creation of reliable fighting forces, these efforts met with undreamt-of difficulties under the conditions of 1917-18. Defeats in the war against the central powers and the collapse of the Tsarist empire had shaken the Russian army to its foundations. Endeavours at democratization by the provisional government had further contributed to undermining the discipline and fighting efficiency of the troops. The bulk of the soldiers, drawn from the rural population, readily followed the slogans of the Bolsheviks, who had come to power by proclaiming an immediate conclusion of peace and the distribution of the land belonging to the large estate-owners.⁶ From the Bolsheviks' point of view the prime task was the smashing of the old army, which in their eyes had been an army of the 'exploiting class', in order to wrest that important military instrument from the hands of the 'class enemy'. Yet once they had attained power, the immediate destruction of the old army was no longer in their interest, at least not while the state of war against the central powers continued and while the young Soviet republic was threatened with intervention by the *entente* powers. Certain measures were therefore taken to 'neutralize' the army and, simultaneously, gain control of it by infiltrating their

own people into what command posts still existed. This purpose was served by the replacement of General Dukhonin by the Bolshevik cadet Krylenko as supreme commander-in-chief, the establishment of a revolutionary committee, and the dispatch of commissars, as well as by 'democratization' through the abolition of military ranks and the introduction of the election of commanders. But in spite of all efforts by Lenin that dual objective was not achieved. In the winter of 1917-18 the army was drifting towards total disintegration, so that the organization of their own fighting forces soon became a pressing task for the Bolsheviks.

In his endeavours to create a reliable military force Lenin was not in an easy position. On the one hand, the mobilization of the broad masses yearning for peace was scarcely possible, considering that the promise of an immediate conclusion of peace had carried the October Revolution to victory. On the other hand, Lenin, in organizing a 'Red workers' and peasants' army', was bound to run into conflict with certain trends among his own supporters and indeed with his own views. Ever since Karl Marx in his *Civil War in France*, regarded as 'one of the most important works of scientific Communism', had glorified the national guard of the Paris commune of 1871 as a kind of model of a proletarian fighting force,⁷ it was an article of faith among his followers that the fighting forces of any future state 'of the revolutionary dictatorship of the proletariat' must be of a similar character. Although the elective principle praised by Marx had substantially contributed to the ignominious collapse of the commune's fighting forces,⁸ what Franz Mehring called the 'hideously childish toy of the Revolution',⁹ and although Friedrich Engels in particular had long moved away from the idea of a 'people in arms' in the sense of the commune,¹⁰ Lenin initially clung to the commune model.¹¹ He was confirmed in that attitude by the successes of the Red Guards in the conquest of power for the Bolsheviks in Petrograd on 25 October 1917 and in other parts of the country, which seemed to provide brilliant confirmation of Marxist ideas. However, when the peace talks at Brest ended in failure and the Germans on 18 February 1918 launched an offensive along the entire front, the utter fragility of the revolutionary war-machine was revealed, just as in Paris in 1871. The Soviet forces, including the Red Guards, retreated in panic before the German troops. The victory won in conjunction with some revolutionary army formations against—it has to be admitted—a demoralized opponent inside the country simply could not conceal the fact that the Red Guards were not an organized or trained military force but scarcely more than a workers' militia, which, in spite of occasional enthusiasm, was unable to stand up to a solidly structured army. After the failure of the attempt to use what was left of

the old army to secure the Bolsheviks' position of power, and after the failure of endeavours to bring discipline into the workers' militias, Lenin eventually resolved to override the ideas and wishes of most of the Bolshevik military experts and to create a 'Red workers' and peasants' army' on a traditional basis. The successes of the German offensive induced Lenin to abandon his own military ideas and, as he himself formulated it, to return to the principle of discipline and order, so exemplarily demonstrated by the Germans, as the foundation of a regular army.¹²

On 3 March 1918 the peace treaty of Brest-Litovsk was signed on the basis of the German and Austrian conditions. The breathing-space thus gained was used by Lenin, subsequently to be hailed as 'the greatest army leader of all countries, all epochs, and all nations', to proceed at once with the creation of a 'Workers' and Peasants' Red Army' (*Raboče-krestjanskaja krasnaja armija*: RKKA). The real creator and organizer of this fighting force, entrusted with the task by Lenin, was the man whose existence Soviet military historiography has tried to hush up to this day—Lev Trotsky,¹³ since 19 March 1918 chairman of the newly established supreme war council and of the people's commissariat for military affairs, who thenceforth embodied supreme power of command under Lenin. During 1918 central command and administrative levels of the Red Army and Red Fleet were set up in rapid succession, and soon these had at their disposal appropriate bodies at *guberniya* [= provincial], district, and area level, performing all functions connected with recruitment, formation, training, supply, and command of the troops.¹⁴ In enforcing the principle of central leadership of the Red Army on the basis of absolute military and political discipline, Trotsky had to overcome considerable opposition from the ranks of militant Communists, who, in the Red Guards, in local soviets, and in the extensive partisan movement, supported the tradition of 'little' or 'irregular' war and could not accustom themselves to a hierarchical chain of command. These circles within the Party clung to Karl Marx's demand that the regular army had to be replaced by the people in arms, failing to realize that, on the contrary, the people in arms would have to be replaced by a regular army if the still unconsolidated Soviet power were to survive the dangers threatening from within and without. For three years Trotsky, according to his own words, had to wage 'day-in, day-out, a struggle against lack of discipline, dilettantism, and all kinds of anarchy'.¹⁵ Gradually he succeeded in overcoming the resistance of the left-wing military opposition and, with Lenin's support until 1920, in setting up a Red workers' and peasants' army organized into fronts, armies, and divisions, reasonably well equipped and based on obedience to orders; this force was able successfully to stand up to foreign intervention and to domestic counter-revolution. There was no longer any talk of democratization or elections. It was openly admitted that those

¹⁴ 50 let vooružennykh sil, 34–5.

¹⁵ Trotzki, *Rote Armee*, BA-MA RW 5/v. 462.

principles had been designed only to break up the old army.¹⁶ In defiance of the mood of the broad masses of the people, who wished nothing more fervently than to return to a peaceful life and who were not inclined to take up arms in defence of Bolshevik rule, general conscription was introduced for workers and peasants on 29 May 1918, and soon some 5.5 million men were in uniform. Soviet power, disregarding the profound war-weariness of the people, had transformed the whole country into a 'united armed camp'.¹⁷ All administrative and economic measures during that period of 'war Communism' served solely and exclusively the purpose of strengthening the Red Army and hence the consolidation of Bolshevik rule against domestic and foreign enemies.

In creating a modern mass army, one that was at the same time to be an army of a new type, an army of the dictatorship of the proletariat, Trotsky, chairman since 2 September 1918 of the revolutionary war council (*Revolutsionnyj voennyj sovet: Revvoensovet*), the supreme command and administrative body of the fighting forces, made use of two elements which initially no doubt interacted like fire and water, but which, tempered in the storms of the civil war and the war against the interventionists, eventually functioned in unison—the military experts of Tsarist Russia, without whom it would have been impossible to create a modern army, and the war commissars of his own party, without whom it seemed impossible to keep the former Tsarist generals and officers under political control. By August 1920 no fewer than 48,000 generals and officers, 14,000 medical officers, and 10,300 army officials of military rank, as well as 200,000 non-commissioned officers, all of whom, according to Trotsky's own words, had played an enormous role in the civil war, had been enlisted in the service of the Soviet government. The recruitment of these 'military specialists'—that was their official designation—was carried out under the guidance of the former imperial Russian general Bonch-Bruевич, who had gone over to the Bolshevik side: initially this recruitment was on a more or less voluntary basis, with service be made compulsory for all former officers after 29 July 1918,¹⁸ but constraint was also used against reluctant officers or members of their families.¹⁹ Forced, for the most part, into serving the revolutionary power, these officers began to reconcile themselves to the inevitable and to make a decisive contribution, despite themselves, to the development and victory of the Red Army. It was not the civil-war heroes glorified by Soviet propaganda, such as Budenny or Chapaev, but the organizational and leadership skills of the military specialists that enabled the Soviet power to hold out against the domestic and foreign threat. Although these military specialists were, at best, no more than tolerated, and although their services have never been adequately acknowledged, many outstanding leaders of the Red Army have subsequently come from their ranks,

such as the Marshals of the Soviet Union Yegorov, Tukhachevsky, and Shaposhnikov, and a whole string of well-known Second World War generals. The huge success of the experiment of making the military experts of the old army serve the Soviet cause was due primarily to Trotsky, who assured those officers loyally co-operating with the Soviet power of his personal protection, while leaving no doubt that 'ex-officers not up to expectations would have to face Draconian measures and, in the event of desertion, find that their families would be held liable. For their supervision he made use of the war commissars, whose duty subsequently, in constantly changing situations, was to ensure the political reliability of officers, as well as the Party's dominating influence in the fighting forces.

The establishment in March 1918, simultaneously with the creation of regular units of the Red Army, of an institute of war commissars, based on Party cells likewise set up at that time, provided the bond that was to ensure the political stance of the Red Army with its heterogeneous elements along the lines laid down by the central committee of the Russian Communist Party (Bolsheviks) (RKP [b]). Furnished as they were with full powers as representatives of the Soviet system, the war commissars were entrusted principally with the supervision of the military specialists and the swift curtailment of any counter-revolutionary intentions of hostile officers.²⁰ Every military order given by a unit commander had to be politically sanctioned by the war commissar's countersignature before it was executed; in the ideal situation the unit commander and the commissar would jointly discuss an order, the commander would issue it, and the commissar would help him put it into effect. At the superior level of fronts and armies revolutionary war councils were set up, which included, alongside the commanding officer, two war commissars; at the lower level of companies, batteries, and squadrons the corresponding functions were performed, after October 1919, by a political guidance officer (*politicheskiy rukovoditel: politruk*). The political importance attached to the commissars was reflected by the fact that, under the merciless conditions of civil and interventionist war, captured commissars were usually shot at once. British interventionist troops under Major-General Malleson also adopted these methods when, in 1918, they killed the celebrated 26 commissars, headed by the commissar-extraordinary of the government of the Russian socialist federative Soviet republic (RSFSR) for Caucasian affairs, Shaumyan, 'in a bestial manner'.²¹

Alongside the large group of military specialists Trotsky made great efforts to train his own stratum of Red commanders and officers from the ranks of reliable young Bolsheviks. A whole network of military academies, schools, and training courses was rapidly created for the raising of leadership personnel. The first classes for the training of new officers were held as early as February 1918. On 8 December 1918 the general-staff academy was inaugu-

²⁰ Petrov, *Stroitel'stvo politorganov*, 35.

²¹ 50 let vooruzhennykh sil, 40; Smirnov, 'Delo ob ubijstve bakinskih komissarov'.

rated as the first Soviet military academy.²² A military-engineering academy, a naval academy, and a military medical academy also started operations. By the end of 1920 the Red Army possessed eight military academies and over 150 military schools and classes. By that time 66 per cent of all Red Army officers had been trained in the Soviet era, and only 34 per cent, admittedly occupying important posts, were former officers of the imperial Russian army.

After 1920, following the victory over the White armies of Admiral Kolchak and Generals Denikin, Yudenich, and Vrangeli, once the Poles had concluded peace (1920), and once the *entente* powers had suspended their intervention and Soviet Russia had taken possession of the independent republics of the northern Caucasus, as well as of Azerbaijan, Armenia, and Georgia, and had more or less stabilized its power also in Turkestan, the time had come to place the Red Army on a peacetime footing. Demobilization of the 5.5 million men in the forces and their integration into civilian labour could no longer be delayed in view of the country's utterly wrecked economy after the war and the civil war. What remained unchanged was the importance of the security organizations. The task of the 'interior troops' was 'the struggle against political and economic counter-revolution, espionage, and banditry'; the frontier troops, created in 1924, had to guard the state borders. With their origin in the Extraordinary Commission for the Struggle against Counter-revolution and Sabotage (ČK), they were placed in 1922 under the State Political Administration (GPU) of the People's Commissariat of the Interior (NKVD), and in 1924 under the Amalgamated Political Administration (OGPU) of the NKVD of the Soviet Union. Heading these forces until 1926 was Feliks Dzerzhinsky,²³ one of the strangest figures of the Bolshevik Party, who has been called the 'knight of the revolution'. As for the Red Army's forces, which, in accordance with Lenin's demand, were to lose none of their combat efficiency through their numerical reduction, a relatively undisturbed period of development began in 1920. Admittedly, the peasant revolts in the Ukraine, in the Tambov *guberniya*, and in Siberia, the mutiny of 16,000 Red Fleet personnel of the Kronstadt garrison, demanding the restoration of basic freedoms for the 'workers and peasants' in 1921, as well as continually flaring disorders elsewhere,²⁴ time and again called for the employment of regular formations.

Demobilization was concluded in 1924 with the adoption of a new military-service law based on a combination of cadre and territorial principles. Only the divisions stationed, predominantly, in the western-frontier districts and the technical formations continued to belong to the active forces, which, like the Red Fleet, were operational at all times. In the territorial divisions only the training personnel were on active duty, while the bulk of the men were in civilian employment and, over a number of years, participated only in military

exercises. The whole system was a compromise between military and economic necessities, and dictated by the need to keep defence expenditure as low as possible and to integrate the work-force in the economic process. After the foundation of the Soviet Union in 1924, in addition to the standing and territorial divisions there were also national divisions, in which members of the minority nations did their military service.²⁵ The territory of the USSR was subdivided into the military districts of Moscow, Leningrad, Belorussia, Ukraine, North Caucasus, Volga, Central Asia, and Siberia; in addition there was an independent army in Transcaucasia.²⁶ After Trotsky's overthrow in 1925 Mikhail Frunze became people's commissar for army and navy affairs, and after his death the same year the post went to Kliment Voroshilov. The armed forces of the Soviet Union consisted of the Red workers' and peasants' army, the Red workers' and peasants' fleet, the air forces of the Red workers' and peasants' army, the interior and frontier troops under the control of the (O)GPU, and an 'escort guard'. Although in theory, under the 1924 constitution, the defence of the Soviet Union was the duty of every Soviet citizen, service in the armed forces was entrusted only to 'workers and peasants'. The bourgeoisie, or whatever was understood by that term, was to remain disarmed.²⁷

The fall of Trotsky, who had extensively backed the activity of former Tsarist officers, resulted in a perceptible lessening of the influence of those military specialists. As members of the educated strata were excluded from service in the forces, and as the officers recruited from the lower popular strata and put through short-term training frequently lacked the intellectual prerequisites, the standard of the command personnel at the middle and lower levels soon left much to be desired. An attempt was made in 1924-5 to remedy that state of affairs by a reorganization of military-training institutions and by an extension of the training period for junior, middle-ranking, and senior officers, as well as for the political personnel.²⁸ During the years which followed much attention was again given to the development of military-training institutions. By 1927 there were six military academies for the training of senior commanders and the military-political academy for the training of the senior political officers. For the purpose of unifying and modernizing the whole system of military training a start was made on the drafting of new service regulations for the Red Army and the Red Fleet. New active-service regulations provisionally introduced in 1925 were finalized and confirmed in 1929. The different services—infantry, cavalry, the air forces, and the navy—received new battle and service regulations after 1927; these reflected for the first time the specifically Soviet ideas of war under contemporary conditions. The year 1924 also saw the publication of the first issue of the army paper *Krasnaya Zvezda* (Red Star).

Under the leadership of Trotsky and of his successors Frunze and Voroshilov, the Red Army had thus, since the civil war and the war against intervention, acquired the appearance and character of a regular army. A first decoration had been instituted, the Order of the Red Banner, and entire units could be awarded this honorary banner. In its hierarchical structure the Red Army had also moved away from the equality principle in outward appearance. Since 1919 members of the junior, middle, and senior 'command staff' had again been wearing distinguishing badges in the shape of small triangles, squares, and diamonds on their collar patches and cuffs.²⁹ One special characteristic which distinguished the Red workers' and peasants' army from other regular armies and which was a reminder of its revolutionary origins was and remained the institution of war commissars, who continued to enjoy authority, far-reaching or more restricted according to political requirements. Although even the Bolshevik Party leaders realized that the best form of military leadership was the concentration of command in one person, the introduction of such a single-command principle was deliberately avoided for the simple reason that it seemed necessary to practise political supervision over the former Tsarist officers in positions of command. An additional reason was that the Red Army rank and file also needed continuous supervision and guidance, as for the most part the men had little taste for war and were anything but Bolshevik-minded. However, as new officers, reliable from the Communist Point of view, were beginning to move in larger numbers into positions of command, and as the Party apparatus became consolidated among the units, the question of strict Party supervision by the commissars now appeared in a new light. However, the revolutionary war council of the USSR, which examined that question in 1924, was unable to decide in favour of abolishing the system of commissars.³⁰ The desirability of the principle of single power of command was actually admitted—but only commanding officers who were proven Communists were to be entrusted with both the military-administrative and the political command of their units. Such officers were merely given a deputy in charge of political affairs. In most instances the position of the commanding officers was evidently strengthened in respect of military matters, though the war commissar, who had the support of the party-political apparatus in his work, remained fully responsible for the political reliability and morale of officers and other ranks. A decision of the Party's central committee in 1927 expressly reserved the right to reintroduce the commissar system as an instrument of political supervision for certain eventualities.³¹ Such an instance arose in 1937 in connection with the mass persecutions of Red Army and Red Fleet officers.³² The institute of war commissars, which had meanwhile been largely dissolved, was reactivated at the time of the great purges, but in 1940, when conditions had settled down again and command of

³² Schapiro, 'Große Säuberung'.

the forces was in the hands of officers loyal to Stalin, it was once more abolished. The fact that single command was reintroduced by a decree of the supreme soviet praesidium in 1940 and that commanders now had only a deputy for political affairs at their side³³ was largely due to the disappointing experience of the dual rule of commander and commissar in the campaign against Poland, in the Russo-Finnish Winter War, and during clashes in the Far East. Such considerations, however, were brushed aside when, at the beginning of the German-Soviet war and the crushing defeats at the fronts, Stalin believed he had every reason to doubt the loyalty of his commanders in the field. Only when the German offensive got stuck and when a change in the military situation began to take shape in October was the renewed commissar system loosened up again. The position of the commissars was a good barometer of how the political reliability of the army was assessed.

By the end of the 1920s, at any rate, the organization of the Soviet armed forces had been largely consolidated. A clear chain of command had been established, except that the provision of the Red Army with weapons, technical equipment, and vehicles was still unsatisfactory in the extreme. At that time there were no more than 7,000 worn-out artillery pieces, mostly of light calibre, 200 tanks dating from the First World War, 1,000 out-of-date aircraft, as well as a more 350 trucks, 700 staff cars, and 67 tractors. The newly started five-year plans (1929-32 and 1933-7), implemented with substantial help from foreign technicians, were to achieve a fundamental transformation in the equipment of the Red Army. The process of industrialization, of the establishment of a native heavy industry, stemmed from the wish to enhance the country's defensive capacity and included a rapidly growing armoured fighting vehicle and aircraft industry. In 1932, during the first five-year plan, 5,000 armoured fighting vehicles were built; by the end of the second five-year plan the figure was 15,000. The number of guns rose from 7,000 to nearly 56,000 modern types by the beginning of 1939.³⁴ During the eight years from 1930 to 1938 alone production of rifles increased from 174,000 to 1,174,000 annually, and that of machine-guns from roughly 41,000 to 74,500.³⁵ The aircraft industry, virtually created from scratch, which had produced an average of 860 aircraft in 1930-1, produced an annual average of 3,578 military machines in 1935-7.³⁶ Approximately 50 per cent of these were bombers and ground-attack aircraft, and 38 per cent were fighters. Naval shipbuilding also experienced a major increase during the first two five-year plans.³⁷ More than 500 vessels were launched during that period. In 1930 the first Soviet submarines went into service. By 1938 the Soviet submarine fleet had received an increasing number of vessels of different types. In the second five-year plan construction

also began of cruisers and destroyers of native design. To provide an idea of the magnitude of the Soviet rearmament effort, suffice it to say that whereas over the span of the first five-year plan military expenditure amounted to 4,900m. roubles, the figure during the second five-year plan was already 47,000m.³⁸

The process of equipping the Red Army and the Red Fleet with modern weapons and a modern war technology during the first two five-year plans had far-reaching consequences in terms of personnel and leadership: the need now was for officers and other ranks to learn to operate the new weapons and handle them under modern battle conditions. In these circumstances the instructional and training programmes of the Soviet armed forces were further developed. The separate faculties of the military-technical academy, established in 1932, were now developed into specialized academies for the officers of the various service branches. Thus there was soon a military academy for mechanization and motorization, an artillery academy, a military-engineering academy, an academy for military chemistry, a military academy of electrical engineering, a military-transport academy, and an academy for war economy. In the strategic and operational training of the senior commanders the general-staff academy, alongside the Frunze military academy, played an ever bigger role.³⁹ Towards the end of the second five-year plan there were altogether thirteen military academies and one military institute, as well as five military faculties at civilian universities. Training for young officers was provided by no fewer than 75 officers' colleges, 11 of them for artillery officers, 9 for tank officers, 4 for intelligence officers, 18 for air-force officers, and 7 for naval officers. The increasing respect enjoyed by the Red Army's officer corps was reflected in 1935 by the introduction of personal ranks for officers, with the customary designations from lieutenant up to colonel. Blyukher, Budenny, Voroshilov, Yegorov, and Tukhachevsky were given the rank of Marshal of the Soviet Union. For the remaining general-officer ranks the designations brigade commander (*kombrig*), divisional commander (*komdiv*), corps commander (*komkor*), and army commander (*komandarm*) first and second rank were kept until 1940 and only then replaced by the customary designations for generals.

The need for consistent and intensive training of all Red Army members in the new war techniques had by then become inescapable. Occasional military exercises of Red Army men no longer met requirements; in consequence the territorial principle, which in part still existed, was finally abolished in 1935 and all divisions of the Red Army were established on the cadre principle of a standing army. The Red workers' and peasants' army, whose strength had increased from 885,000 in 1933 to 1,513,000 in 1937, underwent a number of changes also in the structure of its controlling bodies. The revolutionary war council of the USSR was dissolved in 1934, the people's commissariat for

³⁸ Kravčenko, 'Ekonomičeskaja pobeda', 39.

³⁹ Štemenko, *General'nyj štab*, i. 6.

military and naval affairs was transformed into a people's commissariat for the defence of the USSR, and in 1937 a separate people's commissariat for the ocean fleet was established. Fundamental questions of national defence were examined by the newly created supreme military council of the RKKA and by the supreme military council of the ocean fleet. In 1935 the former staff of the Red workers' and peasants' army was transformed into a general staff of the Red workers' and peasants' army, and the then Marshal of the Soviet Union Yegorov was appointed its chief.⁴⁰

During the first two five-year plans the armed forces of the Soviet Union not only adjusted their organization to modern requirements and were furnished with up-to-date weapons and equipment on a generous scale, but were also greatly increased numerically. During that period, moreover, a whole number of Soviet officers came to the fore, who systematically studied the character of technological warfare, developed the application of the new weapons, and, from the 1930s onward, laid the foundations of Soviet military theory. These Soviet military theoreticians were often young officers, most of whom had begun their military careers in the Tsarist army and who now regarded their break with outdated military views and attitudes and the development of new principles of armed combat as their revolutionary deed. Among these theoreticians the most outstanding were the former Tsarist lieutenant-colonel and subsequent Marshal of the Soviet Union Yegorov,⁴¹ the former Tsarist second lieutenant and subsequent Corps Commander Eydemán,⁴² the RKKA divisional commander and chief of the operations faculty of the Frunze military academy, and subsequent professor of operational skills at the general staff academy, Isserson,⁴³ the Army Commander (1st rank) Yakir,⁴⁴ the former Tsarist colonel and subsequent Army Commander (1st rank) Kamenev,⁴⁵ the former Tsarist lieutenant-colonel and subsequent Army Commander (2nd rank) and chief of the Frunze military academy Kork,⁴⁶ the former Tsarist lieutenant-colonel and subsequent Marshal of the Soviet Union and chief of the Red Army General Staff Shaposhnikov,⁴⁷ the former Tsarist general staff officer and subsequent professor at the general staff academy, Lieutenant-General Shilovskiy,⁴⁸ the former Tsarist staff captain and subsequent Corps Commander Triandafilov,⁴⁹ the former Tsarist lieutenant and subsequent Marshal of the Soviet Union Tukhachevskiy,⁵⁰ the former Tsarist second lieutenant and subsequent Army Commander (1st rank) Uborevich,⁵¹ and the

former Tsarist staff captain and subsequent chief of staff of senior Red Army command authorities Varfolomeev.⁵²

What were the special characteristics of Soviet military theory, as developed at that time? In answering this question one has to proceed from the fact that Soviet military science assigned the decisive role in a future war to the army, with naval and air forces playing only a supportive role. The principal characteristic of Soviet military theory was its emphasis on offensive thinking: 'The operations of the Red Army will at all times aim at the annihilation of the enemy,' the new active-service regulations⁵³ stipulated. 'All combat, in attack and defence, serves the purpose of inflicting a defeat on the enemy, but only resolute attack in the direction of the main thrust, developing into relentless pursuit, leads to the total annihilation of enemy forces and material.' In order to avoid becoming bogged down in positional warfare, as in the First World War,⁵⁴ principles of 'in-depth operation' were developed especially by Tukhachevsky, Triandafillov, and Isserson.⁵⁵ This term signified an offensive operation with the use of artillery, armour, aircraft, and the parachute air-landing troops⁵⁶ first seen in manoeuvres in 1935-6, when they deeply impressed foreign military attachés. 'The modern means of overwhelming the enemy—primarily armoured fighting vehicles, artillery, aircraft, and mechanized units—employed on a large scale,' the regulations continued, 'provide the opportunity of simultaneously carrying the attack into the very depth of the enemy's order of battle, with the objective of cutting the enemy off, totally encircling him, and annihilating him.' This aim was to be achieved by directing the combat against the full depth of the opponent's 'tactical defence zone' by means of artillery, air operations against the reserves and the rear areas of the enemy's defences, penetration of the enemy's position by infantry with escorting armour, break-through of the long-distance armour into the depth of the 'tactical defence zone', pulling forward of mechanized and cavalry units into the deep rear of the enemy, and by the extensive use of smoke for purposes of concealment and deception. In the second phase of the attack the tactical success should thus be widened into success on a strategic scale.⁵⁷

The principles of such an offensive operation were laid down in 1933 in an essay entitled 'Principles of in-depth operation' (*Osnovy glubokoy operatsii*); they were further developed in the Red Army's military academies and staffs, and tested in practice in major manoeuvres, e.g. in Belorussia under Uborevich, in the Ukraine under Yakir, and in the Far East under Blyukher.⁵⁸ The active-service regulations issued in 1936 finally turned the new principles into obligatory training directives for the entire Red workers' and peasants'

army. Soviet military theory had thus received a forward-looking formulation, far outstripping operational and tactical views in western Europe, which were still conditioned by the lessons of the Great War.⁵⁹

Of prime importance, therefore, was the creation of armoured and air formations, capable of widening tactical penetrations into strategic success and of swiftly carrying operations into the enemy's hinterland. For the purpose of massive employment air squadrons had been amalgamated into air brigades, and heavy-bomber corps had been established. According to their designation, the air forces were divided into tactical ground-attack and long-range strategic bomber forces.⁶⁰ As for the use of armour, the tanks, in the Red Army too, were originally seen as support for the infantry. Tank battalions depended on co-operation with infantry divisions, and the mechanized regiments were attached to the cavalry divisions. In May 1930, however, an independent mechanized brigade was established and, in line with Tukhachevsky's and Triandafillov's recommendations—and still in peacetime—a start was soon made on the creation of large armoured formations. In 1932 there existed, as an independent operational formation, a mechanized corps consisting of two mechanized brigades and one rifle brigade, as well as of further special units, comprising a total of 490 tanks. This first mechanized corps was soon followed by three others, so that in 1932 the Red Army possessed four mechanized corps, several independent mechanized brigades, and independent armoured brigades, all of strategic significance.⁶¹

By 1935-6 the Red Army had acquired in every respect the character of a modern fighting force. Major-General Ernst August Köstring, the German military attaché in Moscow and a highly experienced and competent observer, described it as the best and soundest institution still to be found in the Soviet Union.⁶² However, the positive development which the Soviet forces were undergoing in that increasingly complex foreign-political situation was to be abruptly cut short and the structure of the Red Army and Red Fleet shaken to its foundations by the mass persecutions of the great 'purge' staged by Stalin. In June 1937 Marshal of the Soviet Union Tukhachevsky and seven other senior officers were arrested on threadbare charges of espionage, sentenced to death in a secret trial, and shot almost at once.⁶³ The arrests carried out in the Soviet armed forces in 1937 and throughout 1938 assumed a colossal scale.⁶⁴ Victims of the purge were three of the five Marshals of the Soviet Union (Blyukher, Yegorov, and Tukhachevsky), thirteen of fifteen officers of the rank of army commanders (Alksnis, Belov, Dubovoy, Dybenko, Fedko, Yakir,

Khalepsky, Kashirin, Kork, Levandovsky, Loktionov, Sedyakin, Uborevich), and a number of army commissars (Amelin, Bulin, Kozhevnikov, Mezits, Okunev, Osepyan, Shifres, Slavin, and others). The chief of the central political directorate of the Red Army, Gamarnik, allegedly committed suicide when he was arrested. Altogether 62 out of 85 corps commanders,⁶⁵ 110 out of 195 divisional commanders, 220 out of 406 brigade commanders, and about half of all regimental commanders were liquidated—a total of nearly 35,000 officers, which was about half of the Red Army's and Red Fleet's officer corps, as well as 20,000 political officers, about two-thirds of the total number.⁶⁶ Of 6,000 senior officers arrested, from the rank of colonel upwards, 1,500 were executed, usually after torture, and the rest disappeared in concentration camps. Especially affected was the central command apparatus of the Soviet forces, such as the people's commissariat for the defence of the USSR, the military council, the general staff, and the armed forces political directorate. Victims of liquidation were all the commanders of military districts along with their war councils, in addition to all the commanders of the air forces (with one exception), and all commanders of the navy, such as Dushenov, Kireev, Kozhanov, Muklevich, Orlov, Pantserzhansky, Sivkov, Viktorov, and others, as well as countless members of the teaching staff of the military academies and colleges, and the staff of all other military institutions and of the army's political apparatus. Not even well-known and successful armament designers such as Langemak, the creator of the multiple mortar known as 'Katusha' or 'Stalin's organ-pipes', or the mortar designer Shavyrin,⁶⁷ were spared. Indeed, the famous aircraft designer Tupolev only just managed to escape execution.⁶⁸

The decimation of the officer corps of the Soviet armed forces was only part of the purges which, since the assassination of Kirov in 1934, had been spreading throughout the country in ever new waves and which can only be described as 'pathological features', a kind of 'collective dementia'. The whole country was in a state of 'feverish excitement'. The first victims were the leading figures of the Bolshevik Party, the trail-blazers of the Revolution and Lenin's comrades-in-arms, such as Zinovyev, Kamenev, Bukharin, Rykov, as well as Trotsky's followers and former Mensheviks, social-revolutionaries, anarchists, and other members of left-wing groups; but soon the arrests extended to the totality of the Communist Party and to foreign Communists resident in the Soviet Union. Everybody was compelled to denounce everybody else. Officials of the Party and governmental apparatus were affected by the arrests just as much as figures in the economy, scientists, artists, and the leading strata of minority nations, and finally the broad masses of the popu-

⁶⁷ Vannikov, 'Iz zapisok Narkoma', 85. ⁶⁸ Majskij, *Vospominaniya*, II, 276.

lation. The victims of these mass persecutions were not only the arrested persons themselves, 'but also their families down to their entirely innocent children, whose lives were wrecked from the start'. On 7 April 1935 the Soviet government, in one of the 'most barbaric laws' of the twentieth century, imposed upon twelve-year-old children the same punishments as adults, including the death penalty. There was a wave of suicides among the now totally abandoned children of persons executed or arrested.⁶⁹ According to the investigations of Robert Conquest, who carefully analysed all available data,⁷⁰ an average of eight million people were held in Soviet concentration camps under unbearable conditions each year between 1936 and 1950; of these, 10 per cent, or 800,000 people, died annually, making a total of 11 million. During Yezhov's term as people's commissar of the interior, i.e. during the great purge, the 'Yezhovshchina', a million people were liquidated. To these 12 million victims of Stalin one should add the 3.5 million rural inhabitants who perished in the course of forcible collectivization, as well as 3.5 million kulaks who were deported to concentration camps and who likewise, virtually all of them, lost their lives. Conquest arrives at the conclusion that at least 20 million people fell victim to the Soviet extermination measures between 1930 and 1950. This total, however, as he points out, is more likely to be too low than too high, and the number of victims should probably be increased by a further 10 million.

The charges brought against Tukhachevsky and the military and political leaders of espionage, particularly for Germany, of betrayal of military secrets to that power, of secret collaboration with 'Fascist circles', and of preparation of an armed uprising—'fantastic in their incredibility'⁷¹ though they may seem—should be viewed against the background of former co-operation between the Red Army and the Reichswehr. As early as 1919 Trotsky, with Lenin's approval, had approached the German armament industry in order to interest it in producing aircraft, weapons, and ammunition for the Soviet Union. In 1921, moreover, military talks were held in Berlin and Moscow, when the Soviet negotiators allowed it to be understood that they would favour German support in an attack against Poland.⁷² These repeated negotiations between representatives of German armament firms and officers in the Reichswehr ministry, on the one side, and representatives of the Soviet government and the Red Army, on the other, produced palpable results soon after the conclusion of the Rapallo treaty in 1922. In line with the ideas of Trotsky, Radek, and the Red Army chief of staff Lebedev, German industrial enterprises, with the support of Reich Chancellor Wirth, set up a number of production centres in Russia—the Junkers plant for aircraft manufacture at

Fili, the Krupp plants in Petrograd, Shlisselburg, Tula, Zlatousk, and elsewhere, as well as factories for the production of ammunition. In addition, a German-Russian company Bersol set up a factory for the production of poison gas at Trotsk, near Samara.⁷³ Within the framework of co-operation on armament technology, further intensified by agreement after 1923, the deputy war commissar and chief of Red Army supplies Unshlikht, at a conference at the Reichswehr ministry in 1926, proposed German participation in the manufacture of heavy guns and optical instruments in the Soviet Union. Simultaneously, the chief of the Soviet ocean fleet Zof was negotiating with representatives of the German navy command about the transfer of blueprints for the construction of submarines.⁷⁴ During those years Germany received 300,000 artillery shells out of the production of the Soviet Union, a deal cleverly exploited in domestic political propaganda since, as a leaflet from that period put it, those shells could very well have been used for fighting the German proletariat.⁷⁵ As late as 1930 negotiations were still being conducted between on the one hand People's Commissar Voroshilov, his deputy Unshlikht, and Army Commander Uborevich, and on the other General Ludwig, head of the Reichswehr armament department, and representatives of German firms such as Krupp and Rheinmetall concerning the further rearmament of the Soviet Union.⁷⁶

Since the beginning of the 1920s there had developed, in addition to co-operation in the armament sector, a purely military type of co-operation, from which both countries benefited equally. The Soviet Union was generously supplied with German military directives, strategic and tactical studies, and similar material because, as Radek put it, the Red Army of 1922 was especially interested in raising the still rather low professional standards of its officers. Germany's gain was more practical. The Reichswehr was given an opportunity in the Soviet Union to test military aircraft and tanks, both prohibited under the treaty of Versailles, as well as war-gas, and to train the appropriate personnel on the spot. After preliminary negotiations with Rozengolts, the chief of the Soviet air forces, in 1924 the air centre of Lipetsk was first put into operation,⁷⁷ where altogether 450 German fighter pilots and observers were trained over the years and the tactical and technical characteristics of military aircraft tested in co-operation with Soviet personnel. In 1927-8 there followed the establishment of a school for training and techniques in gas warfare on an extensive territory, from which all inhabitants had been evacuated, near Trotsk; its cover-name was 'Tomka'. Eventually an armoured fighting-vehicle school was established in Kazan on the Volga.⁷⁸ By setting up those 'stations' under the control of the Reichswehr ministry and directed by 'Zentrale Moskau' under Colonel Thomsen and Major Dr Ritter von Niedermayer, the

Soviet Union contributed, to a degree not to be underrated, to the strengthening of Germany's military potential. In the opinion of competent judges, without the training and development work performed in the Soviet Union it would have been impossible to bring the German armour and the German air force to the state of proficiency they achieved after 1933.⁷⁹ To the Soviet Union, in return, the participation of Soviet officers in military-training events, troop inspections, and war-games in Germany was no doubt of equal importance.⁸⁰ A number of field commanders of the Red Army, including Army Commanders Yakir and Uborevich, as well as Corps Commanders Eydemann and Uritsky, also participated in secret general-staff training courses in Germany. Altogether it is thought that no fewer than 120 Soviet senior officers were able to complete their training in Germany.

German-Soviet co-operation in the military and armament fields resulted in direct official contacts between Soviet politicians and military men and German officers; despite the reserve shown by the Russians, these had led to better mutual acquaintance and understanding. Not only Trotsky, Radek, Rykov, Krasin, and Krestinsky—to name but a few prominent Bolshevik functionaries—had negotiated with the Germans. A whole string of Soviet senior officers had made contact with them. A particularly vigorous champion of collaboration with the Reichswehr was People's Commissar Voroshilov, who, between 1928 and 1932, was in direct touch with leading figures of the German army command, such as Generals Werner von Blomberg, Kurt Freiherr von Hammerstein-Equord, Wilhelm Heye, and Adam, and who had invariably shown himself 'most obliging'. It was Voroshilov, moreover, who in 1928 specifically proposed to Blomberg a German-Soviet alliance against Poland in the event of either country being attacked.⁸¹ Other Soviet figures involved in negotiations or conversations with German military men were the Soviet air-force chiefs Rozengolts, Baranov, and Alksnis, the ocean-fleet chiefs Zof, Muklevich, and Orlov, the Red Army chiefs of staff Lebedev, Yegorov, and to a lesser degree Shaposhnikov, the field commanders Blyukher, Yakir, Tukhachevsky, and Uborevich, and the chief of Red Army supplies, Unshlikht. Even though co-operation between the Reichswehr and the Red Army came to an end after Hitler's rise to power, many a senior Red Army officer continued to display a friendly, and indeed cordial, attitude towards the highly respected German military attaché in Moscow. General Köstring reports a (possibly authorized) approach made to him by Yegorov, the Red Army chief of staff, who conveyed his gratitude for what Soviet officers had learnt during their stay in Germany.⁸² People's Commissar Voroshilov in a conversation with General von Blomberg likewise remarked how 'very valuable' the study of German training methods had been to the Red Army.⁸³ On

the occasion of the departure of the German ambassador, Herbert von Dirksen, in October 1933 Deputy People's Commissar Tukhachevsky told the chargé d'affaires Fritz von Twardowski 'in all seriousness' that the Reichswehr had been the teacher of the Red Army at a difficult time, that this would never be forgotten, and that the 'Red Army would never, never give up any part of its co-operation with the Reichswehr'.⁸⁴ And in January 1934 Voroshilov, speaking to the new German ambassador, Rudolf Nadolny, allowed it to be understood that the Red Army was hoping for a restoration of friendly relations with the Reichswehr.⁸⁵

This basically pro-German attitude of many senior officers in the Red Army, which is unlikely to have remained hidden from Stalin, might seem at first sight to justify a story spread after the war: that forged documents of the Reichssicherheitshauptamt (the SS central intelligence department) concerning secret collaboration between the Red Army leadership and Germany had been passed on to Stalin by way of the Czechoslovak president Beneš.⁸⁶ Yet even if the contents of these documents were 'unconditionally regarded as the truth', even if they really represented a 'provocation of the Fascist secret service' in a 'monstrous and diabolical' manner, they could never justify carnage on a scale 'virtually bearing the mark of dementia'.⁸⁷ Thus a more convincing explanation—if indeed there can be a rational justification—seems to be that the liquidation of the military leadership stratum of the Soviet armed forces was connected with Stalin's struggle to consolidate his own position of power. To Stalin, however, this meant the liquidation not only of his actual but also all his potential opponents, and ultimately also of those Red Army officers who did not owe their positions exclusively to Stalin or who, looking back to the days of the civil war, might tend to regard him as their equal. Thus it was not so much the former military specialists like Shaposhnikov who were affected by the great purge but the heroes of the civil war and the most gifted unit commanders of the Red Army.

Contrary to the most recent interpretations,⁸⁸ Stalin's action against the officers of the Red Army and Red Fleet meant a disastrous weakening of Soviet armed strength. This was admitted by Nikita Khrushchev himself when, at the twentieth congress of the CPSU in 1956, he blamed those mass reprisals for the conditions 'which prevailed at the beginning of the war and which most seriously endangered our country'.⁸⁹ That view was shared by a whole string of authoritative Soviet military leaders. Thus Marshal of the

Soviet Union Zakharov described the liquidation of the 'most experienced and, in terms of military theory, best-prepared cadres, of the most gifted researchers and qualified army leaders' as having caused 'enormous damage' to the army and the whole country.⁹⁰ A similar formulation was used by Army General Shtemenko: 'a great misfortune for our army and the whole country'.⁹¹ For Marshal of the Soviet Union Bagramyan the liquidation of the best Soviet army leaders was one of the principal reasons for the serious failures in the initial phase of the war.⁹² Even Marshal of the Soviet Union Zhukov, who for obvious reasons tried to exculpate Stalin and his own activity, could not but admit that the 'distasteful arrests' had had an extremely negative effect on the development of the Soviet armed forces.⁹³

This is an appropriate point at which to list some of the consequences of the purge for the operational readiness of the Soviet forces. The liquidation of 'ten thousands of . . . commanding and political officers' meant, first of all, that all vacated posts had to be filled with officers who for the most part lacked the necessary knowledge and experience, and who, often enough, were careerists and 'incompetent lick-spittles'. These (as they were called) 'bold advances' proved particularly damaging in the senior command staffs and special services. The Frunze military academy, for instance, was compelled to fill the gaps made in its teaching staff by line officers with no scientific or educational experience, which seriously impaired teaching work.⁹⁴ As late as the autumn of 1940, of 225 regimental commanders checked at random there was not one who had graduated from the academy; 25 of them had graduated from a military college, while the rest had merely completed courses for lieutenants. The purges, moreover, had resulted in a serious undermining of military discipline, since all Red Army troops had for years been encouraged to unmask their superior officers as secret enemies. Everywhere an atmosphere of 'fear, distrust, and suspicion' was spreading; everywhere 'sabotage and treason' were suspected, so that any personal initiative and any readiness to take responsibility were paralysed.⁹⁵ No less disastrous were the effects of the purge on Soviet military theory, which had only recently received a stamp of modernity with the doctrine of in-depth operation by massed armour and air-force units in the enemy's hinterland. The arrest of all officers concerned with the development of these modern command principles meant that the theories of those 'enemies of the people' were also swept away as sabotage. All publications by officers in disgrace were confiscated and a large portion of military literature and official manuals disappeared from the libraries; in consequence there was growing uncertainty about future training programmes. The further development of the principles of in-depth operations came to a halt. Serious study of the problems of modern war was replaced in the Soviet Army by the practice of collecting casual remarks made by Stalin on military issues—even

if they were totally untenable—as the ‘inspired revelations’ of a great general and of basing the training of the armed forces upon these ‘most important laws’.⁹⁶

2. THE RED ARMY UNTIL THE BEGINNING OF THE GERMAN-SOVIET WAR

Since 1937–8 the armed forces of the Soviet Union had been in a strange dichotomy: leadership and morale, the spiritual strength of the army, had suffered grave damage as a consequence of Stalin’s purges, while its physical strength had been growing vigorously as a result of the high-volume output of the armament industry. On the issue of operational principles, however, the Red Army was now moving in reverse, since even the general-staff academy had meanwhile retreated from the principles of in-depth operation and of the employment of armour ahead of the army front line.⁹⁷ This was happening at the very time when in Germany, under the influence of Guderian and with limited support from Colonel-General Ludwig Beck, chief of the general staff, the concept of independent operations by armoured formations was beginning to prevail over the opposition of conservative views.⁹⁸ That erroneous trend in the Soviet Union was further strengthened by the conclusions which it was believed had to be drawn from the fighting against the Japanese at Lake Khazan in July–August 1938 and on the Khalkin-Gol river in May 1939, and in particular from the Spanish civil war, in which well-known Soviet military leaders of the Second World War, such as Pavlov, Malinovsky, Voronov, Meretskov, Batov, and others, had participated as military advisers. In Spain tanks had been used mainly in support of infantry, and it was therefore thought that in future, too, they were primarily designed to ensure the success of conventional attacks. The fact that armour and aircraft were weapons which fundamentally changed the character of an offensive, or that they were of strategic rather than of merely tactical importance, had been completely forgotten. That assessment of experience in the Spanish civil war was to result in the abolition of the mechanized corps, now called armoured corps, an organizational step which necessarily deprived in-depth operations of their material basis.⁹⁹ During discussions in a special commission presided over by Marshal of the Soviet Union Kulik, the deputy people’s commissar for defence, it was in particular Corps Commander Pavlov, chief of the armoured forces directorate, who argued the view that armoured corps with 560 tanks were too cumbersome to be moved in semi-strategic operations.¹⁰⁰ Admittedly, the majority of the members of this commission of the supreme war council, sitting in August 1939, still came out in favour of keeping the corps formations.

¹⁰⁰ Ryžakov, ‘K voprosu o stroitel’stve’, 109, also for the following passages.

But when the campaign in Poland in September 1939 revealed considerable difficulties in the handling of the XVth and XXVth Armoured Corps employed there, and when the armoured formations lagged behind even the cavalry, evidence of the unsuitability of large armoured formations seemed conclusive. In view of that bad experience, the supreme military council in November 1939 decreed the disbandment of the armoured corps and their replacement by 15 motorized divisions. Altogether 4 such divisions were established by May 1940, each consisting of 1 tank regiment, 2 motorized rifle regiments, 1 artillery regiment, and 1 reconnaissance, signals, and sapper battalion, as well as special units, and totalling 275 tanks. In addition to the motorized divisions, in May 1940 the Red Army had 35 armoured brigades of 258 tanks each, as well as 4 armoured brigades of 156 tanks each for reinforcement of the rifle corps. In addition, there were 20 independent tank regiments within the framework of the cavalry divisions and 98 independent tank battalions within that of the infantry divisions.

The reorganization of the armoured troops at the beginning of the Second World War, between November 1939 and May 1940—that is, the disbandment of the armoured corps—is judged throughout Soviet military literature to have been a mistaken and damaging measure, as it implied the abandonment of the use of large armoured formations for independent operations.¹⁰¹ As part of the rehabilitation of Stalin, there have recently been attempts to justify the measure by the argument that motorized divisions and armoured brigades are more mobile and easier to control than large corps formations.¹⁰² However, these authors overlook the fact that the difficulties in controlling the armoured corps were largely due to the inadequacy of communications. And the inadequate provision of the Red Army with communications equipment, the neglect of communications generally, was in turn the direct result of interference by Stalin, who had ordered the chief of the communications directorate of the Red Army, Corps Commander Longva, his deputy, Divisional Engineer Aksenov, and a large number of other communication specialists to be arrested and shot, and who had brusquely rejected all requests to remedy the serious shortcomings in communications technique.¹⁰³

The disbandment of the armoured corps at the very time when the Wehrmacht was so strikingly demonstrating the operational potential of large armoured formations was so much at variance with actual requirements that the measure was far from unanimously welcomed even in the Soviet Union. However, anyone venturing to suggest that there were lessons to be learnt by the Soviet forces had to expect persecution and reprisals. As for the German successes in Poland, the official Soviet line continued to be that the rapid

collapse of that state and its army was due exclusively to the 'rottenness of the regime' and to the 'disruption of the hinterland by the Fascist fifth column'—not to the superiority of the German forces or the employment of large armoured formations. Divisional Commander Isserson, professor of operational skills at the general-staff academy, who had nevertheless published a piece correctly describing the fighting in Poland as the new form of in-depth operation, was instantly arrested. It was traditional among Soviet authors to try to conceal, or fudge, or—like Marshal of the Soviet Union Zakharov¹⁰⁴—even deny the fact that it was German successes which induced the Soviet military leadership to reconsider the appropriate organization of armoured troops and the principles of their employment. However, the majority of military historians acknowledge that it was the employment of massive armoured forces by the Wehrmacht in Poland and, even more so, in France which, about the middle of 1940, provided the impetus for the re-establishment of mechanized corps in the Soviet Union.¹⁰⁵ In fact 'the summer interval of 1940' marked 'a turning-point in questions of instruction and training of the army on a new basis, hardened by the experience of the war'.¹⁰⁶

On the strength of an analysis of the German operations in the war against France, carried out by the people's commissariat for defence, Stalin gave orders on 6 July 1940 for mechanized corps to be set up, consisting of two armoured divisions and one motorized division, now with between 1,000 and 1,200 tanks at their disposal. By the end of 1940 nine mechanized corps had been formed: I Corps in the Leningrad military district, III and VI Corps in the 'Western special military district', IV, VIII, and IX Corps in the Kiev special military district, II Corps in the Odessa military district, V Corps in the Trans-Baykal military district, and VII Corps in the Moscow military district; moreover, one independent armoured division each was stationed in the Transcaucasian and in the central Asian military districts. As part of a further strengthening of the Red Army the establishment was begun in February 1941 of 21 further mechanized corps; however, this met with considerable difficulties because of a shortage of trained personnel and of tanks of modern design.¹⁰⁷

The question which arises in this context is: What ideas on the course or character of a future war did the Soviet military leadership have on the eve of the German attack, and what principles of command were to be applied in the Red Army? In line with the active-service regulations revised in 1939, Soviet military theory was entirely based on the idea of offence. The Red Army was designed, in the event of war and even in repulsing an attack, to carry an

immediate large-scale offensive into the enemy's territory, totally annihilate him there, and achieve victory with only slight casualties on its own side.¹⁰⁸ In this connection Frunze had first held the view that a future war would trigger off an intensified class struggle within the country of the Soviet Union's adversary. Tukhachevsky and others even regarded the proletariat in the enemy's country as a potential ally of the Red Army, and he therefore denied the need for withholding one's own strategic reserves.¹⁰⁹ As the offensive was to be mounted with the entire might of the Soviet forces, these forces, as will be shown in detail, were mostly concentrated near the state frontiers. Soviet military theory, moreover, proceeded from the assumption that 'wars nowadays are no longer declared',¹¹⁰ as every attacker was naturally anxious to enjoy the advantage of surprise. 'Surprise has a paralysing effect,' it was stated in the service regulations, 'that is why all combat operations must be carried out with maximum concealment and maximum speed . . . The troops of the Red Army must be prepared at any moment to reply with a lightning-like blow to any surprise by the enemy.' The idea that the 'Red Army will be the most offensive army ever',¹¹¹ that in the event of hostilities it would unhesitatingly go over to the offensive against the enemy's territory, had the status of law during the period of the 'Stalin personality cult' and was not subject to theoretical discussion.

However, the course of military operations against Poland, and more particularly Finland, had revealed grave deficiencies in the command and training of the troops, which seriously called in question the offensive role of the Red Army.¹¹² The people's commissar for the defence of the USSR, Marshal of the Soviet Union Semen Timoshenko, whose 'purposeful determination and great seriousness' had deeply impressed General Kōstring, the German military attaché, used the whole weight of his personality in order to remedy those deficiencies and improve the training of officers and men. By Order No. 120 of 16 May 1940 staffs and service branches were instructed to use the summer period to make the military training of the troops as realistic as possible.¹¹³ In consequence, exercises during the summer and autumn of 1940 attached great importance to co-operation of infantry with artillery as well as with tanks and aircraft, live shells frequently being fired in the preparatory bombardment. Because the Red Army had encountered great difficulties during the Soviet-Finnish war in its attempt to break through the fortifications of the 'Mannerheim Line', particular attention was now being paid to the problems of penetrating the enemy's defensive front. The infantry was practising the execution of assaults with tank and air support immediately behind a rolling artillery barrage. The air force, too, began to prepare increasingly for joint

operations with the ground forces and for low-level attacks against ground targets. A conference of leading officers under Timoshenko's chairmanship, held in December 1940-January 1941 to examine past experience in combat training, came to the conclusion that only the penetration of the enemy's front provided the precondition for operational manoeuvring in the depth of his hinterland.¹¹⁴ Although General Romanenko had pleaded for the detachment of strong operational assault forces reinforced by aircraft and artillery, on the model of the Germans in their campaign against France,¹¹⁵ it was nevertheless decided to use the armoured formations only for enforcing and developing the breakthrough. Similarly, it was the prime task of the air forces, subdivided into front and army air forces, to concentrate on the enemy's defensive front. In view of the complex conditions of mechanized combat, it was considered necessary to improve the strategic and tactical understanding of senior staffs, and of the command personnel at all levels generally, as these had declined alarmingly after the purges. This end was served by the people's commissar's directive of 25 January 1941, 'On the operational training of senior leadership cadres in formation, army and front staffs', as well as by Order No. 30, issued on 21 January 1941, which called for a further intensification of realistic training and political schooling in 1941.

Of considerable importance were the 'Disciplinary penal regulations of the Red Army', introduced on 12 October 1940 by Order No. 356 of the people's commissar for defence;¹¹⁶ these suspended the existing 'Preliminary disciplinary penal regulations of the Red Army' of 1925 and made 'a clean sweep of the libertarian achievements of the Revolution'. These 'exceedingly severe' new regulations, 'in the interest of the defence of the socialist state', laid down the 'most severe compulsory measures' in the event of any violation of discipline. The theoretically still valid concept of a 'criminal order' by a superior was now abolished. Any order by an officer or person of superior rank was a law unto the subordinate and had to be implemented without contradiction, accurately and punctually. In the event of disobedience or of wilful violation of discipline or good order any officer, even in peacetime, was now not only entitled but actually obliged to resort to all measures of enforcement, including the use of his weapons. As for the consequences of such actions, he was acquitted in advance. Officers failing to show the necessary hardness or resolution in such cases, or failing to take all necessary measures to enforce compliance with an order, were handed over to military tribunals. The 'Red Army's Soviet discipline' was to differ fundamentally, by the severity and strictness of its demands, from the 'class-structure discipline' of all other armies.

¹¹⁴ Zhukov, *Reminiscences*, 219 ff.

¹¹⁶ *Disziplinarstrafordnung* [Disciplinary penal code] 1941, BA-MA RW 4/v. 328; note for report OKH/OQu IV/GenStdH/Abt. Frd Heere Ost [IIc] No. 3824/40 geh. 12 Nov. 1940, BA-MA RH 19 I/122.

Regardless of Timoshenko's vigorous efforts to ensure the Red Army's combat efficiency, there is no denying the fact that Soviet theory was bogged down between the ideas of mobile and positional warfare. The fundamental emphasis placed by Soviet strategic thinking on offensive operations had led, at the same time, to a neglect of defensive fighting. Strategic and tactical defence, the possibilities of retreat and of combat under conditions of encirclement, were not, of course, totally ignored but were considered admissible only in certain directions and as temporary measures.¹¹⁷ On no account could defensive considerations call into question the principle that the Soviet armed forces would under all circumstances carry the war into the enemy's territory. Only behind closed doors, in certain circles of the general staff and of the general-staff academy, was the question examined of what would have to be done if the war were to take a different course and if, in the initial phase, the Red Army found itself forced on to the defensive.

If offence, therefore, in line with Soviet theory, represented the 'foundation of warfare', and if it was the task of the Red Army to seek out and destroy the enemy on his own territory, then this presupposed that the Soviet Union was in a position to supply the army with the war material necessary for that purpose. The objective of providing it with its material basis was served by the third five-year plan, which started in 1938 and built upon its predecessors, envisaging a massive strengthening of the Soviet Union's economic and military might. During the preceding years a large number of enterprises of the processing industry had already been set up on the basis of the coal and iron and steel industries in the south of the country, on the Dnieper, Donets, and Don, as well as in the Volga basin, in the regions of Moscow and Gorky (Nizhny Novgorod), and elsewhere. For reasons of dispersal new production facilities of the heavy and chemical industry were now being increasingly set up also in the eastern parts of the country, in the Urals, central Asia, eastern Siberia, and even the Far East, on the basis of the rich raw-material and energy resources located there.¹¹⁸ The creation of a second industrial base in the eastern parts of the country was of considerable strategic importance, as these plants would be virtually beyond the reach of a potential enemy. In 1940 the coalmines of Kuznetsk, Karaganda, the Pechora region, near Irkutsk, Chita, and Sangar already accounted for 35 per cent of the total Soviet output of coal and for 25 per cent of coke production. During the same year the iron and steel plants established in the eastern parts of the Soviet Union—at Magnitogorsk, Kuznetsk, Novotagil, Chelyabinsk, and Novosibirsk—were supplying 28 per cent of the total output of iron ore, 28 per cent of pig-iron, 37 per cent of steel, and 36 per cent of rolling-mill products. Some 25 per cent of the country's total energy was generated in the east, as was 12 per cent of crude oil. The importance which this second industrial base had attained by 1940 can further

¹¹⁷ *Istoriya Velikoj Otečestvennoj vojny*, i. 519.

¹¹⁸ Kravčenko, *Voennaja ekonomika*, 50 ff.

be gauged from the fact that over 50 per cent of the 31,649 tractors manufactured in the Soviet Union and 14 per cent of its 58,437 machine-tools were produced there.

Altogether, 1,500 major enterprises were commissioned in the Soviet Union during the first five-year plan, 4,500 during the second, and 3,000 during the first three years of the third five-year plan; all of these could be fully switched over to armament production whenever the need arose.¹¹⁹ Vast sources of energy were available. Coal production alone rose from 128m. t. in 1937 to 166 m. t. in 1940. During that year also the Soviet Union produced 14.9m. t. of pig-iron, 18.3m. t. of steel, 13.1m. t. of rolling-mill products, 31.1m. t. of crude oil, 914 railway engines, 32,000 rail waggons, and 58,437 machine tools. The grain harvest totalled 38m. t. Crude oil and grain excepted, these production totals were lower than those current in Germany, but their rate of growth was disproportionately greater; the objective was to approximately double the total volume of industrial production during the third five-year plan. Simultaneously, large quantities of raw materials and foodstuffs were being stockpiled, predominantly so as to keep the Red Army supplied during the first few months of war.¹²⁰ The degree to which the USSR's planned economy was purely a rearmament economy is revealed by the high proportion of openly recorded military expenditure in the country's overall expenditure. Expenditure on the armed forces and on the provision of all kinds of military material rose dramatically during the last few years before the war. In 1938 it amounted to 27,000m. roubles, in 1939 to 34,500m. roubles, in 1940 to 56,900m. roubles, and in the first half of 1941 to as much as 83,000m. roubles, or 43 per cent of all state expenditure. This increase in the military budget of the Soviet Union was accompanied by a corresponding growth of the armament industry in the narrower sense.

Even during the first five-year plan the foundations had been laid for the production of modern technological weapons and war equipment, aircraft, all categories of artillery and new types of ammunition, automatic infantry weapons, etc. in specialized enterprises. The Soviet armament industry developed its capacity at great speed. Thus tank production rose from 740 in 1930 to 3,139 in 1937. Altogether 5,000 tanks were manufactured during the first five-year plan, and by the end of the second five-year plan, in 1937, the Red Army possessed no fewer than 15,000 armoured fighting vehicles, 12,000 of which were modern models.¹²¹ Another 2,270 were produced in 1938, and a further 7,000 between 1 January 1939 and 22 June 1941.¹²² Stalin told Harry Hopkins, the adviser to the American president, that the Red Army had 24,000 armoured fighting vehicles at the beginning of the German-Soviet war, a figure confirmed by production statistics.¹²³ Of these 24,000, 1,861 were medium or heavy tanks of the new T-34 and KV (Klim Voroshilov) models,

which surpassed all German types in weight, armour, weaponry, and engine performance.¹²⁴ The way in which industry had been switched to the production of these new models is revealed by the fact that 358 T-34 and KV tanks were produced in 1940, whereas 1,503 had already been built in the first six months of 1941. Although at the beginning of the war the armoured formations were still predominantly equipped with the 'older' T-26, BT-7, T-28, and T-35 models, it should be borne in mind that even they were superior in their combat qualities to the German Panzer-I and Panzer-II types, and in some respects superior, or at least equal, even to the Panzer-III and Panzer-IV.¹²⁵ An outstanding authority, Marshal of Armoured Forces Poluboyarov, wrote after the war that the Soviet armoured forces 'at the beginning of the Great Fatherland War were superior in technical equipment, organizational aspects, methods of employment, and also numerically, to any other foreign power'.¹²⁶

Production of guns, like production of armour, had grown rapidly since 1930. Whereas in 1930 the number of guns of all calibres produced was 1,911, by 1937 the number was 5,020. In 1938 gun production rose to more than 12,500 pieces. By the end of that year the Red Army possessed some 56,000 guns. During the period from 1 January 1939 to 22 June 1941 Soviet industry produced a further 92,578 guns and mortars,¹²⁷ so that at the beginning of the German-Soviet war the Red Army had approximately 148,600 guns and mortars at its disposal. Several models, according to Soviet assessment, had outstanding combat characteristics, such as the 7.6-cm. Model-1939 divisional artillery piece, the 12.2-cm. Model-1938 howitzer, and the 15.2-cm. Model-1937 howitzer gun. In addition there were 8.5-cm. anti-aircraft guns, 21-cm. guns, 28-cm. mortars, and 30.5-cm. howitzers, as well as 8.2-cm. battalion and 12-cm. regimental mortars.¹²⁸ Production of the 4.5-cm. anti-tank gun, which possessed outstanding combat characteristics and was said to have pierced the armour of all German tanks, had been halted before the war at Stalin's behest. The Red Army's artillery is altogether presented in Soviet accounts as superior to that of any potential enemy in virtually every respect.¹²⁹

Great efforts were also made to increase production of small arms and automatic infantry weapons. In 1930 some 174,000 rifles and 41,000 machine-guns were manufactured; in 1938 the figures were 1,174,000 rifles and 74,500 machine-guns. Between 1 January 1939 and 22 June 1941 some 105,000 light, heavy, and super-heavy machine-guns were produced, as well as 100,000 submachine-guns.¹³⁰ The Red Army was equipped with the Model-1891/1930 infantry rifle, the Model-1938 carbine, and, for automatic weapons, the Simonev Model-1936 and the Tokarev Model-1940 self-loading rifles, the

Degtyarev and Shpagin submachine-guns, the Degtyarev light machine-gun, the Maxim and Degtyarev heavy machine-guns, as well as the tank, anti-aircraft, and aircraft machine-guns developed from them.¹³¹ All small arms and automatic infantry weapons, if one accepts the judgement of Soviet sources, were likewise superior to those of foreign armies, or at least in no way inferior.¹³²

The aircraft industry underwent a similar rapid development during the period of the three five-year plans. Production of military aircraft was stepped up from 860 machines in 1930 to 3,578 in 1937. In 1938 factories already produced 5,500 aircraft,¹³³ and between 1 January 1939 and 22 June 1941 the figure was no less than 17,745 military aircraft of all types.¹³⁴ Most of the aircraft produced, however, were older models which were inferior to comparable German machines. Nevertheless, even older types, such as the well-known I-16 fighter ('Rata') showed a remarkable performance even according to German assessments, and certainly proved a hazard to German bombers through their manoeuvrability. By 1940, however, serial production had also begun of modern fighters, ground-attack aircraft, and long-range bombers; by the beginning of the war 3,719 of these had been manufactured, 2,650 in the first half of 1941 alone. Production was growing by leaps and bounds. It was intended that 3,950 military aircraft of all types should be produced in the first half of 1941, and as many as 9,800 in the second half.¹³⁵ As for the new models, these were said by Soviet sources to have been not only not inferior to German models but indeed superior in combat and flight characteristics.¹³⁶ Thus the maximum speed of the German Me-109 in 1941 was 510 km.p.h., while that of the Soviet Yak-1 was 572 km.p.h., that of the MiG-3 was 640 km.p.h., and that of the LaGG-3 was 549 km.p.h. The Soviet Pe-2 dive-bomber was said to have been 173 km.p.h. faster than the German Ju-87 dive-bomber (the 'Stuka'), and 171 km.p.h. faster than the German He-111 bomber while carrying half of the latter's bomb load. The Soviet IL-2 ground-attack aircraft was also reported to have had outstanding characteristics. 'The IL-2 aircraft', it was said even in 'Nachrichten über die russische Luftwaffe', published by the German Luftwaffe, 'is an excellent machine, sufficiently fast and highly manoeuvrable, so that this aircraft is vulnerable only to fire from directly ahead.'¹³⁷

Naturally enough, the Soviet navy did not command the same importance as the Soviet ground and air forces; nevertheless, the national rearmament effort was clearly perceptible also in that service. During the first two five-year plans more than 500 warships were launched. The third five-year plan envisaged the creation of a 'great sea- and ocean-going fleet, worthy of the country

of socialism',¹³⁸ after 1939 with the proviso that the construction of large naval units, whose technical requirements and operational advantage were disproportionate to their vulnerability, especially from aerial attack, should gradually be cut back and eventually halted altogether. Between 1 January 1939 and 22 June 1941 the total tonnage of the Red Fleet increased by 108,718 for surface craft and 50,385 for submarines.¹³⁹ During eleven months of 1940 a total of 100 torpedo-boats, submarines, minesweepers, and motor torpedo-boats were launched and another 269 warships were under construction.¹⁴⁰ On the eve of war against Germany the naval forces of the Soviet Union consisted of approximately 600 warships of all types, including 3 battleships, 7 cruisers, 49 destroyers, 211 submarines, and 279 torpedo-boats. To these should be added 2,500 naval air-force planes and 1,000 coastal artillery guns of all calibres.¹⁴¹

This conspicuous growth of Soviet armament production from the beginning of the Second World War was accompanied by an improvement in the strategic position of the country. As a result of its attacks against Poland and Finland, and its annexation of the Baltic States and the Romanian territories of Bessarabia, northern Bukowina, and northern Moldavia, the Soviet frontiers had been shifted to the west by several hundred kilometres and at the same time considerably shortened, so that a far greater troop density was attainable with the same number of personnel. The manpower and material resources of the annexed territories were immediately put to the service of Soviet war preparations. Thus the former armies of Estonia, Latvia, and Lithuania were subjected to a purge and, at the end of August 1940, reorganized into territorial rifle corps of the Red Army. Each of the three rifle corps consisted of two divisions and corps troops (artillery regiment, signals battalion, sapper battalion, and anti-aircraft battery). The Estonian army became the XXII, the Latvian the XXIV, and the Lithuanian the XXIX Territorial Rifle Corps. On 23 February 1941, the 'day of the Red Army', the personnel of the newly acquired troops took their oath.¹⁴²

Alongside these rearmament efforts and the improvement in the strategic position, efforts were proceeding to utilize the country's defensive potential in terms of manpower as well. That objective was served by the introduction of general conscription on 1 September 1939, the day the Second World War broke out; this broke with the principle in force until then that only proletarians, workers, and peasants could be called upon to serve under arms. Thenceforth every Soviet citizen, regardless of nationality or class, was obliged to do military service. The age limit was lowered from 21 to 19, and in special cases even to 18 years, while the compulsory term of service in the ground and

air forces was simultaneously raised to three years, and in the navy to five. Every Soviet citizen had to serve in the reserve up to the age of 50. As a result of the new armed-services law of 1 September 1939 the strength of the Soviet armed forces was increased by a factor of 2.8 by 21 June 1941. The extent of the militarization of life in the Soviet Union was also reflected in the activity of Osoaviakhim (Society for the promotion of aviation and chemical defence), a military-training institution which in 1940 alone trained two million snipers, machine-gunners, telephonists, radio operators, horsemen, drivers, pilots, parachutists, and other military specialists. On 1 January 1941 the society had 13 million members, organized in 3,500 sections, 26,868 command units, and 156,000 groups. The success of the Soviet mobilization efforts was reflected in the growth of the armed forces; from 1,513,000 men in 1937 they increased to 4,207,000 at the beginning of 1941 and, following the call-up of 800,000 reservists in May 1941, they grew to 5,000,000.¹⁴³ A large number of rifle, armoured, air, and mechanized divisions were formed, as well as artillery and anti-tank units of the high command reserve. The strength of the air-defence and air-landing troops was increased, care was taken to furnish the new formations with weapons and equipment, and training facilities, especially for officers, were improved.

On 22 June 1941 the territory of the Soviet Union along the European coastline was protected by the naval forces of the Northern Fleet under Rear-Admiral Golovko,¹⁴⁴ the Red-banner-decorated Baltic Fleet under Vice-Admiral Tributs,¹⁴⁵ the Black Sea Fleet under Vice-Admiral Oktyabrsky,¹⁴⁶ as well as by the Pinsk war flotilla under Rear-Admiral Rogachev and the Danube war flotilla under Rear-Admiral Abramov.¹⁴⁷ Posted along the land front in the west were the troops of the Leningrad military district under General Popov (Fourteenth, Seventh, and Twenty-third Armies, I and X Mechanized Corps, and eight air divisions), the troops of the Baltic special military district under General Kuznetsov (Eighth, Eleventh, and Twenty-seventh Armies, XII and III Mechanized Corps, and five air divisions), the troops of the Western special military district under General Pavlov (Third, Tenth, Fourth, and Thirteenth Armies, VI, XI, XIII, XIV, XVII, and XX Mechanized Corps, and six air divisions), the troops of the Kiev special military district under General Kirponos (Fifth, Sixth, Twenty-sixth, and Twelfth Armies, XXII, IV, XV, VIII, XVI, IX, XXIV, and XIX Mechanized Corps, and ten air divisions), and the troops of the Odessa military district under General Cherevichenko (Ninth Army, II and XVIII Mechanized Corps, and three air divisions).¹⁴⁸ Of these formations the second echelon in the Leningrad military district was I Mechanized Corps, in the Baltic special military district the Twenty-seventh

Army, in the Western special military district the Thirteenth Army together with XVII and XX Mechanized Corps, and in the Kiev special military district IX, XXIV, and XIX Mechanized Corps. The immediate surveillance of the Soviet frontier was the duty of the Frontier Guards of the NKVD under Lieutenant-General Sokolov, with a total strength of 100,000 men, composed of 47 land-frontier and six sea-frontier detachments, nine independent frontier commands, and 11 regiments of strategic NKVD troops.¹⁴⁹ A few weeks before the beginning of the war the general concentration of troops on the western frontier was significantly increased. In strictest secrecy¹⁵⁰ a number of major formations were moved forward after April 1941 from the interior of the country to the western military districts: the Twenty-second Army from the Urals military district into the area of Velikie Luki, the Twenty-first Army from the Volga military district into the Gomel area, the Nineteenth Army from the North Caucasian military district into the area of Belaya Tserkov, the Sixteenth Army from the Trans-Baykal military district into the Shepetovka area, and the XXV Rifle Corps from the Kharkov military district to the western Dvina. Altogether four army HQs, 19 corps HQs, and 28 divisional HQs had received relocation orders from the interior of the country to the western state frontier.¹⁵¹

The deployment of the Red Army forces in the extreme west of the country was as follows, according to Soviet sources. Concentrated in the Baltic special military district were 19 rifle divisions, 4 armoured divisions, 2 mechanized divisions, a total of 25 divisions as well as a rifle brigade, including the three territorial rifle corps formed from the armies of the Baltic States. Stationed in the Western special military district were 24 rifle divisions, 12 armoured divisions, 6 mechanized divisions, and 2 cavalry divisions, altogether 44 divisions. The total in the Kiev special military district amounted to 58 divisions: 32 rifle divisions, 16 armoured divisions, 8 mechanized divisions, and 2 cavalry divisions. Facing Romania in the Odessa military district were 13 rifle divisions, 4 armoured divisions, 2 mechanized divisions, and 3 cavalry divisions, altogether 22 divisions. Under the new mobilization plan, 'MP-1941', all the troops in the western frontier military districts were to be brought up to full mobilization readiness in the course of the spring of 1941. The date laid down by order No. 008130 of 26 March, issued by the war council of the Western special military district for all units and institutions of that military district, was 15 June 1941.¹⁵² A similar order is on record for the Baltic special military district. The war councils of the Eighth and Eleventh Armies, the commanding officers of corps, divisions, and brigades, as well as the commanders of independent detachments were instructed by order No. OM/00159 of 31 May/

2 June 1941, issued by the staff of the Baltic special military district, to submit by 20 June 1941, reports on their mobilization readiness in accordance with MP-1941.¹⁵³ Mobilization readiness did not yet imply mobilization; the army commander-in-chief, General Korobkov, had let it be clearly understood that mobilization would automatically entail the opening of hostilities.¹⁵⁴ However, mobilization of all units was to be prepared down to 'the smallest detail' in accordance with the dates laid down in the deployment directives.

From the spring of 1941 onward the Soviet formations had been moving closer to the frontier. The then chief of the operations department of the Kiev special military district and future Marshal of the Soviet Union, Bagramyan, records a directive of the people's commissar for defence from the beginning of May, according to which five rifle corps and four mechanized corps were to be moved into a strip 30–5 km. from the state frontier.¹⁵⁵ In the Kiev special military district the deployment plan envisaged a depth of defence of 50 km.; in the Western special defence district, in the area of the Fourth Army, the depth of defence was 60–80 km.¹⁵⁶ However, the moving up of the formations had evidently not been completed by the beginning of hostilities. Comparison of published data shows that of the 170 divisions stationed in the western frontier zone, 48 divisions were positioned 10–50 km., 64 divisions 50–150 km., and 56 divisions 150–500 km. east of the Soviet frontier. Striking, at any rate, was the concentration of Soviet formations in the eastern Polish areas incorporated in the Western and Kiev special military districts. This is true particularly of the salient around Biaystok and Lvov, which projected far into German territory.¹⁵⁷ The bulk of the troops of the Western special military district was concentrated at Białystok; even mobile formations such as armoured, mechanized, and cavalry divisions were in an exposed position. Thus three of the four armies of the Western special military district and three of its six mechanized corps—each of a minimum establishment strength of 1,030 tanks—stood in a semicircle around Biaystok; a further mechanized corps was at the starting-point of the salient between Brest and Kobryn. The commander of this military district and, in the event of war, the commander-in-chief of the western front was in fact the expert on the 'employment of mechanized formations in modern offensive operations', Army General Popov, who, with some exaggeration, has been called the 'Soviet Guderian'.¹⁵⁸ Much the same could be observed in the Lvov salient, where three of the four armies and four of the eight mechanized corps of the Kiev special military district were concentrated. The Fifth Army and a further mechanized corps near Lutsk were likewise standing in forward echelon. Not only were the ground forces, including motorized and mobile formations, being moved up close to the new Soviet

frontier, but so were the air forces. Since the spring of 1941 efforts had therefore been in progress to set up a dense network of operational airfields in the proximity of the western frontier of the Soviet Union.¹⁵⁹ This project had not been completed by the beginning of hostilities, with the result that aircraft were crowding together on those airfields which had been completed, offering an easy target to the German air force.¹⁶⁰ Not only had the ground and air forces been moved up close to the new state frontier, but also—in a manner now described as mistaken—supply-depots, fuel stores, and mobilization supplies; these were nearly all lost at the beginning of the war.¹⁶¹ Roads, tracks, bridges, troop accommodation, and so on were massively extended, yet no attempt was made to establish rearward communication links or to set up the command centres indispensable for a defensive war.¹⁶² In a similar vein was the suspension of all work on the strengthening of fortifications along the old state frontier and the partial disarming of the installations; yet the large-scale fortification work planned along the new state frontier in Lithuania and in the annexed Polish and Romanian areas was making only slow progress.¹⁶³ In the opinion of Soviet experts the defensive lines and permanent fortifications (*ukrepyayony*) established since 1929 at great expense from the Gulf of Bothnia to the Black Sea, at Kingisepp, Pskov, Polotsk, Minsk, Mozyrsk, Korosten, Novograd-Volynsk, Kiev, Letichevsk, Starokonstantinov, Mogilev, Kamenets-Podolsk, Tiraspol, and elsewhere could have been of great importance and could have represented a serious obstacle to the advancing enemy armies. 'All measures', the then chief of the intelligence directorate of the people's commissariat for defence, Major-General Gapich, wrote with the knowledge of an expert in his field, 'were directed at creating bridgeheads and making preparations for delivering a blow to the enemy and carrying the war into enemy territory.' Measures and omissions equally suggest that the possible need for defensive fighting in the depth of one's own country was not even considered. Was this the result of Soviet strategic thinking, which, even in the repulse of an enemy attack, allowed only for the option that the Red Army forces would in a counterstrike immediately burst into enemy territory and there destroy the adversary,¹⁶⁴ or could these measures be interpreted also as the start of Soviet offensive planning? In view of the confidentiality of Soviet sources, this question cannot be answered with complete certainty. To begin with, one would have to bear in mind the conspicuous concentration of powerful and motorized forces in the frontier salients of Bialystok and Lvov,¹⁶⁵ which are not readily compatible with defensive intentions. Certainly such a 'strategic configuration' was bound—as even the then chief of the Red Army General Staff, Marshal Zhukov, admits—in the event of an enemy attack to invite the danger

of in-depth outflanking, encirclement, and annihilation of those troops.¹⁶⁶ As Major-General Grigorenko also states, it would have been justified in only one situation, 'that is, if these troops were designed suddenly to go over to the offensive. Otherwise they were instantly half-encircled. All the enemy had to do was perform two thrusts towards each other at the basis of our wedge and the encirclement was complete.'¹⁶⁷

If even in Zhukov's judgement the disposition of the troops in the exposed frontier sectors of the western and south-western front was 'mistaken' for defence, then this can only mean that there was a different motive behind it. This conclusion is too inescapable to be simply dismissed by the suggestion that the Soviet deployment was no more than a mistaken decision 'dating from 1940 and not corrected by the time the war began'. Such a formulation actually reveals that the Soviet Union's military preparations cannot be interpreted as a reaction to the German deployment, which in 1940 had not even begun,¹⁶⁸ but as a reflection of its own ambitions. Seen thus they are in line with certain indications that the Soviet Union, in connection with its plans in the Balkans between the German campaign in the west and the Balkan campaign, may, 'perhaps in the winter of 1940-1', have briefly considered entering the war. Milan Gavrilović, the Yugoslav minister in Moscow, reported remarks by Andrey Vyshinsky, the deputy people's commissar for foreign affairs, on 8 and 13 February 1941, 'that the Soviet Union would enter the war against Germany as soon as the British opened a Balkan front. Soviet forces would move directly against Bulgaria and the Straits.'¹⁶⁹

Also fitting into this pattern of offensive intentions is a document captured by the Germans in the Fifth Army staff building in Lutsk: a 'Plan for the political safeguarding of army operations during the attack', which likewise dates from the period preceding the German campaign in the Balkans.¹⁷⁰ In it the chief of Fifth Army political propaganda, Uronov, who was no doubt informed of the political line by his main directorate in Moscow, argued that it was necessary 'to deal the enemy a very powerful lightning-like blow in order to shake the troops' moral resistance, which had been artificially buoyed up by their successful lightning-like operations in the various theatres of war (Poland, Norway, Denmark, Holland, Belgium, France)'. The 'first stage' of the impending operation, according to this plan, was the 'assembly of the army, its move to its jumping-off position, and its preparation for crossing the Bug'. Combat operations, it was thought, would take place on the enemy's

territory under conditions favouring the Red Army, firstly because of the support to be expected from the Ukrainian and Jewish population, as well as from a major part of the Polish population, who would 'sooner be Bolsheviks than Germans', and secondly because of a progressive collapse of morale among the Wehrmacht. 'That is why hard work is necessary', a report on service morale by the Fifth Army chief of political propaganda, dated from Rovno on 4 May 1941, stated,¹⁷¹ 'to ensure a further decline of the enemy's morale and thus the completion of the enemy's annihilation on that basis.' Comprehensive preparations were made for propaganda, in the event of a Red Army attack, among the civilian population of the occupied areas of the Government-General, as well as among the enemy forces.

The belief that with its military preparations the Soviet Union had 'an offensive of its own in view', in other words, that it wished to create the prerequisites of possible intervention,¹⁷² was held also by the 'most prominent of Soviet prisoners of war', Lieutenant-General Vlasov,¹⁷³ who at the beginning of the war had commanded the IV Mechanized Corps in the foremost line at Lvov and who must have been reasonably well informed on the intentions of the Soviet command. No one in the Soviet Union, Vlasov stated, had believed in the possibility of a German attack, which was also the reason why defensive measures had been so badly behind schedule. On 7 August 1942 the then commander-in-chief of the Second Assault Army, deputy commander-in-chief of the Volkhov front, and future chairman of the Committee for the Liberation of the Peoples of Russia and commander-in-chief of the Russian Liberation Army, told his interrogator, Embassy Councillor Gustav Hilger, that offensive intentions by Stalin had 'undoubtedly existed' in 1941. 'The troop concentrations in the Lvov district suggested that a strike against Romania, towards the oilfields, was planned. The formations assembled in the Minsk area were intended to contain the inevitable German counter-thrust.' On the same occasion the captured commander of the 41st Rifle Division and future deputy chief of staff of the Russian Liberation Army, Colonel (later Major-General) Boyarsky, likewise observed that 'the Kremlin . . . would have

¹⁷³ Minute by Hilger, 8 Aug. 1942 KTB OKW II/2. 1287; Hillgruber, *Strategie*, 437 n. 55. Statements by prisoners of war must of course always be treated with some caution. However, Vlasov invariably expressed his views, even in the presence of the Germans, without reserve or embellishment. Bojarsky, for his part, repeatedly faced up to the Germans with quite ruthless frankness. The statements by both officers probably reflected their true conviction. Reference should also be made to the fundamental assessment of PoW statements in Soviet historiography: 'Statements by captured soldiers, officers, and generals, as well as deserters, are of major importance as primary sources' 'Kusnezova and Selesnjow, "Der politisch-moralische Zustand der faschistischen deutschen Truppen", 600'.

struck no later than in the spring of 1942. The Red Army would then have moved in a "south-westerly direction", i.e. against Romania.¹⁷⁴

Against the background of such evidence it is necessary to state once more that, if in 1940-1 the Soviet leadership did for a while have offensive intentions, it certainly abandoned these again, while at the same time, as the troop dispositions along the western frontier unambiguously reveal, keeping its options open 'for all eventualities'.¹⁷⁵ The unfinished state of military preparations in 1941 was alone compelling reason for Stalin to dismiss for the time being any idea of warlike adventures. Soviet historiography, trying from the outset to discredit any such suggestions, firmly points to the fact that on 22 June 1941 the Red Army forces were not ready for war.¹⁷⁶ In support of that point of view a number of entirely plausible arguments are put forward. It is emphasized, for instance, that not only the air formations but in particular the armoured formations, which in the event of an attack would deliver the main thrust, were in the process of transformation and retraining. In February 1941, it is argued, the mistake had been made of trying to establish all the 21 mechanized corps of the second wave at the same time, without the necessary technological weapons being available for them.¹⁷⁷ The armament industry, for instance, had only been able to deliver 5,500 new tanks instead of the 16,000 required. Tractors, motor-vehicles, repair equipment, and other material had likewise not been available on the necessary scale, with the result that the mechanized corps stationed near the frontier had only 50 to 80 per cent of their authorized strength of combat vehicles.¹⁷⁸ Despite intensified efforts by the military academy for mechanization and motorization, as well as by other training institutions, it had not been possible to equip the armoured formations with command and technical personnel on the scale that was desired. In addition to the armoured formations, the rifle formations had been below establishment in personnel. Of the 170 divisions and 2 brigades in the western military districts, 144 divisions had had a numerical strength of 8,000 men, 19 of them between 600 and 5,000, and the 7 cavalry divisions an average of 6,000.¹⁷⁹ How, on the other hand, the order of magnitude calculated from these data, i.e. a maximum of 1,289,000 troops, can be reconciled with the total of 2,900,000 men admitted elsewhere¹⁸⁰ (2,680,000 Red Army and 220,000 Red Fleet) must necessarily remain an open question. Further evidence of the absence of aggressive intentions by the Red Army is said to be provided by the system of decentralized camp exercises then in

¹⁷⁴ See Hitler's remark on 27 July 1942: Picker, *Hitlers Tischgespräche*, 114; Fabry, *Hitler-Stalin-Pakt*, 422, 425-6.

use.¹⁶¹ During summer exercises the separate service branches had been assembled in special camps often at considerable distance from one another. Thus the artillery regiments of the divisions and the corps artillery had gone to special firing ranges, while the infantry regiments conducted their own combat exercises and the sapper units were busy constructing field fortifications. The deficient road and rail network in Lithuania and in the annexed Polish territories is further adduced as evidence of the incomplete state of preparations and the difficulties encountered by the Soviet side.

All these discussions relate to 22 June 1941 and have no bearing, naturally, on the Red Army's readiness for war at a later date, nor on the subsequent intentions of the Soviet leadership. Given that the military and political situation of the Soviet Union did not allow her to enter the war in 1941, was it not conceivable that, following the consolidation of its war-machine and given a favourable development of the overall situation, i.e. in the event of a decisive weakening or pinning-down of Germany, the Soviet government might have been prepared to intervene militarily, just as it did in 1945 in the war against Japan? Possible reflections along those lines are suggested by Stalin's well-known speech to the graduates of Soviet military academies on 5 May 1941.¹⁶² Details of the actual contents of this address of over forty minutes were obtained not only by the long-term German embassy councillor in Moscow, Hilger, but also by the British journalist Alexander Werth, who enjoyed great respect in Moscow and on many issues clearly inclined towards the Soviet point of view.¹⁶³ After the outbreak of the war Hilger interrogated three senior Soviet officers who had been taken prisoner; they had participated in that Kremlin event and, as Hilger wrote subsequently, their 'accounts agreed almost verbatim, although they had had no opportunity to communicate with one another'. Werth for his part, after the outbreak of war, received 'a fairly detailed account of that reception, to which great importance was attached in Moscow at the time'. The accounts of these very disparate sources do not differ in content, so that the reliability of their informants cannot be doubted. According to Hilger, Stalin had responded very dismissively to a toast proposed by Lieutenant-Colonel Khozin, the chief of the Frunze military academy, to the Soviet Union's peace policy, declaring that an end had now to be put to the slogan of defence, because it was outdated and because not a foot of soil could be won with it. The Red Army would have to accustom itself to the idea that the era of peace policy was over and that of a forcible extension of the socialist front had begun. Anyone failing to recognize the need for offensive action was a philistine and a fool. Werth reproduces Stalin's words in even greater detail. According to him, Stalin explained that it was necessary to delay war against Germany until the autumn, because by then it would be too late for a German attack. War with Germany, however, would 'almost

¹⁶¹ *Istorija Velikoj Otečestvennoj vojny*, i. 473 ff.

¹⁶² Hillgruber, *Strategie*, 432; Erickson, *Stalin's War*, i. 82.

¹⁶³ Hilger, *Erinnerungen*, 307-8; Werth, *Russia at War*, 122-3.

inevitably' take place in 1942, and indeed under much more favourable conditions, because the Red Army would then be better trained and equipped. Werth states expressly that all his information had 'basically' agreed, 'especially on one of the most important points', Stalin's conviction 'that, depending on the international situation, the Red Army would either await a German attack or else seize the initiative, since a permanent hegemony of Nazi Germany in Europe was "not normal"'. In his reflections Stalin proceeded from the assumption that Britain was not yet defeated and that a Japanese attack on the Soviet Union need not be expected, whereas the American war potential, on the other hand, would make itself increasingly felt.

The conviction that there would 'almost inevitably' be a German-Soviet war in 1942 and that the Soviet Union would then have to take the initiative appears, according to Werth, to have been widespread in the Red Army. Thus the former chief of staff of a Soviet rifle corps of the Kiev military district and future chief of the officer college of the Russian Liberation Army, Major-General Meandrov, lists 'numerous arguments' that the Soviet Union had been ready to enter the war after the spring of 1942.¹⁸⁴ 'The government's policy in preparing for a major war was entirely clear to us,' he wrote before he was handed over in 1946; 'what was presented to us as defensive measures proved in reality to be a long-prepared and carefully camouflaged plan for aggression.' Efforts were evidently made on Stalin's instruction to prepare and realign the Red Army's top officers for the new course outlined in his address of 5 May 1941. Colonel Pozdnyakov, in the spring of 1941 chief of the chemical service on the staff of the LXVII Rifle Corps, commanded by Brigade Commander Zhmachenko, subsequently chief of the command section of the Russian Liberation Army staff, records an instructional lecture on the Soviet Union's international position given by a representative of the Party central committee in the first half of May 1941, soon after Stalin's speech, to senior officers of the Poltava garrison.¹⁸⁵ The speaker had rendered the contents of Stalin's speech in roughly these words:

The time has now come when we must and can go over from 'defence' in the tactical sense of the word to 'defence' in the strategic sense. In other words, one cannot wait for an attack by the putative adversary, but one must attack him oneself. This affords indisputable advantages, and this is how the strategic 'defence' of the Soviet Union will be conducted.

According to the speaker it was intended to instruct all garrisons in the USSR along those lines. From the point of view of Soviet military theory such arguments appear merely as the continuation of the thesis that an enemy attack against the Soviet Union would in any case immediately develop into a

¹⁸⁴ Tagebuch des Generalmajors Borodin, BA-MA MSg 149/46, fo. 31; Brief des Generalmajor Meandrov Jan. 1946, BA-MA MSg 149/414, fo. 10.

¹⁸⁵ Pozdnyakov, Gotovilsja li SSSR k vojne s Germaniej [Did the USSR prepare for war with 'Germany?'], BA-MA MSg 149/11, fo. 25.

Soviet attack aiming at the total annihilation of the enemy. There was only a short step between defence in the Soviet sense and the idea of a first strike, bearing in mind Lenin's statement that what mattered in a war was its causes, its aims, and the classes waging it, and not who 'attacked first'.¹⁸⁶ Any armed conflict of the Soviet Union could therefore be presented from the outset as a purely defensive, and hence a just, war.

Soviet historiography uses the Red Army's deficient preparation for defence at the time of the German attack on 22 June 1941 as a weighty argument in favour of the Soviet government's peaceful intentions. Also adduced in this context is the allegedly incomplete state of the army's equipment, although on this point the published sources are to this day faced with an unresolved dilemma. On the one hand, to help explain the Soviet defeats in the initial phase of the war, they are compelled to make the Wehrmacht's numerical superiority over the Red Army appear overwhelming. On the other, in order not to undermine confidence in the far-sightedness and solicitude of the Party and government, they are anxious to argue that everything had been done to equip the Red Army and Red Fleet for combat and to make them ready for defence. It is emphasized that the country's armament industry had been fully able to deliver to the rapidly growing forces all the equipment they required, and moreover to stockpile appropriate reserves for the raising of new formations in the event of mobilization and for replacing any losses suffered. Khrushchev opted for the former version when, at the Twentieth Congress of the CPSU on 25 February 1956, he declared that 'our army was poorly equipped' and lacked 'sufficient artillery, armour, and aircraft'. The assertion that the 'German hordes... had a numerical superiority especially of tanks and aircraft' is found in many sources. Thus the strength of the Germans and their allies is given by Soviet authors as 5.5 million men, 4,300 tanks and self-propelled assault guns, 47,200 guns and mortars, and 4,980 aircraft. Facing them in the western military districts had been only 170 out of 303 existing divisions of the Red Army, as well as two brigades.¹⁸⁷ The personnel strength of these formations would, as mentioned earlier, amount to a calculated maximum of only 1,289,000 men, though according to other data the figure was 2,900,000, including Fleet personnel. These troop concentrations allegedly had at their disposal 1,800 heavy and medium tanks, 34,695 guns and mortars, and 1,540 aircraft, as well as a 'considerable' amount of outdated tanks and outdated aircraft. The aggressors, therefore, had been superior to the Soviet troops by a factor of 1.8 in personnel, of 1.5 in tanks, of 1.25 in guns and mortars, and of 3.2 in aircraft.

It seems appropriate once more to confront these data, evidently part of a 'cover-up', with the actual ratios. The forces deployed for the attack by the Wehrmacht and its allies numbered approximately 3,600,000 men (3,050,000 Germans, 600,000 Romanians, Finns, and Hungarians). The German aggres-

¹⁸⁶ Lenin, *Polnoe sobranie sočinenij*, xxiii. 189.

¹⁸⁷ *Geschichte des zweiten Weltkrieges*, iv. 31, 36.

sors had 3,648 tanks and self-propelled guns, 7,146 guns, and 2,510 combat aircraft of the front-line formations under Luftwaffe command; Germany's allies had no armour worth mentioning, only moderate artillery, and altogether some 900 aircraft, most of them second-rate.¹⁸⁸ They were faced in the western frontier military districts by 2,900,000 Soviet troops, equipped with 14,000–15,000 tanks, 'at least 34,695 guns, and 8,000–9,000 combat aircraft.'¹⁸⁹ This numerical ratio shifts further in favour of the Red Army if one bears in mind that 1,700 of the German tanks were either the totally outmoded I and II types or else of Czech construction. Only 1,880 German tanks of the main strategic assault forces were able to take on the bulk of even the 'older' models of the 14,000–15,000 Soviet tanks stationed in the frontier military districts.

Contrary to the assertions of Khrushchev and most Soviet authors, the Soviet Union's superiority¹⁹⁰ in tanks, artillery, and aircraft over a Wehrmacht now caught in a war on two fronts seems completely overwhelming if one considers the total of weapons and equipment available. According to production statistics, the Red Army at the beginning of the German-Soviet war possessed no fewer than 24,000 tanks (including 1,862 T-34 and KV models), 148,000 guns of all types (including mortars over 5 cm.), as well as 23,245 aircraft built after 1938 alone, including 3,719 of most recent construction. Even though the production process had been slowed down by Stalin's persecutions, the performance of the Soviet armament industry was reflected by the fact that, in spite of the enormous loss of industrial capacity in the territories conquered by the Germans, its output in the war year 1941 amounted to more than treble the peacetime volume of 1940. 'Mass production' of the most modern tanks and aircraft, however, had only just then started, and a dramatic increase in production figures was envisaged. Soviet industry had attained a level which ensured all the prerequisites of shortly supplying the Red Army with 'quite unimaginable equipment'.¹⁹¹

¹⁹¹ The sections contributed to this volume by the present author have meanwhile been substantially confirmed by numerous publications, especially in the Soviet Union. In consequence, no correction is required in terms of content. However, the arguments might be continued in the light of newly revealed historical facts and insights. This concerns the criminal nature of Soviet rule under Stalin, as well as his shared responsibility for the unleashing of the Second World War, as for instance the realization that Hitler on 22 June 1941, if one examines conditions on the Soviet side, merely anticipated an intensively prepared attack by Stalin. The results of research gained in this area did not always agree with the political-historical world-image in West Germany: in fact, the present author had to face a certain degree of opposition. If Vjačeslav Dašičev believes that many Soviet historians have indissolubly linked their reputation to the Stalin regime, then the same applies also to a number of West German historians, who, adapting to political trends, refused to accept any critical discussion of Stalinism and eagerly and uncritically accepted Soviet propaganda versions. The Austrian philosopher and sociologist Ernst Topitsch refers in this connection to a downright 'scandal of historians of historic dimension' and to an impending scholarly, moral, and political 'Cannae' for a certain type of contemporary

3. SOVIET AID TO GERMANY

Ever since its establishment, the Soviet state had attached prime importance to the development of its armed might. The Red Army stood at the centre of the Soviet government's care and attention, and from 1917 onward it underwent a continuous upsurge. The admitted sole aim of the entire domestic—i.e. 'socialist'—development of the Soviet state, as reflected in the five-year plans, was the strengthening of the Red Army and hence of the military power of the country.¹⁹² By comparison, foreign relations during the period of supposedly incipient world revolution played no more than a subsidiary role during the first few years.¹⁹³ Only gradually was a foreign-political safeguarding of the Soviet state considered necessary as well. The main endeavour of the Moscow government was the prevention of an encirclement of the Soviet state by the capitalist powers. The emergence of an anti-Soviet coalition had to be rendered impossible and conflicts between its partners had to be fomented and intensified towards that end.

In its attempt to conclude bilateral agreements with individual countries, Soviet foreign policy was especially interested in Germany as the loser in the First World War, because Lenin believed that the untenable provisions of the treaty of Versailles were bound, sooner or later, to drive that country into an alliance with Bolshevik Russia. That may explain why he never tired of speaking about what he considered to be the inevitable consequences that that peace treaty would have for Germany. 'Germany had a peace imposed on her,' it is stated at one point,

but it was a peace of usurers and cut-throats, a peace of butchers, for Germany and Austria were looted and chopped up. They were deprived of all means of existence, children were allowed to starve to death. That is a monstrous peace of pillage. What then is the treaty of Versailles? A monstrous peace of pillage, which has turned millions and millions of people, among them the most civilized, into slaves. That is no peace, those are conditions dictated, knife in hand, to a helpless victim of robbers.¹⁹⁴

That ideological rejection, perceptible in the Soviet Union even after the Second World War, of the treaty of Versailles,¹⁹⁵ which in Moscow's view was

historiography. In evidence a number of sources are here listed from which conclusions may be reached about such studies or their subject-matter: Judgement of the 5th civil bench of the Freiburg Landgericht of 19 June 1984, Ref. 5083/84; Dašičev, 'Pakt der beiden Banditen'; id., 'Stalin hat den Krieg gewollt'; Gillesen, 'Krieg der Diktatoren' (1986) and (1987); id., 'Krieg zweier Aggressoren'; Hoffmann, 'Stalin wollte den Krieg'; id., 'Angriffsvorbereitungen der Sowjetunion 1941'; Hosoya, 'Japanese-Soviet Neutrality Pact'; Magenheimer, 'Sowjetunion'; Pavlenko, 'Stalins Krieg'; Rhode, 'Ende des Schweigens'; 'Schlafende Aggressoren'; Schustereit, *Vabanque*; Stegemann, 'Geschichte und Politik'; Suvorov, *Eisbrecher*; Topitsch, *Stalins Krieg*; Volkogonov, *Triumph i tragedija*.

¹⁹⁴ Lenin, *Über Krieg, Armee und Militärwissenschaft*, i. 774, also 561, 569, 600, 756, 758, 819. Lenin only expressed, somewhat crudely, what some statesmen in western Europe were also feeling—such as Premier Nitti, who had signed the treaty on behalf of Italy and later declared that 'what was aimed at was not peace but the strangulation and partition of Germany'. 'quoted according to Franz-Willing, *Der Zweite Weltkrieg*, 70'.

¹⁹⁵ *Istorija diplomatii*, iii. 924; also *Pravda* '26 Oct. 1939'.

directed not only against Germany but also against the land of the Soviets, provided the foundation of the policy which, at Rapallo in 1922, brought Soviet Russia and Germany together. It was on the basis of common hostility to Versailles that co-operation between the two powers began to develop, and indeed initially continued even after Hitler's rise to power, although mutual relations soon cooled perceptibly. Even when, in the Litvinov era, a *rapprochement* took place between the Soviet Union and France, and when the Soviets co-operated with the Western powers, a great many leading figures—to name only Radek, still influential, as well as Molotov, Kaganovich, and, above all, senior circles in the Red Army—and possibly even Stalin himself continued to be convinced of the need to maintain good relations with Germany.¹⁹⁶

In effect, therefore, it was only during a brief span of time, from the signing of the anti-Comintern pact between Germany and Japan in 1936 to the Munich agreement in 1938, that an undisguisedly antagonistic policy was pursued. By October 1938 there were indications that a reorientation was beginning to take place in Moscow in the direction of a renewal of earlier co-operation with Germany. The decisive turn occurred in March 1939, when Stalin at the Eighteenth Congress of the All-Union Communist Party (Bolsheviks) publicly hinted that he was prepared to enter into an arrangement with Germany, and that he had no intention of allowing his country to be dragged into a conflict for the benefit of the Western powers.¹⁹⁷ Stalin's offer preceded the negotiations between the Soviet Union and the Western powers on a collective security agreement against Germany,¹⁹⁸ which invalidates present-day assertions that the subsequent conclusion of the 'Soviet-German non-aggression treaty' was the consequence of the failure of those negotiations, more particularly the failure of the simultaneous military negotiations, for which Britain and France had to be held solely responsible.¹⁹⁹ The sluggish progress of the negotiations with the Western powers, moreover, suggests that these were by then playing only a secondary role and that the Soviet government was primarily interested in gaining time and raising the ante for a treaty with Hitler. The Western powers in effect had nothing to offer.²⁰⁰ All they could expect of the Soviet government was that it would support, and if necessary fight for, the maintenance of the Versailles system of states, hated though this was also in Moscow—in other words, as Stalin put it, 'pull the chestnuts out of the fire' for them. An arrangement with Hitler, on the other hand, promised some immediate protection against a German attack and even opened up the future possibility, without the Soviet Union itself risking

¹⁹⁶ Hilger, *Erinnerungen*, 255 ff.; Allard, *Stalin*, 21–2.

¹⁹⁷ Rossi, *Zwei Jahre*, 21–2; Hilger, *Erinnerungen*, 275; Fabry, *Hitler-Stalin-Pakt*, 13. Sipols, *Diplomatičeskaja bor'ba nakanune*, 274 ff., who devotes a whole chapter to the prehistory of the 'Soviet-German non-aggression treaty', passes in silence over Stalin's crucial observations in order to assert that the urgent desire for understanding had come solely from the German side and had initially met with total rejection from the Soviet side.

¹⁹⁸ *Istorija Velikoj Otečestvennoj vojny*, I, 164.

¹⁹⁹ Žilin, *Problemy voennoj istorii*, 176–7, 304–5; Sipols, *Diplomatičeskaja bor'ba nakanune*, 279 ff.

²⁰⁰ Rossi, *Zwei Jahre*, 26–7, 36–7, 46.

involvement in a conflict, of at least a partial restoration of the old western frontiers of the Tsarist empire. Against the background of such prospects Maxim Litvinov's dismissal on 3 May 1939 and Molotov's appointment as people's commissar for foreign affairs marked the opening of a new phase in Soviet foreign policy. There could no longer be any doubt about its direction. The significance of that change of ministers emerges from the words with which Litvinov parted in April from Nahum Goldmann, the president of the World Jewish Congress in Geneva: 'If one of these days you read in the paper that I have resigned from my post as foreign minister, you will know that Stalin has decided to conclude a pact with Hitler . . . that means that a few weeks later there will be war, because Hitler will feel secure in the east.'²⁰¹

The non-aggression treaty concluded between the Soviet Union and Germany on 23 August 1939 was therefore from the start not merely a 'treaty about non-aggression, about renunciation of aggression, or, in other words, about peace between two states', in other words a measure dictated by circumstances for the preservation of peace, which of course changed nothing about the continuing fundamental hostility to 'Hitlerite Fascism'.²⁰² An integral part of that treaty was the secret protocol 'to which the Russians attached the greatest importance' and which Molotov actually described as a *conditio sine qua non*.²⁰³ Moreover, the non-aggression treaty has to be seen in direct connection with the consequential frontier and friendship treaty of 28 September 1939 and its fateful additional secret protocols, with the agreement between the German Wehrmacht and the Red Army of 20 September 1939, with the two major economic agreements, and with certain other arrangements, all of which are passed over in silence in the Soviet literature, along with the secret protocol of 23 August 1939, as if they did not exist.²⁰⁴ All these agreements far exceeded mere security arrangements; indeed, they clearly reduced these to a purely secondary status.

At the focus of attention were offensive aspirations. The treaties were a reflection of an 'imperialist partnership',²⁰⁵ and made it clear that the Soviet

²⁰¹ Quoted according to Franz-Willing, *Der Zweite Weltkrieg*, 137. Herwarth von Bittenfeld, legation counsellor at the German embassy in Moscow, knew as early as May 1939 that not Britain and France but Hitler would conclude a treaty with the Soviet Union, because he alone was in a position to deliver the Baltic States to Stalin. Herwarth arranged for hints along those lines to be conveyed to the Italian and US embassies in Moscow: Herwarth von Bittenfeld, *Memoirs of a Diplomat*, 154 ff.

As for the contents of the secret protocol of 23 Aug., the US Ambassador in Moscow, Steinhardt, for one, was fairly accurately informed by 24 Aug.: see Steinhardt to Secretary of State, 24 Aug. 1939, *FRUS* (1939), i, 342-3.

²⁰⁵ Stökl, *Russische Geschichte*, 746. The Polish government called it 'an illegal act in direct violation of existing treaties and international law': Ambassador Potocki to Secretary of State, 30 Sept. 1939, *FRUS* (1939), i, 462.

Union was not only not doing anything to oppose 'aggression by Fascist Germany', but that it was actually paving the way for it. By allying itself with Germany and taking an active part in her acts of aggression, the Soviet Union succeeded in enlarging its living-space by the acquisition of a strategically vital territory. Between 1939 and 1941 an area of the extent of the Reich in 1919—426,700 square kilometres, with a population of 23 million—was incorporated in the Soviet state.²⁰⁶ This meant a fundamental redrawing of the political map of eastern Europe, one that could not be dismissed as a 'mere westward shift of the frontiers of the USSR' but which represented an 'extension of the brotherly family of the Soviet peoples'.²⁰⁷ Nor can these territorial acquisitions be represented as a contribution to the Soviet Union's security or justified by that argument.²⁰⁸ Even more questionable is the assertion of official historiography that they constituted a 'contribution . . . to the common cause of all peace-loving nations fighting against aggression by Fascist Germany'.²⁰⁹ The vast territorial gains of the Soviet Union—the annexation of eastern Karelia, Estonia, Latvia, Lithuania, the greater half of Poland, Bessarabia, northern Bukowina, and a corner of Moldavia (the Hertza region)—were unambiguously motivated by war or the threat of war, and were therefore diametrically opposed to the interests of peace-loving nations. 'The German-Soviet non-aggression treaty of 23 August 1939'—this was already beyond doubt to Rossi in 1954—'was a treaty of aggression against Poland.' 'The secret agreement proved . . . on a juridical basis that this crime was committed jointly, i.e. by Germany and Russia . . . The German-Soviet agreements of August and September 1939 were based on the partition of eastern Europe.'²¹⁰ In the judgement of the former Romanian foreign minister and ambassador in Moscow, Gafencu, the treaty, which covered Hitler's rear, 'unambiguously' meant war:²¹¹ first of all Germany's war against Poland, which was welcome to the Soviet Union because it provided the prerequisite of its taking possession of substantial portions of the 'sphere of interests' assigned to it; and secondly the great conflict, deliberately included by Stalin in his calculations, of the 'capitalist' or 'imperialist' countries, i.e. Germany and the Western powers against one another.²¹² General war in Europe meant, for one thing, the removal of the immediate danger of a united move by the capitalist powers against the Soviet state, a possibility never ruled out in Moscow, especially

after the Munich agreement—the more so as the prospect of a simultaneous arrangement with Japan provided some security also in east Asia. For another, a conflict in Europe, which Moscow, recalling the First World War, certainly expected to be of long duration, held out the prospect that it would inevitably end with a weakening of all participants and with a fundamental change in the balance of power. In the final result the Soviet Union would be in a position, as Stalin had formulated it as early as 1925, decisively to throw into the balance the undiminished weight of its military might. Having his rear covered by the Soviet Union, which was siding with the presumed weaker of the imperialist powers,²¹³ Hitler could take the first step into war. The Soviet Union was able to keep in the background, which did not, however, rule out its readiness instantly to resort to force whenever this seemed necessary for the attainment of objectives close at hand without jeopardizing its main interest.

At least on one fundamental issue there was complete identity of interests between the Soviet Union and Germany at the beginning of the Second World War, something that was expressly stressed by Stalin and Molotov on several occasions.²¹⁴ What united the two powers was rejection of the system of states created by the treaty of Versailles and its follow-up treaties, a system which had demanded territorial sacrifices of Germany as well as of the Soviet Union. As late as 1 July 1940 Stalin quite openly told Sir Stafford Cripps, the British ambassador, that 'the basis of the German-Soviet non-aggression pact had been a common desire to get rid of the "old equilibrium" in Europe, which, prior to the war, Great Britain and France had sought to preserve'.²¹⁵ The Soviet Union had associated itself with Germany's revisionist aspirations when it became anxious to conclude a treaty with Germany. As Chargé d'Affaires Georgy Astakhov, authorized by Stalin to conduct the preliminary negotiations, had indicated to Minister Karl Schurre on 26 July 1939, 'Danzig must return to the Reich one way or another, and the question of the corridor' must also be resolved 'somehow in favour of the Reich'.²¹⁶ That in the summer of 1939 this could only be accomplished by war was clearly realized in Moscow. Of particular interest in that respect is a report by Augusto Rosso, the Italian ambassador, of 25 August, 1939, quoting a remark of Reich Foreign Minister von Ribbentrop, just then in Moscow, that 'the Soviet Union had taken note of the need for Germany to regulate the Danzig issue, and would not therefore raise any objections to a war by Germany against Poland'.²¹⁷ On 21 December 1939, when Poland had long been crushed, the Soviet trade-union paper *Trud*—after *Pravda* and *Izvestiya* the third biggest daily in the Soviet Union—observed that of the unjust stipulations of the Versailles treaty, those were still in force in 1939 which separated East Prussia from Germany by the 'so-called

Polish corridor' and which compelled 'the German city of Danzig' to remain outside the Reich.²¹⁸ And in his famous speech of 6 November 1941, months after the beginning of the German-Soviet war, Stalin still observed that in a certain sense the 'Hitlerites' had been 'nationalists', i.e. something entirely positive in his eyes, so long as they had confined themselves to 'bringing together the German countries and reuniting the Rhineland, Austria, etc. with them'.²¹⁹ Only when they attacked the living-space of foreign nations had they revealed their true nature.

If, therefore, the Soviet Union was showing a good deal of understanding for German aspirations to shake off what it interpreted as 'unjust' clauses of the treaty of Versailles, then that benevolent attitude was further enhanced by the fact that the Poland of 1939, in Moscow's eyes, was 'one of the most reactionary states in Europe', a country whose 'economic, political, and military backwardness cried to heaven', a country where 'terror', 'oppression', and 'exploitation' ruled, a country in total 'disintegration' and 'decay', while at the same time indulging in 'great-power chauvinism'.²²⁰ Moscow was not alone in its criticism of the character and condition of a state which, regardless of its internal social and national conflicts, was in dispute not only with its great neighbours in the east and west, i.e. the Soviet Union and Germany, but also with Lithuania and the Czechoslovak Republic. Indeed, even leading figures of the Western powers did not refrain from voicing such views. Thus Sumner Welles, the acting American secretary of state, speaking to President Beneš of Czechoslovakia in 1943, observed that what had become of Poland after the Great War was a 'scandal': 'It was a nonsense that a nation of 20 million would play it big in between 80 million Germans and 200 million Russians.'²²¹ William Strang, head of the central division in the British Foreign Office, and Gladwyn Jebb, secretary to the permanent under-secretary, who travelled in Poland in an official capacity in June 1939, remarked in their report on the aggressive mood in Poland and on the far-reaching great-power plans of Polish chauvinism. By means of conquest and annexation of foreign territories a Greater Poland was to be created and Warsaw to be made the centre of a 'powerful concentration'.²²² And finally Joseph Davies, the American ambassador in Moscow and foreign-policy adviser to Roosevelt, recorded on 26 August 1939 the 'very definite' remark of a Polish minister that 'his government would never agree to Poland and Germany coming together to settle their difficulties because of the Polish corridor and Danzig... His government, he said, would show the world; three weeks after the outbreak of war Polish troops would be in Berlin.'²²³

In view of the intransigent mood in Warsaw, of which Moscow was very well aware, Soviet propaganda had no difficulty in holding Poland responsible for the outbreak of the war. Soviet sources cling to the thesis first formulated by Molotov, chairman of the council of people's commissars, in his radio address of 17 September 1939 in justification of Soviet intervention in Poland: that the Polish people had been hurled into the 'unfortunate war' and into disaster by its 'unreasonable leaders', and that the Soviet Union was virtually compelled to 'place the lives and property of the population of the western Ukraine and western Belorussia under its protection'.²²⁴ However, the situation developing in Poland in mid-September 1939, with its alleged dangers for the Soviet Union, did not come about by accident but was the consequence of the German-Soviet treaty. Moreover, the Soviet Union had from the very first day directly helped in the destruction of the Polish Republic. Thus on 1 September 1939 it had readily complied with a request from the chief of staff of the German Luftwaffe by broadcasting homing signals over the Minsk transmitter for the benefit of the German bombers operating in Poland.²²⁵ On 8 September 1939 the Soviet government informed Wacław Grzybowski, the Polish ambassador, that its territory would be closed to the transit of Allied war material to Poland. Anyway, the Germans were not greatly interested in a swift advance with strong forces to the Soviet state frontier in order to penetrate into Soviet territory at a suitable opportunity and thereby to open the war against the Soviet Union.²²⁶ On the contrary, the German government attached great importance to as unimpeded an advance as possible by the Red Army against 'Polish fighting forces' and its occupation of the territory assigned to the Soviet Union—if only to be able to transfer its own troops to the still weakly held western front.²²⁷ When on 3 September 1939 it received an invitation from the Reich government to take possession of its 'sphere of interest' up to the line of demarcation agreed in Moscow,²²⁸ the Soviet government was 'unconditionally' in favour, except that it wished to postpone for a while the moment for 'concrete action'.²²⁹ One reason was the need for military and organizational preparations, another was the wish to preserve the semblance of neutrality and to avoid being suddenly seen as an aggressor. But when the German advance made unexpectedly rapid progress, the Soviet government found itself under pressure. On 10 September 1939 Molotov admitted to Graf von der Schulenburg, the German ambassador, that his government found itself in

²²⁴ *Rundschau*, 17 Sept. 1939, according to *Stalin und Hitler*, No. 121; Note of the government of the USSR to the Polish ambassador in Moscow, 17 Sept. 1939, *FRUS* (1939), i. 429.

some embarrassment, having hoped to use the German advance as a pretext for declaring that 'Poland was falling apart and it was necessary for the Soviet Union, in consequence, to come to the aid of the Ukrainians and the Belorussians'. This approach, however, would now be denied to it: if, as he assumed, Germany were to conclude an armistice with Poland, the Soviet Union could not very well 'start a "new war"'.²³⁰ Ribbentrop managed to reassure Molotov by having him informed that there could be no question of an imminent armistice with Poland, so that the Soviet Union would have an opportunity to intervene and to use its special justification for that step.²³¹

Even during those first ten days of September there thus existed a German-Soviet agreement that the Soviet Union too would take possession of the 'sphere of interest' assigned to it in the secret protocol of 23 August 1939.²³² Hence the motivation subsequently adduced for its intervention in Poland, that in 'mid-September 1939' an unexpected need arose to protect the allegedly threatened 'Ukrainians and Belorussians',²³³ is revealed as a mere pretext. The more so as that argument had been the subject of a German-Soviet exchange of opinion ever since 10 September 1939. Besides, one might ask, who was actually threatening that population? On 10 September 1939 Molotov, talking to Schulenburg, was still hoping to present Germany as the alleged source of the threat, but that version was later somewhat modified in the literature, with Proëktor for instance arguing that the 'Ukrainians and Belorussians' had been in danger of coming under the yoke of 'Poles of the *pans* [big landowners] under the conditions of a Fascist occupation regime'.²³⁴ When the German ambassador objected to that accusation, Stalin 'with the utmost readiness altered the text' so that the statement to be made to the public on 17 September 1939 was acceptable to the Germans.²³⁵ The intensively accelerated military preparations had meanwhile progressed to a point where Stalin, in the night of 16-17 September 1939, in the presence of Molotov and of the people's commissar for defence, Marshal Voroshilov, was able to inform Schulenburg that the Red Army would cross the Polish frontier along the entire line from Polotsk to Kamenets-Podolsk at 6 o'clock in the morning, and that air-force units would 'begin today to bomb the district east of Lvov.'

Planning and execution of the Soviet operation altogether reveal that this was not some kind of 'liberation campaign' but a war of aggression²³⁶ in breach of the Soviet-Polish non-aggression treaty, a case of 'hostilities' even in the restrained language of the International Red Cross. The troops of the specially

formed Ukrainian and Belorussian fronts were instructed 'not to get involved in frontal engagements', but to bypass 'enemy groupings' along their flanks and rear and speedily to occupy enemy localities.²³⁷ The Soviet communiqué from the front on 17 September 1939 reported the shooting down of ten Polish aircraft²³⁸ and on 20 September the destruction of three Polish infantry divisions and two cavalry brigades, as well as the capture or destruction of 280 guns and 120 aircraft.²³⁹ On 21 September 1939 Soviet artillery began to bombard Lvov.²⁴⁰ Air attacks against Polish troops were accompanied by propaganda actions. Thus leaflets signed by Army Commander (1st rank) Timoshenko, the commander-in-chief of the Ukrainian front, invited Polish soldiers to wipe out their officers and generals in the spirit of the class struggle.²⁴¹ 'The officers and generals are your enemies,' Army Commander (2nd rank) Kovalevsky, the commander-in-chief of the Belorussian front, similarly proclaimed in his leaflets: 'Soldiers! Destroy your officers and generals...'²⁴² The Polish soldiers were begged not to shed their blood for the 'foreign interests of big landowners and capitalists': 'The ministers and generals have taken their looted gold and fled like cowards, abandoning the army and the entire Polish nation to their fate.' Any resistance to the Red Army would end in total annihilation. In view of the weakened condition of the Polish fighting forces, the troops of both fronts advanced rapidly, though here and there against stiff opposition,²⁴³ so that, as Army Commander (2nd rank) Tyulenev, the commander-in-chief of the Twelfth Army, put it, they were compelled to deal 'crushing blows'.²⁴⁴ Polish opposition was primarily broken by the use of armoured formations.²⁴⁵

By the conclusion of the campaign after twelve days some 230,000 Polish troops had been taken prisoner; their number increased to approximately 250,000 after the annexation of the Baltic States. The fate of these prisoners of war, as well as of the Polish civilians detained in the Soviet-occupied territory, was for the most part to be exceedingly severe. According to Soviet literature, all Polish servicemen were immediately released to their homeland, regardless of whether occupied by German or Soviet troops, or else allowed to go abroad. 'A few, however,' it is stated, 'went to the USSR, where patriotic Polish organizations were being formed.'²⁴⁶ In fact, of the 250,000 Polish prisoners of war and the 1,230,000 Polish civilians arrested or deported, an extremely high

proportion perished in Soviet detention.²⁴⁷ The question of the whereabouts of the 15,000 Polish army soldiers, 8,000 officers, and 7,000 NCOs, as well as a number of prominent civilians in the hands of the NKVD in the prison camps of Kozelsk, Ostashkov, and Starobelsk, who vanished without a trace west of Smolensk in the spring of 1940, was answered by the discovery of the mass graves at Katyn in 1943. As Zawodny, in agreement with the results of international investigations, records, they had been 'systematically annihilated by the Soviet security police'.²⁴⁸ The victims of that Moscow-directed extermination included, along with 300 senior officers, Generals Billewicz, Bohatyrewicz, S. Haller, Kowalewski, Lukowski, Minkiewicz, Plisowski, Smorawinski, F. Sikorski, Skierski, and Skuratowicz, and Admiral Czernicki.²⁴⁹ General Olszyna-Wilczynski, commanding the Grodno military district, had already been murdered in September 1939, after he had gone to the Soviets to offer to surrender without fighting. In Zawodny's judgement 'the officers shot at Katyn and those recorded as missing represented the flower of Polish society. Thousands had been called up from the reserve. In civilian life they were university professors, doctors, scientists, artists, secondary-school teachers... who were doing their duty as officers of the reserve.'

If further proof were needed that the campaign in Poland was conducted by agreement between the two aggressors, this may be found in the military negotiations held in Moscow on 20 September 1939,²⁵⁰ attended on the Soviet side by Marshal Voroshilov, people's commissar for defence, and by Army Commander (1st rank) Shaposhnikov, chief of the Red Army General Staff, and for the 'German High Command' by Lieutenant-General Köstring, the

²⁴⁷ The Polish ministry of justice in London in 1949 estimated the total number of Polish citizens taken prisoner, arrested, deported, and sent to forced labour at 1,442,000-1,660,000: *Documents on Polish-Soviet Relations*, i. 573-4. Rhode, 'Polen', 1028, speaks of 'about' 1.5m. deportees. According to the Polish Committee for Social Self-Defence (KOR; formerly Committee for Workers' Defence), losses amounted to 148,000 out of 250,000 prisoners of war and 600,000 out of 1.6-1.8m. deported civilians: see 'Polen erinnert Moskau an Völkermord'. One remarkable account states that out of 600,000 Polish Jews deported to the Soviet Union in 1939-40 'about 150,000 returned to Poland at the end of the War. The rest—some 450,000—just vanished': *Documents on Polish-Soviet Relations*, i. 607-8.

²⁴⁸ Zawodny, *Zum Beispiel Katyn*, 104 ff.; Montfort, *Massacre de Katyn*, 223; Pozdnjakov, 'Novoe o Katyni'. On the entirely different fate of the approximately 18,000 Polish officers in German captivity see Schickel, 'Gefangene Polen in deutschen Offizierslagern'.

²⁴⁹ As recently as 1977 a reputable Soviet legal scholar, Prof. Dr Minasjan, wrote about the 'blood-bath prepared by the Hitlerite hangmen for the Polish officers in the forest of Katyn', which 'the nations of the world will never forget and for which they will never forgive the Nazi criminals': Minasjan, *Meždunarodnye prestuplenija*, 16, 221. Any comment is superfluous. As in similar instances, the Soviet government had also attributed its mass murder of the Polish officers in the forest of Katyn to the Germans. See the official report of the 'Extraordinary State Commission for Ascertaining and Investigating Crimes Committed by the German-Fascist Invaders and their Associates': *Truth about Katyn* (in private ownership). The Soviet Union admits the massacre of Katyn: Šavoronkov, 'Charkow'.

²⁵⁰ Secret protocol of 20 Sept. 1939, in *General Köstring*, 176 ff.

military attaché, by Colonel Heinrich Aschenbrenner, the air attaché, and by Lieutenant-Colonel (General Staff) Hans Krebs. A jointly signed protocol laid down the modalities of the two sides moving into their respective 'spheres of interest'. The German Wehrmacht undertook to take all 'necessary measures' for the prevention of 'possible provocations or acts of sabotage by Polish gangs and so on' in the towns and villages to be handed over to the Red Army. The Red Army for its part undertook to make available the 'necessary forces for the annihilation of Polish army units and gangs' along the line of withdrawal of the German troops. There was a partial exchange of liaison officers between the withdrawing German and the advancing Soviet formations. Acts of transfer, such as that of the modern fortress of Osowiec between the German Major-General Brand and the Soviet Colonel Berdnikov, were staged in a solemn manner.²⁵¹ Poland had demonstrably succumbed to a combined attack by Germany and the Soviet Union—a fact that can be neither hushed up nor argued away.²⁵² Even the man responsible for Soviet policy, People's Commissar Molotov, in his speech to the Supreme Soviet on 31 October 1939 unambiguously summed up the situation: 'A single blow against Poland,' he said, 'first by the German and then by the Red Army, and nothing was left of that monstrosity of the treaty of Versailles, which had owed its existence to the oppression of non-Polish nationalities.'²⁵³ At Stalin's express behest no remnants at all of Poland's existence as a state were to survive. The German ambassador reported to Berlin that on 20 September 1939 Molotov had informed him 'that the original inclination entertained by the Soviet government and Stalin personally to permit the existence of a residual Poland had now given way to the inclination to partition Poland along the Pisa-Narev-Vistula-San line.'²⁵⁴ On 25 September 1939 Stalin proposed a territorial exchange to Schulenburg, under which Germany would renounce Lithuania, assigned to her in the secret protocol of 23 August, and instead would receive the entire Voivodship of Lublin and parts of the Voivodship of Warsaw as far as the Bug.²⁵⁵ The reason for this was simple: the Soviet Union wished to get rid of Polish provinces which were difficult to assimilate and in which millions of Jews were living, and instead gain a free hand in the three Baltic States. In the event of Germany's agreement the Soviet Union, as Stalin declared, would 'immediately take up the solution of the problem of the Baltic countries in accordance with the protocol of 23 August'. The Reich government did not find it easy to agree, but once that agreement was given and enshrined in the

secret protocol signed by both parties and attached to the 'frontier and friendship treaty' of 28 September 1939²⁵⁶ nothing stood in the way of the Soviet intentions. Within a few days the Soviet government began to put massive pressure on the Baltic republics to make them agree to the establishment of bases on their territories, which in practice meant military occupation as a first step towards the planned annexation.²⁵⁷ As for the Polish Republic, 200,036 square kilometres of its sovereign territory were incorporated in the Soviet Union in accordance with the secret protocol of 28 September 1939, while 188,737 square kilometres were annexed or occupied by Germany. According to Soviet data, the Red Army's losses were 737 men killed and 1,862 wounded in Poland, sufficient reason for Stalin to refer in a telegram to Ribbentrop on 27 December 1939 to the 'friendship of the nations of Germany and the Soviet Union' consolidated 'by blood'.²⁵⁸ German-Soviet collusion against Poland's national existence was finally sealed when the two powers in a secret additional protocol agreed in their respective territories not to tolerate any political 'agitation which affects the territory of the other party', to suppress any 'such agitation' from the outset, and to inform 'each other concerning the most suitable measures for this purpose'.²⁵⁹ Any stirring of national resistance by the Poles was to be nipped in the bud.

From the very start the Soviet government had regarded Poland as a problem exclusively concerning her two neighbours, Germany and the Soviet Union. After the 'disintegration of the Polish state', in other words after the destruction of its fighting forces and the occupation of its territory by troops of the Wehrmacht and the Red Army, the Polish problem was, in Soviet eyes, 'settled definitively'. In that spirit on 28 September 1939 Molotov and Ribbentrop signed a joint 'declaration by the government of the German Reich and the government of the USSR', which stated that a 'firm foundation' had been created for 'a lasting peace in eastern Europe'.²⁶⁰ As the Western powers, Britain and France, were as a matter of principle denied the right to interfere in Polish affairs, these countries' declaration of war against Germany was interpreted in Moscow as an arbitrary extension of a local conflict, not as an obligation arising out of a guarantee. Stalin and the Soviet government did not hesitate to put the entire Soviet propaganda machine as well as all the parties of the Moscow-controlled Communist International into the service of a large-scale campaign designed to brand Britain and France as the originators of the war and to hold these two powers responsible for its continuation and extension.²⁶¹ The justification given by these countries for their declaration of

²⁶¹ Rossi, *Zwei Jahre*, 85 ff., 90, 102 ff.

war against Germany was thus repeatedly characterized as a mere 'pretext' designed to conceal their true intentions.²⁶² 'Just as the pistol-shots in Sarajevo were only the pretext and not the cause of the first imperialist war,' a joint peace appeal by the Communist Parties of France, Britain, and Germany of January 1940 stated, 'so the self-appointed defence of Poland by Britain and France is only the pretext for the second imperialist war.'²⁶³ Neither was the Western powers' reason for continuing the war against Germany after the collapse of Poland—the moral necessity of a fight against National Socialism, i.e. against the 'Fascism' opposed in every possible way in the Soviet Union too until 1939 and then again from 1941 onward—accepted as valid in Moscow.²⁶⁴ On 31 October 1939 Molotov expressly and emphatically rejected that motivation when, in his speech to the Supreme Soviet, he declared that there was 'no justification at all' for that kind of war. The chairman of the council of people's commissars explained that one could accept or reject 'the ideology of Hitlerism'—that was a matter of political attitude—but every person should understand that an ideology cannot be destroyed by force, that it cannot be removed from the world by a war. It is therefore not only pointless but indeed criminal to wage such a war for the "destruction of Hitlerism", camouflaged as a struggle for "democracy".²⁶⁵ *Izvestiya*, the mouthpiece of the council of people's commissars, had already carried similar reflections on 9 October 1939, when it stated that 'no kind of ideology, no kind of philosophy' could be destroyed 'by fire and sword'. 'One may respect or hate Hitlerism, like any other system of political beliefs... but to unleash wars for the "destruction of Hitlerism" means to permit a criminal piece of political stupidity... a senseless and nonsensical atrocity.'²⁶⁵

In addition, attempts were made in the Soviet Union to question Britain's and France's morality in conducting a war which, in Molotov's words, was 'reminiscent of the religious wars of earlier days'. The appeal of the Communist Parties of January 1940 reminded the people of Britain, France, and Germany that those who 'oppressed 300 million Indians' or, as Georgy Dimitrov, chairman of the Comintern, described it, 'practised undivided rule over hundreds of millions of colonial slaves' had no right to speak 'of the freedom of nations' while themselves 'practising the worst Hitlerite methods of brute force and oppression against their own nations'. 'There are', it was stated in allusion to the self-righteousness of those countries, 'concentration camps in France and in British India, just as in Germany.' The war, in the Soviet interpretation, was not about a 'reactionary multinational state', about

²⁶² Molotov addressing the Supreme Soviet, 29 Mar. 1940, according to *Stalin und Hitler*, No. 222; Dimitrov, *Kommunistische Internationale* (Stockholm) (Nov. 1939), *ibid.*, No. 173; *Izvestiya* (26 Feb. 1940).

²⁶³ 'Joint Appeal of the Communist Parties of France, Great Britain and Germany', *Rundschau* (20 Jan. 1940), according to *Stalin und Hitler*, No. 199.

a 'reactionary Fascist Poland',²⁶⁶ nor about the liquidation of 'Hitlerism' or 'Fascism', about ideological or philosophical issues, or about 'freedom and democracy'. It was in reality about the maintenance of the old balance of power in Europe, a balance created by Britain and France and benefiting only them; to liquidate that balance had, in Stalin's words, been the real point of the German-Soviet treaty.²⁶⁷ From the Soviet point of view, therefore, the armed conflict had the character of a preventive war by Britain and France against an increasingly powerful Germany,²⁶⁸ their most dangerous competitor; Moscow had no doubt that the two world powers were concerned with nothing but their own material and imperial interests. Molotov in this context repeatedly spoke of the inevitability of a clash between Britain and Germany. The cause of the war, in his words, was Germany's natural endeavour 'to break the fetters of the treaty of Versailles, whose authors had been Britain and France with the active participation of the United States'.²⁶⁹ In his observations of November 1939, which defined the political line of the Communist International, Dimitrov called the war a conflict 'for hegemony in Europe, for colonial possessions in Africa and other continents, for colonies and sources of raw materials, for control of shipping-routes, for the subjection and exploitation of foreign nations . . . but in no respect for the dyence of "Dencocracy", "freedom", and "international law", or for safeguarding the independence of small countries and nations'. And on 26 February 1940 the government paper *Izvestiya* outlined the international situation as follows: 'When Germany was beginning to struggle for the annulment of "Versailles", Britain became aware of . . . the renewal of a threat from a dangerous competitor. Britain began serious preparations for a new war . . . the war, fought in defence of the fundamental position of British imperialism, is intended to weaken or even destroy its most dangerous rival in the world market.'²⁷⁰ Although Germany too was counted—covertly rather than openly—among the imperialist countries, all direct criticism of her was meticulously avoided; the sympathies of the Soviet Union were clearly on her side. Stalin and Molotov repeatedly emphasized their interest in the existence of a strong Germany as the 'indispensable prerequisite of peace in Europe'.²⁷¹ The Soviet Union, Stalin declared on 19 October 1939, 'would not consent to the Western powers' creating conditions which might weaken Germany or place her in a difficult position'. In this context Molotov pilloried Britain's and France's 'criminal' aims: they were trying to destroy and chop up Germany and impose on her an even worse Versailles than in 1918.²⁷²

²⁷² Molotov addressing the Supreme Soviet, 29 Mar. 1940, according to *Stalin und Hitler*, No. 222.

In line with the Soviet view that the obstacle to peace had been removed with the liquidation of Poland, Britain and France alone were being held responsible in the German-Soviet government declaration of 28 September 1939 for the continuation of the war, and consultations between the German and Soviet governments 'concerning the necessary measures' were threatened. On 30 September 1939 the Party daily *Pravda* called the continuation of the war a crime being committed against the nations by 'provocateurs and dishonourable politicians' without any justification.²⁷³ A peace campaign such as the one launched by Moscow did not of course cost the Soviet Union much: if peace really was achieved, the USSR would, on the strength of its success, be a partner to the negotiations and have a considerable say in Europe.²⁷⁴ The Soviet Union could no longer be excluded from the concert of powers, as it was in Munich. If, however, as seemed likely, the conflict continued, that eventuality would also be welcome to Moscow—quite apart from the propaganda benefit gained from its display of love of peace. It is against this background that the declaration has to be seen which Stalin, summing up official opinion, ordered to be published in *Pravda* on 29 November 1939 and which therefore deserves special attention.²⁷⁵ Stalin declared:

(1) It was not Germany which attacked France and Britain, but France and Britain which attacked Germany and therefore took upon themselves the responsibility for the present war. (2) After the outbreak of hostilities Germany made peace proposals to France and Britain, and the Soviet Union publicly supported Germany's peace proposals because it believed, and still believes, that a rapid end to the war would radically alleviate the position of all countries and nations. (3) The ruling circles of France and Britain have rejected both German peace proposals and the efforts of the Soviet Union in an offensive manner. These are the facts.

Stalin's exculpation of Germany and attribution to Britain of sole responsibility for the unleashing of the Second World War could not, in the further course of events, be maintained in this one-sided and narrow form, but neither was it ever entirely abandoned. The way in which the first phase of the war—the imperialist war of the capitalist countries against one another—can be viewed in the Soviet Union to this day may be gleaned from the observations of a figure who was intimately acquainted with the policy of the Western powers, especially of Britain, during the war. 'All accounts so far', Ivan Maysky, the former Soviet ambassador in London, states in his memoirs, 'nevertheless show beyond dispute that the real responsibility for the Second World War is borne by Hitler on the one side, and by Chamberlain and Daladier on the other . . . Chamberlain and Daladier, and the aggressive imperialist forces behind them, deserve no mercy before the great judgement of

history.²⁷⁶ In the eyes of the well-known Soviet diplomat Britain and France thus stand alongside National Socialist Germany. No mention, on the other hand, is made of the responsibility borne by the Soviet Union for the disaster which befell Europe, a responsibility stemming from the treaties concluded with Hitler, the extensive support given to Germany during the first phase of the war, and the execution of the secret protocols.

In what way did the Soviet Union support Germany's war effort? Its support, first of all, was in the political and propaganda field, and subsequently in the economic sphere. However, Germany also received practical military support. Thus the naval base put at Germany's disposal in Zapadnaya Liza Bay, and subsequently in September 1939 in Yakonga Bay on the Murmansk coast, the 'Base North', was of assistance to German naval operations prior to the occupation of Norway.²⁷⁷ The Soviet Union allowed the Germans free passage through the 'Siberian Straits', the north-east passage, and thereby enabled the auxiliary cruiser *Komet* to break through into the Pacific, where it engaged in raids against British shipping. On 6 September 1940 the German embassy was instructed to convey to the Soviet government the Reich government's gratitude for that 'valuable support'. Grand Admiral Raeder, the commander-in-chief of the navy, did not omit to send a personal letter of thanks as well to Admiral Kuznetsov, the people's commissar for the ocean fleet.

Since in the Soviet view it was solely the Western powers who desired a continuation of the war, the occupation of Denmark and Norway by German troops in the spring of 1940 was regarded in Moscow as a justified counter move against the alleged intention of Britain and France to extend the war to northern Europe. On 9 April 1940 Molotov formally assured the Reich government of the Soviet government's understanding for what he called the 'defensive measures . . . forced upon' Germany and wished it 'complete success' with them.²⁷⁸ Comment in the government paper *Izvestiya* and in the Party paper *Pravda* was on the same lines.²⁷⁹ Britain and France had 'invaded' the neutral waters of the Scandinavian countries in order to undermine Germany's military position. In view of the fact that the Western powers had 'violated the sovereignty of the Scandinavian countries' and 'extended military operations to Scandinavia', *Izvestiya* on 11 April 1940 described any discussion of the legitimacy of the procedure 'forced upon' Germany as 'ludicrous'.²⁸⁰ And on 12 April 1940 *Trud*, the trade-union daily, observed that Britain and France had 'sown the wind and harvested the whirlwind'; by their intervention they had taken upon themselves 'the whole weight of responsibility for the

extension of war operations to Scandinavia'.²⁸¹ This exceedingly understanding attitude on the part of the Soviet Union towards Operation Weserübung is explained by the relief felt in Moscow that with the failure of the attempted Anglo-French invasion of Norway the danger of an armed conflict between the Soviet Union and the Western powers in the northern region had disappeared. That reaction refutes the thesis of an allegedly unselfish attitude to the Nordic nations, and conflicts with the interpretations of Soviet historiography, which speaks of a German 'raid', of an 'attack',²⁸² indeed 'not a preventive war, but open aggression',²⁸³ and suggests that 'when Norway, at the beginning of April 1940, was occupied by Fascist troops, in that most difficult period in the history of the Norwegian people', the Soviet Union had stood 'by its side'. The Soviet government's real assessment of its role emerges from Molotov's speech to the Supreme Soviet on 31 July 1940, when he declared that, without indirect support from the USSR, Germany would not have been able to extend its sphere of power to Scandinavia and Western Europe.²⁸⁴

As the Soviet government was blaming only the Western powers for a policy of extending the war and 'violating the rights of neutral states', it managed to find words of understanding and excuse also for the German attack on Holland and Belgium. Behind those words, however, was the unspoken satisfaction of seeing the forces of Germany and the Western powers locked for an unforeseeable time in a 'war of attrition', which would ultimately bring supremacy to the Soviet Union. Against this background, in May 1940, there took place a repeat performance of the previous month's event, when Molotov, though perhaps a little more curtly, expressed his understanding for the German invasion of the two neutral countries²⁸⁵ and when a few days later keynote articles, inspired by the highest quarters in the Kremlin—that is, by Stalin personally—appeared in *Izvestiya* and *Pravda*.²⁸⁶ It was pointed out that it had long been part of the plans of the Anglo-French bloc to 'drag' Holland and Belgium 'into the imperialist war by economic and diplomatic pressure, and by direct threats'. Germany had therefore been confronted with the task of delivering a counterblow against the invasion of the Ruhr planned by the Western powers. Britain and France had thus thrust 'two more small countries into the flames of the imperialist war'.²⁸⁷ The attitude adopted by the Soviet Union in the conflict between the Western powers and Germany can be gauged in particular from the behaviour of the Moscow-controlled Communist Party of France.²⁸⁸ Having committed the 'grave error' of voting for the war loans in the Chamber on 2 September 1939, it soon performed a complete about-turn on the lines of the peace campaign launched by the Soviet Union. Maurice Thorez, Jacques Duclos, André Marty, and the other Communist

leaders were now consistently taking the Soviet policy line of holding the 'Anglo-French imperialists' responsible for the war because they had 'induced Poland to reject an amicable revision of the Danzig statute' and because they were refusing to examine Hitler's peace proposals. Despite strict counter-measures by the French government, the French communists did not confine themselves to a covert propaganda struggle against the 'imperialist war' or the 'criminal policy of the warmongers'. To the applause of the Soviet press they next proceeded to undermine the morale of the French army and to paralyse the troops' will to resist. The Communist Party of France thus contributed its share to the success of the German offensive in the west, which, in contrast to the postwar version, was by no means described in 1940 as an 'invasion of Fascist troops', but as a superbly planned and executed strategic operation. After France was defeated, or, as it is now formulated, had come 'under the yoke of Fascist Germany',²⁸⁹ Molotov again conveyed to the German ambassador 'the warmest congratulations of the Soviet government on the splendid success of the German Wehrmacht'.²⁹⁰ According to the chief of the press department of the foreign commissariat, Palgunov, the Soviet Union had throughout the campaign played the role of a 'valuable second' to Germany. The pronouncements of the Soviet press and propaganda machine, as ambassador von der Schulenburg reported from Moscow, certainly left nothing to be desired but came up to the 'highest expectations' of the German side.²⁹¹ Molotov repeatedly (e.g. in his speech to the Supreme Soviet on 31 July 1940) and in his conversations with Hitler in November 1940 and rightly pointed out that the German-Soviet agreement had been 'not without effect on the great German victories', if only because it had provided Germany with the 'calm feeling of security in the east' and had allowed her to employ the bulk of the Wehrmacht in the west.²⁹² As for the Communist Party of France after the surrender, it called on the French to adopt a friendly attitude to the German occupation troops; it further demanded that 'those who had driven France into the war and had lied to the French people' be publicly sentenced.²⁹³ A 'Soviet-French policy of friendship', as a 'complement to the German-Soviet treaty', was to create the conditions for durable peace in western Europe.²⁹⁴

The German offensive in the west marked the climax, but simultaneously also a certain turning-point, in political and propaganda co-operation between the Soviet Union and Germany. The increment of power which the Reich, after the occupation of important countries of central and northern Europe, had now also achieved in western Europe was bound to cause concern in the

Soviet Union. Its interest would have been served by a protracted conflict in the west, which would have worn down the strength of both sides.²⁹⁵ But now the campaign had been brought to a conclusion after but a few weeks and the Soviet Union was facing its powerful ally alone on the Continent. In a conversation with Sir Stafford Cripps, the British ambassador, on 1 July 1940 Stalin allowed it to be understood that the Soviet Union would not favour German hegemony in Europe, though at the same time he declared that he did not believe in the realizability of such intentions as the Reich lacked the necessary naval power. Thus a renewed attempt by the British ambassador in the autumn to win the Soviet Union over 'for a common defence policy *vis-à-vis* Germany' in view of the new situation again ended in failure.²⁹⁶ However, preparations were started in Moscow to take possession without delay of the Baltic States assigned to the Soviet Union in the secret protocol of 28 September 1939 in order to improve the country's strategic position.²⁹⁷ On 15 and 16 June the Soviet government issued ultimata demanding the formation of pro-Soviet governments in Lithuania, Latvia, and Estonia. The Soviet troops already in those countries were reinforced and strategic locations occupied, while Stalin's special envoys—Dekanosov for Lithuania, Vyshinsky for Latvia, and Zhdanov for Estonia—prepared for their definitive incorporation by so-called plebiscites.

While Germany and the Western powers, which had guaranteed Romania's integrity in April 1939, were tied down by the conflict in western Europe, the Soviet Union attempted, by force of arms where necessary, to incorporate in its state territory the Romanian regions claimed by it.²⁹⁸ Whereas the Reich government fully recognized the justification of the Soviet claims to Bessarabia, which had been part of the Tsarist empire from 1812 to 1917, it objected to the incorporation of the Bukowina, which, as Ribbentrop on 23 May 1940 instructed Schulenburg to point out, had been an Austrian crown land, in the fate of whose ethnic Germans the Reich was taking a lively interest.²⁹⁹ In view of the German objection the Soviet government decided to content itself with the annexation of the northern Bukowina and a corner of Moldavia, and on 26 June 1940 had a short-term ultimatum delivered to the Romanian government on those lines.³⁰⁰ The same day, at 22.00 hours, the supreme command had transmitted to the Soviet Twelfth Army and the Mechanized Cavalry Group in Kolomyia (commander-in-chief Lieutenant-General Cherevichenko; chief of staff Major-General Boldin; member of the war council Divisional Commissar Nikitin) order No. 001 for the

opening of hostilities and for an attack in the general direction of Cernăuți-Jassy.³⁰¹

Germany advised the Romanian government to yield, so that force was avoided in the end. However, the annexation of the northern Bukowina without prior notification was felt in Berlin as an affront and aroused concern about Germany's vital oil supplies from Romania. The Soviet government for its part felt bound to describe the transfer of substantial portions of Transylvania to Hungary—as adjudicated by the Vienna arbitration award of 30 August 1940—and the subsequent recognition of Romania's integrity by Germany and Italy as a violation of article 3 of the non-aggression treaty, which provided for mutual consultation.³⁰² However, Ribbentrop disputed this by arguing that the secret protocol of 23 August 1939 referred only to Bessarabia as part of the Soviet sphere of interest.³⁰³ The Soviet government protested against Germany's dispatch of a military mission to Romania—sent there primarily with a view to the protection of the oilfields—and to the fact that she was stationing troops in that country and subsequently also in Bulgaria. Fundamental differences of opinion on the maximum demands of the Soviet government, about the free hand claimed by it in Finland, about its aspirations to control the exits from the Baltic and the Black Sea, and about its wish to extend its 'sphere of interest', now called 'security zone', to Bulgaria, all cast a shadow over Molotov's outwardly glamorous stay in Berlin in November 1940 and foiled Ribbentrop's hopes of including the Soviet Union in the continental bloc of the Tripartite Pact.³⁰⁴ Tensions were further aggravated by the German attack on Greece and Yugoslavia, with whose government the Soviet Union had established diplomatic relations on 25 June 1940 and concluded a friendship and non-aggression treaty on 5 April 1941.³⁰⁵ Although the Soviet government did not draw any immediate conclusions and did not even risk lodging a formal protest, with Molotov only verbally expressing regrets, there can be no doubt that the occupation of Yugoslavia, unlike that of the countries of northern and Western Europe, was no longer applauded in Moscow and that a different tune was now being played there.³⁰⁶

The deterioration of relations perceptible after the summer of 1940 behind a façade of continuing mutual understanding underwent a temporary check when Stalin himself on 6 May 1941, surprisingly, assumed the post of chair-

man of the council of people's commissars in place of Molotov. The assumption of government business by the general secretary of the Party, who as recently as 13 April 1941 had assured the Japanese foreign minister Matsuoka that he was 'a convinced adherent of the Axis and an opponent of England and America',³⁰⁷ was interpreted by the German ambassador and by diplomatic circles in Moscow as a clear indication of the wish to improve Soviet-German relations, as a disavowal of Molotov's policy, which had in a sense become bogged down, and ultimately as a wish to avoid a conflict with Germany for the time being.³⁰⁸ The real reason for this change of course emerged from Stalin's above-mentioned address to military-academy graduates on 5 May 1941, when he explained that it was necessary to delay conflict with Germany until the autumn of 1941 because war at that time of year was unlikely and because the Red Army would be able to conduct it under more favourable conditions in 1942. At any rate, Stalin's very first measures were to confirm German expectations of an improvement in the political climate.

The Soviet Union's anxiety to meet Germany's wishes, an anxiety unhampered by any other considerations, is most clearly revealed by the manner in which Soviet relations with other countries were adapted to the 'facts created by German arms'.³⁰⁹ In 1939 the Soviet Union had broken off relations with the Polish government, as well as with the government of Czechoslovakia, although it had a mutual-assistance treaty with that country, and instead recognized as legitimate under international law the independence of the Slovak Republic,³¹⁰ which has since been described as a mere 'puppet in Hitler's hands'.³¹¹ Then, in May 1941, Stalin also withdrew diplomatic status from the Norwegian and Belgian ministers in Moscow and broke off relations with the exile governments in London on the ground that these no longer exercised sovereignty over their countries. The break with Greece occurred in June. Only a month previously Stalin had solemnly recognized Yugoslavia's integrity and independence, and received Gavrilović, the Yugoslav minister, 'in the Kremlin like a brother'; now he too was dropped in a manner that was bound to astound 'even the most experienced and hardened observers of Soviet methods', moreover 'before the Germans had even opened their mouths'.³¹² These events caused profound despondency especially in Britain, whose government had, after the fall of France, intensively though vainly endeavoured to loosen Soviet-German co-operation.³¹³ In London they were taken as a clear signal 'that nothing more was to be expected of Moscow'.³¹⁴ If

any further proof were needed of the pro-Axis line of Soviet foreign policy during that period, it may be seen in the fact that the Soviet government now also formally recognized the government of Iraq,³¹⁵ which, under Rashid Ali al-Gailani, had just taken up the struggle for liberation from British colonial rule. After the beginning of the German-Soviet war Churchill, in September 1941, reproachfully told the Soviet ambassador Maysky that Britain 'a mere four months ago' had not known 'whether you were not going to march against us with Germany. We even considered it quite probable . . . You Russians are the last people with a right to reproach us.'³¹⁶

A fact of crucial importance to Germany prior to 1941 was that the Soviet Union was supplying the Reich, which was poor in raw materials, with a vast volume of commodities in order to enable it to wage a prolonged war of attrition against the Western powers. Economic relations followed a development of their own, even though this depended on the state of political co-operation at any given time, and greatly contributed to 'broadly buttressing . . . mutual political understanding.'³¹⁷ But Hitler and Göring, his plenipotentiary for the four-year plan, as well as being Reich minister for foreign affairs and minister for economic affairs, expressed their profound satisfaction at the scope of Soviet deliveries and emphasized their importance 'for the victorious prosecution of the war'. Even the first economic agreement, concluded on 11 February 1940, was regarded by the Soviet government, according to Stalin, not as 'an ordinary trade agreement' but, in a wider sense, as a treaty on mutual assistance between two states.³¹⁸ In line with its undertaking to support Germany economically during her war,³¹⁹ the Soviet government was making 'considerable' efforts to satisfy Germany's material requirements.³²⁰ Deliveries and services during the first twelve months of the treaty were to represent a total value of RM800m., comprising, among other things, 1m. t. of oil, 1m. t. of grain, 8000,000 t. of iron ore and scrap, 500,000 t. of phosphate, 100,000 t. of cotton, 100,000 t. of chrome ore, 80,000 t. of manganese, 10,800 t. of copper, 1,575 t. of nickel, 985 t. of tin, and 1,300 t. of raw rubber. As the Soviet Union did not have sufficient quantities of some of these raw materials and metals itself, some of its own imports were diverted to Germany³²¹ in fulfilment of Stalin's promises.³²² In fact as much as a half of the Soviet Union's own imports were, according to Stalin, to be resold to Germany. Another concession of major importance was the right of transit from and into Romania, as well as the countries of the Middle and Far East,

through the Soviet Union.³²³ In the opinion of German experts, the obligations of the Soviet Union even in the first year of the treaty exceeded the extent strictly needed by Germany from a purely economic point of view and considerably mitigated the effects of the British blockade.

Economic relations, though suffering to some extent on account of Germany's failure to keep to her contractual obligations as well as through differences of opinion on material compensation for the Lithuanian strip of territory near Mariampol, occupied by the Soviet Union though actually assigned to Germany, underwent a further boost at about the turn of 1940-1. The second economic agreement, successfully negotiated on 10 January 1941 as a result of exceptional Soviet obligingness,³²⁴ was described as the biggest trade agreement ever concluded by Germany.³²⁵ In the opinion of Special Envoy Karl Ritter that treaty represented 'the final collapse of the English blockade and the English attempt at an economic encirclement of Germany'.³²⁶ Stalin had, for the past year, realized that by the scale of its assistance to Germany the Soviet Union would earn the enmity of the Western powers, but he had pointed out that the Soviet Union would not be deflected from its attitude either by Britain or by France. Indeed on 11 January 1941 *Izvestiya*, the government daily, mocked the United States for evidently believing that 'it could sell Britain everything, including warships, in full conformity with international law and its position as a neutral, while the Soviet Union cannot even sell grain to Germany without violating its peace policy'.³²⁷ Not only were all delivery dates observed during the months to come, but the Soviet Union in some respects even exceeded its obligations and, in the German view, accomplished 'a truly admirable achievement' even in the organization of the transports. Thus Germany received, prior to the beginning of the German-Soviet war, no less than 2,220,000 t. of grain, maize, and legumes, 1 m. t. of oil, 100,000 t. of cotton, and numerous other products, in particular strategically important metals. As late as May 1941 the first deputy of the people's commissar for foreign trade, Krutikov, complained to Berlin that the German side was not providing sufficient rail capacity for the transport of goods from the Soviet-German frontier³²⁸ and simultaneously indicated a projected increase in deliveries.³²⁹ For the following year alone (1942) 5 m. t. of grain were promised.³³⁰ Goods trains carrying these commodities were rolling towards the Soviet-German frontier literally until the last hour before the opening of the German attack.

Bearing in mind the vast scope of the Soviet Union's support for the German war effort during the period of imperialist partnership between the

III. From Economic Alliance to a War of Colonial Exploitation

ROLF-DIETER MÜLLER

I. WAR-ECONOMY ASPECTS AND CONSEQUENCES OF THE ALLIANCE WITH THE SOVIET UNION 1939-1940

WHEN the German Wehrmacht invaded the Soviet Union on 22 June 1941 the close economic co-operation between the two countries came to an abrupt end. For nearly two decades it had probably been the most important positive aspect in German-Soviet relations from the treaty of Rapallo to the Hitler-Stalin pact, surviving the transformation of the alliance of two losers into mistrust, fear, and open confrontation; eventually, at the beginning of the Second World War, it was about to approach a new culmination.¹ This statement should not of course conceal the fact that in the area of German economic and rearmament policy there existed certain traditional lines which, regardless of any domestic or foreign-policy changes, were ultimately determined by a persistent revisionist idea, aiming at the establishment of a power-base in the east.²

After the failure of the military solution in 1918, efforts had centred on the establishment of an economic sphere of influence in eastern Europe. This was to provide the prerequisite of Germany's 'renewed rise'. The goal of a blockade-proof great-power position for Germany, based on Russia's ability to deliver, became a central part of Hitler's living-space programme. That consistent line, leading from Weimar to the Third Reich, rendered possible a partial congruence between the national-conservative leadership élites and National Socialist expansionist policy. Against this background the turning-points in German-Soviet relations, from the Rapallo treaty via Hitler's 'seizure of power' to his pact with Stalin, can also be explained with the consistent aspiration to extend German influence towards the east—economically, politically, and ultimately territorially and 'racially'.

At the beginning of 1939, when the outbreak of a European war for the assertion of Germany's expansionist aims appeared increasingly probable,³ the

¹ See the survey in Krummacker and Lange, *Krieg und Frieden*.

² See Müller, *Tor zur Weltmacht*; on the key role of economic aspects in Hitler's living-space programme see Zitelmann, 'Zur Begründung des "Lebensraum"-Motivs'. The thesis of a German preventive war against the USSR, still occasionally put forward, fails to carry conviction if only for this reason. It altogether lacks plausibility and support. When apologia and polemics take the place of debate, all rational scholarly discourse ceases.

³ See *Germany and the Second World War*, i. 680ff., and in particular Weinberg, 'Deutschlands Wille zum Krieg'.

Wehrmacht at first had to adapt itself to the possibility of a war on several fronts, rather like the initial situation in the First World War. In these circumstances the war-economy staff of the High Command of the Wehrmacht concluded that Germany's inadequate supplies of mineral oil would necessitate, right at the start of the war, not only the occupation of the Romanian oilfields but also the conquest of the southern Russian and Caucasian deposits.⁴ Simultaneously the demand was being raised in leading economic circles that 'in the event of war the Ukraine must be economically utilized'.⁵ Studies by civilian Reich authorities confirmed that 'military-economic immunity to a blockade' could 'even with the utmost efforts and the most favourable conditions concerning the northern region's willingness to supply [Germany] be achieved only to a limited extent *without the economic incorporation of Russia*'.⁶

From a strategic point of view this meant that, in the event of an enemy coalition including the USSR, Germany would have to occupy the Ukraine immediately after the onset of hostilities, in order, on the one hand, to weaken the Soviet regime as an opponent in the war and, on the other, to strengthen Germany's war economy by the exploitation of occupied Soviet territories.⁷ Hitler, however, in a daring diplomatic game, succeeded in ensuring the conclusion of a non-aggression treaty with the Soviet Union.⁸ An interim solution had thus been achieved which, by shelving the anti-Soviet expansion plans for the moment, enabled Germany to conduct her conflict with the Western powers with reliance on the deliveries promised by Stalin.

Cut off from overseas sources of raw materials and suffering from increasing production and supply bottlenecks, the Reich found itself in a long-term contest of strength with the potential of the Western democracies, whose superiority was bound to be felt increasingly the longer the war went on. The newly established German-Soviet 'partnership' therefore had to demonstrate that it was a viable arrangements at least in the short term, mainly as a means of supplementing the German war economy. It is against this background that German expectations at the beginning of the war concerning the value and the future prospects of a German-Soviet economic alliance have to be seen.

(a) *German-Soviet Trade Exchange and Hitler's War Policy up to the Summer of 1940*

Hitler himself explained to the leaders of the Wehrmacht that one need no longer 'have any fear of a blockade' as Russia would supply 'grain, cattle, coal, lead, and zinc'.⁹ This particularly impressed the chief of staff at the quartermaster-general's office, Colonel (General Staff) Eduard Wagner, who regarded the treaty with Stalin as the 'last salvation'.¹⁰ The war-economy staff of OKW, however, warned against excessive expectations.

At a first assessment of the situation the greatest immediate advantage was thought to be the elimination of the dangerous threat to the vital iron-ore imports from Sweden.¹¹ Any rapidly effective relief for the German war economy from deliveries of Soviet raw materials and foodstuffs was out of the question if only because of inadequate communications. To meet the need for exact data to assist long-term economic planning, efforts were made to obtain a multitude of expert opinions and items of information from public and private economic institutions.¹²

What was probably the most comprehensive study was submitted by the Weltwirtschaftsinstitut in Kiel as early as September 1939.¹³ It contained the conclusion—at first sight surprising—that in the short term Germany had no vital need for Soviet raw materials or foodstuffs. Even so, however, a considerable indirect advantage might be gained at least in the agricultural sector if the Soviet Union were to supply the neutral countries within Germany's sphere of influence (Denmark, Belgium, Holland) with grain. This would maintain their economic strength, from which Germany hoped to profit. Moreover, with regard to three strategically important raw materials (manganese ore, petroleum products, and raw phosphates) urgently needed additional deliveries for the Reich were expected from the Soviet Union. Taken overall, however, Russia's significance for the German war economy emerged only in the longer term, as Russia's agricultural base could become 'of crucial importance in a drawn-out war'. This 'important possibility of supplementing the greater German economic bloc' should be borne in mind also with regard to German war aims, as even after the conclusion of the present war the Soviet Union would occupy 'a significant key position in the German

global economic sector (in contrast to the British-American global economic sector)?

The opinions of Western experts, attentively followed in Berlin, confirmed that estimate. Although the possibility was acknowledged that Germany, given an undecided continuation of the war, might succeed after about two years in stepping up its economic relations with the Soviet Union to such an extent that the defeat of the Western powers would become inevitable, this would presuppose that Germany could survive two years of siege both in terms of domestic politics and materially, and that the Soviet Union would be prepared to subordinate its own economic needs to providing aid for Germany—and that was considered exceedingly uncertain. On the contrary, it was to be expected that Moscow would exact a high price for its supplies—especially hegemony in eastern and south-east Europe—and, in the long term, would make use of Germany's increasing dependence in order to steer the 'brown revolution' into Bolshevik channels.¹⁴

In Germany it was mainly Grand Admiral Raeder, the commander-in-chief of the navy, who in October 1939 emphasized the economic advantage of the German-Soviet alliance. Stalin's economic assistance, he said, was of 'decisive' importance. His offer was 'so generous that the economic blockade is almost bound to fail'.¹⁵ Equally optimistic was Colonel Ritter von Niedermayer, who was Reichswehr representative in Moscow during the 1920s and was subsequently on the teaching staff of the Military Academy. In *Militärwissenschaftliche Rundschau*, published by the Army General Staff, he published a euphoric article on Russia,¹⁶ commending the Soviet ally's military and economic strength, which, after a further suppression of 'Jewry', would emerge even more clearly. He invoked in that context an 'amalgamation of German organizational talent and the inexhaustible material resources of Russia's soil', which would render the 'Eurasian military front' unassailable.

The German foreign ministry initially saw no reason to expedite the economics talks which had already begun with Moscow or to ask the Russians for immediate massive supplies of war material.¹⁷ Although mobilization had revealed the shortcomings of Germany's rearmament and led to a marked exacerbation of the economic crisis in Germany,¹⁸ the speedy defeat of Poland, hastened by the participation of the Red Army, gave rise on the German side to expectations of an early conclusion to the war. Hitler therefore rejected a greater mobilization of the German economy and even considered it possible to conduct a campaign against France before the end of the year and thereby to end the war. The promises concerning commercial policy made by the

Soviets in connection with the non-aggression treaty seemed sufficient to provide adequate elbow-room for the German war economy at least for the next few months. The Soviet Union had undertaken to deliver additional raw materials to a value of RM180m. within two years and to open the transit route to the Far East. In addition, following the joint occupation of Poland, agreement was reached on developing mutual trade in such a way that 'the exchange of goods will again reach the highest volume attained in the past'.¹⁹ Thus, when talks for the conclusion of a comprehensive economic treaty began in the autumn of 1939, Berlin believed itself to be in a favourable negotiating position. Even though within his exclusive circle of leaders Hitler left no doubt that he regarded the pact with Moscow as merely a provisional solution,²⁰ diplomats and industrialists initially prepared for long-term co-operation with the Soviet Union, taking up concepts of an informal German economic hegemony developed in the 1920s.

Interest was focused on the raw-material and agricultural sectors of the Soviet economy.²¹ It was assumed that the employment of German experts and technologies would result in an enormous increase in production, especially if key enterprises were to be directly managed by German firms. Such a penetration of the Soviet Union would create a 'political-economic bloc whose development opportunities are only just beginning to dawn on the horizon as vague surmises'.²² Although the 'Russia Committee of German Trade and Industry', an amalgamation of firms interested in trade with the Soviet Union, in a memorandum for the Reich chancellery²³ pointed out that the 'discussion of plans aiming at a change or a loosening of Soviet economic policy' was attended by risks, as it might give rise to disquiet in the Soviet Union and thus unfavourably affect negotiations for a treaty, the long-term programme 'with the objective of utilizing the Russian economic space' became the official directive for the German negotiators.²⁴

Specifically, this comprised a total of raw-material requirements of the Berlin economic departments, which in volume greatly exceeded Soviet export

capacities. Thus the agricultural authorities demanded a doubling of the grain deliveries already agreed by Moscow, to a total of at least 2m. t., in order to top up Germany's meagre reserves.²⁵ Altogether these demands amounted to additional deliveries to a value of over RM1,500m., to be implemented by the Soviet Union within a year. By way of compensation the German side offered deliveries of industrial products over a period of five years—on condition that the Russians provided the necessary raw materials in short supply, or alternatively purchased them for Germany in third-party countries, thereby circumventing the Allied blockade.

The head of the German delegation, Ambassador Ritter, therefore proceeded from the belief that the trade exchanges could be based 'not on reciprocal business, but on unilateral deliveries by the Soviet Union, i.e. on a kind of subsidizing treaty', as it was formulated in a presentation to Hitler.²⁶ Moreover, efforts were to be made to obtain from Moscow an explicit recognition of German hegemony in the Balkans.²⁷ A mere four weeks earlier Hitler had still been prepared, if necessary, to offer Stalin the whole of eastern Europe as a sphere of influence, in order to achieve the conclusion of the treaty. But now Berlin was evidently hoping to get the economically vital supplementary region of eastern and south-eastern Europe under its own control and similarly to gain the Soviet Union as a willing source of war supplies.

Here and elsewhere the ancient German hegemony claim *vis-à-vis* Russia, the 'urge towards the east', concealed by recent formulas of alliance but given its extreme expression in Hitler's living-space goals, emerged clearly. But whether, in the economic and strategic conditions at the beginning of the war, Germany would be able to achieve Russia's alignment with the requirements of Germany's war economy solely by a policy of economic influence and political and territorial arrangements remained to be seen.

The Soviet leadership at first reacted calmly to the growing German pressure: it had no reason to extend deliveries to a war-waging and blockaded German Reich beyond the limit already conceded and thereby weaken its own rearmament efforts. It seems that Stalin for his part intended to derive the greater advantage from the economic relations and to get the German war economy to work extensively for the Soviet Union. Clearly this was in line with his interest in a protracted war of attrition between the capitalist great powers, which would absorb the industrial strength of the belligerents without one side or the other being capable of a decisive blow. As a neutral power wooed by both sides, the Soviet Union would be able to build up its strength unhampered, in order eventually to emerge as a referee in the struggle for the distribution of power in Europe. Moscow therefore endeavoured, moreover

²⁵ See the minutes of the meeting of the ministerial council for Reich defence on 16 Oct. 1939, No. 2852-PS, *IMT* xxxi. 235.

²⁶ *DGFP* D viii, No. 430 (8 Dec. 1939).

²⁷ Note by Weizsäcker, *ibid.*, No. 137 (26 Sept. 1939).

with some success and under the mistrustful eyes of Berlin,²⁸ to maintain and extend its trade relations with the Western powers, and particularly with the United States, in order to become less dependent on Germany in the field of valuable technologies needed for speedier rearmament.

In the negotiations with Germany the Soviet representativeness made it clear from the start that they rejected any kind of performances in advance. They countered the German maximum demands with such rigorous ideas of their own that the intended deal seemed, from the German point of view, to have been stood on its head.²⁹ In exchange for raw-material deliveries worth RM420m. over one year Berlin was to undertake to supply industrial goods to a value of over RM1,500m. Particular irritation was caused on the German side by the Soviet list of requirements, which contained almost exclusively the most modern military material. Although originally Hitler had been prepared to hand over only limited quantities of material already in use, he had to yield to Moscow's ultimatum-like demands and permit a large Soviet commission to inspect the most important German armament works.³⁰

This obligingness was due to a change in German war policy. In the late autumn of 1939 Hitler found himself compelled to postpone his intended decisive battle against France until the following spring and to use the time thus gained for an intensive rearmament phase.³¹ With dismay he now realized the poor performance of Germany's armaments industry, especially in the area of ammunition; this might have been acceptable in expectation of an early conclusion of the war after the Polish campaign, but was inadequate for an armaments race with the Western powers.³² As total mobilization of the economy had to be avoided for political and ideological reasons, and as the exceptionally hard winter of 1939-40 and setbacks in the economic war for control of the neutral continental markets further increased tensions within the German war economy, with finally the prospect of a 'collapse of food supplies in the course of the second year of the war, as in 1918',³³ it was doubly important to step up imports of raw materials and foodstuffs at all costs.

Thus the German leadership inevitably turned its attention increasingly to short-term opportunities for developing German-Soviet trade. Hitler eventually urged a speedy conclusion of a treaty with Moscow,³⁴ which, in the given

²⁸ See the letter of the head of the economic-policy department of the German foreign ministry, Wiesel, to the embassy in Moscow, *ibid.*, No. 273 (18 Oct. 1939).

³⁴ Note by Ritter, 10 Jan. 1940, PA, Büro des Staatssekretärs, Rußland [office of the secretary of state, Russia], vol. ii; cf. also *DGFP* D viii, No. 543 [16 Jan. 1940].

circumstances, could be achieved only by shelving the far-reaching German demands and by barter offers which entailed a restriction of Germany's own rearmament programme.

On the other side, Moscow too found itself compelled to be more obliging. The war against Finland was forcing Stalin to modernize his armaments and to move closer to his German ally. After all, he could not entirely rule out a reversal of alliances, i.e. an arrangement between Hitler and the Western powers at the expense of the Soviet Union. It had to be remembered that, on the one hand, the Soviet-Japanese front in the Far East could flare up at any moment or that, on the other, the Western powers might be preparing for action against the Soviet Union while hostilities on the German-French front were slight for the time being.³⁵

As a result of a gradual *rapprochement* an economic agreement³⁶ was signed on 11 February 1940. Although this was magnified by National Socialist propaganda into a brilliant success,³⁷ it bore the unmistakable character of a compromise. The envisaged volume of RM600-700m. was closer to Moscow's original ideas, while Berlin succeeded in getting accepted at least some of its demands for Soviet advance deliveries. Although not all German wishes had been fulfilled, the outcome of the negotiations was of considerable importance for Germany's future economic planning. Hitler now had sufficient latitude to solve the material problems of his intended campaign in the west. In the Four-year Plan general council, the command centre of the German war economy, there was talk of the 'Russian deliveries' decisive importance for the outcome of the war,³⁸ and the Reich ministry for economic affairs made it known that 'the Russians have already supplied us with vital commodities, such as grain, oil, and phosphates, and have promised further great quantities of raw materials which are simply irreplaceable to our war economy and national economy. For that reason all misgivings, even those of the greatest domestic importance, must be set aside.'³⁹ In return the Reich had to agree to extensive deliveries of German armaments to the Soviet Union, which were to prove a perceptible burden on German armament production for years to come—especially in the naval-engineering and machine-tool areas.⁴⁰

⁴⁰ For an assessment see Birkenfeld, 'Stalin', 492-3.

Under the pressure of economic circumstances Germany thus found herself in a greater measure of dependence on the Soviet Union than had originally been intended, a dependence which was likely to increase the longer the war continued. A declining German export capacity would be faced with growing delivery obligations, while the Soviet Union for its part—given an increasing consumption of its own for rearming the Red Army—would presumably demand a progressively higher price for its deliveries of raw materials to the Reich. Against the background of Hitler's decision to employ all reserves for his planned campaign against France, without any regard to the future,⁴¹ his win-or-bust gambling emerges in this context too. In the event of a failure of the German offensive Germany would be totally dependent on Soviet aid; victory in the west, on the other hand, would clear the way for the conquest of those raw-material resources which were indispensable to the Reich if it wished to attain self-sufficient world-power status, and which, so long as they were available to a foreign autonomous power, would always represent both a threat and a temptation. The symptoms of paralysis in Germany's war economy reinforced that argument.⁴² They resulted not only from organizational shortcomings of mobilization and the consequences of a grave crisis in coal supplies, but also from the loss of imports due to the Allied blockade; this amounted to 62 per cent in December 1939. The reduction of Germany's export volume by 84 per cent was an indication of a growing inability to pay for urgently needed imports with hard currency or with goods.⁴³ Although Moscow had promised a twelvefold increase of its share in Germany's imports—which would have offset approximately half the losses due to the blockade—weather-related transport difficulties and the necessary running-in period set a limit to Soviet deliveries until the spring of 1940.⁴⁴

Thus a general impression was created in Germany that one had passed 'close to the edge of a major crisis'.⁴⁵ One consequence was that German firms repeatedly refused to accept Soviet orders if there was doubt that they could be fulfilled punctually. As, however, this meant a negative charge to the German clearing-account, involving the risk of a Soviet suspension of deliveries, Berlin endeavoured to fill its contractual export obligations at least in some areas. In order to send the Russians a signal of willingness to deliver, Germany even borrowed a few thousand tonnes of coal from the Dutch government.⁴⁶

Unimpressed, the Soviet side energetically insisted on the implementation of promised German coal deliveries⁴⁷ and refused to accept German manoeuvres to dictate prices.⁴⁸ Six weeks before the opening of the offensive in the west the Soviet Union suspended its oil and grain deliveries in order to assert its claims. At a hurriedly summoned meeting of all war-economy leadership bodies Göring thereupon declared that there was no alternative to accepting the Soviet demands:

All German departments must proceed from the fact that the Russian raw materials are absolutely vital to us, that for a prolonged war further contracts would have to be concluded, and that, on this account, it is necessary for the current contracts to be executed promptly and all mistrust on the part of the Russians dispelled. According to an explicit decision by the Führer, where reciprocal deliveries to the Russians are

endangered, even German Wehrmacht deliveries must be held back so as to ensure punctual delivery to the Russians.⁴⁹

Moscow, nevertheless, was not prepared to resume deliveries until the envisaged quantities of coal had arrived in the Soviet Union. Only at the opening of the German offensive against the Western powers did the Russians cool the conflict and resume deliveries. After all, Stalin had an interest in supporting an intensification of hostilities and thereby tying Hitler down in the west.

It is significant that the military success in the west induced the Wilhelmstrasse to adopt a considerably tougher line *vis-à-vis* the Soviet Union. The ambassador in Moscow was instructed to reject all Soviet complaints about the implementation of the current deals, simply to dispute any shortfall in Germany's implementation of the treaty, and to criticize the performance of Soviet delivery obligations.⁵⁰ Germany had to be able to count on uninterrupted supplies of raw materials from the Soviet Union in future. When Stalin thereupon in a personal letter to Göring endeavoured to settle the delivery squabbles once and for all,⁵¹ German government quarters believed that further concessions to the Russians were now unnecessary and that Moscow could be put under pressure to fulfil its delivery obligations. At least the troublesome problem of the coal and oil agreements could now be regulated 'favourably, in accordance with Germany's wishes'.⁵²

(b) *The Concept of Large-space Economy and the Russian Problem*

The unexpectedly rapid successes of the Wehrmacht created a new situation for German-Soviet relations. Latent mistrust of Soviet willingness to deliver, present not only in military circles, and a sense of growing danger to Germany's policy of expansion⁵³ temporarily receded entirely into the background. In a euphoria of victory it was confidently expected that the war would be concluded by a compromise peace with Britain on the basis of a global share-out, and that Germany in consequence would have a free hand on the Continent. Towards the end of May the 'Society for European economic planning and large-space economy', which enjoyed the support of high-ranking representatives of industry, the administration, and the Wehrmacht, presented an expert opinion⁵⁴ which mapped out a 'continental-European large-scale economy under German leadership', which 'in its ultimate peace aim would embrace all the nations of the Continent from Gibraltar to the Urals and from the North Cape to the island of Cyprus, with natural colonial

radiations into the Siberian region and across the Mediterranean into Africa'. In the view of the experts there could be no doubt about Russia being included in the German large-scale economy. In the specific plans for the conclusion of peace in the west, the 'further development of close economic relations with Russia' had therefore been regarded as 'one of the most important tasks' since the end of May 1940. How this was to be achieved, however, remained an open question. While the deputy head of the economic department in the foreign ministry, Clodius, in his memorandum⁵⁵ argued that Germany after the end of the war would have a growing productive strength and would therefore be better able to satisfy Russian demands, Ambassador Ritter in his memorandum emphasized the need, on the one hand, for a considerable increase in trade with the Soviet Union and, on the other, for defending Germany's economic hegemony in the Baltic and in south-eastern Europe against competition from Moscow.⁵⁶ In an appraisal of the situation by the naval operations command of 2 June 1940 the possibility was not even ruled out that the Soviet Union might boycott economic co-operation in the long term and thus manoeuvre Germany into a tight corner.⁵⁷

German trade policy was nevertheless faced with the question whether the impending negotiations for a new economic agreement for 1941 could really be dictated by Germany. Unlike the situation with her allies (Italy, Slovakia), which were in any case dependent on Germany, or with the countries seeking a *rapprochement* either voluntarily (Romania, Hungary, Finland) or under pressure (Sweden, Switzerland), or the European countries occupied or annexed by Germany, where the Reich was ruthlessly able to assert its claims to political and economic domination, Berlin had no reliable instrument of pressure for bringing the Soviet Union into greater dependence. Even though diplomats and military men saw no acute danger threatening from the Soviet Union, they realized that Stalin's great-power policy represented a potential threat to Germany's hegemony in Europe.

The problems of German large-area policy emerged clearly from the detailed plans and calculations initiated by the ministry of economic affairs on Göring's instructions.⁵⁸ While, amidst the general euphoria over victory in the west, the European continent including Britain and the African and Middle Eastern spheres were already being regarded as available to German interests, with a full realization of the need to secure Russia's raw materials, the present political and economic 'special situation' of the Soviet Union *vis-à-vis* a German-dominated greater European sphere was regretted. According to the calculations of the Reich department for economic development, even with full utilization of production capacities in Europe, Africa, and the Middle East there would remain a shortfall in Germany's supply balance sheet with regard

to 19 out of 33 vital raw materials.⁵⁹ A number of other studies by reputable economic institutions confirmed the realization that the German large-area economy within its existing outlines did not dispose of a sufficient measure of domestic resources either in foodstuffs or in industrial raw-material production.⁶⁰ The German metal industry, in an expert opinion for the Reich government, pointed out that, according to its calculations, the production capacities for the most important non-ferrous metals in Europe and Africa were not nearly sufficient to cover Germany's future peacetime requirements, let alone her present war needs.⁶¹ In order to match up to the 'steel block of the USA', the principal secretary of the section for the iron-producing industry stated in a lecture to the naval command on 14 June 1940⁶² that the import of Russian ores would have to be absolutely assured. This statement explains why one of the leading economic research institutes launched a new series of publications on the Soviet economy, for in-house use, with a survey of 'export possibilities for the products of the Soviet mining industry'.⁶³

While Germany's military successes had undoubtedly resulted in a certain easing of the supply balance of the German war economy, prospects for the more distant future appeared exceedingly doubtful in many areas. Especially serious was Germany's dependence on Soviet grain supplies. In the balancing of accounts in the summer of 1940 the German side already counted on Soviet willingness to deliver in the coming year, in order to meet the most pressing needs of Germany and the occupied territories.⁶⁴ The quantity of one million tonnes of grain already promised by Moscow was regarded as unsatisfactory. If the Soviet Union were prepared to employ its vast grain reserves, exports could easily be trebled. 'Actually it would without any doubt be easy for Russia to meet the central-European bloc's import requirements of all agricultural produce, provided her economy in general, and her agriculture in particular, were more productive.'⁶⁵ However, any influence on the organization or the alignment of the Soviet economy along German requirements, such as was

already being practised in other European countries, remained illusory in the case of the Soviet Union.

What was at stake was explained by the director of the Statistical Office, Walter Grävell, in the leading National Socialist economic periodical.⁶⁶ Germany, he argued, must possess a 'supply region available to her at all times', in which Russia would be playing a greater role in supplying Germany with vital commodities than before the war. He expected the exchange of goods to reach 'a scale of thousands of millions'. By contrast, it was an open secret among experts that Russia most probably would not be willing for much longer to play the part of supplier of raw materials and be a market for industrial manufactures. A contemporary economic doctoral thesis argued: 'Russia's expansionist strength is enormous, and planning enables her increasingly to develop that expansionist strength. Given an appropriate trade policy, Russia could bring the Baltic and the Scandinavian states into full dependence on her and thus achieve a position of hegemony in the Baltic area.'⁶⁷ Moscow's economic influence could moreover extend unhampered to the Indian sub-continent and the Far East, thereby cutting Germany off from vital foreign markets. That development was being favoured by the present war situation, 'and if Russia succeeds in staying in this war as a profiting neutral, she will have gained a lead over the other countries'.

It is against this background that the prospects of German-Soviet trade at the time have to be judged. The Russia Committee of German Industry in a position paper for the Reich chancellery on 18 July 1940 drew attention to the fact that Soviet readiness for deliveries depended on the course of the war and demanded a number of changes in German-Russian trade relations, all of which were designed to gain a more advantageous position for Germany *vis-à-vis* the Soviet Union.⁶⁸ The doubtful prospects of trade with Russia also emerged four days later in a balance sheet of the foreign ministry.⁶⁹ Major difficulties were expected because of the considerable arrears of Germany's clearing obligations. Only about half of the Soviet deliveries already made had been covered by German exports. Fulfilling of the orders made by the Soviet trade representatives in Germany, to a value of RM600m., seemed the more uncertain as they concerned almost exclusively high-value capital goods and war material, which competed with extremely urgent orders for the Wehrmacht and the armament industry.

On the same day Walther Funk, the minister for economic affairs, proposed at a conference with the other departmental heads that, by way of a basis for the Führer's decision, the principles and objectives of a future German large-

space economy be summed up.⁷⁰ Germany now possessed 'the political power in Europe to enforce a reorganization of the economy in line with her requirements'. It therefore followed 'that the countries must align themselves alongside ourselves'. In dealing with the separate countries Funk expressly excluded the Soviet Union, as 'Russia's position *vis-à-vis* the territories looked after by Germany is still uncertain'. In the light of his warning, approved by Hitler a few days later, that the 'greater German economic space' must not 'become dependent on forces or powers over which we have no influence'⁷¹ it becomes clear that the top leadership was not prepared to accept that 'uncertain' position of the Soviet Union.

Interest in a clarification of that problem was shown also by German industry. If one views its demand that 'the Reich government will use the consequences of the victorious war to bring about such conditions as will ensure the economic and military freedom of the German people for the longest possible time ahead'⁷² against the background of the economic-policy analyses, the complaint about the Soviet Union's 'special position' is understandable. In the opinion of the IG-Farben concern,⁷³ this would in the long run lead to an alarming development which, 'given constant political conditions, would be apt to affect and disturb the confrontation of the European chemical industry with the other large areas'. This company probably the most powerful enterprise of the private sector, had evidently learnt something during the preceding months that would explain its interest in a reshaping of German-Soviet relations.

In connection with the negotiations for the German-Soviet trade agreement for 1940 the firm had been pressured by the foreign ministry's negotiators to comply with the Soviet request for the delivery of a complete plant for the production of synthetic rubber and motor-fuel.⁷⁴ Although such installations were at the top of the priority list of German rearmament, it was to be expected that the execution of this deal would take at least three or four years. Thus, while the actual implementation remained uncertain, the price could be entered immediately in the balance sheet of German-Soviet exchanges and thus converted into Soviet raw-material deliveries.

From the outset the management of the concern was not too pleased at having to hand over to the Russians, for political reasons, its most secret and modern production technology.⁷⁵ It found its misgivings confirmed when

Moscow tried to consolidate its advantage by insisting that Soviet experts should be permitted unimpeded access to all manufacturing secrets even during the project phase. The German concern was to provide training courses of several months for a substantial number of them, so that they could acquaint themselves with all plants under construction or in operation in Germany. The Soviet Union moreover expected the German side to take full responsibility for the subsequent erection and operation of the plant ordered. Of considerable importance was the demand for inspection facilities in all workshops and supply enterprises, where parts of the apparatus were manufactured. This would give the Russians possession of the most important production secrets—the manufacturing methods for special apparatus.

The greatest alarm, however, was caused by the Soviet wish to have handed over to them the IG-Farben process for the production of toluene. In this area of high-quality aviation fuel, work in Germany was still in the development stage. However, the Soviet Union even then demanded a binding agreement that, once IG-Farben had gained full-scale production experience, it would immediately be able to acquire the relevant patents.

When the IG-Farben management thereupon alerted the Wehrmacht High Command, the Reich ministry for economic affairs, and the Luftwaffe command, it was soon realized in Berlin that more was at stake on this issue than the preservation of private-enterprise business interests.⁷⁶ Here was the beginning of a dangerous development which fundamentally ran counter to German large-area economic plans. Besides, weighty military interests were involved. The representative of the Luftwaffe pointed out that 'the lead of the German air force is largely due' to the employment of high-aromatic, i.e. higher-grade, aviation fuels, achieved by the use of toluene. The Soviet air force, on the other hand, because of a shortage of that substance and a lack of the relevant manufacturing know-how, predominantly used inferior fuels which reduced the performance of the aircraft engines and were therefore regarded internationally as outdated. Apart from this delicate question the delivery of the Buna (synthetic rubber) and hydrogenation plants ordered by Moscow would, given the tight capacity situation, be at the expense of German development plans and thus of the supply of fuels and rubber to the Wehrmacht. That explains, on the one hand, the breaking off of negotiations on this issue in June 1940 and, on the other, the firm's complaint about the Soviet Union's 'special position' in Germany's greater economic sphere.⁷⁷

By the summer of 1940 two tendencies were thus emerging in the economic field with increasing clarity, both of them—quite apart from Hitler's strategic and ideological aims—jeopardizing German-Soviet co-operation on the basis of the Hitler-Stalin pact. The first of these was the Soviet Union's own

⁷⁶ OKW Az. 66 b 3340 WiRüAmt/Ro No. 2710/40 g. VI, memorandum of a conversation concerning the setting up of a hydrogenation plant for aviation fuels in Russia on 13 and 15 Apr. 1940, dated 22 Apr. 1940, *ibid.*

growing consumption of the raw materials and foodstuffs on the availability of which the Reich's war-economy plans were based; the second was Germany's obvious 'inability' to force Russia into the role, originally assigned to her, of a supply-source for a future large-area German economy. The massive and unimpeded build-up of Soviet armaments, which profited from Germany's enforced assistance, as well as the unmistakable policy of autarky pursued by the Moscow leadership, represented a long-term threat to German great-power and world-power aspirations, a threat which had to be taken seriously.

The most important indication, in Berlin's eyes, was the Soviet action against the Baltic States and in the Balkans.⁷⁸ Although Stalin was only moving into the positions assigned to him in 1939, the German reaction was one of irritation. Both the Baltic region, important for Germany's food supplies, and the Balkans—then the most important supplier of oil to the German war economy⁷⁹—had already been viewed by the economic planners as secure parts of the large-area economy.

On the assumption of an early compromise peace with Britain, the National Socialist leadership, right up to the end of 1940, was confident of being able to conduct the apparently inevitable—and, as far as Germany was concerned, actually intended—conflict with the Soviet Union with a secure rear in the west. In the course of July, however, it became increasingly clear that Britain was continuing the struggle with unremitting determination and, in doing so, was able to rely on increasing support from the United States. Thus a strategic dilemma arose, in which the Russian problem increasingly moved to the centre of attention. Hence the Army High Command's preparations for a limited military strike against the Soviet Union, designed to consolidate the German claim to hegemony in eastern and south-eastern Europe and to occupy the economically valuable western territories of the Soviet Union.⁸⁰ Such a move seemed indicated in view of the latest calculations of the Statistical Office on Germany's raw-material position, which clearly revealed her serious dependence on raw-material deliveries from Russia and the Balkans.⁸¹ Parallel reflections by the naval command also kept within the framework of a limited war of annexation on the model of the First World War. In his 'Observations on Russia' of 28 July 1940⁸² the chief of staff of the naval command, Rear-Admiral Fricke, based his arguments mainly on the economic-policy aspects of a military solution in the east. Germany's security, he suggested, demanded 'the most self-sufficient economy possible, especially

⁸² Chief of staff of the naval command, Rear-Adm. Fricke, *Betrachtungen über Rußland*, 28 July 1940: Salewski, *Seekriegsleitung*, iii, 137 ff.; for an assessment see Schreiber, 'Mittelmeerraum', 74-5.

with regard to commodities vital in war (e.g. oil, foodstuffs)'. This necessitated raw materials and market opportunities. For both roles Russia was 'ideally suited'. With respect to the planned development of a European large-area economy under German leadership the 'naturally given possibilities of supplementation between German and Russia in nearly all areas of economic life' inevitably leapt to the eye time and again. Fricke believed that economic co-operation as such could be continued also by political means, provided that Russia was weak both politically and militarily, and would bow to German hegemony. Of that, however, he saw no sign. On the contrary, the 'strong economic pressure emanating from a giant empire such as Russia on its neighbour states', the strengthening of the Soviet position on the Baltic, and finally the 'spirit of Bolshevism' which was threatening Europe compelled Germany to liquidate 'this chronic danger one way or another'. From this Fricke derived a number of military reflections, based on the assumption that the political leadership intended 'to clean up matters in the east', with the objective of consolidating the German position on the Baltic and in the Balkans, of annexing the Baltic region as well as part of the Ukraine, 'in order to lay down its peace conditions on the basis of that possession'.

It is impossible to say whether Hitler was informed of these ideas. The economic problems, at any rate, were presented to him once more on 30 July 1940 by the minister for economic affairs.⁸³ The following day he met the top military leaders and informed them of his firm resolve 'to eliminate Russia'.⁸⁴ The war aims formulated by him on that occasion differed substantially in their spatial dimension from those of the general staff: Hitler, in view of the by then obvious necessity to continue the war against Britain for an uncertain period of time and to prepare for an American entry into the war, did not aim merely at 'gaining space' but at smashing the Russian state at a single blow. The operation envisaged for May 1941 would make Germany master of Europe and the Balkans. On these lines Göring a few days later issued instructions that the economic 'new order' plans were to assume that Germany would extend her economic sphere of power 'in Europe and in the rest of the world as far as possible'.⁸⁵

This meant the conclusion of the first phase of the definition of Germany's plans of aggression against the Soviet Union. The decision-making process, proceeding simultaneously with the extension of the German sphere of domination in northern and western Europe, was certainly not initiated solely by Hitler's still vague remarks that he was in principle prepared for conflict with the USSR. Nor can it be understood solely as a reaction to the developing war situation or, more particularly, to Soviet foreign policy. Additional factors were economic considerations and interests which, after Germany's successful expansion on the Continent, veered towards a stronger incorporation of Russia in the German sphere of power. Two levels can be distinguished here,

⁸³ See DGFP D X, No. 261 (30 July 1940).

⁸⁴ Halder, *Diaries*, 534 (31 July 1940).

⁸⁵ Letter from Göring to Funk, 17 Aug. 1940: Freymond, *Le III^e Reich*, 245-6.

whose link-up in the summer of 1940 decisively promoted the final decision to attack the Soviet Union. The first of these was the traditional German 'urge towards the east', i.e. economic and hegemony objectives *vis-à-vis* Russia, which during the First World War had first given rise to the plan of a continental empire from the Atlantic to the Urals and which can be found in the eastern policy of the German Reich in the period between the two wars, as well as in Hitler's radical living-space programme. With all necessary gradations, a broad band of agreement—viewed thus—can be discerned between the traditional élites and the National Socialist leadership. Secondly, ever since the spring of 1940 there had been a growing realization among the leading circles of Wehrmacht, ministerial bureaucracy, and industry that, in the given circumstances, the German-Soviet economic alliance could guarantee neither the required supplies of vital raw materials and foodstuffs nor an undisturbed build-up of German hegemony in Europe. Which factors eventually proved decisive in Hitler's reflections and decisions cannot be stated with complete certainty. Significant, however, is the fact that his decision not only caused no surprise among military men, economists, or ministerial officials, but actually met with broad understanding.

2. ECONOMIC PREPARATIONS FOR THE WAR AGAINST THE SOVIET UNION

(a) *Economic Aspects of the Operational Plan*

Hitler's decision to strike at the Soviet Union in May 1941 induced the Army General Staff to extend and systematize its preparations for the attack. In this work a special role was played by the pre-existing incipient connection of strategic and economic considerations. A complete occupation of the enemy's territory was ruled out from the start, if only because of the enormous geographical dimensions. The seizure of the Soviet Union's economically vital regions therefore acquired decisive importance in the intended smashing of the Russian empire. Compelling parameters for the planning of the operations stemmed also from Germany's existing economic bottlenecks and from the economic and political objective of a self-sufficient large-area economy.

One of the most important bases was a military-geographical study of European Russia completed at the beginning of August 1940.⁸⁶ This pointed out the importance of Moscow and Leningrad as industrial centres and that of the Ukraine as the agriculturally and industrially most valuable part of the Soviet Union. Occupation of those regions would 'pay off particularly'. The underlying thought was not so much the weakening of the enemy's military strength as the profit which Germany would derive in the longer term from

⁸⁶ First draft of a military-geographical study of European Russia, completed 9 Aug. 1940 (Bibl. MGFA). Location lists of the Soviet armament industry and appropriate material were obtained from the 9th dept. [Mil. geogr.] of the Army General Staff by OKW/WiRüAmt as early as 31 July 1940: cf. KTB WiRüAmt/Wi 1940, 203, BA-MA RW 19/244.

having the agricultural produce and the raw materials of that region at her disposal. Further operational objectives—despite the great distance—were Baku and the industrial region of the Urals. A geographical framework was thus mapped out which, in some respects, exceeded that of 1917–18. The warning contained in the study that even the occupation of all these regions would not necessarily put an end to the war, as—in contrast to the situation in the First World War—a vital and significant economic force existed in the Asian part of the Soviet Union, provided further food for thought.

The operational studies were bound to ask and answer the question of a rational matching of war aims and the means of war. It was here that the experts in the Army High Command would eventually fail.⁸⁷

Marcks's study had first replaced a necessary sober assessment of the situation by a string of speculative assumptions, e.g. that the capture of the western border territories of the Soviet Union would result in a complete collapse of the Soviet war economy.⁸⁸ In order to avoid such a collapse the Red Army would stand and fight the decisive battle near the frontier. This would provide the Wehrmacht with an opportunity to annihilate the bulk of the enemy army within a very short time. After that a regeneration of Soviet fighting power could be ruled out, and the German forces would then, in a general chaos as in 1918 and with but little effort, be able to push ahead far to the east in a 'railway advance'. The military geographers' warnings concerning the potential of the Asian part of the Soviet Union and concerning the real principal enemies, climate and vastness of space, received scant attention in such speculations. The question whether the Soviet government might not after all succeed in weakening Germany's fighting strength by stubborn resistance in the European part of the USSR and thus in gaining time for a relocation of its armaments industry, in order, on the basis of Siberia's raw-material and energy resources, to mobilize the country's vast human potential, was left out of consideration from the outset.⁸⁹

Judgement on this issue depended crucially on how one assessed the organizational ability of the Soviet regime and its inner stability. It was here that the general staff was the victim of prejudices which, for more than two decades, had been moulded not only by the National Socialists but also by conservative and bourgeois-liberal circles.⁹⁰ Assessment of the industrial development of Siberia was not just a problem of the difficulties (acknowledged to exist) in obtaining information. On the Kuznetsk industrial region, for instance, there

⁸⁷ See also the section by Klink, I.v.1(d) of the present volume.

⁸⁸ See 'Operations draft East'. The above statement may need qualification in the light of Marcks's subsequent correspondence, but his occasional misgivings did not influence further operational planning. For a full account see sect. I.v.1(d) at nn. 103–17 (Klink).

⁸⁹ For the USSR's war-economy capacities see the survey in *Sovetskaja ekonomika*. Information on this point was nevertheless being sought in the general staff; cf. Lt.-Col. Kinzel's lecture on 'The bases of Soviet military strength' on 11 Oct. 1940 (Halder, *Diaries*, 618) and relevant enquiries by Army Grp. B from WiRüAmt on 4 and 15 Oct. 1940 (KTB WiRüAmt/Wi 1940, 281, 296, BA-MA RW 19/244).

⁹⁰ Cf. Müller, *Tor zur Weltmacht*; Hillgruber, 'Rußland-Bild'.

had long been excellent studies in the specialized literature.⁹¹ The Wehrmacht High Command, however, unhesitatingly used the outdated Soviet industrial atlas of 1934.⁹² There was a widespread inability to evaluate available data and information without prejudice. This explains, for instance, the claim by *Militärwochenblatt* a few weeks before the attack on the Soviet Union that the relocation of the Soviet industry to the interior of the country had remained only a project and existed only on paper.⁹³

Such traditional patterns of thinking about the Soviet Union were at no time seriously questioned during the Army General Staff's operational planning, even though there would have been repeated opportunities. A memorandum from the legation councillor at the German embassy in Moscow, Gebhardt von Walther, of October 1940, a memorandum intended for Halder, contained emphatic warnings of the far-reaching economic consequences of a German campaign against the Soviet Union.⁹⁴ Hopes of a rapid internal collapse of the Soviet system, it stated, were totally misplaced. Economically, the Soviet armaments industry could not be hit decisively by a German attack at all, and even if large territories were successfully occupied, this would yield no appreciable advantage to Germany. From the Ukraine, for instance, the principal surplus region, there was even less to be gained than in the First World War because of its over-population and its unfavourable structure of agricultural production. There could be no question of taking over its industrial plants as these would certainly be destroyed on Moscow's orders, and anyway German forces would be insufficient to set up a new native administration from scratch.

A further reason for re-examination of prior assumptions could have been provided by the continuous extension of the planned operational limits and main efforts. Halder reacted to this by endeavouring to preserve the principle of a concentric attack against Moscow and to assert the 'predominance of strategic and tactical points of view'⁹⁵ over economic considerations. If at times he had doubts about the sense of the whole operation, whether a decision in the war against Britain could really be achieved in that way, or whether Germany's economic basis would be greatly improved,⁹⁶ then these confirmed him in his belief that 'operational plans cannot be tailored to suit economic planners'.⁹⁷ That eventually a campaign was envisaged with three army groups, each aiming at different economically important targets, was due mainly to Hitler.⁹⁸ With an evidently better sense of the importance of

⁹⁸ See sect. I.iv.1(e) (Klink) of the present volume; for the part played by economic considerations in Hitler's conduct of the war in the east generally, also from an economic point of view, see Dworok, *Konventionelle Kriegsführung*. The interpretation of Schustereit, *Vabanque*, is unconvincing.

military-economic aspects he urged that greater attention be given to the marginal zones (Baltic, Black Sea), and that distant regions (Caucasus, Urals) be included in operational plans. Thus at his conference with the top military leaders on 5 December 1940 he once again stated that it was necessary to 'crush Russian manpower'.⁹⁹ No bodies capable of regeneration must be left.

On 9 January 1941 Hitler explained to the commanders-in-chief that economic considerations had made him certain of victory also in his past campaigns.¹⁰⁰ For Germany

the shattering of Russia will mean a great relief. Only 40 to 50 divisions would then have to remain in the east, the army could be reduced, and the entire armaments industry could be employed for the air force and the navy. A fully sufficient anti-aircraft defence would then have to be built up and the most important industries relocated to unthreatened regions. Germany would then be unassailable. Russia's space contains immeasurable wealth. Germany must dominate it economically and politically, but not annex it. With that she would possess all the possibilities of waging war even against continents in the future, and she could not then be defeated by anyone.

From this exposé it emerges that Hitler saw the principal justification of his intended attack against the Soviet Union in the need 'to occupy the Ukraine'.¹⁰¹ Hitler evidently regarded the reference to economic constraints and economic war aims as so convincing that he called with increasing emphasis for an appropriate alignment of operational plans.¹⁰² In this connection he demanded from the Wehrmacht High Command a set of maps on the economic capacity of the Soviet Union.¹⁰³ In addition, calculations were to be made of the importance of the various industrial centres of the Soviet Union, first on the assumption of an operations line from the Crimea to Leningrad, which corresponded roughly to the original plan of the Army High Command, and second for the Astrakhan-Archangel line already ordered by him.

The problem of the interdependence of strategic and economic aspects, however, did not only affect the assessment of the enemy's military potential and the definition of German operational objectives, but also the question of material preparations for and the execution of the planned war of conquest. In that respect the general underestimation of economic factors in German military planning had particularly serious consequences. Instead of operational planning being governed by one's own available strength and by logistical possibilities—which would have been sensible if only for geographical reasons—the military objectives of the campaign were laid down in accordance with superior strategic and economic considerations. The question of the material equipment and supply of the eastern army remained, by comparison,

¹⁰³ Mentioned in Maj. von Petri's account of the examination of the material military strength of the major European and extra-European states (presumably 1944), 22, BA-MA Wi/Vl. 397.

a secondary problem. In view of the pre-set premisses of the operational plans, preparations for equipping the army were pursued with little urgency, because it was assumed that, given the expected short duration of the campaign, the existing strength would be sufficient. Supply issues were dealt with similarly in the Army High Command.¹⁰⁴

After initial reflections in October 1940 the new quartermaster-general, Major-General Wagner, presented his thoughts on supplies in November.¹⁰⁵ New large-area solutions of the transport problem were, naturally enough, at the centre of attention, but the most important issue was the calculation of expenditure and its dependence on the factors of time and space. After all, more than three million troops, 500,000 motor-vehicles, and 300,000 horses had to be kept supplied, and the supplies had to be organized from Reich territory into the vast expanses of Russia. Calculations showed that available motor-fuel was sufficient for a rapid advance of some 700–800 kilometres, and ammunition and foodstuffs for twenty days in all. This meant a possible depth of operations of 500 kilometres. With that one would reach neither Leningrad nor Moscow, nor the Donets region. The eastern army, having crossed that logistical boundary, would either have to put in a rest period of several weeks and prepare for a war of presumably two years, or one would have to rely on a rapid collapse of the Red Army and the possibility of a German 'railway advance' during the second phase of the war. As this very assumption was envisaged in the operational plan, the quartermaster-general had little reason, initially, to make provision for a supply operation extended both in time and in space. Just that, however, was becoming increasingly pressing as the envisaged limits of occupation were being shifted ever further to the east. Thus yet another range of tasks was arising for the quartermaster-general: the establishment of a military administration designed to make the hinterland secure and available for the purposes of Germany's war effort.¹⁰⁶ The ideas developed in that context within the Army High Command were apparently all based on the First World War. An occupation policy such as Hitler—at least in his hints to the Army Command—seemed to support until the spring of 1941 did not, however, hold out much advantage in terms of material support for the eastern army. On the strength of the experience of 1917–18 a traditional military administration, which showed consideration for the local population, even making concessions to it and promoting general economic reconstruction, could not at the same time mobilize a maximum of resources to provide the fighting forces and the homeland with urgently needed raw materials and foodstuffs.¹⁰⁷

Idealistic concepts, such as those championed in the 1920s by the former

chief of the general staff under the commander-in-chief East, General Max Hoffmann, in a model operational plan for the 'liberation' of Russia from Bolshevism,¹⁰⁸ were totally unrealistic in the conditions of 1940. Hoffmann had called for the establishment of an expeditionary force, capable, by the employment of the most up-to-date means of transport and with strong protection for rearward communications, of not only supplying itself but also, instead of living off the land, of bringing considerable quantities of foodstuffs and goods into the country in order to win the co-operation of the Russians. Such a procedure was totally unthinkable for the military leadership in 1940-1. In view of the expected exacerbation of shortages in the Reich in the autumn of 1941 the Wehrmacht would instead have to occupy the Ukrainian wheat-fields and the Caucasian oil wells as fast as possible, and maintain operations by largely living off the land.

Realization of these objectives, however, was called into question from the outset in two respects. First, Halder endeavoured to employ the bulk of the army for a concentric thrust at Moscow, regardless of the fact that scarcely any provisioning facilities existed in the sparse landscape of central Russia; second, the extension, under pressure from Hitler, of both the disposition and the objectives of the operation greatly exceeded the Wehrmacht's logistical potential. The quartermaster-general's preparations inevitably fell victim to the unsettled conflict between Halder and Hitler. No convincing solutions were reached either with regard to supply and provisioning possibilities or with regard to the necessary exploitation of the territory to be occupied. Thus the envisaged military administration was to be assigned no more than a narrowly circumscribed sphere of duties, chiefly the 'collection and utilization of important supply commodities for the fighting forces with a view to relieving supplies from the homeland'.¹⁰⁹ In order to win the co-operation of the population it was suggested 'granting them certain freedoms and material advantages'. Prisoners of war were categorized as 'valuable manpower', to be employed, with observance of the international law of war, for the purposes of the fighting forces and of the German war economy. Up to this point the concept was still in line with Hoffmann's ideas. On the other hand, however, it also contained the basis for more radical procedures. Thus the Army High Command was determined to nip in the bud any active or passive resistance of the population by Draconian punitive measures. This appeared to be

¹⁰⁸ See Max Hoffmann, *Aufzeichnungen*, II, 339ff., and id., 'Intervention in Rußland'.

¹⁰⁹ OKH/GenStdH/GenQu 1/IIa No. 1/050/41 g.Kdos., Anordnungen über militärische Hoheitsrechte, Sicherung und Verwaltung im rückwärtigen Gebiet und Kriegsgefangenenwesen [Regulations concerning military sovereign rights, security, and administration in the rearward area, and prisoner-of-war matters], Feb. 1941 (appendix 15), BA-MA RH 3/v. 132. The concept of military administration and its already discernible tendency towards an opportunistic application of the international law of war met with fierce criticism from Count Helmuth James von Moltke, an international law expert in Canaris's Abwehr (Counter-intelligence) department and a future leading figure in the anti-Hitler resistance movement. His efforts to tie down OKH and the quartermaster-general to a strict observance of international regulations by the military administration failed in the spring of 1941; on this see Müller, 'Kriegsrecht'.

necessary because the lack of German administrative and law-and-order forces ruled out the establishment of a close-knit administrative network as in western Europe, and because native administrative institutions would have to be created from scratch, as in the First World War, in what would presumably be a protracted process. It would therefore be necessary to concentrate one's own forces on the economic surplus areas in order thereby to achieve a maximum yield.

It was therefore envisaged that the Ukraine and Bessarabia would be 'placed under ordered administration', with public life and the economy being re-started and encouraged so that 'their production can strengthen the German war economy as soon as possible'. From that strategy it followed that economically weak regions would be neglected and would 'ruthlessly' be made 'useful to the purposes of the operation'. Such a concept, coming close to the limits of the Hague land-war regulations, seemed justified by the assumption of a short campaign. At the same time it was obvious that any extension of the war in time or space was bound to intensify exploitation and oppression if the military administration hoped to meet the growing demands of the fighting forces. When at the beginning of March 1941 the Army High Command issued orders for a military administration to be set up in Russia,¹¹⁰ the signals for occupation policy were already pointing in a different direction. In this a key role was to be played by the Wehrwirtschafts- und Rüstungsamt (War Economy and Armaments Department).

(b) First Preparatory Steps by the War Economy and Armaments Department

After Hitler's decision in July 1940 the problem of executing an economic plan that would match up to the military and operational preparations then in progress remained initially unresolved. The main reason was the lack of a central control authority which would have been capable of clarifying the economic prerequisites and objectives of such an enterprise and of orientating Germany's war economy accordingly. Göring, who had only recently, in June 1940, assumed the co-ordinated planning of the economy in the western territories, thus concentrating in his person the principal authority in the field of war economy, was focusing his entire attention on the air war against Britain and was therefore not available as a driving force in economic planning. The staff of experts available to him in the Four-year Plan authority was fully engaged in organizing the 'new order' of the European economy, alongside the industrial-development projects within the Reich. The Army High Command saw no reason to develop any initiative of its own, as it believed firmly in a separation between superior economic-policy planning and the practical handling of day-to-day issues which, in the occupied territories and in those yet to be occupied, were to be the sole responsibility of the military administration.¹¹¹ In the case of Russia, therefore, the army command re-

¹¹⁰ Reproduced in *Deutsche Besatzungspolitik*, Nos. 1, 2.

¹¹¹ See Halder, *Diaries*, 493 (4 July 1940).

garded the 'systematic administration and exploitation of the country' as a 'worry in the future'.¹¹²

The Armed Forces High Command, on the other hand, viewed the War Economy and Armaments Department as an institution which, under the leadership of Infantry General Thomas, had long been trying to seize the unified control of the German war economy in competition against the weapons departments of the Wehrmacht services and the civilian economic departments.¹¹³ In the spring of 1940 Hitler, by appointing Fritz Todt Reich minister for armaments and ammunition, had made it clear that he did not believe in military guidance of private industry, placing more trust in the 'subterfuges' of industrialists as a stimulus for war production.¹¹⁴ However, General Thomas pursued his endeavours to preserve and strengthen OKW influence in the sphere of economic policy. It was natural, therefore, for Field Marshal Keitel, as OKW chief of staff, to inform Thomas of the intentions of the supreme leadership immediately after Hitler's fundamental decision in favour of a campaign in the east,¹¹⁵ thereby tying the War Economy and Armaments Department into the planning process, in parallel with the Wehrmacht operations staff, which tried to influence operational procedures. Along with armament planning it was predominantly the assessment of the Soviet economic potential that offered itself as an area of activity for becoming involved in the preparations of the army.

Thus the Russian desk of the war-economy section first of all made itself available to the general staff as a supplier of information.¹¹⁶ The principal activity was the preparation of economic maps and town plans showing the location of Soviet armaments enterprises. General Thomas moreover succeeded in winning the co-operation of a number of economic institutions.¹¹⁷ Research contracts concerning the Soviet economy were assigned to the Reichsamt für wehrwirtschaftliche Planung (Reich office for war-economy planning), the Studiengesellschaft für bauerliche Rechts- und Wirtschaftsordnung (Study group for rural law and economy), the Ernährungssicherungsstelle (office for the assurance of food supply), and to the Generalbevollmächtigter für Sonderfragen der chemischen Erzeugung (General plenipotentiary for special questions of chemical production), Carl Krauch. In Paris representatives of OKW inspected captured French material. Arrangements were made with the Reich Statistical Office for a mutual ex-

change of information. The office of the Reich Peasant Leader made available its entire material on agriculture, food supplies, and the foodstuffs industry in the Soviet Union. Further information was obtained from the specialized economic press. The Institute for Foreign and Colonial Forestry was instructed to produce as soon as possible a study, from a war-economy point of view, of the timber industry and forestry in the Soviet Union.

Careful preparatory work seemed called for if only because in the summer of 1940 General Thomas had got into difficulties with setting up his apparatus in connection with the establishment of a military administration in the west. During the occupation of Poland the armaments inspection authority set up by Thomas had been able to operate as it pleased—because there was no solidly structured military administration. For the west, however, OKH had designed a new type of administration in an attempt, successful up to a point, to curtail the strivings for autonomy by the war-economy apparatus.¹¹⁸ Armaments inspection bodies were tied closely to the military commanders and infiltrated by a large number of representatives of the weapons department. While OKH was anxious, in this rivalry, to ensure the uniformity of military administration and occupation policy, Thomas was trying to extend the armaments apparatus of OKW and, in the interest of unified armaments control, to make himself independent of the three Wehrmacht services.

In the regulation of organizational problems in France a vital role was played by Lieutenant-General Stud, head of the department for industrial armaments in the Heereswaffenamt (Army weapons department). When, in early October 1940, he was transferred to the OKH senior officers' reserve, it seemed natural for Thomas to entrust him with drawing up an armament organization for Russia. Stud, who in the 1920s had been involved in the secret co-operation between the Reichswehr and the Red Army, immediately got in touch with the Russian desk of the war-economy section and with the armaments-economy department.¹¹⁹ At a joint conference on 1 November he announced that he envisaged the establishment of a War Economy and Armaments Staff with four inspectorates of three armaments control squads each.¹²⁰ This required the location of personnel familiar with the country¹²¹ and the preparation of accurate maps of the principal industrial and raw-material regions of the USSR. Alongside the teams of experts for the armaments industry, Stud also intended to set up a few units for the securing of raw materials.

¹¹⁸ See Thomas, *Wehr- und Rüstungswirtschaft*, 219–20.

¹¹⁹ KTB WiRüAmt/Wi 1940, 281, 296 (4, 15 Oct. 1940), BA-MA RW 19/244. The 1944 history of WiStabOst quotes an instruction by Thomas along these lines, 30 Oct. 1940, allegedly based on a directive from the Reich Marshal; see *Deutsche Wirtschaftspolitik*, 27 ff. However, there is no documentary evidence of such an early instruction by Göring, nor is it mentioned by Thomas himself in his own 'history'.

¹²⁰ Rü (Ic), minute of 1 Nov. 1940, BA-MA Wi/VIII. 411: *Fall Barbarossa*, No. 107.

¹²¹ See WiRüAmt/Rü (Vic), concerning personnel with foreign experience, 11 Nov. 1940, BA-MA Wi/VIII. 411.

This draft, based on the model of the armaments organization in occupied France, enlarged only by a fourth armaments inspectorate, was based on the idea of localized employment at the armaments centres of Leningrad, Moscow, the Ukraine, and the Caucasus. Numerically small teams of armaments experts, in which the representatives of the weapons departments would no doubt call the tune, were to ensure qualified consultation of the military administration and the implementation of its instructions in the technological field. A draft of the 'tasks of the chief of staff of the War Economy Organization East'¹²² therefore envisaged a 'report' to the quartermaster-general in order to clarify the question of integration in the military administration. A handwritten gloss by Thomas, to the effect that such a report should only be made after consultation with him, suggests that he was not willing to let his organization be totally absorbed by OKH.

Another indication of Thomas's striving for autonomy is his early contact not only with civilian economic departments but also with the leading German industrial concerns. This will be discussed later. In view of the Army High Command's efforts to separate planning from execution in the economic sector, the War Economy and Armaments Department was anxious to establish a foothold in both areas and thereby to enhance the influence of OKW. After Hitler on 4 November 1940—with an eye to the impending visit of the Soviet foreign minister Molotov—had affirmed to the top military leaders his determination to have a 'great showdown' with Russia whatever happened,¹²³ Göring took this opportunity to inform the top officials of the Four-year Plan authority, as well as General Thomas as the OKW representative, of the intentions of the political leadership.¹²⁴ As a result of Göring's general instruction to base armament and raw-material planning on the assumption of a 'longish war', Thomas felt encouraged to intensify his department's Russian studies.¹²⁵

The war-economy section was instructed (1) to produce a comprehensive picture of the Soviet armament industry; (2) to establish the state of the power and transport network; (3) to investigate raw-material and oil deposits; and (4) to provide an overview of the USSR's civilian economy. In addition, a card index of all major enterprises and a Russian-language economic dictionary were to be created.¹²⁶ The department, mainly thanks to its preparatory work, was able to discharge some of these tasks within a few days.¹²⁷ The prerequi-

¹²⁶ Thomas, *Wehr- und Rüstungswirtschaft*, 261. A copy of the German-Russian language guide was handed over by a German printer to the Soviet consulate in Berlin in mid-Feb. 1941. It was immediately passed on to Moscow, but met with no interest there; see Bereshkow, *Jahre*, 67.

¹²⁷ See KTB WiRüAmt/Wi 1940, 337 (22 Nov. 1940), BA-MA RW 19/244.

sites had thus been created—as indeed in earlier campaigns—of establishing support and guidance for the general staff.¹²⁸

Organizational planning developed in striking contrast to this broadly planned research. The study-group 'War Economy Organization East' was dominated by the representatives of the armaments-industry section, which, because of its close contacts with the weapons departments, led a kind of separate existence within OKW. In agreement with OKH, whose interest was focused on the Soviet armaments industry, they succeeded, against the opposition of the war-economy section, in having the number of armaments inspectorates envisaged for Russia reduced from the original four to two (Ukraine and Moscow), with a total of thirteen squads.¹²⁹ Only three 'War Economy Officers' were to be employed in the Baltic provinces as advisers to the military administration. The 'War Economy Staff Russia' was envisaged as a small-scale co-ordination staff.

When Lieutenant-General Stud submitted this organization plan on 7 December 1940, Thomas could not of course withhold his fundamental approval. However, he ruled that, seeing that three inspectorates were employed in France, a third inspectorate should at least be held in readiness for the vastly larger Russian territory.¹³⁰ A few days later, when Directive No. 21, 'Barbarossa', laid down the operations plan, Stud had essentially completed his preparations for the organization of armaments. In addition to a study on the Soviet economy, there was a revised organization plan, together with lists of names of specialists familiar with the country.¹³¹ Three induction courses of fourteen days' duration each—starting on 15 February 1941—were to prepare the core staff for their tasks. At the beginning of January the organization tree was eventually further reduced on the initiative of the armaments-industry section.¹³² Not only the central departments suffered staff cuts, but also the armaments groups, because 'utilization of the enemy's armaments industry would, if at all, become topical only at a later stage'.

The Economic Organization Russia was thus left only with the task, in co-operation with the agencies of the quartermaster-general, of collecting captured stocks of raw materials and mineral oil and directing them to the army supply organizations. When the section heads submitted this plan, code-

¹²⁸ A thousand copies of the paper were sent out on 9 Apr. 1940 to the military commands; see OKW/WiRüAmt/Wi (VI) No. 2758/41 g., Az 31/34/25, *Die Wehrwirtschaft der Union der Sozialistischen Sowjet-Republiken (UdSSR), Teil I, Kurze Charakteristik und Gesamtbeurteilung der wehrwirtschaftlichen Lage, Stand März 1941* [The war economy of the Union of Socialist Soviet Republics (USSR), part 1, Brief outline and overall assessment of the war-economy situation, as of Mar. 1941], BA-MA W 01-8/296: *Fall Barbarossa*, No. 20. The most important findings had already been communicated to the army general staff in Dec. 1940: see Heusinger's report, in Halder, *Diaries*, 741 (17 Dec. 1940).

named 'Oldenburg', to the departmental head on 27 January 1941, it became obvious that the War Economy and Armaments Department was seeking the closest possible integration with the command structure of the army.¹³³ As the question of establishing a war-economy staff was regarded in OKH as still wide open, Thomas presumably, by submitting a new employment procedure, hoped to gain greater prominence for his organization. It was envisaged that, at the very start of operations, the forward elements of armaments control squads, especially the recovery and mineral-oil squads, would be placed under the liaison officer of the War Economy and Armaments Department at each army HQ. In this manner the often complained-of belated arrival of the economic personnel was to be avoided and looting or destruction of stocks of booty prevented. The armaments commander with his staff would follow on the heels of the army commands, and with the establishment of a military administration the forward and rearward elements of the armaments control squads would eventually link up and establish themselves locally. This procedure, it was intended, would result in the occupation of the conquered territories in successive leaps by the relevant armaments agencies. The War Economy Staff Russia was to be attached to the quartermaster-general in the operations staff of the army in the east.¹³⁴

On 28 January 1941 General Thomas put forward these ideas at a conference of all armaments departments in the Army High Command.¹³⁵ Halder was not yet ready to comment on the problems and assumptions considered, noting merely that 'entirely new ideas' were involved.¹³⁶ After consultation about conditions within the military administration in France the quartermaster-general proposed a greater measure of centralization of military administration. The military commander, thus strengthened, should have under him economists and administration experts as 'advisers for special fields'.¹³⁷ In a letter to Thomas, Wagner informed him that no more war-economy organizations were to be set up in future operations.¹³⁸ OKW interests were to be safeguarded by an appropriate enlargement of the staff of Thomas's liaison officer with the quartermaster-general. This model immediately entered into the plans for operation 'Marita', the campaign against Greece.¹³⁹

It seemed therefore that by the beginning of February 1941 the Armed Forces High Command's prospects of establishing a field organization of the War Economy and Armaments Department for Russia, even one furnished

¹³³ WiRüAmt/Wi No. 230 g.Kdos., Neue große Ausarbeitung Rußland [New great study Russia], 29 Jan. 1941, *ibid.*; the code-name 'Oldenburg' had already been decided on at the conference on 9 Jan. 1941. The information in Eichholtz, *Kriegswirtschaft*, 233, is therefore incorrect.

with few powers, were vanishing. Simultaneously Thomas, even in the area of armaments control within Germany, had to accept substantial curtailments of his authority in favour of Todt. For one thing, Keitel undertook to keep Todt informed in advance about any proposals by Thomas intended for Hitler,¹⁴⁰ and for another Todt announced the creation of 'bottleneck commissions', which would aim at a further extension of 'industrial self-management' in the armaments field at the expense of military direction.¹⁴¹ Moreover, if one considers the quartermaster-general's intention of no longer involving OKW in future military administrations but using individual industrialists instead, then the fiasco of General Thomas's far-reaching ambitions becomes evident. Although he issued instructions that there should be no opposition to the bottleneck commissions—there was reason to fear that, if there was, Todt would denounce Thomas to Hitler¹⁴²—he tried at the same time to consolidate his position with the help of the weapons departments of the Wehrmacht services. In a circular dated 6 February 1941 he offered them 'the creation, for future large-scale operations, of a *unified* economic organization of the Wehrmacht High Command, one which would take full account of the war-economy interests of the Wehrmacht services and especially of the supply departments', thereby preventing the parallel activities of different economic authorities.¹⁴³ The war-economy sections could be 'so extensively staffed with specially selected individuals from the supply departments of the Wehrmacht services that these would feel confident that their interests are sufficiently safeguarded'. However, this proposal for concentrating the armaments interests in the territories to be occupied under the umbrella of OKW did not meet with a response. It seemed, therefore, that General Thomas was giving up his efforts when he appointed the 'working staff Oldenburg', consisting of three officers of his department, for the further study of Russian questions, at the same time relieving Stud of his task.¹⁴⁴

The expert opinions produced in his department at that time seemed to justify such a retreat.¹⁴⁵ Essentially they confirmed the prognoses of the

Warum das Wirtschaftsabkommen vom 23.4.1918 zur Lieferung von Agrarprodukten an die Mittelmächte nicht voll zur Ausführung kam [Why the economic agreement of 23 Apr. 1918 on deliveries of agricultural produce to the Central Powers was not fully implemented], 13 Feb. 1941, BA-MA Wi/I D 38, as well as Col. Jansen's collection of papers, Die Lebensmittellieferungen der Ukraine im Jahr 1918 [Ukrainian food supply deliveries in 1918], BA-MA Wi/I D 1658.

Walther memorandum¹⁴⁶ about the insignificant economic advantage of a campaign against the USSR; it was probably this that had induced Halder to work for a strengthening of military administration and the confinement of its activities to supplying the troops. On the basis of First World War experience by the German civilian economic administration in the occupied Russian territories, OKW was aware of the meagre results of all measures then taken for the collection and removal of foodstuffs and raw materials. Along with obstacles due to the war, such as the disorganization of the native economy and the black market, in 1918 it had largely been the mistakes of the occupation authorities which had impaired the result of the collection drive. Because there was then not enough time for a more effective exploitation of the country's economic resources in favour of the needs of the German war economy, it had been necessary to resort to ruthless requisitioning and to neglect the long-term reconstruction of the country. That procedure had curtailed the political scope of the native authorities upon whom German occupation was largely relying. The Ukrainian puppet regime, in particular, had proved incapable of supplying the delivery quotas laid down. A further factor was the German failure to keep promises concerning deliveries of coal and industrial goods; this had resulted in a silent boycott by the Ukrainian authorities.

Especially disastrous, in the view of the experts in the War Economy and Armaments Department, had been the precipitate (because politically motivated) agrarian reform. The break-up of predominantly Russian-owned big estates and the transfer of the land to Ukrainian small peasants had resulted in chaotic conditions and in a rapid decline of agricultural output. Even the most drastic intervention of the military administration had then been unable to improve the utilization of an a priori favourable production situation in the Ukraine.

Typical of the dilemma of German occupation policy had been the unresolved conflict between the military authorities, which demanded ruthless exploitation of the country—if need be by coercive measures—and the civilian economic authorities, which were looking ahead to economic reconstruction and which, for political reasons, wished to see the Ukrainians treated with consideration.¹⁴⁷ Halder's concept of a military administration and its concentration for the purpose of supplying the fighting forces did not, however, meet all the problems raised in the study-papers of the War Economy and Armaments Department. These pointed out, above everything else, that in the present circumstances there was not even any certainty that the meagre results of 1918 could be reached.¹⁴⁸ Ukrainian stocks and the prospects of autumn and spring cultivation, as well as the fertility of the soil, had to be judged even more

¹⁴⁸ Paper by Varain (above, n. 145).

unfavourable, so that 'surpluses' for export to and the supply of central Europe' could certainly not be expected.

Further reason for concern was provided by calculations by the War Economy and Armaments Department of the consequences for the German supply situation of even a short-term interruption of raw-material deliveries from the Soviet Union.¹⁴⁹ Thus at least temporary serious dislocations of German war production would occur in the area of certain steel alloys and rubber. When Thomas thereupon warned the supreme leadership that in the event of an eastern campaign motor-fuel and rubber supplies would be sufficient only until the autumn of 1941, and therefore demanded additional authority for the War Economy and Armaments Department *vis-à-vis* civilian- and military-user departments, Hitler had him informed that he would not allow himself to be diverted from his decisions by such pessimistic forecasts.¹⁵⁰ It is conceivable that Thomas, after this rebuff and against the background of OKH's restrictive attitude, reviewed his attitude to the Russian problem and thereby triggered a development which gave a new direction to preparations for the attack on the Soviet Union.

(c) *The Thomas Memorandum and its Consequences*

On 22 January 1941 Thomas was summoned by Keitel to report to him. On that occasion Thomas disclosed that he intended to have a memorandum prepared on some misgivings, from the war-economy point of view, about the planned operations in the east.¹⁵¹ Keitel's reaction is not known, but it may be assumed that his own opinion was based on Hitler's expectation that the conquest of Russia would result in a gigantic gain and in relief from all war-economy worries. In consequence, OKW stood to gain nothing from the fact that it supported OKH's cautious assessment of economic aspects by pessimistic forecasts of its own. It seemed advisable, however, to approach the top leadership with a 'sober' profit-and-loss account, which would make it clear 'what is to be gained and what to be lost (past supplies and transit rights) (a) from the execution of the enterprise itself, and (b) after its successful execution'—as Thomas put it in his instruction to the War Economy Department that same day.¹⁵²

During the next few days Thomas had occasion, in conversations with Keitel, Todt, and Göring, to sound out the expectations of the top leadership.¹⁵³ Göring had shortly before been briefed by his experts in the Four-year

¹⁵² Ibid. 142-3.

¹⁵³ The minutes of these conversations were removed from the appendix of the KTB at a later date (presumably in connection with the 'History' written by Thomas in 1943-4) and exist only in parts in BA-MA Wi/I F 5.3662. On the following passages see Gibbons, 'Soviet Industry', 101-2, and n. 262 below.

Plan authority on the consequences of an attack on the Soviet Union. With the exception of Herbert Backe, the state secretary in the ministry of food and agriculture, all of them had spoken against it. Backe, who had been interested in the state of Soviet agriculture as early as the 1920s, had believed, from the outbreak of the war, that because of the precarious situation of German food supplies a large volume had to be obtained from Russia. As General Thomas now learnt, Backe had assured Hitler 'that possession of the Ukraine will mean the end of all our economic worries'.¹⁵⁴ Thomas therefore knew what Hitler wished to hear confirmed, and that he was following those questions with keen interest. In this connection it might be recalled that, shortly before the outbreak of the war, Hitler had stated to Carl J. Burckhardt, the League of Nations High Commissioner for Danzig: 'I need the Ukraine, so that we cannot be starved out again as in the last war.'¹⁵⁵ It is significant that Thomas instructed the editor of the Russia memorandum to co-operate with Backe.¹⁵⁶

After a conference with the Army High Command on 3 February 1941 had once more revealed its doubts,¹⁵⁷ Hitler on 11 February demanded that the Russia memorandum, which Keitel had informed him was being prepared, should be accompanied by a clear map.¹⁵⁸ The study, dated 13 February, was in fact completed and sent to Hitler only on 20 February, following repeated personal intervention by Thomas.¹⁵⁹ Presumably it crossed with a study-paper produced by the Four-year Plan authority, which was based on extensive statistical material.

In contrast to the latter, the Thomas memorandum generally confirmed Hitler's expectations and thus conflicted perceptibly with earlier OKW research as well as with the Walther memorandum. Instead of discussing in detail the economic risks which would stem from the execution of the operation, as the Walther paper did, Thomas devoted much space to long-term economic gain. In spite of all warnings, he believed it possible to extract from the European part of the Soviet Union sufficient agricultural surpluses to cover German import requirements for 1941 and 1942, and subsequently even to improve the German foodstuff situation to a marked degree. He never questioned the prerequisites of this. On the strength of experience from the First World War he proposed that the Russian agrarian order should not at first be changed. His recommendation for achieving the greatest possible yield in the shortest possible time was in line with German practice in other

¹⁵⁹ WiRüAmt No. 10/41 g.Kdos./Chefs., Die wehrwirtschaftlichen Auswirkungen einer Operation im Osten [The war-economy consequences of an operation in the east], 13 Mar. 1941: Thomas, *Wehr- und Rüstungswirtschaft*, 515 ff.

occupied territories: a reduction of domestic consumption by 10 per cent would, in the case of Russia, yield 4m. t. of grain, which would be sufficient to cover the import requirement of the entire German sphere of power.¹⁶⁰ These arguments are likely to have come from Backe.

Even during the preparation of the memorandum Thomas had attached great importance to the need for a rapid strike to seize not only the Ukraine, but also the oilfields of the Caucasus and—because of the transport of rubber—a connection to the Far East. An adequate economic gain could be expected only if the operational objectives were pegged out as far to the east as possible. This supported Hitler's line of argument *vis-à-vis* the Army High Command. As for the operational and, more especially, logistical prerequisites of such an operation, Thomas of course had nothing to say. Instead, without concerning himself with the questionable value of his sources, and in clear conflict with the conclusions of the military geographers of the Army High Command, he declared that the campaign would give Germany possession of 75 per cent of the Soviet armaments industry. The Asian part of the Soviet Union could not represent a serious threat to German dominion in the foreseeable future, so long as Germany succeeded in destroying the industry in the Urals. Germany's economic war aims were defined by him as the seizure and removal of all raw materials and foodstuffs within reach, as well as the utilization of the Russian armaments industry.

In his deliberately factual exposé General Thomas based himself on the same data as were also used by the Army High Command. The crucial difference was that Thomas in his memorandum created the impression that the economic resources and, more particularly, the armaments industry in the European part of the Soviet Union could be captured intact, and within a short period of time put to the use of the German war effort. In doing so he disregarded the real central problem of the whole operation, i.e. the question whether the Soviet regime would in fact rapidly collapse under the German assault, so that the expenditure of time, personnel, and material on the campaign could be kept within limits. Had Thomas wished to 'dissuade Hitler from his decision with all means at his disposal'¹⁶¹ he could easily, with the information available to his department, have confirmed the objections to such an assumption, the objections contained, for instance, in the Walther memorandum. Furthermore, he could have factually refuted Hitler's expectations of rapid and vast economic gain in the east. He did not do so, and the charge that he was an 'opportunist and a double-dealer'¹⁶² was perhaps not

¹⁶⁰ Thomas, *Wehr- und Rüstungswirtschaft*, 517, and KTB WiRüAmt/Stab 1939/41, 184 (12 Feb. 1941), BA-MA RW 19/164.

Critical attitudes towards the memorandum, on the other hand, in Hillgruber, 'Rußland-Bild', 309, and Streit, *Keine Kameraden*, 62–3.

¹⁶² Thus Keitel's defending counsel in his plea before the Nuremberg tribunal on 8 July 1946, *IMT* xvii, 712.

unjustified. Whatever objective Thomas may have pursued with his memorandum, to Hitler it certainly came as a confirmation of his own views.

Together with the simultaneously submitted draft 'Guidelines on special issues in connection with Directive No. 21' the Thomas memorandum induced Hitler to take a fundamental decision on future occupation policy. Having spent nearly three weeks recuperating at the Berghof, he presumably met Göring, Reich Leader of the SS Heinrich Himmler, and Alfred Rosenberg, the head of the foreign-policy department of the NSDAP, in Munich on 24 February, on the occasion of his speech to celebrate the anniversary of the Party.¹⁶³ It cannot be ruled out that—along with the ideas of the generals—conversations in that circle may have influenced his decision from the outset to wage the campaign against the Soviet Union differently from all others. Even before he had clarified the details in his mind he instructed Göring to assume, with the involvement of General Thomas, the administration and exploitation of the eastern territories to be conquered.¹⁶⁴ In order to pacify the rear areas and to safeguard maximum exploitation, Communism had to be 'exterminated' through the liquidation of all political leaders.

This decision was conveyed to General Thomas by Göring on 26 February, when Thomas once more submitted his memorandum to him personally.¹⁶⁵ The two men quickly agreed on economic war aims, so that the question of the potential risks of the operation was relegated to the background from the start. Göring instead announced with 'special emphasis' that the employment of the war-economy organization was to be carried out in a different framework from the past. He demanded a separation from OKH and the creation of an entirely new and independent organization under his own command. Hitler, he explained, had already agreed that Thomas should undertake the preparatory work for it.

The head of the War Economy and Armaments Department thus found himself faced with a totally changed situation. Here at last was an opportunity to set up an economic organization comprising all spheres, an organization of the kind that was in line with his age-old demand that the control of the German war economy should be in the hands of a single man who held 'all full powers', who was familiar with the 'plans of the supreme leadership and who could argue his views to the Führer himself'.¹⁶⁶ Effectively fronted by Göring, he might now expect to achieve such a position and thus decide in his own favour the energy-consuming struggle for the control of the war economy, a struggle he had waged for many years against usually more influential rivals. Understandably enough, he seized the opportunity offered him by Göring and

¹⁶³ See Below, *Hitlers Adjutant*, 262–3.

¹⁶⁵ Minute by Thomas on his report to the Reich Marshal, 26 Feb. 1941, BA-MA Wi/I D 1716.

¹⁶⁶ Thomas, *Wehr- und Rüstungswirtschaft*, 300.

'reported' spontaneously, if not quite truthfully, 'that preparatory work on those lines' was 'already in progress'. He promised to submit a draft organizational outline soon. The level of expectation from which Thomas proceeded after his conversation with Göring emerges from the war diary entry¹⁶⁷ which states that the Reich Marshal 'hands over to the department chief the preparations for the entire administration. He emphasizes that the department chief will have a completely free hand; he does not intend to let any other departments or authorities exercise any influence.' Only the food-supply area was to be taken over by Backe.

In order to secure his presumed triumph, Thomas immediately ordered a draft decree¹⁶⁸ to be prepared for Göring, the burden of which was to be the 'concentration of command authority in all questions of the economy'. In all future operations the organization of the OKW would take charge of the 'entire utilization of occupied territories' and perform the 'annexation of the economy of those territories to that of the Greater German economic sphere with a view to the greatest possible enhancement of German armament'. Thomas's ambitions evidently aimed at breaking the autonomy of the separate Wehrmacht services in armaments matters and at making OKW, under Göring's 'patronage', the command centre for the war economy. The future would show whether such hopes were realistic. But there can be no doubt that his model suited the demands of a modern war far better than the procedures practised in the past.

(d) *The Establishment of the Economic Organization East*

From the end of February 1941 work proceeded feverishly in the War Economy and Armaments Department on the organizational and conceptual foundations of an Economic Organization East.¹⁶⁹ The Russia staff was instructed by Thomas to prepare a new organizational draft for Göring within eight days.¹⁷⁰ It was, among other things, to contain the unequivocal statement that the Organization was independent of any kind of military or civilian administration, receiving its instructions directly from General Thomas. It also contained explicit mention of the taking over of certain areas of responsibility from the Reich ministry of economic affairs, and the demand addressed to the Wehrmacht services to dispense with armaments offices of their own in the occupied territories. Even the take-over and securing of captured military installations was to come within the authority of the war-economy officers. To

¹⁶⁸ Der Reichsmarschall des Großdeutschen Reiches, draft, Feb. 1941, BA-MA Wi/VIII. 411.

¹⁶⁹ The account by Thomas, *Wehr- und Rüstungswirtschaft*, 266 ff., is not reliable, although the secondary literature is largely based on it—e.g. Gibbons, 'Soviet Industry', 121 ff. Birkenfeld tries to explain the conflict between Thomas's zeal in preparing for the Russian campaign and his alleged resistance by a kind of 'schizophrenia', so typical of men of the Resistance on active service. Duty compels them to devote their entire effort to the preparation of something which passionate volition is trying to prevent': introduction to Thomas, *Wehr- und Rüstungswirtschaft*, 17–18.

¹⁷⁰ See minute dated 28 Feb. 1941, No. 1317-PS, IMT xxvii. 169–71.

support the Economic Organization, a 'military administration' was envisaged, which would concern itself mainly with 'looking after the population' and 'safeguarding nutrition in the occupied territories'.¹⁷¹ The task of the war-economy officers, on the other hand, would be to accompany the army's advance, safeguard captured stocks, and administer the conquered industrial areas. In view of the bottlenecks of the German war economy the collection of raw materials in Russia was a particularly important task.

In order to guarantee staffing of the 'Oldenburg' working team by the necessary personnel, Thomas called a conference of all officers involved in the preparatory work for the beginning of March.¹⁷² He also summoned to it Luftwaffe Lieutenant-General Schubert, the armaments inspector in Paris, who seemed to have the ideal qualifications for a future head of Economic Organization East. As a former military attaché in Moscow and Reichswehr representative during the first few years of secret co-operation with the Red Army, he was familiar with conditions in the Soviet armaments industry,¹⁷³ he had experience of managing large armaments organizations, and as a Luftwaffe general he had the necessary 'direct line' to Göring.

To enable the initially modest organization to cope with its new tasks the 'Economic Staff East' was considerably enhanced and enlarged as a directing body. It was to be headed by an 'Economic Control Staff East' as its steering body, headed by State Secretary Paul Körner representing Göring; this was to render possible the participation of other civilian and military agencies. Thomas reserved the 'central responsibility' to himself. On 19 March Göring approved this organization plan¹⁷⁴ and on 29 April Thomas informed the Wehrmacht services.¹⁷⁵ The order establishing the organization, dated 6 May, envisaged five economic inspectorates with a total of 23 economic squads (Wirtschaftskommandos) and 12 field agencies (Außenstellen), with a staff totalling 6,485.¹⁷⁶ The real problem, however, was the relationship of this economic authority with the military administration and the delimitation of its tasks as against the military administration—in other words, its role in the future occupation policy in Russia. A mere week after the commissioning of Thomas with this task, further directives were issued by Hitler: these made it

¹⁷¹ Draft WiRüAm directive for Göring, Feb. 1941, BA-MA Wi/VIII. 411.

¹⁷² OKW/WiRüAmt/Rü (Ic) No. 574/41 g.Kdos., concerning war-economy staff (special duties) Oldenburg, 26 Feb. 1941, *ibid.*

¹⁷³ On Schubert's role in the 1920s see Müller, *Tor zur Weltmacht*, 99. As late as his account of the early 1960s it is evident how closely he agreed with Göring's and Rosenberg's political ideas: version of 20 July 1965, BA-MA MStg 2/2558. In contrast to the sober businesslike attitude of Thomas, whom he mistrusted, Schubert felt inspired by his task, which he likened 'to the Varingian campaign a thousand years ago'; see Lt.-Gen. Schubert, No. 93/41 g.Kdos., Oldenburg study, 9 Mar. 1941, BA-MA RW 31/80.

¹⁷⁴ Chef WiRüAmt, g.Kdos., report to Reich Marshal Göring on 19 Mar. 1941, minute dated 20 Mar. 1941, BA-MA Wi/VIII. 411.

¹⁷⁶ OKW/WiRüAmt/Rü (Ic) No. 1405/41 g.Kdos., betr. Wirtschaftsorganisation z.b.V. Oldenburg [concerning economic organization, special duties Oldenburg], 6 May 1941, BA-MA Wi/VIII. 347.

clear that what he had in mind was not simply a reorganization in the economic sphere, but generally an integration of political, ideological, economic, and military objectives into an overall strategy.¹⁷⁷

Hitler ruled that the military administration of the Army High Command was to be confined to the operational areas, while the rear areas were to be handed over to civilian Reich commissars. These were to be assisted by Wehrmacht commanders in the handling of military and war-economy tasks in the hinterland. Overlapping authority, i.e. for the area of the military administration and for the Reich commissariats, was assigned to Himmler for the police sector and to Göring (or, acting on his behalf, General Thomas) for the economic sphere.¹⁷⁸ The idea, therefore, was that the optimal collection of booty, needed on war-economy and on logistical grounds, was to be ensured by the co-operation of the 'four pillars': the Wehrmacht, Himmler's special-action squads, Rosenberg's Reich commissars, and Göring's economic organization. Hitler did not accurately delineate the tasks of each of these. That he left to the rivalry of the different officials. Hence the structural and delimitation issues became the most pressing problem of the new economic organization. To achieve his far-reaching ambitions Thomas had to assert his 'central responsibility' *vis-à-vis* Göring's civilian economic managers and, at the same time, find a *modus vivendi* with OKH that took account both of the executive power of the army in the theatre of operations and of the overall economic concerns of OKW.

Although the first drafts and instructions assumed a general directive-issuing authority by the War Economy and Armaments Department, Göring soon made it clear that he had no intention of leaving Thomas an entirely free hand. The draft of a letter by Thomas,¹⁷⁹ designed to get the Reich Marshal to inform the commander-in-chief of the army that he, Thomas, would have full authority to deal with economic matters, was altered by Göring at the crucial passage. Its revised version ran: 'For the preparation and implementation of the organization necessary for this purpose I have set up a control staff answerable to me directly and headed, on my behalf, by State Secretary Körner. It includes, among others, Infantry General Thomas, head of the War Economy and Armaments Department in the Wehrmacht High Command.'¹⁸⁰ On another occasion Göring had given instructions that the economic organization should be staffed by 'the best forces from industry', chosen not by OKW but by the Four-year Plan authority.¹⁸¹ Moreover, he delegated the top officials of his Four-year Plan authority into the Economic Control Staff East,

¹⁷⁷ See KTB OKW i. 341 (3 Mar. 1941), and sect. I.vii.2(a) (Förster).

so that Thomas's idea of a loosely constituted advisory body under his 'central responsibility' soon proved to be an illusion.

Although the Economic Staff East and its subordinate agencies were assured of a military channel of control issuing from OKW, the work to be done by the specialized civilian departments was largely controlled by the various Reich authorities. The most important Main Group (Chefgruppe) for Agriculture in the Economic Staff East was headed by Ministerialdirektor Hans Joachim Riecke of the Reich ministry of food, a Party member since 1925 and an SA Gruppenführer. The Main Group Economic Affairs was headed by Ministerialdirektor Gustav Schlotterer, one of Funk's principal assistants. He had been a Party member since 1923 and a leading National Socialist economic journalist. After 1933 he had been in charge of the Department for Export Promotion in the Reich ministry of economic affairs and in that post had been concerned also with trade with the east. The head of his Russian desk, Ministerialrat Wilhelm Ter-Nedden, had been employed since 1939-40 on 'German-Russian economic planning' and was now assigned to the two principal departments in Main Group 'W' of the Economic Staff East. It should also be mentioned that in the summer of 1940 Schlotterer had been in charge, on Göring's instructions, of postwar economic planning. After the beginning of the German-Soviet war he additionally took charge of the newly established Main Department VI (Economic problems of the newly occupied eastern territories) in the Reich ministry of economic affairs as well as Main Group III Wi (Economic-policy co-operation) in the Reich ministry for the occupied eastern territories. (For the structure of the Economic Staff East in 1941 and for the planned chain of command in the Economic Organization East see Diagrams I.III.1 and I.III.2.)

These ministerial representatives, enjoying the confidence of the Party and experienced in the planning and implementation of large-area economic policy, brought with them their own teams of experts into the Economic Organization East, so that OKW was eventually left with only the narrow field of armaments economy. Initial expectations that Göring's concept would not remain a one-off decision but that the organization for the east would rather become a model for all future operations were soon disappointed. On 3 April 1941 Consul-General Franz Neuhausen paid a surprise call on Thomas and informed him that Göring had appointed him 'economic dictator' for Yugoslavia.¹⁸² OKW's organization, which was then being built up for the Balkan campaign, had to be placed under Neuhausen and a complicated harmonization had to be carried out with his own apparatus.

As the Army High Command had been somewhat relieved at the news that it would be spared the 'burden' of administration in Russia, arrangements with Thomas proceeded without any conflict. Both sides considered it necessary for the forward economic agencies to be closely integrated in the

¹⁸² See KTB WiRüAmt/Stab 1941, p. 4 (3 Apr. 1941), BA-MA RW 19/165.

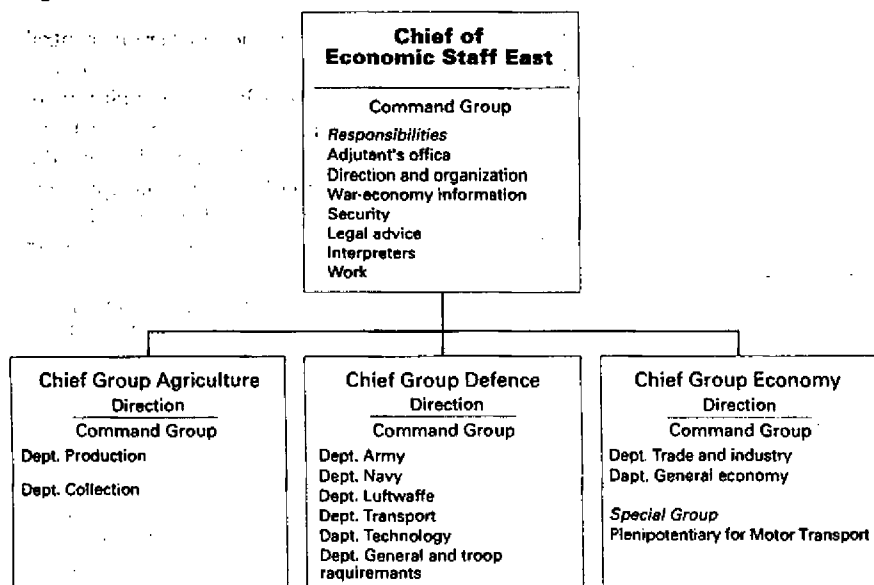

DIAGRAM I.III.1. Structure of Economic Staff East in 1941

command structure of the ground forces. It was therefore agreed that while operations were in progress the Economic Staff East should be located in the immediate proximity of the quartermaster-general, to ensure smooth co-operation.¹⁸³ In the rear army areas the subordination of one economic inspectorate each to the commanding officers and the establishment of one or several economic control squads under the security divisions were envisaged, together with one Group IV Wi economist at each field headquarters in the rear areas. In the army area the higher commands were to have a Group IV Wi economic expert assigned to them, who would at the same time be OKW's liaison officer. According to need, these economic agencies would have attached to them collecting and scouting units for manufacturing industry and for agricultural produce and machinery, as well as technical battalions for the restoration of supply enterprises, mineral-oil units, and mining companies.

It was the task of these economic agencies to make themselves available to the Wehrmacht commands to meet the immediate needs of the fighting forces. Although this task enjoyed priority while operations were in progress, preparations were to be made at the same time for the utilization of the country for the German war effort. In the event this meant that the economic officers had

¹⁸³ On the following passages see *Wirtschafts-Führungsstab Ost, Richtlinien für die Führung der Wirtschaft in den neubesetzten Ostgebieten* [Economic Control Staff East, Guidelines for the control of the economy in the newly occupied eastern territories], June 1941, pp. 5-6, BA-MA RW 31/128 D: *Fall Barbarossa*, No. 112.

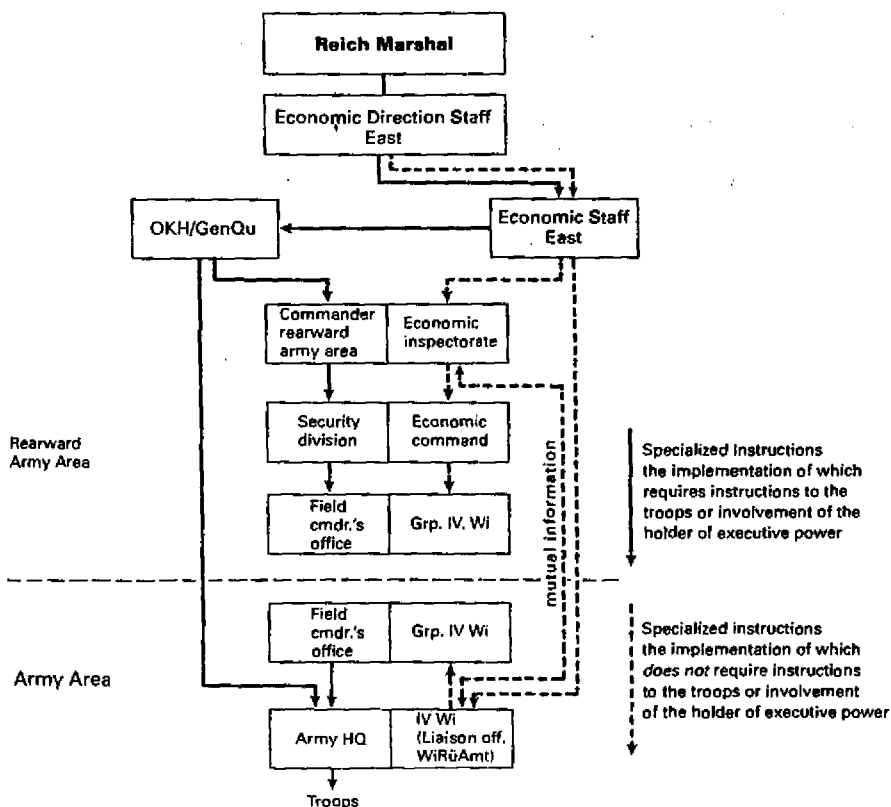

DIAGRAM I.III.2. Structure of Economic Organization East (Plan)

to direct supplies simultaneously forward and back, which soon turned out to be highly problematical in practice. The procedure was further impeded by the complicated regulation of authority to issue commands and instructions. Thus while the military and economic apparatuses were leaning upon one another, any clear subordination was avoided. The quartermaster-general found himself compelled to sacrifice the principle of uniform administration in the area of operations to the economic organization's striving for independence.

A question that remained entirely unresolved was that of the relationship between the military administration and economic agencies on the one hand and the envisaged civilian administration on the other. As Göring had been entrusted by Hitler with the unified control of the economy in the occupied eastern territories, Thomas saw no reason for aligning the boundaries of his

economic inspectorates along the separation-line between military and civilian administration.

Within the Army High Command there was likewise at first no clear concept of how, or for what purpose, territories were to be handed over to Rosenberg, and attention was therefore focused on the phase of military occupation. Discussion between the quartermaster-general and the War Economy and Armaments Department, in which State-Secretary Backe also participated, led to the drafting of the 'Rayon Plan'.¹⁸⁴ This provided for the economically most important Russian districts to be assigned a headquarters and a company of occupation troops each, in order to ensure the security and exploitation of the hinterland. According to OKW calculations such a procedure would require the use of 360,000 men with 4,000 staff cars and 10,000 trucks—a deployment which might perhaps be possible after the conclusion of the campaign but certainly not during operations. OKH therefore solidly refused to make such a large number of occupation troops available. Eventually Thomas asked for the provision of at least 100,000 men from labour service and replacement units;¹⁸⁵ even that proved to be only partially feasible. Thomas found support from Backe, who in an urgent letter to Keitel¹⁸⁶ demanded the creation of the greatest possible number of occupation troops, if necessary at the expense of the labour force in the Reich. He justified his demand by the grave situation in Germany's foodstuff economy, which, he argued, made a ruthless exploitation of Russia indispensable. But this could not be accomplished without appropriate pressure on the local population there.

As soon as the occupied territories were handed over to civil administration, the Wehrmacht commander appointed by OKW—this was Thomas's plan—would occupy a key position. His duties in the economic sphere were defined as 'supplying the troops in accordance with OKH demands', as well as 'utilization of the country and safeguarding of its economic assets for the purposes of the German economy'.¹⁸⁷ The state secretaries and, more particularly, Rosenberg were informed of this at the beginning of May.¹⁸⁸ Rosenberg was moreover notified that the Wehrmacht commanders would, in these matters, be placed above the civilian administration. Rosenberg objected at once, claiming for himself unrestricted responsibility in all spheres, including the economy. Hitler settled the conflict with his typical 'reluctance to commit himself'.¹⁸⁹ Once the territories had been handed over to civilian administra-

tion, the economic agencies were formally to become part of their apparatus, while in their specialized activities they would continue to come under Göring and his Economic Control Staff. As for the Wehrmacht commanders, Hitler assigned to them only military-security functions and responsibility for supplies to the troops.¹⁹⁰ It was this very point which set the seal on the failure of General Thomas's concept—of his hopes that, once OKH had been successfully squeezed out of responsibility for the occupied territories, he would establish military domination and unified economic control by OKW. The road was open to future chaos in German occupation policy in Russia.¹⁹¹ (For the proposed boundaries of the economic inspectorates see Map I.III.1.)

To sum up, it may be said that in the spring of 1941 the head of the War Economy and Armaments Department had allowed himself to be induced by Hitler and Göring to act as a wedge within the top military leadership, and, in pursuit of his boundless ambition, to follow an eventually disastrous policy of estrangement from the Army High Command. The separation of the economy from overall occupation policy on the one hand encouraged the inclination of the Army High Command to prepare and execute operations solely according to military and strategic considerations—which made collision with Hitler inevitable since for him the war-economy aspect occupied a higher priority. And on the other hand, it gave free rein to the economic agencies' eagerness for booty, which was now able to run untrammelled by any other considerations. That development was largely also encouraged by German private industry, whose interests it met.

(e) *The Involvement of Private Enterprise*

The majority of German big business had decided, certainly no later than the early 1930s, to support those political forces which stood for an expansion of the German political and economic sphere towards the east.¹⁹² This general agreement with the eastward expansionist aims of National Socialism also determined attitudes during the phase of immediate war preparations by the Third Reich. Admittedly there were a few industrialists who, at moments of international tension, believed they had to remind the political leadership of that consensus and call for a strict observation of an anti-Soviet expansionist policy,¹⁹³ but these were the exception rather than the rule. After all, the fact that Hitler's war policy never lost sight of the creation of an economic 'living-space in the east' was known not only to his closest political and military

¹⁹⁰ Hitler's decree of 25 June 1941: *Deutsche Besatzungspolitik*, No. 8.

¹⁹¹ On this see the extensive treatment in Dallin, *German Rule in Russia*. The factual justification of independence for the economic organization, formulated retrospectively in the history of WiStabOst, is certainly not to be dismissed lightly; see *Deutsche Wirtschaftspolitik*, 27 ff. However, as has been shown above, such considerations were not at the centre of the fundamental decisions made in the spring of 1941.

¹⁹² See Müller, *Tor zur Weltmacht*, 235 ff., and *Germany and the Second World War*, i, 189 ff.

¹⁹³ Mention should be made here of Krauch's remarks in Apr. 1939 and of the memoranda by Rechberg and Röchling in 1938 and 1936 respectively, published in *Anatomie des Krieges*, Nos. 47, 80, 82, 93.

circle.¹⁹⁴ The question of exerting direct influence, or of bringing about a change of course, did not therefore arise at all for the top industrialists or bankers. So long as the National Socialist leadership—whose powers of decision had been greatly strengthened after the depression of 1936 in the area of economic policy as well—ensured, or even promised, the satisfaction of basic economic interests with its foreign-policy or military operations, it could

¹⁹⁴ See Müller, *Tor zur Weltmacht*, 245 ff., and for Hitler's military circle the evidence of Below, *Hitlers Adjutant*, 185.

maintain the primacy of politics without opposition. Timing and sequence of individual expansionist steps might be determined by Hitler unopposed. Thus a form of co-operation developed, in which 'on the one hand, the state was guaranteed the pursuance of its political objectives, while, on the other, the effectiveness of free entrepreneurial initiative and the freedom of private capital were not impaired'.¹⁹⁵

The approval of Hitler's war policy by big business undoubtedly reached its peak in the summer of 1940. The hegemony which had been achieved in Europe assured it of undreamt-of opportunities of expansion and profit, especially as the administration was offering every possible support and encouragement for the achievement of close integration with the European national economies, and thus for the goal of a strong self-sufficient large-area economy under German leadership. Although the resulting tasks required all the strength of the German economy, and although their accomplishment was still far from being in sight, there was unanimity in top economic circles after the campaign in France that the economic 'reorganization' of Europe was no more than the jumping-off base for a global struggle with the Anglo-American bloc for control of the world market, and that German control and freedom to dispose over Russian resources had to be viewed as an indispensable prerequisite.¹⁹⁶ And in that context there could scarcely be any doubt that the solution of the problem through trade policy was totally unsatisfactory in the long term and could represent no more than a provisional solution.

It is, of course, conceivable that prior to taking important decisions Hitler might have conferred also with leading industrialists, and consulted with them, without such contacts necessarily being mentioned in those records that have come down to us.¹⁹⁷ Even so, it may be assumed with some justification that in the decision-making in the spring of 1941 there was no direct impulse from big business towards a realization of anti-Soviet aggressive aims. Indirect influence, on the other hand, may be detected along the fringes of the political decision-making centre, as reflected by the discussion of the problem of large-area economics; and that influence should be seen as operating in parallel with the views of diplomats and military figures outlined above.

When, therefore, Governor-General Hans Frank at an economic conference at the beginning of June 1940 hinted at the possibility of a military conflict with the USSR,¹⁹⁸ he could expect to meet with understanding on the part of the representatives of trade and industry. By July, within the Wehrmacht High

(retd.): *Einige Erfahrungen des Heeres-Waffenamtes mit der Industrie, besonders in der Entwicklung und Prüfung von Waffen, Munition und Gerät* [Some experiences of the army weapons department in dealing with industry, especially in the development and testing of weapons, ammunition, and equipment], 25 June 1952, BA-MA Bw 9/138.

¹⁹⁸ No. 2233-PS, *IMT* xxix. 419.

Command preparations for a military 'eastern solution' were a secret which, despite all attempts at concealment, was leaking out.¹⁹⁹ The Wehrmacht High Command order 'Aufbau Ost' (Build-up East), resulting in the withdrawal of labour even from vital armaments enterprises, Germany's defeat in the Battle of Britain, as well as the strengthening of the German position in Romania and Finland—all these were indications which, by August 1940, were correctly interpreted by attentive observers on the management floors of the German armaments industry. Detailed preparations for the attack on the USSR were by no means confined, in the initial phase, to the political and military planes. The realignment of armaments inevitably involved numerous enterprises of Germany's privately owned armaments industry, as well as their suppliers. German business in general, in so far as it was able—encouraged by surmises or indiscretions²⁰⁰—to adapt to the political leadership's war plans, was anxious at that stage to ensure its influence on the decision-making process of official bodies with regard to the issue of economic policy in the occupied Soviet territories. Until the responsibilities of the different authorities were clearly defined, it was natural for firms to keep to those authorities which in earlier campaigns had been the control centres for the distribution of captured stocks, machinery, enterprises, and other economic assets. Individual firms which made themselves indispensable at an early stage by providing expert opinions and other information, or by making available appropriate expert staff, thus found the field wide open for the pursuit of their own selfish interests.

This meant, primarily, the military economic organization. In contrast to OKH, where the excesses of private enrichment through officially gained information and influence were viewed with mistrust,²⁰¹ matters were handled in a comparatively generous way by the War Economy and Armaments Department. The close links and co-operation with private enterprise resulted in a tolerant attitude towards specialized staff called up for army duties, who, in armaments control squads or technical units, or as temporary managers of plants, often pursued the interests of their firms.²⁰² In the case of planning against Russia the Wehrmacht High Command's position was further strengthened by the fact that the quartermaster-general was focusing his main interest on the Soviet armaments industry, which he believed could, on past evidence, already be regarded as Wehrmacht booty, to be run under the auspices of the weapons departments.

The intensified gathering of intelligence about the Soviet Union, practised since August 1940 by the war-economy section, provided a promising field for

¹⁹⁹ See Bräutigam, *So hat es sich zugetragen*, 275.

²⁰⁰ See e.g. the relevant diary entries in Hassell, *Tagebücher*, 162, 165 (22 Sept., 8 Oct. 1940).

²⁰¹ Thus the commander of German forces in Denmark reported that 'all sorts of dubious characters are arriving from Thomas's office (black marketeers)': Halder, *Diaries*, 344 (6 May 1940).

²⁰² On the close ties between the War Economy and Armaments Department and industry see also the account in Thomas, *Wehr- und Rüstungswirtschaft*, 108 ff.

industrial influence. Thus the Siemens concern offered information on Soviet energy supplies, and IG-Farben provided data on the production of aviation fuel in the USSR.²⁰³ In mid-October OKW decided to commission the concern to compile a major study of the Soviet Union's chemical industry; this provided the basis of the department's war-economy studies and plans. The AEG concern similarly supplied data on the Soviet electrical industry, and in early November, while Molotov was in Berlin, an IG-Farben representative examined and updated the entire material available on Russia at the War Economy and Armaments Department.

When Lieutenant-General Studt, during his initial conversations about an economic organization, gave instructions that not only should experts on Russia be tracked down within the department but in addition contacts should be made with civilian circles, he was thinking predominantly, perhaps a little naïvely, of haulage firms active in east-west trade.²⁰⁴ The armaments section, however, instructed the officers concerned to go for the big firms which had done business with Russia in the past.²⁰⁵ The first person proposed was a Siemens engineer,²⁰⁶ which was hardly surprising considering existing close contacts. During the following period the enlistment of specialists continued to be governed by personal relations and applications from firms.²⁰⁷ Although the actual preparations for the establishment of the War Economy and Armaments Department, prior to January 1941, concerned only a limited number of technical units, contacts were even then being established on a wide scale in order to collect details of experts on Russia in the business world.

As preparations for the economic aspect of the Russian campaign within the Wehrmacht High Command were petering out at the beginning of 1941—an outward sign was the cancellation of the induction courses originally planned for February—business circles found themselves confronted with a new situation in that there was now no contact person available on the government side. Admittedly Halder intended to include 'advisers' from the world of business in his model of military administration,²⁰⁸ but these ideas could not be implemented so long as no final decision had been arrived at on the fundamentals of future German occupation policy in Russia.

In consequence, managerial circles increasingly turned their attention to the German-Soviet economic agreement of 10 January 1941, which held out the prospect of new and exceedingly favourable business opportunities. An IG-Farben board meeting on 5 February welcomed the 'relatively favourable

success of export business' with the USSR.²⁰⁹ The Hoesch concern's official in charge of business with Russia expressed himself 'very optimistic' about the development of bilateral economic relations and was favourably impressed by the fact that the Russians were already anxious to discuss business for 1942, which suggested that Moscow was clearly thinking of 'long-term planning'.²¹⁰ The firm of Thüringische Zellwolle AG opened negotiations about setting up a complete factory in the Volga region; these were successfully concluded in June 1941.²¹¹ The then first secretary at the Soviet embassy in Berlin, Valentin Berezhkov, in his memoirs records the frequent visits by leading representatives of German big business, who expressed the view 'that the Soviet Union and Germany complement one another in many respects and that the development of trade relations benefits both our countries'.²¹² There were even deliberate warnings of Hitler's aggressive intentions, which induced the Army High Command and the foreign ministry to launch counter-measures.²¹³ However, the interest in exports, which in the 1920s and still in the 1930s had perceptibly marked German industry's attitude towards the USSR, had long died down and had no effective political weight any more. The main interest now was in securing and further stepping up Soviet deliveries of raw materials and foodstuffs, as these had become vital to Germany. General Thomas undoubtedly summed up this attitude correctly when he said that trade exchanges were of course necessary and useful, but if 'the military leadership is in a position to make good the deficiencies in our raw-material resources by way of conquest, then this would be particularly welcomed by our captains of industry'.²¹⁴

In any case, there was no doubt in industrial circles about the seriousness of the military preparations for aggression.²¹⁵ The Russia Committee of German Trade and Industry therefore felt it necessary to warn firms engaged in deals with Russia to have themselves briefed by the Committee before engaging in business negotiations.²¹⁶

When Göring, with his instructions to Thomas on 26 February 1941, inaugurated the turn-about in war-economy preparations, he proceeded from the belief that, for the purpose of taking over all important enterprises, it would be 'appropriate from the start to involve reliable figures from German business concerns, as only with their experience will it be possible to do

successful work from the outset'.²¹⁷ Even in the military section of the economic organization, the key positions, in his opinion, were to be filled by 'the best figures from the business world'.²¹⁸

Following that political decision private industry was involved to a greatly increased degree in the plans and preparations for the economic organization. Admittedly the Wehrmacht High Command was no longer the agency for that. The co-ordinators of state and private-enterprise interests were now the representatives of the civilian economic sector, primarily the ministry for economic affairs and the Four-year Plan authority; German big business preferred to deal with them rather than with the military. This development suited private business: its increasingly close ties with the Party and state apparatus made it easier for business to exploit rivalries between authorities in order to gain decisive influence and strengthen the autonomy of private enterprise against state control.²¹⁹

On 27 March 1941 the 'Kontinentale Öl AG' was founded as the model for the new form of co-operation between state and private economy.²²⁰ This umbrella organization, supported jointly by industry, banking, the military, and the economic bureaucracy, was to ensure for German mineral-oil interests 'the position which Germany as a great power needs and to which it is entitled'.²²¹ For the German war economy to be dependent on the 'good will' of foreign governments was 'as dangerous as it is intolerable'. In future any oil policy relevant to German supplies was to be made in Germany alone. This referred not only to the Balkans.

Two days prior to the first conference about the establishment of the company Halder had had himself briefed on 'Oil deposits and their importance for the European economy: Baku'.²²² Simultaneously, within the Wehrmacht High Command, 'material for the examination of action against the Caucasian oil region' was being collected, and General Thomas, who was a member of the company's board, never tired of pointing out that the conquest of the Caucasus must absolutely be included in operational plans.²²³ A minute by Deutsche Bank correctly described the development of Kontinentale Öl AG as depending 'on the future course of the war'.²²⁴

On the basis of such close ties between political, military, and industrial expansionist goals, preparations began in March 1941 at the Reich ministry for economic affairs for the attack on the USSR. The names of the administrative experts needed for the direction of the Economic Organization East were

given to the War Economy and Armaments Department by the end of April. To facilitate the recruitment of the large number of experts for the technical units and the forward economic agencies, preliminary discussions were held in certain important fields, such as the iron and metallurgical industry, with those private firms which had already earmarked experts for the take-over of Soviet enterprises.²²⁵ For reasons of security, however, these arrangements were not extended until immediately after the launch of the attack.²²⁶

Parallel to such questions of personnel, efforts were also being made to ensure an exchange of views and information on the Soviet economy and on the economic objectives of the military operation. To that end the ministry for economic affairs approached the economic self-administration bodies, the industrial and specialized groups, which in turn approached individual firms.²²⁷ Under the heading of 'large-area economy' information was thus exchanged on the prospects of expansion into Russia, and requests and demands were put forward in advance. Thus, weeks before the actual attack, 'lists of booty' were already circulating in entrepreneurial circles; these had either been compiled in industrial archives²²⁸ or made available by governmental agencies.²²⁹ The ministry for economic affairs expected firms to go in for 'forward planning', to make sure they were 'ready for take-off' at the end of the war.²³⁰ On much the same lines were the remarks by Paul Heinrichs, manager of the Zeiss concern, at the beginning of May 1941: 'Meanwhile the Balkans have been cleaned up, and we can now get down to planning for whatever comes next.'²³¹ What would 'come next' emerged clearly from the principal agenda of the economic research institutions and the economic departments of big business firms; ever since spring that year—and increasingly so after the attack on the USSR—they had been producing expert opinions on Russia's economy and making them available to the state authorities.²³² Interest ranged from sheep-keeping through the leather and footwear industry to cement manufacture.

Competitive pressures and the urge for expansion caused many entrepreneurs to place their hopes in the opening up of new marketing and profit

opportunities in European Russia. In the field of mining it was mainly the semi-state-owned Reichswerke concern, directed by Göring's economic manager Paul Pleiger, which was anxious to expand the empire it had created in central and eastern Europe by the acquisition of the valuable south Russian coal and ore deposits.²³³ Relying on favours from Göring, the management of the concern was determined to gain for itself an advantage in Russia over its Rhineland-Westphalian competitors, who based their claims largely on the period of the First World War.

The German textile industry also went into action as early as the spring of 1941. Its representative, the textile industrialist Hans Kehrl, responsible for German textile supplies in the ministry for economic affairs as well as in the Four-year Plan authority, sought assurances from State Secretary Backe that the agricultural leaders would not erect any obstacles to the exploitation of Russian cultivation areas or production capacities.²³⁴ In March the Institute for Economic Research in a study confirmed Russia's surplus potential in textile raw materials of 'particular importance to German textile circles'.²³⁵ Although Europe possessed the world's biggest textile production capacity, it was nevertheless dependent on substantial Soviet deliveries of hemp, flax, raw wool, and linseed.²³⁶ Russia moreover represented a still largely undeveloped gigantic market which, as the result of a Soviet industrialization policy favouring a one-sided development of heavy industry, was characterized by a hitherto unsatisfied backlog of demand. It should also be borne in mind that the further development of cellulose production—as a substitute for the lacking raw materials within the framework of the Four-year Plan—had reached its limits, set by an insufficiency of investments, building capacities, manpower, and finally even timber as its feedstock.

The IG-Farben concern, as the largest and most influential enterprise of the chemical industry, was interested primarily in eliminating any burgeoning competition in Russia and in making sure that the existing capacities there did not fall into state hands, or indeed other private hands.²³⁷ In the boardroom that danger was seen as particularly great in the sphere of Buna. A list was therefore compiled of 'gentlemen suitable for employment in Russia for the purpose of taking over any enterprises for the production of synthetic rubber' and submitted to the Economic Organization East.²³⁸ The issue of Soviet oil deposits had already been settled in the interest of the concern in March by the foundation of Kontinentale Öl AG. Unresolved, on the other hand, was the

²³⁸ Letter from Ambros to Krauch, 28 June 1941: Czollek and Eichholtz, 'Monopole', 74 ff.

problem of nitrogen production, which represented a dangerous bottleneck both for agriculture and for the production of explosives within the German sphere of power. On 26 April 1941 the chairman of the board, Professor Carl Krauch, once more briefed the general council of the Four-year Plan authority on the situation and prospects of European nitrogen supplies.²³⁹ In May the nitrogen syndicate, which was dominated by IG-Farben, therefore prepared a comprehensive study of the Ukraine—rightly regarded as the most important nitrogen-producing and -consuming region of the future German empire in the east—and passed it on to the Wehrmacht High Command as a basis for its planning.²⁴⁰

Influential representatives of German big business therefore not only supported the political and military leadership's decision to conquer European Russia in 1941, at the cost of a war on two fronts, but extensively promoted it by their active participation in the organizational preparations. This identification of private enterprise with the National Socialist war for living-space cannot be fully explained by firm-specific expansionist interests. There was also a clear continuity of an eastward-directed imperialist economic policy which went back to the First World War. However, these inclinations were able to turn aggressive in the spring of 1941 only because the political leadership was clearly determined to conduct the planned campaign in the east as a war of pillage and destruction. The resultant abandonment of traditional practices of military occupation and administration allowed business a greater measure of collaboration and of influence even on political and military planning than had been the case in earlier campaigns of conquest. This emerged most conspicuously in the definition of economic war aims.

(f) *Economic Objectives of the Campaign*

During the first phase of the political and military decision-making process, until the end of 1940, economic war aims had been mainly defined in territorial terms. At the centre of interest was the capture of economically important regions, in order to weaken the enemy and bolster the German war economy. Although the quartermaster-general in his plans had envisaged at least a partial rehabilitation of the eastern territories to be occupied,²⁴¹ there existed a variety of ideas among the military leaders concerning future economic policy *vis-à-vis* Russia.

The Navy High Command, in particular, being more accustomed than the army generals to thinking in global economic terms, regarded the objective of the campaign as the extension of Germany's 'living-space in the east' and hence her definitive immunity against blockade.²⁴² From that point of view it

²³⁹ Notes for the report in the Karinhall Plan file, BA R 25/94, Reichsamt für Wirtschaftsausbau.

²⁴⁰ Stickstoff-Syndikat, Wiss. Abt., Ukraine, May 1941, BA-MA RW 19 annexe I/1229.

²⁴¹ See sect. 2(a) of the present chapter.

²⁴² In addition to the above-mentioned observations by Fricke on 28 June 1940 see the retrospective observations by Grand Adm. Doenitz at the naval commanders' conference on 17 Dec. 1943, No. 443-D, *IMT* xxxv. 106-7.

was not enough to liquidate the Soviet system or partition the Soviet Union. 'Not until the newly created heavy and armaments industry has been destroyed and once more become dilapidated, and Russia has become a patriarchal authoritarian state with exclusively agricultural and raw-material production, will the threat from the east be lifted from Europe,'²⁴³ noted the German naval attaché in Moscow, Captain Norbert von Baumbach, on 14 September 1940. That kind of picture of a 'new economic order' in the east was in line with the large-area economic plans pursued in Germany since the 1920s and was getting close to Hitler's living-space programme.

Such long-term plans, however, were of no interest initially to the Army High Command and, even less, the Wehrmacht High Command. Their plans were concerned primarily with a possible utilization of the Soviet armaments industry. The question of a specific economic gain from the eastern campaign began to move into the centre of attention with Hitler's Directive No. 21, during the second phase of decision-making. This may have been due partly to the exacerbation of war-economy problems in the Reich about the turn of 1940-1. Increasing importance was certainly being attached to the occupation of the Caucasian oilfields, in order to safeguard German fuel supplies, and of the 'grain-basket' of the Ukraine, in order to relieve the food situation throughout the German sphere of power.

In that assessment of economic war aims Hitler was supported mainly by Backe and Thomas. A possible indirect factor was the alarming memoranda sent by the IG-Farben director Krauch to Göring and Hitler, demanding a greater allocation of manpower and raw materials for the development of the hydrogenation plants; OKW had not been able to grant him such an allocation because of the tight situation in armaments.²⁴⁴ Hitler himself, in his talk with the Italian top leaders on 20 January 1941, touched on this issue when he spoke of the possibility of freeing manpower for the armaments industry by eliminating the 'danger from the east'.²⁴⁵ Four weeks later, in his conversations with his Japanese ally, interest was focused on a new share-out of global economic power. On that occasion Hitler claimed the European part of the Soviet Union for himself, while displaying less interest in its Asian territories.²⁴⁶

Belief in an economic profit to be gained in the east was not unreservedly shared throughout German leadership circles. There were sporadic critical voices, but these had no effect on the decision-making process. The state secretary in the foreign ministry, Freiherr von Weizsäcker, openly expressed his doubts in a position paper.²⁴⁷ He was concerned primarily about the risks

of a war on two fronts. If Britain were really on the point of collapse, he argued, then

the thought might suggest itself that by the use of force we must feed ourselves from Soviet territory . . . If every Russian city reduced to ashes were as valuable to us as a sunken British warship, I should advocate the German-Russian war for this summer; but I believe that we would be victors over Russia only in a military sense, and would, on the other hand, lose in an economic sense.

He justified his view by the argument that it would not be possible, against the expected passive resistance of the Russians, to exploit the conquered land effectively or fast enough, while on the other hand one would have to assume that the Stalin regime would continue to exist in Siberia and the war in the east would be protracted indefinitely.

On the other hand, of course, there were figures in the foreign ministry who identified more strongly with Hitler's living-space programme and therefore welcomed the war preparations against the Soviet Union.²⁴⁸ They emphasized the need to provide settlement space for an overpopulated Germany, and, as things stood, such space could be found only in the Ukraine. From there some 10-20 million Slavs would have to be evacuated to Soviet Asia to make room for the Germans. The reservations thus created in Siberia would have to be strictly controlled by the Reich to prevent any flare-up of Slav resistance.

Especially critical comment on the idea of rapid economic gain in the east came from the Reich minister of finance, Lutz Graf Schwerin von Krosigk.²⁴⁹ When he learnt about the preparations for the campaign in the east he feared an over-extension of German strength and thought it wiser first of all to consolidate what had been accomplished. After Göring had told him that the 'reconstruction of Europe' would be enormously complicated by the continued existence of the Soviet regime and that a change of that state of affairs was therefore indispensable, he sent an extensive memorandum to the Reich Marshal in April 1941, based primarily on economic arguments.²⁵⁰ In particular he rejected the assumption that the German supply situation could be substantially improved by the conquest of southern Russia. There would be no perceptible relief in the area of foodstuffs. On the contrary, he argued, as the Russians would burn down their barns and fields, less grain would be collected from Russia that year than the Reich would receive on the basis of current delivery contracts. And even if yields could be increased in the long term, there still remained the enormous transport difficulties. Even the greatest gain that could be achieved would never offset the loss which was bound to arise from the inevitable decline of domestic production in the event of a prolongation of the war.

²⁴⁸ Vertraulich, Persönlich, Russische Skizzen [Confidential, personal, Russian sketches], Feb. 1941, estate of Niedermayer (BA-MA N 122/9), who records remarks presumably made by Consul Eizenlohr during his stay in Moscow for the purpose of discussing resettlement issues.

²⁴⁹ See Schwerin von Krosigk, *Erinnerungen*, II, 237-8.

²⁵⁰ Letter from Schwerin von Krosigk to Göring, 19 Apr. 1941, BA R 2/24243.

Significant, however, is his reservation that matters would look different 'if the Russians did not keep their pact with us, failed to make the promised deliveries, etc. So far, however, there are no indications of such an attitude. On the contrary, I believe that, out of understandable fear, the Russians would strip off their own shirts in order to satisfy our delivery requests, even if we stepped them up further.'²⁵¹

Similar views were held also by the spokesman for industry within the circle of the bourgeois opposition movement, Ulrich von Hassell. He foresaw a 'greatly increasing danger to food supplies' in the event of a German attack on the USSR, and expected three consequences: '(1) deliveries from Russia being cut off, whereas the Ukraine can become utilizable only after a long time; (2) new exceedingly heavy burdens on all war material and human resources; (3) deliberately triggered complete encirclement.'²⁵²

This essentially marginal criticism, therefore, was aimed primarily at the expectation of instant economic gain in the sense of a short-term cost-effectiveness analysis. However, as a result of Backe's and Thomas's contrasting statements both the military leadership and Hitler had long made up their minds. In a third phase of the decision-making process the overall economic profit of the campaign was to them beyond any question. The problem which instead moved to the fore was the methods to be used in order to achieve the maximum profit. Hitler's decision in favour of a new procedure moreover implied exploitative aims which reached further than in his past campaigns.

Göring's instruction to General Thomas to set up an Economic Organization East enabled the Wehrmacht High Command to lay down some initial specific war aims in the economic sphere with binding validity. The basics of this had already been outlined by Thomas in his memorandum to Hitler.²⁵³ The goal was the collection of raw materials and foodstuffs to relieve the German war economy. The question of industrial rehabilitation, however, was left open. Reference to the high level of performance by the Soviet armaments industry suggested that its utilization was at least being considered in the Wehrmacht High Command. That, as well as the development of transport and the production and processing of raw materials, would admittedly require some measure of industrial activity in the occupied territory. And there was always the additional task—in line with Hitler's instructions—of supporting the army in the east.

The new economic organization eventually combined within itself both

²⁵¹ Göring in his reply did not take up the economic arguments. This is not surprising, as he had meanwhile received different predictions from Thomas.

²⁵² Hassell, *Tagebücher*, 183 (2 Mar. 1941). On this point Hassell's opposition was not one of principle, as his views were largely in line with the plans for a large-area economy, in the implementation of which in south-eastern Europe he was then taking an active part. His concept for Europe was based also on the involvement of Russia as a supplementary region; see Asendorf, 'Hassell', 395.

²⁵³ Memorandum of 13 Feb. 1941: Thomas, *Wehr- und Rüstungswirtschaft*, 515 ff.

military and civilian obligations—i.e. it had to send supplies both forwards to the fighting forces and backwards to relieve the German war economy.²⁵⁴ In addition, it was to get the Soviet economy going again—at least in certain sectors—and thereby create the prerequisites of its integration in the German large-area economy. Although supplies for the troops had priority in OKW preparations, the three categories of duties were not clearly delineated. Assuming a campaign of short duration, such a separation of tasks was not perhaps indispensable; but the longer the campaign went on, the greater the problems which a parallelism of different tasks was bound to create. In the spring of 1941, however, such imponderables were disregarded, and not only in the Wehrmacht High Command. The drafts of economic war aims worked out jointly by Thomas's department and the civilian economic authorities, however, reveal another significant feature. The principle, first contained in the quartermaster-general's reflections of February 1941, that not the entire occupied territory but only its economically important parts should be placed under 'orderly administration',²⁵⁵ had been further developed and defined by Thomas. It was now laid down that territories which 'are of no economic importance for the conduct of operations, or for the greater German war economy, or for the creation of new states' were to be 'economically neglected after the most extensive exploitation'.²⁵⁶ Moreover, the form of management was to be so chosen 'that the greatest possible benefit is achieved in terms of the overall war effort'. Special importance was to be attached to the 'attainment of a great surplus of agricultural and mineral-oil products'.

Although this concept, in spite of repeated approaches, had not been explicitly approved either by Hitler or by Göring prior to the German attack on the USSR, General Thomas on 29 April 1941 briefed the three Wehrmacht services along these lines on the tasks and structure of his Organization East.²⁵⁷ Three days later his directives were accepted as a binding outline for future work at a conference of state secretaries.²⁵⁸ They contained the following statements:

1. The war can be continued only if the entire armed forces are fed from Russia in the third year of the war.
2. Tens of millions of people will undoubtedly starve to death if that which we require is taken out of the country.
3. Of greatest importance is the securing and removal of oil crops, oil-cake, with grain occupying a lower priority. Available fat and meat will presumably be consumed by the troops.

²⁵⁴ See Entwurf [draft] OKW/WiRüAmt, Apr. 1941, and Gen. Thomas's minute dated 5 May 1941: Müller, 'Interessenpolitik', Nos. 3 and 4.

²⁵⁷ WiRü/Ic, minute dated 29 Apr. 1941, No. 1157-PS, *IMT* xxvii. 32 ff.; in a list of points to be discussed at the subsequent conference of state secretaries it was again pointed out that the submitted draft should at last be signed by the Führer or the Reich Marshal: see Stab Ia, Besprechung Staatssekretäre [conference of state secretaries], 2 May 1941, BA-MA Wi/I D 45.

²⁵⁸ Minute dated 2 May 1941, No. 2718-PS, *IMT* xxxi. 84.

4. Industry must be restarted only in areas of deficiency, such as:

factories for means of transport
 factories for general supply plant (iron)
 textile mills

armaments enterprises only in areas where there are bottlenecks in Germany.

Repair workshops for the troops to be, of course, opened on an increased scale.

This programme was absorbed, during the weeks that followed, into a number of papers prepared in the Wehrmacht High Command and containing directives for the exploitation of the eastern territories to be occupied. With a few modifications they continued to be valid for the officers and administrative officials of the Economic Organization East until the collapse of the eastern front in 1944. The relevant decrees by Göring and Hitler shortly after the beginning of the German-Soviet war likewise merely confirmed Thomas's drafts.²⁵⁹ The most important document was 'Guidelines for the direction of the economy in the newly occupied eastern territories', also known as the 'Grüne Mappe' (green folder) from the colour of its cover.²⁶⁰ In addition to organizational regulations it contained a detailed presentation of the principles laid down by the state secretaries on 2 May 1941. Again, the problem of agricultural policy played the main part. This was the responsibility of State Secretary Backe of the ministry of food. His decisions were accepted by the Wehrmacht High Command without comment and incorporated in the military directives.

Backe, as mentioned above, had assured Hitler that possession of the Ukraine would relieve him of all economic worries. While this was in line with the ancient German dream of the 'Ukrainian bread-basket', it soon acquired special topicality as a result of the growing crisis in food supplies within the German sphere of power. Indeed, Backe's continual warnings of a collapse of food supplies had contributed to that development.²⁶¹ However, the investigations and calculations made at the beginning of 1941 within the Wehrmacht High Command and in the staff of the Reich Peasant Leader about the potential gain arising from an occupation of European Russia gave little ground for optimistic expectations.²⁶² According to that study 'the world's greatest contiguous economic region' scarcely produced any agricultural surpluses. Even the Ukraine recorded a surplus only in its southern part, while its central and northern areas, because of their high population density and their industrialization, had to be regarded as areas dependent on imports. It was

Similar warnings of a deterioration of the situation came also from within the Four-year Plan authority itself, as later reported by Dr Friedrich Richter, in charge of eastern affairs; see excerpt from his field-post letter dated 26 May 1943, BA R 6/60a; also sect. I.III.2(b) at n. 144.

necessary, moreover, to remember that, because of the high level of mechanization of Soviet agriculture, wartime effects and internal upheavals must instantly result in substantial losses of yield.

These losses can only be made good over several years and are likely to reach their peak in the second year, when cultivation can no longer be adequately performed. For that reason no surpluses should be expected under the given circumstances for several years to come; even immediate requirements for human and animal consumption will probably scarcely be met for some time.

On the other hand, there were no reliable data on harvest yields. Because of fluctuations in consumption and during the harvest, and of losses in collection and transport etc., virtually any desired surplus or deficit could be calculated for Russia. Estimates of a 'normal' gross harvest varied between 80m. and 120m. t. of grain. What realistic booty targets could be based on that kind of data? The Berlin agricultural experts dodged the question. They proceeded solely from German requirements. The most important basis of calculation was the amount of grain which Moscow was prepared to supply under the trade agreement. These 2.5m. t. were already firmly incorporated in the German balance sheet for food. If one added the supply of the army in the east with its more than three million men, as well as the exceedingly tight food situation in the rest of the German sphere of power, then requirements quickly rose to 8-10m. t. of grain which had to be collected from Russia. Because a 'normal' surplus of scarcely more than 1m. t. could at best be expected from European Russia, the economic leadership had to find new ways of redeeming Backe's promise. The agricultural experts found a way out, with the aid of the geographical conditions on the one hand and, on the other, the introduction of a radical hunger strategy. In an expert opinion the Berlin agro-geographer Waldemar von Poletika had pointed to the familiar disparate distribution of agricultural production in the different climatic zones of the USSR.²⁶³ In the office of the Reich Peasant Leader it had also been realized that, notwithstanding all fluctuations, 'the relative ratio of the individual Russian provinces remained constant'.²⁶⁴ The idea therefore suggested itself of restoring a condition that had existed in Russia before the First World War—diverting the surpluses of the south across the Black Sea, to be exported to central Europe. The areas of deficiency in central and northern Russia, however, especially the big industrial regions, would thereby be cut off from their foodstuff basis.²⁶⁵

In this way the Berlin agricultural experts were hoping to achieve a grain surplus of the order of 8.7m. t. for the purposes of the Reich. This entailed an

overall reduction of local consumption by some 12 per cent; this would most painfully affect the population in the deficit areas. How was such a forcible intervention in the organically grown structures of the Soviet agrarian and food economy to be accomplished? Quite apart from the enormous transport difficulties, there were the problems of actually getting hold of all the stocks, of ensuring harvesting measures, and of collecting the harvest yield as completely as possible. This ruled out any interference with the existing collective-farm system. In order to attain the collection target, the option of material incentives to win the co-operation of the local population was not available. Backe and Thomas had from the outset relied on a different method—the use of the most brutal coercive measures to compel the Russians to hand over their stocks. That, in their opinion, was necessary especially in the deficit areas, seeing that the German forces had to be fed off the land there too. This meant a double burden for the affected local population. Not only would the usual food supplies not be arriving from the areas of agricultural surplus in the south, but their own already inadequate supplies would be further depleted in order to feed the German troops. The consequences of such a procedure were spelt out clearly at the conference of state secretaries on 2 May 1941. The predictable death by starvation of many millions of Soviet citizens did not particularly worry either the Wehrmacht High Command or the German agricultural leaders. On the contrary, this prediction led, if anything, to a further radicalization of measures, as the people condemned to death by starvation would have to be prevented from becoming a security problem or a threat to economic management. (For the distribution of grain within the USSR see Map I.III.2.)

Quite apart from such apparent constraints, the ideological intoxication of the leaders of the Third Reich was hardly likely to tolerate scruples about the starvation strategy. After all, had not National Socialist propaganda been pillorying the Soviet regime's 'starvation policy' for years, thereby cultivating the age-old prejudice of the Slav people's capacity for suffering? Why then should the German occupiers act more humanely than Stalin had done during his collectivization drive in the early 1930s? Backe's instructions to the German agricultural controllers to be appointed in occupied Russia therefore stated: 'Poverty, hunger, and frugality have been borne by the Russian individual for centuries. His stomach is elastic—therefore no false pity!'²⁶⁶ The directives for agricultural policy²⁶⁷ with their undisguised diction and their would-be technocratic arguments clearly revealed the economic war aims of the Third Reich. In connection with the establishment of a self-sufficient German large-area economy the Soviet Union was to be exploited as a colonial

hinterland. The aim was not 'to convert the population to National Socialism but to turn it into our tool'. Above all the question must be: 'How does this help Germany?'²⁶⁸ From that point of view the 'destruction of the Russian processing industry in the forest zone' was 'also an absolute necessity for Germany's future'—a statement reminiscent of the above-quoted navy memorandum of September 1940 (see I.III n. 82) and typical of the continuity of economic-policy attitudes towards the Soviet Union. The consequences of such a programme were discussed in detail. They culminated in the statement

that the 'gradual death both of the industry and of a large portion of the population in the former deficit areas' was indispensable.²⁶⁹

Many tens of millions of people will become superfluous in those areas and will have to die or to emigrate to Siberia. Any attempts to save the local population from death by starvation through the importation of surpluses from the black-earth zone can only be at the expense of food supplies for Europe. They would undermine Germany's and Europe's immunity to blockade.

The agricultural leadership wished to see all economic activity subordinated to that one single objective. The immediate task was to ensure 'the supply of the fighting forces with foodstuffs and fodder and the feeding of Greater Germany for years ahead'.²⁷⁰ The War Economy and Armaments Department, which was in charge of the preparation of the 'Green Folder', concurred with that view in general terms, though its radical deindustrialization plans were not unanimously accepted there. In the short term, at least, OKW did not wish to do without a certain measure of industrial activity. An important starting-point was thought to be the area of the armaments industry, for which the Wehrmacht High Command declared itself to be 'solely competent and responsible'.²⁷¹

The heavy strain on armaments capacities in Germany and the gigantic plans of the Wehrmacht services for the future inevitably focused attention on the extremely modern and highly effective Soviet armaments industry. Even in April 1941 a Luftwaffe commission had been able to inspect enterprises of the Soviet aviation armaments industry and had been surprised by its volume.²⁷² In January 1941 the war-economy section had assumed that it could not be expected that the Soviet armaments plants would be captured intact. In February General Thomas in his memorandum then predicted the capture of 75 per cent of the Soviet armaments capacity. A certain euphoria seems thereupon to have arisen in the Wehrmacht High Command. The realization that 'in the great unified continental European armaments region, extending from the North Cape to the Mediterranean and backed by the vast Russian economic sphere, no insuperable war-economy problems' would arise 'any longer'²⁷³ was bound to be attractive. Steps were therefore taken in the War Economy and Armaments Department for transferring manufacturing bottlenecks in the armaments area to Soviet enterprises.²⁷⁴ The prerequisite no doubt was a higher degree of industrial activity than envisaged by the agricultural leadership or than was compatible with the long-term economic-policy objectives of the Third Reich. Even if the Soviet armaments factories really

were captured intact, there was still the crucial question whether the raw materials, energy, and deliveries necessary for recommissioning them could be made available. As, moreover, these enterprises were predominantly located in the agricultural deficit areas, food supplies for the necessary manpower were, on the Germans' own plans, exceedingly doubtful. This objective of exploiting the Russian territory for armaments production was not in fact pursued with particular urgency in the Wehrmacht High Command. Nevertheless it was included in the list of tasks and objectives in the 'Green Folder',²⁷⁵ without the conflict between these goals and the premisses of the agricultural policy being resolved in any detail.

The inability of the military and civilian agencies to work out between them a realistic and well-thought-out overall economic strategy was revealed also in other areas. Thus, according to all official directives, priority was to be given to raw materials in order to underpin the German war economy. Along with oil, other vital raw materials in short supply were platinum, magnesium, and rubber; these were to be collected immediately and shipped to Reich territory. Raw-material production was generally to be restarted, which would no doubt require a large native workforce. Yet the starvation strategy made it impossible from the outset to feed them properly.

There was yet another regulation, presumably initiated by the ministry for economic affairs, to the effect that there was no point in controlling consumption in the east because no organized economic structure existed there. Instead, all 'raw materials, semi-finished and finished goods of any use to us' were to be withdrawn from trade, and all business with third countries was to be cut off. Any surpluses of goods were, as a matter of principle, earmarked solely for German needs. This meant that the needs of the forces had to be satisfied first of all—especially their immediate requirements of foodstuffs and fodder, motor-fuel, tyres, clothing, sapper and construction materials, workshop equipment, and medical needs. As for matching the short-term demands of the troops and the homeland with the objective of a longer-term economic reconstruction, at least in certain areas—to that question the forward economic control squads found no answer in their documents or instructions.

Another example was the statement in the 'Green Folder' that 520,000 tractors and 180,000 combine harvesters would be available to Soviet agriculture in 1941. These figures had simply been taken over from Soviet statistics, without anyone questioning whether these machines could really still be counted on when military operations died down. Without that fleet of machines, as well as the provision of at least 200,000 trucks together with the necessary fuel—moreover of an order of magnitude that exceeded total German consumption—it would be impossible to bring the harvest in or plant for the next season. Whether Backe's foresight in holding German farm machinery and equipment ready for possible employment in the east²⁷⁶ rep-

²⁷⁵ On the following passages see Green Folder, pt. 1, June 1941, BA-MA RW 31/128 D.

²⁷⁶ Evidence in KTB WiStab Ost/Chefgr. La 1941/42, BA-MA RW 31/42.

resented an adequate preparation was exceedingly doubtful. Against that background, General Thomas's summing up is bound to seem more than a little boastful:

The theoretical groundwork, i.e. the equipment of the economic organization to be employed and of the troops moving into Russia with the necessary war-economy material, had been carried out in model fashion; it may be stated that never before had an army been so well furnished with war-economy data about the enemy country as the German army in Russia.²⁷⁷

The mere idea that an occupying power might 'take over' the conquered economy without appreciable losses and that it might remould it to its own requirements within a very short period of time, or that, without regard for the subjected population, it could extract a maximum profit, solely on the basis of an open threat of force and terror—that idea seems unrealistic in retrospect, even though to contemporaries and to the actual executives it might have seemed no more than compliance with economic constraints. To restrict economic activity to only a few sectors while the rest were being neglected—that was an economic strategy which might have worked against underdeveloped nations. In the case of the Soviet Union, however, of a great power developing into an industrialized society, it was surely doomed to failure from the outset. It took a whole year before the realization gained ground in German circles that success, even if only in the key areas of army supplies, agriculture, and oil extraction, was not possible in the east except on the basis of a functioning overall economy. The change of direction, however, came too late to have any effect on the course of the war.²⁷⁸

The 'eastern experts' of the NSDAP had been busy since 1933, under Rosenberg's leadership, with detailed plans for a political and racial 'new order' for Russia under German rule.²⁷⁹ In the summer of 1940 they intensified their instructional and research work.²⁸⁰ In July 1940 the foreign-policy department of the NSDAP prepared a study for Hitler on Moscow's activities in eastern and south-eastern Europe.²⁸¹ In September Rosenberg made a comprehensive report to Hitler on his department's research work to date.²⁸² In April 1941 he submitted a memorandum on objectives and methods of future German occupation policy in the east,²⁸³ and shortly afterwards he was officially appointed 'Plenipotentiary for the central handling of matters relating to the east European region'.²⁸⁴ The party officials were thus ready to assume

their duties in Hitler's living-space programme. The question at this point is not so much Rosenberg's political and ideological disruption plans *vis-à-vis* the Soviet Union as his economic-policy ideas resulting from them, and the influence he had on the formulation of the economic war aims for Operation Barbarossa.

In his very first memorandum of April 1941 he made it clear that the political objectives 'naturally become valid only after the important war-related deliveries from the territories to be occupied—the deliveries necessary to the Greater German Reich for the continuation of the war—have been secured'.²⁸⁵ And two days before the opening of the attack he declared again:

The feeding of the German people undoubtedly holds the top place now on the list of German demands in the east, and there the southern regions and the northern Caucasus will have to assist the feeding of the German people. We certainly do not see that we have any duty to feed the Russian people from these surplus areas as well. We know that this is a tough necessity, beyond all emotion. Undoubtedly a very extensive evacuation will be necessary and the Russian nation will certainly have to face very difficult years. To what extent industries are to be preserved there (rolling-stock factories etc.) will have to be decided at a later date.²⁸⁶

The 'tough necessities', as formulated by the military and business leaders, evidently met with his approval.

The reason for this approval was that the short-term economic objectives coincided, at least in part, with Rosenberg's long-term plans for a 'new order'. This was true especially for the area of 'Old Russia' around Moscow, which had been classified by General Thomas and his experts as a foodstuff deficit area and had therefore been earmarked for ruthless 'exploitation'.²⁸⁷ Rosenberg accepted the directive of Economic Organization East and demanded 'very extensive economic utilization, such as removal of all expendable stocks, machinery, and equipment, especially of available transport stock, river barges, etc.'. ²⁸⁸ Rosenberg justified such a procedure not only on economic grounds but also by National Socialist racial policy: German rule was to be made safe 'by the total annihilation of the Bolshevik-Jewish state administration' and 'Muscovite Russia' used 'on a major scale as a dumping-area for undesirable population elements'. These, in Rosenberg's view, included the native intelligentsia of the Baltic States, whose removal would make room for German settlement. In a similar manner he intended to make the Caucasus and the Ukraine 'racially pure'; as a first stage he envisaged the confinement of Soviet Jews in ghettos.

Even on the question of preserving the collectivization of agriculture—subsequently to become the most contentious issue in occupation policy

²⁸⁵ Memorandum No. 1 (above, n. 283), 548.

during the German-Soviet war—Rosenberg initially showed great understanding for the attitude of the economic departments.²⁸⁹ There was no doubt that during the first phase an effective exploitation of the country would only be possible with the help of the collective farms. The expected shortage of draught animals, dairy cattle, and general livestock, as well as the necessary equipment for cultivation, harvesting, and transport, ruled out any immediate establishment of individual peasant farmsteads, even though decollectivization occupied a key position in Rosenberg's concept for the east, in order to win the 'willing co-operation' of the rural population.²⁹⁰ Expecting as they did a short campaign, the economic departments believed they could dispense with such co-operation. Even the suggestion of the foreign ministry that the peasants should at least be promised the reprivatization of farm land at the start of the German invasion, and that livestock already in private ownership or the produce of so-called private plots should on no account be requisitioned, was not acceptable to the military leaders or to the agrarian politicians in Economic Organization East, since any consideration for the native population must ultimately be at the expense of the hoped-for volume of booty.²⁹¹

There were a number of other contentious issues. In the discussion of the currency problem, for instance, economic exploitation goals clashed with Rosenberg's 'new order' ideas. As early as mid-May 1941 the Reichsbank had submitted a position paper for the Green Folder section on money and credits.²⁹² It took account of the exceptional importance of monetary policy especially in the case of Russia. As the German occupying power would not be willing or able to offer any real equivalent to the population for services or local material goods, the success of the economic exploitation policy would depend largely on the confidence shown by the local population in the currency of the occupying power. The collection of grain in the Ukraine in 1918 had failed primarily because the German authorities did not have enough roubles and because the parallel use of the rouble and the newly introduced karbovanec had caused a lot of difficulties.²⁹³ In line with its past practice, the Reichsbank in 1941 intended to set up in the occupied countries of Europe fifteen Reich Credit Banks, as well as an issuing-house in the Soviet Union, and issue uncovered payment vouchers to the troops as well as to the econ-

omic administration to meet initial needs. Their redemption was later to be set off against occupation-cost payments and reparations from the occupied territory.²⁹⁴

Rosenberg's staff vigorously protested against such manipulation.²⁹⁵ On 23 May 1941 Rosenberg actually appeared in person, along with his top officials, at the ministry for economic affairs so that, in conversation with Funk, Schlotterer, and a Reichsbank representative, he might get the directive changed.²⁹⁶ He insisted that the currency problem could not be dealt with from a economic point of view alone, as conditions in the east differed from those in the west. Because of the 'very low standard of education of the Russian people' they would not even be able to read the Reich Credit Bank vouchers envisaged. It would therefore be preferable to introduce the Reichsmark in the Baltic countries at once, while retaining the rouble for the moment in the Ukraine and the Caucasus—until such time as local national banks had been set up—and moreover, in order to avoid a shortage of money, start printing roubles in Germany without delay. Now the Reichsbank objected to the suggestion that it should counterfeit money and doubted that the German army command would agree to pay its troops in forged roubles. Funk, on the other hand, was impressed by Rosenberg's political arguments and instructed Schlotterer 'to negotiate with the military men at once, to find out if they would accept the proposals which had emerged in the course of the meeting'.

The Wehrmacht High Command came out unambiguously against Rosenberg. The introduction of Reich Credit Bank vouchers was ordered in the Green Folder, and explained as follows:

The purpose of the Reich Credit Bank vouchers is, on the one hand, to keep the industry of the occupied country going—in so far as it is of importance to us and is desirable for the preservation of quiet and order—and, on the other, to satisfy and balance the German forces' requirements of money. The former aim is achieved by the granting of credits to industrial and other enterprises, as well as to financial institutions or central or local administration bodies, when the granting of such credits is in the German interest.²⁹⁷

Payment of army pay in valid roubles was envisaged as an exception; as a rule Reich Credit Bank vouchers were to be used, and, if necessary, their acceptance by the local population was to be ensured by the threat of force.

Rosenberg's primarily political and ideological ideas were overruled also on the issue in which he was most involved, the special status of the Ukraine. In

Rosenberg's plans for the disintegration of the Soviet Union the Ukraine held a key position. From that point of view, considerate treatment of the population seemed called for. To the economists, however, the Ukraine was the most important surplus area of all, so that any cut-back in the intended exploitation measures in favour of the native population was out of the question. Rosenberg's staff, 'on the other hand, believed that the economic targets would more effectively be achieved by means of a political strategy.

Long-term secure deliveries of raw materials and foodstuffs to the German Reich could be achieved with fewer forcible means through a sympathetic treatment of the nationalities concerned than if the accomplishment of those tasks were enforced solely by means of military or police strength through disregard of this ethnic and political situation.²⁹⁸

The 'strengthening of Ukrainian awareness' was a means not only of 'securing German production with military force, but of promoting the voluntary collaboration of the Ukrainians in the course of time'.²⁹⁹ Rosenberg in fact did not question the global economic objectives as such, though he objected to the publication of the OKW draft of a Führer Decree on the economy in the eastern territories to be occupied, 'because it states unequivocally that the occupied eastern territories are of interest to Germany only as objects of extreme economic exploitation. If that became known it would have a fatal political effect in those territories.'³⁰⁰ Rosenberg's chief concern was to see his political and propaganda objectives taken into account in the handling of the overriding economic issues. As he was claiming chief responsibility for future eastern policy, he was naturally also anxious to bring the area of economic policy into his sphere of power. He therefore rejected the planned organization of the Wehrmacht High Command and the Four-year Plan authority, because to his mind it was structured on 'purely economic points of view'.³⁰¹ He explained his attitude by arguing that 'such a central agency would be compelled to carry out a similar treatment in all territories, governed solely by economic considerations, which would render the implementation of the *political* task more difficult or, with a purely bureaucratic concentration, perhaps even impossible'. Rosenberg buttressed his claim to leadership by pointing out that his team of experts had been studying these questions for many years and could field several thousand Russia specialists.³⁰²

Göring and General Thomas, however, saw no reason for conceding to Rosenberg any influence whatever on the formulation of economic war

aims.³⁰³ The Wehrmacht High Command on the contrary assumed that Economic Organization East would later be maintained also in the areas under civilian administration. Besides, Dr Georg Leibbrandt, the designated political director of Rosenberg's envisaged ministry, had not so long before, in May 1941, described the duties of the eastern ministry as pure propaganda work.³⁰⁴ Hitler himself never admitted any doubt that war-economy tasks had absolute priority in the east, even though he was reluctant to commit himself for the time being on the organizational and personnel questions of the civilian administration.³⁰⁵

The primacy of the economy, to which Rosenberg now had to submit, emerged from the official guidelines for his employees.³⁰⁶ All he was able to promise them in the event of conflict was to 'bring about an amicable settlement in consultation with the superior military agency'.³⁰⁷ When two days before the opening of the attack on the USSR Rosenberg once more set out his ideas to the top leaders of the Reich, the Wehrmacht High Command's sober comment was: 'Can only be done by soldiers.'³⁰⁸

To sum up: the economic war aims were laid down in a fully autonomous manner by the military and the economic bureaucracy, in agreement with the top representatives of German trade and industry, and put into effect even against political and propaganda interests such as those championed by Rosenberg. These war aims were a summation of private business interests in the acquisition of Russian raw-material sources and processing installations, of long-term economic-policy ideas, and of actual economic constraints. Jointly they represented an unbridled strategy of pillage and plunder. The need for tough action and ruthless exploitation, repeatedly emphasized by economists and officers, was undoubtedly in line with Hitler's ideological premisses. It should, however, be remembered that, beyond the general framework, Hitler took no part in the detailed definition of economic war aims. Nor was that necessary, seeing that the plans of the military leaders and economists largely confirmed Hitler's expectations of the economic profit to be derived from the east. In a letter to Mussolini on 21 June 1941 Hitler outlined them as follows:

³⁰³ Backe had received a specific assurance from Göring that he would be able to carry out his agrarian policy without regard to Party ideologists; see Kehrl, *Krisenmanager*, 223-4.

³⁰⁴ Ref. Großkopf (above, n. 291); such an interpretation of Rosenberg's task is still perceptible in Thomas, *Wehr- und Rüstungswirtschaft*, 272, where he observes that the object had been 'to bring propaganda influence to bear on the conquered territory as soon as possible through the organization of the Party and to carry out the liquidation of unreliable elements by the agencies of the security service and the police'.

I hope above all that it will then be possible for us to secure a common food supply in the Ukraine for some time to come, which will furnish us with such additional supplies as we may need in the future . . . Whatever may now come, Duce, our situation cannot become worse as a result of this step, it can only become better.³⁰⁹

Even though it may be assumed that Hitler with his more agriculturally orientated living-space programme may have harboured different ideas from his pragmatic generals on the question of a possible industrial policy in the east, more specifically on the utilization of Soviet armaments capacities, this did not affect agreement between the political and military leadership on the economic objectives of Operation Barbarossa. This emerged clearly on 20 June 1941, when Hitler stated to Todt and Keitel: 'The objective therefore must be to secure for ourselves by conquest all the areas which are of particular interest to us from a war-economy point of view.' General Thomas commented on this in a minute: 'If the military leadership is in a position to secure the lacking raw-material deposits by conquest, then the economic leadership would most warmly welcome that.'³¹⁰ This concurrence of views was due largely to the development of Germany's economic position on the eve of the German-Soviet war.

3. ECONOMIC FRAMEWORK FOR MILITARY PLANNING

(a) *The German War Economy until the Spring of 1941*

Once the euphoria of the early summer of 1940 had evaporated, it became obvious that Germany, while dominating large parts of the European continent, had not in fact achieved any abundance of material assets as a result. The performance of the German war economy was still considerably below the pre-war level,³¹¹ and since Hitler's future war plans did not allow for a diminution of armaments production, it was unlikely that existing bottlenecks would be overcome in the near future or that the economy would undergo an upswing.³¹² Although a further decline was initially prevented by the booty captured in the victorious campaigns, and even although a slight increase in production was recorded, this meant no more—given the danger of long-term exhaustion—than a short-term postponement of Germany's problems. The main difficulties arose from the shortage of manpower, more especially of skilled workers.³¹³ The Wehrmacht's manpower requirements deprived the economy of the younger age-groups, with the result that not only was the size of the workforce available for the production process greatly reduced by

comparison with the outbreak of the war, but also its work performance. Unlike the Anglo-Saxon countries, Germany was unable to draw on any additional manpower reserves. Repeated demands from military quarters that greater use should be made of female labour were rejected by the political leadership.³¹⁴ Any more intensive exploitation of the manpower potential was prevented not only by ideological and administrative obstacles, but also by a lack of enthusiasm for the war among broad circles of the population.³¹⁵ There was even some concern in conservative circles that the National Socialist regime, out of fear of a dissatisfied working class, might adopt a 'red course'.³¹⁶ Introduction of a second or even third shift, which would have been necessary for the utilization of such labour reserves as existed, therefore remained an unrealistic idea.

Transition to industrial mass production, of the kind most advanced in the United States, continued to meet with obstacles in Germany.³¹⁷ One of these was the equipment of German industry, consisting as it did mainly of multi-purpose machines unsuitable for mass production; moreover, due to the direction of investments before the war, these had not been sufficiently updated, especially in the field of consumer products. Even in the metal-processing industry more than half of the machines were over ten years old in 1941.³¹⁸ Machine-tool manufacturers were unable to meet the steadily rising demand for capital items. For the past few years the development of the machine-tool industry had been neglected in favour of armaments production, and its technical level generally had in some respects declined by international standards. Additional burdens resulted from export obligations, mainly the Soviet trade, from the erratic and uncoordinated orders of the Wehrmacht services, and from shortage of skilled labour. Delivery delays of several years were not unusual, and all measures for the rationalization and stimulation of production yielded only minimal improvements. The same was true of the one-off relief provided by the employment of over 4,000 'machine-tools captured in Poland',³¹⁹ some of which were of the latest American design.

An increase in German war production was further being hampered by the shortage of raw materials. Although production of basic commodities continued to rise in the Reich, thanks to the measures taken by the Four-year Plan authority, self-sufficiency was out of the question except in a few areas.³²⁰ The situation was slightly relieved by booty captured, principally in the west. By the end of 1940, however, the Wehrmacht High Command and the Four-year

Plan authority pointed out that 'starting in the summer of 1941 a considerable worsening of the supply situation' would have to be expected.³²¹ That judgement was confirmed in May 1941.³²² Even coal, though available in Germany in sufficient quantities, increasingly became a commodity in short supply.

The food situation was also developing unfavourably.³²³ The shortage of animal feeding-stuffs resulted in a marked drop in meat production. It proved impossible to offset the harvest losses of the first year of the war—over three million tonnes of grain—and the shortfall of oilcake and fodder cereals in spite of higher imports, chiefly from the Soviet Union. The state of the crops promised no more than an average harvest in 1941. In consequence, once all stocks were consumed by 1 August 1941, the country, for better or worse, would be dependent on the harvest results.³²⁴ By the end of 1940 the army command assumed that food supplies were 'reasonably assured for 1941, but not beyond that. We'll swindle ourselves through 1941.'³²⁵ In view of this outlook rations in Germany had to be drastically cut some weeks before the start of Operation Barbarossa. The army leadership's reaction was irritation: the generals saw the danger of the kind of situation which had existed at the end of the First World War.³²⁶ The effect that this would have on the mood of the population was obvious.³²⁷ Considering that General Thomas and State Secretary Backe were assuring him that possession of the Ukraine would relieve him of all such worries,³²⁸ it is easy to understand why Hitler was so anxious to carry out Barbarossa at all costs before 1941 was out and why he was attaching greater importance to war-economy objectives than to operational considerations.

The threatening decline in German production was partially offset by the exploitation of the occupied and dependent countries within the German sphere of power. It emerged, however, that the economic peacetime plans and large-area projections of the summer of 1940 had painted a false picture of the potential of the Continent.³²⁹ The true conditions were outlined by Göring's state secretary, Erich Neumann, on 29 April 1941 as follows.³³⁰ Germany's

raw-material and food situation was becoming increasingly difficult as certain industrial raw materials could not be obtained from the occupied or dependent countries either, or only in insignificant quantities, while on the other hand the maintenance of order and of production for the war effort made it necessary partially to supply those countries, once their own stocks were exhausted, with the necessary raw materials from Germany. As, moreover, agricultural production in the countries newly incorporated into the German supply region was largely based on feeding-stuff imports from overseas, from which they were now cut off, those countries were compelled to adopt an extensive form of farming; with the exception of Denmark they were therefore bound, if the war continued for any length of time, to turn from surplus areas into deficiency areas. In addition, there were the obligations Germany had undertaken to make deliveries to her allies.

Although the increase in war-economy potential resulting from the accretion of German power was substantial, it proved possible to make only slight use of it for the German war effort in the second year of the war. Only in the area of armaments production did the reallocation of orders reach significant dimensions; however, it encountered a variety of obstacles and, moreover, had to be paid for by the need to 'feed to a large extent' the territories occupied by Germany.³³¹ This applied also to the three million foreigners and prisoners of war employed as labour in the Reich in May 1941. With their help it was possible to maintain the manpower total of the previous year, although that was three million below the pre-war level.³³² At the same time, in May 1941, some 50,000 miners went on strike in Belgium, in protest against the bad food-supply situation, thereby endangering coal supplies in the German sphere of power.³³³ Altogether the pattern of German imports showed that, even in the second year of the war, the loss of roughly 50 per cent of the pre-war import volume, due to the blockade, could not be made good.³³⁴ With German exports, on the other hand, declining further, so that delivery offers had to be cut back and delivery times extended, the National Socialist leadership was increasingly forced to apply political and military pressure in order to maintain vital supplies from the dependent and occupied countries of Europe, and in order to compel them to accept a trebling of Germany's clearing-debt in 1941.³³⁵ Thus about a half (in value) of German imports were obtained by extortion without collateral. One of the most important suppliers of the German war economy was Stalin.

(b) Intensification of German-Soviet Trade

Soviet war deliveries represented a considerable strengthening of the German war potential not only during the first year of the war.³³⁶ Even during the preparatory phase of Operation Barbarossa Hitler could not manage without them. Indeed, they acquired increased importance in view of the small extent of the production increase in the Reich and the continuing tight supply situation. Whether German diplomacy would succeed in inducing Stalin to continue and step up his supplies while, simultaneously, the German military deployment was being carried out in the east—that was a crucial question, political as well as economic, in the summer of 1940.

German trade policy found itself confronted by two principal tasks: (1) to ensure the execution of the deliveries arranged under the trade agreement of 11 February 1940, thereby resolving the problem of the steadily growing backlog of German deliveries to the Soviet Union; and (2) to negotiate a new trade agreement for 1941, in order to ensure a continuous, and if possible increased, inflow of Soviet raw materials up to the very opening of the German attack, bearing in mind that, the Soviet advance deliveries having been fulfilled, German reciprocal deliveries of war material and industrial equipment, to be completed by 11 May 1942, would have to start to their full extent at the beginning of 1941. There was no denying the fact that Moscow was in a more favourable position: for one thing, Germany found it very difficult to make up the backlog of deliveries accumulated by the summer of 1940 and thus to meet her delivery obligations, and for another, the greater interest in a continuation of German-Soviet trade was undoubtedly on the German side—at least while the war against Britain lasted.

The foreign ministry's expectation that after the German victory in the west the Soviet Union might be prepared to give up the exploitation of its favourable situation in bilateral trade and to accept an increasing German debt³³⁷ soon proved to be an illusion. At a meeting of the inter-ministerial Committee for Trade with Russia on 8 August it was even suggested³³⁸ that the growing German backlog in deliveries suited the Soviet Union very well, as by making excessive demands with its own orders it would be in a position to make the implementation of delivery obligations even more difficult for Germany, which meant in turn that the Soviets would not have to fulfil their own delivery obligations. The committee was divided on how Germany should react to such tactics. The demand by State Secretary Friedrich Landfried of the ministry for economic affairs that deliveries to the USSR should be given top priority was rejected by General Thomas on behalf of the Wehrmacht, because that would be feasible only at the expense of German armaments production. Göring, asked for a decision a few days later, was unwilling to commit

³³⁶ On the following see also Birkenfeld, 'Stalin', 500 ff., and Eichler, *Wirtschaftsbeziehungen*, 108 ff.

³³⁸ KTB WiRuAmt/Wi 1940, 210 (8 Aug. 1940), BA-MA RW 19/244.

himself.³³⁹ Although he rejected Landfried's proposal on the grounds that 'real rearmament was only just starting', he nevertheless asked Thomas to work towards systematic deliveries for the Soviet Union until the spring of 1941. After that, there would no longer be any interest in 'fully satisfying the Russian requests'.

Shortly afterwards Moscow responded to Berlin's dilatory attitude with the threat of an immediate stoppage of Soviet raw-material deliveries,³⁴⁰ which actually led the Wehrmacht High Command hurriedly to examine the possibility of dispatching 300 trucks to the USSR as an immediate step to defuse the critical situation.³⁴¹ The foreign ministry's negotiator, who had gone to Moscow at the Soviet request in order to draw up a balance sheet of reciprocal deliveries, produced a sober assessment for headquarters in Berlin.³⁴² According to this, the German backlog already amounted to RM73m., with further deliveries to a value of RM234m. due by 11 May 1941.

The territorial changes in eastern Europe gave rise to additional burdens. Although the Russians had taken over the existing delivery contracts of Bessarabia and the Baltic States, they showed no inclination to grant Germany any credit, as the former 'bourgeois' negotiators from those countries used to do. They demanded, moreover, that the German reciprocal deliveries now due were not to be made up of consumer goods, as had previously been the case. Instead, Germany was to supply the Soviet Union with greater quantities of armaments, since surely—as Moscow pointedly observed—there must be increased capacities for exports to the Soviet Union after the campaign in France.³⁴³

The Soviets' intransigent attitude was clearly also due to the fact that, immediately after Hitler's decision of 31 July 1940, measures had been put in hand to broaden the deployment basis against the Soviet Union. Stalin cannot have failed to notice that German influence in both Romania and Finland—which until then had been part of the Soviet sphere of influence—was being built up by means of massive arms deliveries. In the case of Finland this gave rise to a violent quarrel about control of the strategically important nickel deposits of Petsamo,³⁴⁴ which defied settlement by agreement until the spring of 1941 and which more than once put a heavy strain on German-Soviet economic negotiations.

These had to be temporarily suspended in September 1940, when the head of the German delegation in Moscow, Minister Schnurre, saw no way of

³⁴⁴ See sect. I.vi.2 at nn. 23 ff. (Überschär).

meeting Soviet demands for intensified German arms deliveries.³⁴⁵ In Berlin he called for an urgent decision by Hitler, as otherwise the 'massive deliveries of raw materials, especially grain, mineral oil, cotton, precious and non-ferrous metals, and phosphates would cease, at least temporarily, and could at best be resumed at a later date at a much lower level and with heavy sacrifices of German deliveries'. He referred to the statement of the Reich ministry of food, according to which German grain stocks would be exhausted in the course of the current year, with Russia being the only country capable of continuing to make major deliveries in the future. Basically this represented 'very substantial support for the German war economy', and also in particular for the vital route to the Middle and Far East.

When the Soviet Union thereupon heightened the conflict by cancelling all long-term orders for industrial plant (e.g. the negotiations about the construction of hydrogenation plant, which had produced no results since the spring of 1940, and by switching the bulk of its orders to the areas of machine-tools and rolling-mill products, this had a major effect on German armaments production. Göring therefore called an emergency meeting of all departments involved, in the hope that a solution might be found.³⁴⁶ The foreign ministry and the ministry for economic affairs once more demanded that 'Russian orders' be placed on an equal footing, in the category of top priority, with orders for the Wehrmacht, and indeed even given precedence in specific instances. General Thomas, while acknowledging that the Soviet Union, after south-eastern Europe, had become the 'most important supplier' for Germany, declined to take responsibility for having the Wehrmacht's rearmament drive impaired by an upgrading of Soviet orders and insisted that Hitler be informed. Göring, who was clearly anxious to avoid such a step, tried to achieve a compromise. He ruled that, on the one hand, it should be investigated 'to what extent Russian imports are to be restricted', while, on the other hand, Soviet orders due for delivery by 11 May 1940 were to be accorded top priority. All other Soviet orders, however, were to be ignored.

This decision, of course, produced only a slight relaxation in German-Soviet trade relations. As for the new round of negotiations about another trade agreement, it was impossible to make any further trade-policy concessions with regard to short-term German delivery obligations. So how was Stalin to be induced to continue his raw-material deliveries in the spring of 1940? Territorial concessions in eastern Europe as the price of Soviet advance deliveries—a solution in 1939—had to be ruled out towards the end of 1940 in view of the German deployment in the east. Neutral countries were expecting, if anything, an intensification of German-Soviet trade, as Soviet grain deliver-

ies to Germany, given the disastrous grain harvest in the Balkans, would no longer be sufficient in their present quantities to supply the German sphere of power.³⁴⁷

The invitation to the Soviet foreign minister Molotov to visit Berlin at the beginning of November 1940 to negotiate about a possible Soviet adherence to the Tripartite Pact³⁴⁸ represented an attempt by the German side to bamboozle Stalin with the transparent offer of territorial expansion towards the Indian Ocean and thereby to gain a basis for negotiations on trade-policy problems. The foreign ministry's estimate in advance of Molotov's visit suggested that Moscow was evidently interested in a meeting.³⁴⁹ For the following year a delivery of 1.2m. t. of grain had already been firmly promised and a further million tonnes held out as a possibility. In return, Germany offered long-term deliveries of heavy armaments, railway rolling-stock, merchant vessels, and other industrial goods.³⁵⁰

In his conversations with Molotov Hitler pointed out that 'peaceful co-operation' between the two countries presupposed respect for Germany's vital economic interests and for her hegemony in eastern Europe.³⁵¹ The Soviet Union had to guarantee 'under all circumstances' to deliver the raw materials indispensable to Germany. The Soviet foreign minister, however, rejected Hitler's share-out of spheres of interests and emphasized the specific conflicts existing with regard to Finland and the Balkans. Göring thereupon made one more attempt to persuade Molotov to favour 'large-scale planning of economic relations' and to overlook 'trifling matters'; Molotov retorted that surely Germany had acquired sufficient additional resources in the occupied territories to make it possible for her to meet Soviet orders. After the failure of the political talks about the Soviet Union's adherence to the Tripartite Pact the Soviet leadership was endeavouring once more to strengthen bilateral relations by making concessions in the economic field. During the trade talks in Moscow, shortly after Molotov's return from Berlin, the Russians submitted a proposal which, in its scope, went a long way to meet German ideas.³⁵² Moscow promised deliveries to a value of RM1,600m. by 11 May 1942, including 2.5m. t. of grain, 970,000 t. of mineral oil, and 200,000 t. of manganese ore. In return, Germany was to ensure the smooth fulfilment of orders already placed, and additionally supply further armaments to a value of RM110m. Top priority among Soviet requests was again held by machine-tools, which Moscow was now also demanding in payment for transit freight

to the Far East. This demand, considering Germany's lack of rubber, touched upon a critical bottleneck in the National Socialist war economy. Despite its generous offer, the Soviet Union therefore wished to ensure its own advantage. So far, however, the negotiations had been blocked by the German side because of the issue of additional armaments orders. The representatives of the Four-year Plan authority³⁵³ and of the Wehrmacht High Command, who had been briefed by Göring in November 1940 on the final decision to launch a campaign in the east, had openly boycotted the talks about Soviet armaments requests.³⁵⁴ Although it was realized that new orders from the USSR would no longer be filled before the date planned for the attack, even the conclusion of any deal and the start of manufacture were bound to compel the German armaments firms to switch manpower resources, which would in consequence be lacking for the implementation of top-priority orders for the Wehrmacht. The foreign ministry's head of delegation was worried that the negotiations would not be concluded successfully owing to a lack of flexibility, and therefore tried to persuade Thomas and Halder to intervene in their own military interest. He induced the foreign ministry to use its influence on the board of the Rheinmetall armaments firm, because that firm had refused to accept Soviet armaments orders on the grounds of being weighed down by orders for the Wehrmacht.³⁵⁴

Any concessions from the German side on the issue of armaments deliveries were being impeded by the difficult situation which emerged ever more clearly in the war-economy preparations for Operation Barbarossa. Upon the emphatic urgings of the men responsible for armaments, Hitler had only just agreed to delay manufactures for the war against the Soviet Union.³⁵⁵ A measure of relief was provided by the negotiations—which were running parallel to the economic talks—on compensation to meet the claims of ethnic German resettlers from the former Baltic States.³⁵⁶ Molotov's offer of RM150m. again exceeded the expectations of the German delegation.

Another positive element was provided by the territorial requests in connection with the conclusion of a frontier treaty. For the cession of the Lithuanian 'corner' the German side demanded raw-material deliveries to the value of 13m. gold dollars, while the USSR was ready to pay only about a third of that sum. At the beginning of January, however, Molotov revised his offer and came fairly close to the German proposal.³⁵⁷ When the German foreign minister thereupon asked for immediate payment,³⁵⁸ not surprisingly in view of the preparations for the attack on the Soviet Union, by then in top gear, the German embassy in Moscow found that demand excessive and requested

more latitude for negotiations. However, Stalin's interest in settling the frontier problem was such that eventually he gave way as well on the timing of payments. It was agreed in a secret protocol that the purchasing price of RM32.4m. would be paid within a period of three months, in gold and in non-ferrous metals of importance to the war effort.³⁵⁹

Otto Felix Bräutigam, the German consul-general in Batumi, came up with yet another variant of this kind of deal, which undoubtedly was more profitable to the German side. Just before the end of 1940 he urgently proposed that the German population in Russia should be repatriated.³⁶⁰ Bräutigam had learnt of the German offensive plans in the Wehrmacht High Command at the beginning of July³⁶¹—even before he assumed his new duties—and presumably was at first concerned about the protection of that ethnic group. However, on the model of the German resettlers from the Baltic States, these repatriates from Russia might also have been traded in for additional urgently needed raw materials. As it happened, there was no time to realize that project.

In the end, negotiations about a new trade agreement were successfully concluded only because Germany decided to make concessions in the armaments sector. A short-term release of Luftwaffe equipment to a value of RM7m. and promises to supply over 30,000t. of aluminium and 150t. of cobalt³⁶² were accepted by the Soviets as tokens of good will. The head of the German delegation regarded the outcome as decisive for Germany's future conduct of the war.³⁶³ This was the most important trade agreement ever concluded by Germany: it placed the Russians under an obligation to supply the very raw materials 'of which we have a shortage that we cannot meet in any other way'. By the time the agreement was eventually signed on 10 January 1940,³⁶⁴ German trade policy *vis-à-vis* the Soviet Union had not only achieved the objectives stemming from Hitler's decision in the summer of 1940 to an astonishing degree, but had considerably surpassed them. Stalin had undertaken to make substantial deliveries by the summer of 1941, while Germany was allowed to start by making good her delivery backlog from 1940; she would not, therefore, have to embark on her new deliveries to the Soviet Union until a date when the attack would have long been launched.

The foreign ministry was thus justified in drawing attention, in an instruction to all its agencies, to the inestimable value of that agreement.³⁶⁵ If it were not for the Soviet deliveries, some 'very harsh' economies would be necessary in certain areas, whereas now Germany would have 'abundant supplies'. It

may be assumed that the Soviet delivery promises were taken by Hitler as confirmation of the economic motives for his aggressive plans, and that General Thomas was therefore able, shortly afterwards, to show himself in the right light by his memorandum. The exuberant reaction of the German economic press to the conclusion of the agreement with Moscow did much to stimulate German business interest in the resources of the Soviet Union.³⁶⁶ Thus Hans Jonas, the director of the German Eastern Fair, who had taken an important part in the negotiations and who, at the same time, was involved in the Wehrmacht High Command's economic preparations—moreover, six months later he was put in charge of the economic department of the Reich Commissariat Ukraine—in a reputable economic journal³⁶⁷ elaborated on the bridging function of East Prussia, for which 'a hinterland extending far south into the Government-General and into the rich southern Russian provinces' had been opened up. East Prussia, in consequence, now had a foreign-trade radius extending 'from the Baltic to the Pacific'. An unpublished economic analysis³⁶⁸ likewise recalled such traditional economic objectives with regard to the Soviet Union by stating that only the solid integration of Russia into the German large-area economy could ensure German immunity to blockade. The author, not privy to 'grand politics', believed that a trade-policy solution was bound eventually to remain unsatisfactory. Problems resulting from the 'interreaction of the creation of a German large-area economy and Soviet strivings for autarky' could, he believed, be resolved only in the mode of the First World War, i.e. by military means.

Once Hitler had decided that the 'Russian agreement must be implemented at all costs',³⁶⁹ the departments represented on the Trade Policy Committee agreed to meet German delivery obligations during the next few months whatever happened—even at the expense of Wehrmacht orders—so as not to provoke any further upsets in the urgently needed raw-material shipments from the USSR.³⁷⁰ Firms were instructed to accept Soviet orders in every case. But whereas Soviet deliveries, after some weather-related transport difficulties, once more rose dramatically after March 1941—so much so that Moscow complained of insufficient rolling-stock being made available by Germany, thus preventing the Soviet Union from filling her orders as promised³⁷¹—Berlin naturally enough endeavoured to delay her deliveries of war material during the final few weeks before the offensive.

The Soviets, however, took no countermeasures. On the contrary, the

Soviet Union made every effort to meet its delivery obligations punctually and at times even at the expense of its own national stockpiles. Stalin was evidently determined, even against his own interests, not to offer Hitler any reason for a military conflict and to prove the value to the Reich of the German-Soviet economic alliance. On the German side, on the other hand, the impression was gaining ground, ever since Hitler's decision in July 1940, that Moscow's solid adherence to the principle of mutually profitable relations was placing an increasing strain on Germany's war economy. This in turn seemed to justify Hitler's decision to go to war. The SS security service's *Meldungen aus dem Reich* (Reports from the Reich) of 12 April 1941 reflected a widespread mood:

It is being said that in return for her deliveries Russia was receiving not foreign currency but top-quality machines, but that Germany would soon be unable to do without those machines and would put a stop to the deliveries. Russia would then refuse to deliver oil and grain. As, however, Germany would have to feed almost the whole of Europe during the coming winter, she was obliged to secure the Ukraine and the Russian oilfields.³⁷³

Simultaneously, rumours were making the round in Berlin government circles that Moscow might, under certain conditions, be prepared to cede those territories voluntarily. Such suppositions were being spread by those who regarded Operation Barbarossa as 'lunacy' and would have preferred instead to operate with the mere threat that the Bolsheviks would 'all have their heads cut off unless they did what Hitler wanted'. In that way they were to be 'made to comply without fighting'.³⁷³ These persons presumably included the German ambassador in Moscow, who on 28 April 1941 made one last attempt to convince Hitler of the advantages of a continued economic alliance.³⁷⁴ In a conversation with him he suggested that substantially greater concessions could surely still be obtained from Stalin through negotiation. Perhaps Moscow would supply up to five million tonnes of grain in the following year. Hitler, who did not place much faith in his diplomats' reports anyway and who—this was the impression of the foreign minister—appeared to be better briefed from other sources, revealed himself well informed on the problems of German-Soviet trade and rejected such speculations, if only on the grounds of existing transport difficulties.

³⁷³ *Meldungen aus dem Reich*, 143-4.

³⁷⁴ Hassell, *Tagebücher*, 199 (4 May 1941). American journalists in Berlin regarded such rumours as credible, as the USSR would not stand a chance in a military conflict; see report dated 19 May 1941, PA, Dienststelle Ribbentrop, UdSSR. The Hungarian minister in Berlin spread the speculation that Stalin was ready to concede to the Germans the control of the production and transportation of Soviet raw materials, thereby submitting to the German large-area economy: see St. S. No. 357, minute by Weizsäcker, 22 May 1941, PA, Büro des Staatssekretärs, Rußland, vol. v. In senior SA leadership circles there was a conviction that Molotov would soon come to Berlin to sign a new trade agreement: see Watzdorf, 'Lehren', 15. The military attaché in Moscow, on the other hand, was more cautious: 'Russia will do anything to avoid war and yield on every issue short of making territorial concessions': Halder, *Diaries*, 904 (5 May 1941).

³⁷⁴ DGFP D xii, No. 423 (28 Apr. 1941).

The general approval which Hitler's intention to seize the vital raw materials and foodstuffs by force met with among the top echelons of the armed forces, big business, and economic administration was probably due in no small measure to the fear that the German war economy might become increasingly dependent on Soviet deliveries. Those fears, however, should not be over-rated. Once preparations for the attack on the Soviet Union had entered a concrete phase, a certain relaxed mood began to spread at least among the top leadership of the Reich. This was most perceptible in the armaments area, even though the stresses of German-Soviet trade were particularly marked in that field. In June 1941, at any rate, some RM600m.'s worth of Soviet orders were in process of being manufactured, thereby blocking a considerable proportion of German armaments capacities.³⁷⁵ Why was Hitler prepared, as late as the spring of 1941, to accept that reduction in his own armaments? The answer that he was evidently interested in a smooth functioning of German-Soviet trade is surely insufficient. That paradoxical situation can be explained only by the armaments policy which had been initiated by Hitler's decision of July 1940.

4. THE EQUIPMENT OF THE EASTERN ARMY

At the peak of the campaign in France government circles in Berlin initially believed that the danger of 'over-exertion' through a continuous increase in armaments had, for the moment, been exorcized.³⁷⁶ It was hoped that armaments production would now decline, contributing to a general easing of Germany's economic situation.³⁷⁷ Hitler, on the other hand, argued that, although the planned creation of 20 divisions could now be abandoned in view of the termination of hostilities in France, and the size of the army reduced to 120 divisions,³⁷⁸ this new peacetime army should nevertheless be adapted in its material equipment to the lessons learnt in the war and be brought to a peak of quality. He also issued instructions that the armaments programmes of the Luftwaffe and navy were to proceed unchanged. The necessary raw materials, means of production, and manpower were to be made available by a cut-back in armaments for the ground forces. He further directed that the older age-groups be released from the army in order to restimulate civilian production.³⁷⁹ There was certainly no intention to reduce overall armaments production.

³⁷⁵ See Bericht VO WiRüAmt zum RWM [Report of War Economy and Armaments Department officer liaising with the minister for economic affairs], 2 July 1941, BA-MA Wi/VI. 326.

³⁷⁸ See OKW WFA, Abt. L (Chef) No. 00349/40 g.K., Erlaß über die Umsteuerung der Rüstung [Decree on the redirection of armaments production], 14 June 1940: Thomas, *Wehr- und Rüstungswirtschaft*, 406-7.

³⁷⁹ Chef OKW WFA/L II No. 1270/40 g.Kdos., Erlaß betr. Umsteuerung der Rüstung [Decree concerning redirection of armaments production], 9 July 1940: *ibid.* 408-12.

Instead, Hitler stuck to his plan of promoting the development of the Wehrmacht to the point where it was equal to the sum total of all potential enemy armies.³⁸⁰

The Army High Command was primarily interested in creating the pre-requisites for the reorganization of the army. Re-equipment and replenishment of units were possible not only from existing stocks of weapons, equipment, and ammunition, but also by drawing on new production, which was continuing, albeit on a reduced scale. In addition there was the captured war material of approximately 180 enemy divisions, including almost 5,000 armoured fighting vehicles. The booty collected in France alone was enormous.³⁸¹ Its utilization enabled the Army High Command to exceed the envisaged total of 120 divisions from the outset and to raise additional units for limited operations in the east and for preparing the invasion of England. This had no bearing on the problem of new production, as existing material seemed to be entirely sufficient even for the deployment in the east as planned by the Army High Command. The envisaged occupation of the western regions of the Soviet Union would be feasible, according to the estimate of the Army High Command, with 80–100 divisions.³⁸²

Hitler's decision of 31 July 1940 in favour of an extended operational disposition in the east justified Halder's misgivings over the planned reduction in the size of the army. However, neither Hitler nor the Army High Command believed that the now essential enlargement of the army to 180 field divisions necessitated a complete reorganization of armaments production, let alone total mobilization. The assumption that the campaign against the USSR would take no longer than a couple of months, together with the time still available until the date of the attack in the spring of 1941, made any drastic interference with armaments production appear unnecessary. For the Luftwaffe and navy Hitler's decision was of no great consequence, as they were still primarily concerned with the war against Britain and as the decree for the redirection of armaments gave them priority anyway.

Colonel-General Fritz Fromm, chief of land-force armaments and commander-in-chief of the reserve army, saw no reason for precipitate action, even though he was faced with the task of promoting the qualitative reshaping of the army and, simultaneously, making provision for a further extension. Compared with the army's strength in the campaign against France, the new target of 180 divisions represented an increase of about 20 per cent. Quite apart from personnel problems, the equipment of these formations would have called for

³⁸⁰ According to information from Todt, 6 July 1940, *KTb OKW* i. 74E (6 July 1940).

³⁸¹ See the relevant data in the 10-day report of OKH/GenStdH/Gen.Qu./Qu. I/1a, 12 July 1940, BA-MA III W 805/2, pt. 2, and Hitler's directives of 23 June 1940 concerning captured weapons, Abt. Landesverteidigung No. 33110/40 Chfcs., *Notizen WFA über Besprechung Führer-ObdH* [Minutes Wehrmacht operations department on conference of 23 June 1940 between Führer and C.-in-C. Army], dated 24 June 1940, BA-MA RW 4/v. 581.

³⁸² See Halder, *Diaries*, 517 (22 July 1940).

considerable efforts. For these the collection and re-allocation of existing stocks as well as of captured material were certainly not sufficient.

Major claims on new production were therefore inevitable. However, General Thomas immediately pointed out that complete equipment and arming of 180 divisions, plus an additional amount for the reserve army and current supplies, could not be achieved. 'In that case everything else would have to take second place to the army.'³⁸³ The task in hand, therefore, was not so much a general increase in the army's equipment as a definition of new priority areas. In any case, production capacities were already fully taken up with the manufacture of heavy weapons and tanks. To create new capacities in this field would not produce any results before the spring of 1941, as the time needed for the manufacture of certain heavy weapons exceeded that interval. There was, however, thanks to an accumulated stockpile in certain areas, some latitude in light weapons, ammunition, and army equipment, so that production efforts could be focused on areas of deficiency. Because the Army High Command did not consider a major effort necessary for the campaign in the east, the chief of ground-force armaments accepted the new armaments programme, labelled 'B', which only slightly exceeded the programme of 9 July 1940, now named 'A'. In his deliberations, therefore, he did not proceed, from an ideal target for equipping the 1941 field army; instead, the army weapons department examined manufacturing facilities to determine what production could be accomplished by 31 March 1941. Next, the army's general department was to examine 'to what extent the shortfall can be made good by drawing on booty or by a cut in equipment'.³⁸⁴

Calculating the expected volume of new production proved exceedingly difficult: on the one hand, manufacturing capacities had to be assessed and, on the other, the question had to be settled whether the manpower, raw materials, and means of production necessary for a full utilization of these capacities would be available. Allocation of raw materials was in the hands of the Wehrmacht High Command; for the army an increase of no more than 10 per cent was scheduled over the next two quarters. The greatest problem was manpower. General Thomas, who briefed the Todt ministry, which was responsible for the finishing stage of armaments production, on the new situation, called for rigorous measures, mainly at the expense of the civilian sector.³⁸⁵ He realized that such an appeal had little chance of success 'in view of the reluctance of the world of business'.³⁸⁶ As the army was likewise unable to release any substantial amount of manpower, Hitler's expectation that

armaments production would now move into top gear was unrealistic. Thomas and Keitel certainly arrived at that conclusion.³⁸⁷

Nor did Hitler, as it seems, close his eyes to those facts when, on 26 August 1940, he was briefed on the army's armaments plans and on the drastic consequences these would have for the equipment of the troops.³⁸⁸ He approved the proposal of the Army High Command that only the 10 motorized divisions should be brought up to a full state of equipment; the fact would have to be accepted that the 20 armoured divisions would temporarily be equipped with only one tank regiment, and that some of the infantry divisions to be newly set up, as well as the motorized units, would be equipped largely with captured material. This would inevitably reduce the rearward services and the mobility of those units. Hitler's particular wish, the reinforcement of divisional artillery throughout the field army, had to be set aside for the time being because of the bottlenecks in the production of artillery pieces. Only his suggestion that the field divisions be equipped with light anti-aircraft units was still fitted into armaments programme B.

Particularly obscure was the situation in the ammunition sector. Despite substantial stockpiles and modest consumption, production had to be re-started on a major scale. In a conversation with Keitel at the beginning of September Todt referred to the difficulties of precisely determining the army's ammunition needs for their increased weapons requirements.³⁸⁹ It would first have to be reliably established what weapons would be available on 1 April 1941, in order, after deduction of existing ammunition stocks, to determine the scale of new production required. The demands for ammunition submitted by the chief of land-force armaments were not in accord with such calculations.

In the War Economy and Armaments Department the developments in the field of armaments for the land force were followed with some concern. One comment of 11 September 1940³⁹⁰ was that production targets for individual firms under programme A had only recently been laid down, and appropriate readjustments made with regard to manufacture, so that the new programme B had now caused total chaos. The army's stepped-up demands could not be fully met because of existing shortages of manpower and raw materials, the less so as the Führer had just called for a drastic increase in the manufacture of 88-mm. anti-aircraft guns and appropriate ammunition.

³⁸⁷ Conference between Keitel and Thomas on 20 Aug. 1940, KTB Rüstungswirt. Abt., *ibid.* 76E.

³⁹⁰ Rü Ilw, Beitrag zum Vortrag Chef WiRüAmt [Notes for the report by chief of the War Economy and Armaments Department], 13 Sept. 1940, betr. Steigerung der Rüstung und ihre Folgerungen [concerning intensification of armaments production and its consequences], 11 Sept. 1940, *ibid.*

The existing priority system was clearly no longer adequate for regulating the different armaments programmes of the Wehrmacht services. The Wehrmacht High Command therefore worked out a further subdivision of categories, designed to shorten the list of top-priority items which had to have full claim on available resources. The special category of top-priority items for the three services (for the army this was mainly the construction of the Mark III and Mark IV tank, as well as the latest 50-mm. anti-tank gun) was followed by category I, now subdivided into Ia and Ib, and finally by category II.³⁹¹ Other possible ways of relieving the situation were measures in regard to manpower and the utilization of industrial capacities in the occupied territories.

The chief of land-force armaments therefore saw no reason for antagonizing the other Wehrmacht services, even though the production programme worked out by him³⁹² was based on the optimistic assumption that production capacities would be fully taken up and that an appropriate allocation of raw materials and manpower was possible. Provided the army asserted itself more forcibly in the valid system of priorities, and provided no major capacities were lost as a result of enemy air raids, he estimated that the material prerequisites for the wartime army demanded by Hitler could be 'essentially' fulfilled by 1 May 1941. A few gaps would admittedly have to be expected in meeting the targets for weapons and equipment, but these might be offset by a reduced level of equipment of the units. The ammunition situation also seemed to him to present no problems. Even if the twelve-months' stockpile on top of the initial issue was not achieved by the stipulated date, there would at least be sufficient stocks to bridge such time as it took for current production to catch up with expected consumption.

From this assessment the Wehrmacht High Command concluded that, apart from a production increase in respect of a few weapons in short supply, the demands of the chief of land-force armaments were roughly within the framework laid down for overall armaments production in July 1940.³⁹³ Keitel, however, exposed as he was to Hitler's continual calling for armaments manufacture to move into top gear, insisted that provision be made for an increase in production for the army even after 1 April 1941. One should not, he explained to General Thomas, make a virtue of the present necessity and juggle with fluctuating output figures. It was necessary to extend capacities in the long term: the present situation whereby, for example, production of 88-mm. anti-aircraft ammunition could be increased only if production of ammu-

dition for the light field howitzer were cut back at the same time, must not become a permanent feature. The objective must be to produce both types of ammunition 'alongside one another at maximum volume'.

A conference on 19 September 1940 of representatives of land-force armaments and the Reich ministry for arms and ammunition soon revealed that the calculations of the authorities concerned still did not agree and that an accurate prescription of production targets in individual cases was not possible at the time.³⁹⁴ In consequence the participants once more confirmed the principle that only such demands should be made as could in fact be implemented within the seven months still available. The balance was to be taken care of later.

This left two important problems open. One concerned the precise determination of expected figures for tank construction. These figures had to be known so that appropriate production targets could be laid down for tank-guns and ammunition. The 'mobile troops' project ordered by Hitler called for the widest possible replacement of the light Mark I and Mark II types with the medium Mark III and Mark IV types. Production programme A had envisaged an increase in monthly production to 380 tanks, with a view to satisfying the army's overall requirement of 26,700 battle tanks by the end of 1944.³⁹⁵ The tank-delivery programme of the Todt ministry, dated 23 August 1940,³⁹⁶ on the other hand, had envisaged delivery of 1,500 battle tanks and 300 self-propelled guns by 1 May 1941; this presupposed an average monthly production of approximately 200 vehicles, which was more or less in line with Hitler's ideas. If one compares the actual production figures for April 1940 (127) and September 1940 (121),³⁹⁷ then one realizes the additional effort that had to be made with regard to tanks. The fact that at the conference on 14 September substantially higher figures were mentioned by the Todt ministry—the delivery of 2,000 Panzer III and 800 Panzer IV by 1 April 1941—reveals the dilemma of a land-force armaments department which, with such frequently fanciful number-games, was increasingly losing touch with reality.

The second major problem concerned the further extension of production capacities, primarily in the ammunitions field. Existing limited resources were insufficient to increase output and simultaneously extend manufacturing facilities, i.e. set up new places of production. Expansion of the gunpowder and

³⁹⁷ Rü Ilw, minute of 10 Sept. 1940 (above, n. 394).

explosives base was already lagging badly behind schedule. The chief of land-force armaments naturally pleaded for priority for armaments production; he believed that final expansion targets for a long-term programme 'C' could not be firmly laid down so long as the necessary decisions on the structure and equipment of the future army—after the conclusion of the campaign in the east—remained to be made. The Army High Command thereby concurred with the postponement of a long-term armaments programme; this was to prove an important decision affecting the material fighting strength of the army in 1941.

When Keitel and Todt jointly reported to him, Hitler basically approved the production proposals on which the departments had agreed.³⁹⁸ However, he made some important additions to certain items. He was primarily anxious to increase the number of armour-piercing weapons and the principal types of artillery pieces, and to achieve a greater density of light anti-aircraft weapons. In these areas the figures submitted were to be regarded as minimum targets; wherever possible, higher output figures were to be aimed at as a supplementary programme. Hitler also gave orders that 300,000 metal-workers were to be released from the army and made available to the armaments industry on factory leave until the spring of 1941.

Moreover, Hitler's decree, published on 28 September 1940, on the intensification of armaments production listed a number of additional tasks for the navy (the unlimited continuation of the U-boat programme) and for the Luftwaffe (increase in the production of anti-aircraft guns and suitable ammunition).³⁹⁹ Whether this list of tasks could be accomplished merely by an appeal for the prescribed system of priorities to be observed, or through the shelving of all non-urgent tasks in the civilian sector—along with some minor measures in the labour market—must have seemed exceedingly doubtful.

Hitler's armaments instructions again upset the equilibrium between requirements and resources, so laboriously balanced by the different departments. On the number of men to be granted army leave for work in industry his ideas likewise diverged greatly from those of the Army High Command; the latter needed all its personnel for the planned enlargement of the army in the field.⁴⁰⁰ In addition, the manufacturing programme 'Axis', for the support of Germany's Italian ally, had to be set up.⁴⁰¹ This was placed at the head of the priority scale, even above 'special category' manufacture. Then there was

the decision to include Soviet armaments orders in priority class Ia.⁴⁰² It was obvious that by then the framework of overall armaments production laid down in July 1940 was finally quite destroyed. Implementation of the various programmes was moreover threatened by the multiplicity of overlapping responsibilities of different clients and by the military agencies' lack of supervisory and directing powers *vis-à-vis* private industry. Additional friction arose through the far from smooth operation of an ineffective military bureaucracy.

In the field of armoured fighting vehicles it was therefore agreed that 1,490 new vehicles could presumably be manufactured by 31 March 1941.⁴⁰³ Although Todt's enormous figures had thus been quietly discarded, it was by no means certain that even the new targets could in fact be reached, considering the serious bottlenecks in all fields. Even a reliable determination of the existing total of armoured fighting vehicles proved extraordinarily difficult. Military leaders were operating with figures (as of 1 September 1940) which fluctuated between 4,833 and 3,563.⁴⁰⁴ These divergences presumably arose from double counting of tanks, many of which were undergoing rearming. When even the current total was uncertain, determination of overall requirements became rather difficult.

Hitler's new instructions compelled the chief of land-force armaments to check his calculations in other areas as well. Thus an additional requirement of 1,469 light field howitzers 18, the principal divisional artillery weapon, was initially established; an examination of production capacities, however, revealed that probably only about 60 per cent of this target could be met (i.e. 840 artillery pieces).⁴⁰⁵ The balance was to be delivered later, by August 1941. Hitler's demand that a further 800 pieces be manufactured was therefore unrealizable from the start, especially as manufacture of the 88-mm. anti-aircraft gun was to be stepped up at the same time. Indeed, this would have been possible only at the expense of the light field howitzer 18. According to the calculations of the chief of land-force armaments, an additional 900 machine-tools would have to be provided to ensure the ordered production increase. Yet the army could only count on the delivery of, at best, 350 machines-tools by the spring of 1941,⁴⁰⁶ and even these would only begin

to affect output of artillery pieces in the late summer of 1941. In consequence, there was no one who could reliably predict what production targets could in fact be attained over the next few months. The effect such a situation was bound to have on the calculation of ammunition requirements is obvious.

The relief which the Wehrmacht High Command had expected as a result of the use of captured weapons often proved illusory. Although large numbers of the standard weapon of the French field artillery, the field gun M-97, had been captured,⁴⁰⁷ of the 860 pieces captured in Czechoslovakia and Poland, 80 had been sold to Romania, 410 had gone to the navy, and 371 had gone to the Luftwaffe. Of the booty taken in the western campaign, 2,440 artillery pieces in all, the navy had by the beginning of October taken over 44 pieces, and the Luftwaffe nearly half of the stocks in order to employ them in barrage-fire batteries for aerial defence. Göring had made sure that all usable M-97 guns were placed at the disposal of the Luftwaffe for that purpose. Attempts by the army's general department to have this decision revoked in order to offset the increasing shortage in the army therefore met with very little success.

It appears that none of these contradictions and imponderables in the armaments situation was felt to be alarming by the Army High Command in the autumn of 1940. The army's weapons department passed on its manufacturing orders to industry. Harmonization with the orders from other services and provision of appropriate resources were then essentially the task of the Wehrmacht High Command.

Fromm held the dual post of chief of land-force armaments and commander-in-chief of the reserve army. It was the second of these functions which increasingly occupied him and his staff after October 1940, when the reconstruction and expansion of the army were gaining momentum. Organizational and personnel measures in this context occupied his entire attention.⁴⁰⁸

Initially there was a sufficient stock of weapons and equipment for refurbishing the units. By September, current production had virtually made good the losses from the campaign in France,⁴⁰⁹ so that some support was available for the most urgent armaments projects. Further relief was expected from the transfer—by then massive—of Wehrmacht orders to the occupied territories, more especially to France. Despite considerable political opposition and administrative friction, orders for the delivery of spare parts, as well as for subcontracted deliveries of military equipment, were placed to a total value of RM1,800m.⁴¹⁰ However, the relief felt by armaments manufacturers within

Germany was limited, since the raw materials needed to complete an order had, as a rule, to be provided by the German side.

It is a matter of record that in contrast to the Wehrmacht High Command, where the problem of overall control of armaments production and excessive requirements was viewed with increasing concern,⁴¹¹ the Army High Command reacted calmly. It is, however, significant that Lieutenant-General Studt, previously responsible for industrial production as a group leader in the army's weapons department, addressed the problem of the take-over of the Soviet armaments industry as soon as he was transferred to the War Economy and Armaments Department. That was presumably due to a realization among top military leaders that the overtaking of Germany's economic capacity had clearly reached a peak and that other solutions had to be found if armaments targets were to be reached. When Göring called for an assessment of the war-economy situation by 1 May 1941, the armaments economy department of the Wehrmacht High Command came to the conclusion that a postponement of target dates was inevitable.⁴¹² 'On the whole' the material equipment of the '1941 wartime army' was ensured, with the exception of a few types of weapons and their ammunition still in short supply; the shortage in stocks, on the other hand, would not be made good until early 1942. By contrast, the tank-construction programme was proceeding smoothly: monthly output figures of 375 armoured vehicles could be expected from April 1941. The army's weapons department was judging the situation sceptically, admitting that, as a result of the new priority system and the resulting switch of manpower, any overall idea of manufacturing capacities had been 'totally lost'.⁴¹³ Added to this was the very late allocation of raw materials by the Wehrmacht High Command, which resulted in numerous orders having to be given to industry without the necessary resources being made available. The forecast for tank production had already been reduced by 10 per cent by the army's weapons department because of inevitable delivery problems, with a monthly output of 337 vehicles being laid down for April 1941.⁴¹⁴ There was good reason, therefore, for returning to the idea of planning armaments for the army on a longer-term basis. The first question to be settled was what capacities could additionally be made available within the army in order to carry the tank programme, and possibly also programme B, beyond 1 April 1941.⁴¹⁵

Immediately following the conclusion of Molotov's visit Hitler summoned those responsible for land-force armaments to report to him. He wanted to get an idea of the present state and the prospects of armaments production. By then there was no question that drastic intervention was necessary.⁴¹⁶ Although he took note of the fact that only about half of the 300,000 servicemen he had ordered to be released had in fact been made available by the army for the armaments industry, Hitler did not wish to make any changes to the scale of the programme. He merely gave orders that, wherever stocks and consumption permitted, the target dates were to be postponed. Hitler also believed that by switching more civilian production to the occupied territories he could free an additional 100,000 workers for munitions.

At the same time he once more called for the production of specific weapons to be increased, such as the 88-mm. anti-aircraft gun. In addition, construction of air-raid shelters was to be accelerated in the major cities of Germany. The result of this was that the Wehrmacht's quota of raw materials—an increase in which for the first quarter of 1941 had already been rejected—was to be cut into even further as greater quantities of raw materials had to be diverted towards indirect Wehrmacht requirements.⁴¹⁷ A similar need arose for the development of supply facilities, the transport network, and raw-materials enterprises, so that a smaller quota of raw materials was available for armaments manufacture proper than before.

A new system of priorities was therefore being worked out in the Wehrmacht High Command for directing munitions manufacture with a view to concentrating what meagre resources were available on the most important programmes.⁴¹⁸ Since the backlog in the army's equipment for the eastern campaign was not regarded either by Hitler or by the Army High Command as sufficiently serious to warrant special steps for the preparation and execution of that campaign, the Wehrmacht High Command encountered no opposition when it demanded priority for Luftwaffe and naval armaments at the expense of the land forces. Top priority was to be given, in Jodl's view, to anything needed for the 'siege of Britain: U-boats, torpedoes, mines, and light naval forces, bombers, and air-dropped ammunition'; next came the strengthening of air defences in Germany, while the army's requirements came only in third place.⁴¹⁹ In Jodl's opinion the operations in the east could be 'easily conducted' with the material strength available. If it were not possible to bring the envisaged twenty armoured divisions to full strength by the following

⁴¹⁶ See Rū IIa, Aktennotiz über die Besprechung bei Reichsminister Dr. Todt am 22.11.1940 (Minute of conference at Reich Minister Dr Todt's office on 22 Nov. 1940), *ibid.*; Todt gave a briefing on a conference with Hitler on 21 Nov. 1940, at which, apart from himself, Keitel and Fromm had been present.

Überprüfung der Rüstungsprogramme [Wehrmacht operations department, comment on note for report by the War Economy and Armaments Department of 30 Nov. 1940 concerning examination of armaments programmes], 3 Dec. 1940: Thomas, *Wehr- und Rüstungswirtschaft*, 436-7.

spring, then this was, if anything, an advantage because it would save 'an enormous amount of auxiliary weapons and rearward services'. It was therefore correct, he argued, to reduce new production for the army and instead to maintain full production for the Luftwaffe and naval programmes. Indeed, Jodl went even further. He did not rule out the possibility that, 'if the armaments situation forces us to do so', the campaign in the east may have to be postponed as it was 'not a compelling necessity for victory over Britain'. There are indications that the Army High Command similarly judged the armaments situation and the conclusions to be drawn from it. At any rate, Hitler—parallel to his directive No. 21 for Barbarossa—had submitted to him for signature instructions for manpower support for the armaments industry, designed primarily to benefit the navy and the air force.⁴²⁰

The consequences of that decision, needless to say, also affected the army's main programmes, even though they were included in the top priority class. Thus, tank production alone was short of over 6,000 skilled workers in January 1941,⁴²¹ so that Todt—who was focusing increasingly on that sector because ammunition manufacture, his real responsibility, was running at only half speed—requested from Hitler the provision of additional labour.⁴²² This was to be released from the rest of armaments production for the army, as well as from the army's personnel planning. Hitler approved Todt's request, and although Göring thereupon asked for additional manpower for the Luftwaffe, which Hitler granted, Hitler nevertheless appeared to be proceeding from the assumption that munitions for the army would enjoy priority until the summer of 1941, with the Luftwaffe not being 'served' until after that date.⁴²³

The Wehrmacht High Command, on the other hand, continued its efforts to mobilize all forces primarily for Luftwaffe and naval armaments. In a letter to the chief of land-force armaments, dated 15 January 1941, Keitel referred to 'binding instructions from the Führer' which prevented any greater consideration of the army.⁴²⁴ Hitler, having 'considered all operational intentions and given full weight to all military misgivings' had 'taken responsibility'. The Wehrmacht High Command continued that line also in its new priority regulation of 7 February 1941.⁴²⁵ A new special category was established,

designated 'SS' and ranking above all other categories. It included the principal armaments programmes of the navy and Luftwaffe, and, as far as the army was concerned, at least the tank programme and a few areas of deficiency. The next category down, 'S', covered equipment for the mobile forces, especially light armoured vehicles, as well as provision of spare parts and workshops for all armoured fighting vehicles. The programme for trucks was in a lower category still, even though output was lagging nearly 30 per cent below the target.⁴²⁶ This was bound to have grave effects on the army's motorization and mobility. Nevertheless, the Army High Command saw no reason to call for greater weight to be given to it in overall armaments production.

This attitude begins to make sense when one considers that, following negotiations of the armistice commission in the spring of 1941, the bulk of the French war material from the unoccupied part of France was now also being transferred to the Wehrmacht. This comprised no less than 341 trains, as well as 13,000 lorries,⁴²⁷ the take-over of which made it possible to eliminate at least some of the bottlenecks in the motorization of the army.

The Army High Command therefore confined itself to releasing some manpower and raw materials through rearrangements within programme B—mainly through cut-backs in the production of ammunition and artillery pieces.⁴²⁸ They were to fill existing gaps in weapons and equipment for initial issue, for supplies, for re-equipment, and for export to Germany's allies and neutral countries. Since just at that time the bulk of the men given labour leave by the army were returning to their units and a major call-up wave was in progress, considerable shortages of manpower arose, and these had a detrimental effect chiefly on munitions for the army. Neither Göring's appeal of 18 February 1941 that all non-vital manufacture should be cut back or ruthlessly halted nor the creation of bottleneck commissions constituted more than a temporary expedient.⁴²⁹ Colonel-General Ernst Udet, the Luftwaffe's quartermaster-general, therefore warned that a cut-back in aerial armaments was out of the question.⁴³⁰

Although over 80 per cent of the Luftwaffe equipment programme came

under the two special categories, delivery targets had still not been reached. If anything, he argued, additional manpower, raw materials, and machines were needed. In its preparations for the eastern campaign, which had been in progress since the end of 1940, the Luftwaffe command had proceeded from the assumption that current aircraft production could at best maintain its present strength.⁴³¹ It was natural, therefore, that attempts should be made to make full use of existing manufacturing capacities and to search for possibilities of extending production. The intended war against the Soviet Union played no particular part in these considerations, even though the Luftwaffe command expected a Soviet superiority of a factor of three or four. Like the army command, it was convinced that the war could be won with the forces available. Additional production efforts were regarded as superfluous and, in view of the short time available, also pointless. Instead, Göring's Luftwaffe was focusing entirely on the period after Barbarossa and on the armaments race with the Anglo-Saxon powers, whose output of aircraft already exceeded that of Germany. The Luftwaffe was therefore aiming at doubling the capacities in aircraft production, which of course could be achieved only at the expense of munitions for the army.

As the navy likewise rejected any further cut-backs in its armaments programme, and indeed made additional demands for manpower and resources,⁴³² the Army High Command launched a new drive for longer-term armaments planning, to avoid being left even further behind by the other two services.⁴³³ The intention was that, when programme B came to an end, the change-over in land-force armaments, already under way, should be kept going by new projections, thereby preventing any further reduction of the army's share in overall armaments. The army's weapons department expected that, as a result of a further concentration of land-force armaments as well as of the amounts already passed on to the other services, there would be a marked decline in the course of 1941 in the manufacture of many types of weapons, equipment, and ammunition. This was considered acceptable, as the remaining capacities, together with stockpiles, would be sufficient to meet 'all conceivable future requirements of the war'. Any further increase, though desirable, would not become effective, as far as military operations were concerned, before the end of 1941. 'On the assumption of a *development of the war* in line with the intentions of the high command (which rules out any serious continental adversary on the ground in future), a substantial *reduction of the army*, with the exception of the mobile troops, was envisaged.' The resources freed as a result, mainly from the 75 per cent reduction in supply

⁴³³ See WaA No. 12345/41 g. Wa Stab Ia, Stellungnahme betr. Planung der Kapazitäten [Comment on planning of capacities], 7 Apr. 1941 (draft), BA-MA RH 8/v. 1068.

requirements, were to be used for the further promotion of the tank programme.

In a letter to the Wehrmacht High Command, dated 10 April, the chief of land-force armaments therefore pointed out that, despite certain cut-backs in production, the army could not release any further manpower.⁴³⁴ In parallel to the Luftwaffe, which under its 'Göring Plan' was aiming at quadrupling its aircraft strength, and to the navy, which was planning a gigantic enlargement of the fleet over the next twelve to fifteen years,⁴³⁵ the army now likewise drafted a megalomaniacal armaments programme which, both in its scale and in its structural weaknesses, revealed the contradictions and limitations of the planning capabilities of the military leadership. This was the 'armour programme 41',⁴³⁶ which was based on the original target (June 1940) of the establishment and equipment of twenty armoured and ten motorized divisions. The following calculations therefore indicate the dimension which armaments programme B would have had to assume for these formations to be fully equipped for the campaign in the east. The army's general department proceeded from a complete initial equipment of those formations, as well as the provision of their annual requirements for replacements and spares; it concluded that 34,661 armoured fighting vehicles would have to be produced for these purposes.⁴³⁷ If one added the needs of the reserve army and supplies, that figure increased to 39,759. Further to be added were 126,379 tractor trucks. In order to achieve that target by 31 December 1944, current manufacturing capacities would have to be increased roughly fivefold. That would require 11,500 so-called bottleneck machines by 1 October 1943. In actual fact only 472 of these could be delivered by that date. The conclusion which the army's weapons department drew from this striking disproportion was that either the entire machine-tool capacities of the country should be placed at the army's disposal at once—which would necessitate the shelving of all programmes for other claimants—or else, if drastic changes were to be avoided, manufacture of armoured fighting vehicles and anti-aircraft guns could only be considered in the long term, with no perceptible growth until the years after 1943.

⁴³⁶ See WaA, No. 1100/41 g.Kdos. Wa Stab Ia, Die Schwerpunktprogramme des Heeres, Panzerprogramm 41, Heeresflakprogramm (unter besonderer Berücksichtigung der Werkzeugmaschinen-Lage) [The army's main areas of effort, armour programme 41, army anti-aircraft programme (with special reference to the machine-tool situation)], May 1941, BA-MA RH 8/v. 1130.

⁴³⁷ Ibid., annexe 4; the armaments plan of 9 July 1940 had envisaged 26,700 tanks by the end of 1944; see Erlaß betr. Umsteuerung der Rüstung [Decree on the redirection of armaments production], 9 July 1940, annexe 4, BA-MA Wi/I F 5.378.

In its memorandum of May 1941 the army weapons department pleaded for the latter alternative. One reason was probably that conveyor-belt production with special-purpose machines was rejected on grounds of principle, although it was obvious that a rapid growth in production figures could only be achieved that way. The army officers instead preferred short manufacturing series with multi-purpose machines. These plans were controversial also in another respect: the 'armour programme 41' unquestioningly projected the existing equipment target into the future, without regard for any modernization or technical advances. Thus a continuous increase in deliveries of the Mark II light tank was envisaged, even though this was regarded as outdated among the troops and was due for gradual replacement by the Mark III and IV medium tanks. As recently as 18 February Hitler himself, at a conference with the men responsible for tank development,⁴³⁸ had again come out in favour of heavier armament. Yet the plan of the army weapons department stipulated that nearly half the calculated tank fleet as of 1 April 1941 was to consist of the light Mark II.⁴³⁹

In contrast to the military armaments programmes of the first year of the war, when an attempt was made to establish what was feasible and to use that as the basis of production demands, the plans of the three services on the eve of Operation Barbarossa were strikingly out of proportion to Germany's economic capacity, even if the German-dominated European territory was included. It would have made sense to set up a central planning agency at the Wehrmacht High Command, to harmonize armaments targets with each other, as well as with actual resources. But although the weapons departments of the three services considered the idea,⁴⁴⁰ nothing came of it.⁴⁴¹ The separate services evidently preferred to pursue their ambitious programmes independently and, if necessary, to seek new ways of doing so.

On the one hand, they tried, to a greater measure than in the past, to gain support and co-operation from industry. Thus an industrial council was set up under Göring for aerial armaments, and a tank commission was established for the army under the Reich minister for armaments and ammunition.⁴⁴² Both

⁴³⁸ See the account in Rohland, *Bewegte Zeiten*, 73.

⁴³⁹ See *Die Schwerpunktprogramme des Heeres* (above, n. 436), annexe 4.

⁴⁴⁰ See OKW WiRüAm/Rü IIa No. 20968/41 g., Aktennotiz betr. Zusammenfassung und Steuerung der seitens der Wehrmachtteile vorgesehenen Gesamt-Planung auf dem Rüstungsgebiet [Minute concerning concentration and control of the overall planning in the armaments sector, as envisaged by the Wehrmacht services], 4 Apr. 1941, BA-MA Wi/I F 5.120, pt. 2. Efforts along those lines had first failed during the rearmament phase before the outbreak of the war: see *Germany and the Second World War*, I, 505 ff.

⁴⁴¹ At the urgent request of WiRüAmt such a planning agency was set up on 9 Oct. 1940 at the Armaments Industry Department, headed by a Luftwaffe general staff officer; its effectiveness, however, was limited. See Thomas, *Wehr- und Rüstungswirtschaft*, 290.

⁴⁴² See Vereinbarung zwischen dem RMfBuM sowie dem Chef der Heeresrüstung betr. Panzerprogramm [Agreement between the Reich Minister for Armaments and Ammunition and the chief of land-force rearmament concerning tank programme], 21 June 1941, and Mitteilung des Generalluftzeugmeisters (Notification of the Luftwaffe quartermaster-general) No. 8308/41 (GL 1 V) betr. Industrierat des Reichsmarschalls für die Fertigung von Luftwaffengerät [concerning the Reich Marshal's industrial council for the manufacture of Luftwaffe equipment], 22 May 1941, BA-MA Wi/I F 5.120, pt. 2.

these bodies were dominated by the representatives of industry, while the weapons departments had to surrender their influence on the direction of armaments production. On the other hand, the Wehrmacht High Command was increasingly bypassed on these matters and direct access to Hitler sought instead. The Luftwaffe no doubt had an excellent 'direct line' in the person of Göring, but the army—as shown by the establishment of the tank commission—similarly found a champion in Todt, who, as an old Party member, was able to gain Hitler's confidence more readily than the conservative generals.

But as the top military bodies themselves lacked a clear idea of the state and future prospects of German armaments production, and as the diverging interests of the three services could no longer be tied into a common concept, Hitler was in no position to form a realistic picture for himself. At any rate, his own interest was mainly in technical details and output figures. Otherwise he confined himself to the role of a driving force, leaving it to the rival departments to implement in practice his continual demands for higher production. In these circumstances the Wehrmacht High Command chief of staff evinced scepticism about a proposal by the War Economy and Armaments Department that a central planning body should be set up. In view of Hitler's ceaseless personal intervention, he argued, such an agency would forever be trailing behind so-called orders from the Führer.⁴⁴³

The final weeks before the attack on the Soviet Union most clearly revealed Hitler's lack of an overall view. Thus on 18 May 1941 he criticized the production and stockpile figures submitted to him concerning land-force armaments, in particular the substantial decline in ammunition and weapons manufacture.⁴⁴⁴ He called for the quickest possible switch-over to mass production as well as—here conflicting with the army weapons department—a 'return to more primitive robust types'.⁴⁴⁵ Yet a fortnight later he signed Directive No. 32, submitted to him by the Wehrmacht High Command, which, with a view to the post-Barbarossa period, already called for a switch of priorities to Luftwaffe and naval armaments.⁴⁴⁶ Accordingly, after consultation with Todt he ordered the Army High Command to cut back radically on land-force armaments in order to free production capacities and manpower for an extended Luftwaffe armaments programme.⁴⁴⁷ He even offered the

Luftwaffe the immediate disbanding of three eastern divisions in order to relieve the manpower sector.⁴⁴⁸ Colonel-General Fromm was totally taken aback by this development and declined to implement the Führer's order in that form.⁴⁴⁹ Hitler was first to specify the exact scale of the cut-backs, he informed OKW. He was hoping that at least the 'tank programme, urgently commended' to the minister for armaments and ammunition, would escape unscathed.

With the expiry of armaments programme B, therefore, the weight of problems was by no means eased; if anything it had become more pressing. The balance sheet prepared by the War Economy and Armaments Department of Wehrmacht armaments production from 1 September 1940 to 1 April 1941⁴⁵⁰ in order to meet Hitler's criticism of the state reached scarcely succeeded in concealing the shortages in German armaments manufacture. The programmes of all three services showed often considerable gaps. These were to be explained not only by the difficulties of controlling manpower employment, transport, and coal supplies, or by the shortage of specialized machine-tools and raw materials; they were also rooted in insuperable organizational problems. In spite of all efforts, as OKW pointed out, that targets demanded by the 'supreme leadership'—targets which had been raised all the time—were never fully achieved 'because even the manufacturing capacities available in the enlarged Greater German territory' were not sufficient. The observation, made in the same breath, that a 'huge increase in the material equipment of the Wehrmacht' had been accomplished and that the programmes had 'by and large been fulfilled despite great difficulties', suggests that the Wehrmacht High Command was here concealing the true state of affairs.

The questionable nature of that balance sheet emerges clearly if one remembers that Germany's overall armaments production in the second year of the war had scarcely increased, whereas in the United States, Britain, and the USSR it had almost doubled over the same period. The armaments output of these great powers was by then three times the German volume (see Table I.iii.2).

Germany's increase in weapons production had been achieved mainly at the expense of ammunition; moreover, it was concentrated on a small number of priority areas. Even the army's programme B, the target figures of which had been based on presumed manufacturing capacities, had been only partially implemented. Alarming shortfalls existed mainly in armour-piercing weapons, field artillery, and infantry artillery pieces; this impaired the fire-power of the

infantry units. Similarly, only 30 per cent of the production target for naval guns had been achieved (primarily as a result of Soviet orders), 78 per cent of that for Luftwaffe ammunition (with the exception of ammunition for the 37-mm. anti-aircraft guns), and 60 per cent of that for anti-aircraft weapons and equipment.

Although the number of armoured fighting vehicles and track-mounted assault-guns had gone up by about a third, the bulk of the vehicles were still of light or medium type, including 281 Mark Is and 157 captured Czechoslovak light 35 t types, which were no longer really battle-worthy. Numerical ratios were similar in the artillery. The total of artillery pieces at the beginning of the French campaign was 7,184; against the Soviet Union 7,146 were available.⁴⁵¹ As for fighting aircraft, 3,530 were available in May 1940, compared with 2,510 against the Soviet Union; of that figure only 1,945 could be regarded as operational front-line planes.⁴⁵² Approximately 142 divisions were involved in the campaign in the west;⁴⁵³ against the Soviet Union initially no more than 150 German divisions were deployed. (For details of programme B see Table I.III.3.)

Table I.III.4 shows the state of equipment of the army compared with its strength before the opening of the offensive in the west.⁴⁵⁴

⁴⁵¹ Data from Engelmann and Scheibert, *Deutsche Artillerie*, 237, and Liss, *Westfront*, 126.

⁴⁵² See sect. I.IV.2(c) at n. 393 (Boog). ⁴⁵³ *Germany and the Second World War*, ii. 249.

⁴⁵⁴ Data taken from Müller-Hillebrand, *Heer*, ii. 106, partially amended according to Überblick über den Rüstungsstand des Heeres 'Waffen und Gerät', Stand 1.6.1941 [Tables on the state of armaments of the army, 'Weapons and Equipment', as of 1 June 1941], BA-MA RH 8/v. 1090, and OKH/GenStdH/Org.Abt (I) No. 702/41 g.Kdos., beir. Panzer-Nachschub Ost [concerning armour, supplies, east], 15 Sept. 1941, BA-MA RH 2/v. 1326. The figure of 3,350 tanks (not counting assault-guns recorded in the last line of the table) given in the report of GenQu/Abt. Heeresversorgung of 20 June 1941 (*ibid.*) presumably refers to operational vehicles. The discrepancy of 48 is therefore explained by vehicles undergoing repair at the beginning of the attack.

One is therefore forced to conclude that the Wehrmacht's strength in men and materials for the campaign against the Soviet Union was substantially the same as in the western campaign against France and Britain in the spring of 1940. There were, admittedly, some qualitative improvements, such as the partial modernization of the fleet of armoured fighting vehicles. Although the wartime army had been enlarged by about 20 per cent compared with 1940, this was largely offset by additional tasks in the war against Britain. From the North Cape to Crete large numbers of occupation troops and security formations and of coastal-defence and anti-aircraft batteries had to be employed. Added to all that were the operations in North Africa. Anything that could be spared, anything that could be made mobile and battle-worthy, had been deployed by Hitler in the east; the rest was scarcely operational.⁴⁵⁵ But for the use of captured material, the Wehrmacht, given the meagre extant of new production of weapons, ammunition, and equipment, would scarcely have been in a position to take on such a variety of tasks. The infantry divisions of the field army, reorganized into so-called waves or newly established, presented a rather disparate picture in regard to their equipment with motor-vehicles (see Table I.III.5).

⁴⁵⁵ See GenStdH/Org.Abt (I), No. 652/41g.Kdos., Beurteilung des Kampfwertes der Divisionen nach dem Stande vom 20.6.1941 [Assessment of the operational value of the divisions as on 20 June 1941], BA-MA RH 2/v. 427.

In addition to 84 infantry divisions, 3 of the 10 motorized divisions as well as 21st Armoured Division were equipped with foreign vehicles. Captured material was moreover used for refurbishing the anti-tank units. Some of these were re-equipped with the French 47-mm. anti-tank gun.⁴⁵⁶ Because of a lack of appropriate tractors, French armoured vehicles were employed for that purpose in the divisions of the 11th and 12th waves; they were used also as transport vehicles for the infantry of the light divisions. Panhard scout cars and Hotchkiss and Somua armoured vehicles were used in armoured reconnaissance units. The 5,000 armoured vehicles available for such purposes from captured French material were also used for equipping security and occupation divisions in the west. Captured tanks were moreover used in large numbers in the reserve army and on army training grounds, as well as for arming armoured trains. Although the armoured formations of the eastern army operated predominantly with tanks of German manufacture, there were five armoured divisions which were uniformly equipped with Model 38 tanks from former Czech factories. These vehicles in particular, just like other captured material, were by no means inferior to German standards. Even so their employment is significant. For one thing, it confirmed the weaknesses of the German rearmament drive; for another, it confirmed the assumption of the army command in the summer of 1940 that captured material would be a vital prerequisite for the planned deployment of the eastern army. And thirdly, their employment further increased the multiplicity of types in the German army, with all the consequences for supplies of spares and ammunition. This was an additional strain on supply management from the outset. A study of the order of battle of the eastern army on 22 June 1941 (see Diagram I.III.3) shows that the divisions with the best equipment were deployed around the armoured groups, while the gaps and the flanks were held largely by divisions of reduced fighting power and mobility. Altogether, then, the eastern army presented the aspect of a patchwork rug rather than the impression, often propagated in the postwar literature, that Hitler, by means of a skilful blitzkrieg economy and the exploitation of the occupied territories, had succeeded in fielding a huge, uniformly equipped military force against the Soviet Union.⁴⁵⁷ This astonishing result was due not only to material limitations of the German war effort at the time, but largely also to the fact that the decision to attack the Soviet Union failed to give rise to any appropriate efforts in the armaments sector. At no time was a maximum effort even considered—an effort commensurate with the enemy's potential—because the German leadership assumed that available forces were sufficient to smash the Soviet military potential within a few weeks. It seems that this evaluation of the situation was largely responsible for the fact that plans for a complete utilization of the German and captured potential were executed only half-heartedly. Neverthe-

DIAGRAM I.III.3. The Material Equipment of the German Army in the East (incl. Army HQ Norway), 22 June 1941

Note: Data on equipment make allowance for captured material used.

Source: Müller-Hillebrand, *Heer*, ii. 157 ff.

less, Hitler must have gained the impression, from information given to him by the men responsible for munitions, that Germany's potential was being utilized to the limit and that a further intensification was not possible with existing resources. The hopeful post-Barbarossa programmes of the separate services, on the other hand, required additional manpower and raw materials, moreover on a scale that could evidently be satisfied only by the conquest of new 'living-space in the east'.

When on 22 June 1941 the Wehrmacht crossed the frontiers of the USSR for that purpose, the military leaders were convinced that, if not in the material sphere, then certainly in terms of operational skill they were able to bring to the task a superiority that would decide the war in their favour.

IV. The Military Concept of the War against the Soviet Union

1. LAND WARFARE

ERNST KLINK

ANY account of the military objectives, the Wehrmacht's plans, and the preparations for war against the Soviet Union is such a widely ramified undertaking that, within the present framework, clarity can only be achieved by limitation to the central, decisive, and more or less definable processes within the top leadership. Principal attention must go to the assessment of the military situation after the conclusion of the campaign in the west and the lessons derived from it by Hitler and the military command staffs for the further conduct of the war. This does not, of course, exclude earlier historical processes from being considered along with the vital factors in decision-making.

Central to these reflections is the interaction of the expectations and intentions of Hitler on the one hand and of the Wehrmacht High Command on the other. Of particular importance is the judgement of Colonel-General Franz Halder, the chief of the Army General Staff; by comparison, the commander-in-chief of the army, Field Marshal von Brauchitsch, played a distinctly lesser role in the operational field, as indeed had emerged earlier in the planning and execution of all the campaigns since 1939. The reconstruction and presentation of the decisions of Hitler and the Army High Command, to be attempted in the following section, proceed from the belief that these sources have to be understood, unambiguously, in their literal sense. As military orders and instructions had to be obeyed promptly—even against moral reluctance—and as a rule were so obeyed, they generally escape the kind of latitude of interpretation customary, for instance, in the case of political or diplomatic sources. This fundamental state of affairs, which determined military action and has therefore to be taken into methodological account, is in no way invalidated by the circumstance that, as will be shown in the course of the present study, certain military leaders, faced with Hitler's particular style of leadership, in some exceptional cases interpreted his orders rather elastically. Basic acceptance of the text and meaning of instructions, orders, and reports may also help to avoid anachronistic interpretations.¹ The controversial question

¹ Hans Buchheim (preface to *Anatomie des SS-Staates*) in 1965 made this demand of contemporary research: 'That is why in Germany, in our intellectual confrontation with National Socialism and its era, we need not emotions or moral reawakening, but sober work with intellect and reason.' His demand was based on the still valid critical observation that there was a growing tendency not to reflect too much on Hitler's dictatorship, since it was 'to be assessed negatively

of what weight should be attributed in the conduct of the war to evaluations of the military situation and decisions stemming from them on the one hand, and to the well-known political, economic, and ideological 'perspectives' on the other, is one to which this kind of study of the sources may offer new answers.

(a) *The Red Army in the Judgement of the Army High Command after September 1939*

The German-Soviet non-aggression treaty of 23 August 1939 with its secret supplementary protocols resulted, far beyond the partition of Poland, in a massive shift of political power-structures in eastern central Europe. The division of this territory into 'spheres of interest' surrendered the Baltic region as far as the northern frontier of Lithuania and Finland to seizure by the Red Army, while in south-eastern Europe Hitler had declared his lack of interest in the redrawing of Romania's frontiers—which meant the return of Bessarabia to the Soviet Union—provided this preserved peace and protected vital German economic interests.² For the German army leadership, more especially its chief of general staff, Artillery General Halder, the territorial 'delimitations of interests' envisaged in the secret supplementary protocols were to be judged primarily from the strategic point of view.³ The obvious disadvantages of a military presence of the Red Army and Navy in Latvia and Estonia were mitigated by the maintenance of German influence in Lithuania, i.e. the glacis of the East Prussian fortification system. To Halder the military victory over Poland meant, as a matter of course, that Germany could expect preferential treatment for her strategic interests when the frontiers would be drawn in the future. However, he had no influence on this matter and was only informed at second hand about the stipulations of the treaty.

The Red Army's entry into Poland on 17 September 1939 and the cession to it of the Lvov area dealt the first blow to Halder's expectations. Outraged, he described 20 September as a 'day of disgrace for German political leadership'.⁴ The surrender of Galicia meant not only the surrender of the oilfields

in every respect, and therefore to move from a historical-rational to a moral-emotional way of looking at things. The present study, which seeks to discover the essential aspects of our subject, endeavours to comply with Buchheim's demand.

² See sect. I.v.1 on Romania in the present volume, as well as sect. I.ii.2 at nn. 150ff. (Hoffmann).

³ The most comprehensive study of the period here under review—Hillgruber, *Strategie*—will be narrowed down in the present chapter to the military sector. An extension of the range of sources, on the other hand, at the same time provides new aspects which may compensate for the loss of an overall view. On the problems of the non-aggression treaty of 23 Aug. 1939—only touched upon here—see *Germany and the Second World War*, i. 696–7, ii. 75–6; Fabry, *Hitler-Stalin-Pakt*, goes furthest in examining the military aspects of the frontier delineation. For a summary see Myllyniemi, *Baltische Krise*. See also OKH/GenStdH/Frd Heere Ost, Lagebericht Baltische Staaten und Finnland [Situation report Baltic countries and Finland], 15 Oct. 1939, as well as Lagebericht Sowjetunion-Finnland [Situation report Soviet Union-Finland], Nos. 1–14 (1 Dec. 1939–25 Jan. 1940), BA-MA RH 19 III/380, and Nos. 15–22 (3 Feb. 1940–18 Mar. 1940), BA-MA RH 19 III/381; BA-MA H 12/135.

⁴ Halder, *Diaries*, 86 (20 Sept. 1939).

of Drogobych but also that of direct communications between the Silesian industrial area and the Romanian oil wells. Instead of the Polish army, it was now the Red Army which was standing at the flank of an area important to the German war effort. Although compensation by way of the 'Suwalki' corner represented a strategic improvement of the new frontier in the north-east, the 'frontier and friendship treaty' of 28 September 1939 ceded Lithuania, and hence important stretches of the Dvina and the Niemen, to the Soviet Union. Concentration of a force to invade Lithuania, still envisaged in Hitler's directive of 25 September, was revoked.⁵

The basic reason for that decision was the intention to initiate a military offensive in the west that same year and to safeguard for that purpose the Soviet Union's urgently needed economic assistance. A further consideration of Hitler's related to the presumed longer-term attitude of the Soviet leadership. At a conference with Brauchitsch and Halder on 27 September 1939 he emphasized that 'even treaties' did not represent 'a secure basis for an assessment' of future developments. 'Treaties' were overridden by 'state interest'. 'Eternally valid' were 'success, power' alone.⁶ That was why he was so anxious to convince a hesitant Army High Command of the need for a rapid settlement of the war in the west.⁷ In his memorandum to the Wehrmacht High Command chief of staff and to the three commanders-in-chief of the Wehrmacht services, dated 9 October, Hitler similarly declared that no treaty and no agreement could guarantee the permanent neutrality of the Soviet Union. The best insurance against Russian intervention was a clear display of German superiority or a swift demonstration of German strength.⁸ The stubborn struggle for the strategically valuable southern tip of Lithuania, the Mariampol area, which under the treaty of 28 September 1939 was to be open to German military intervention the moment the Red Army initiated 'special measures' in Lithuania, i.e. the establishment of bases, demonstrates the determination with which the generals on both sides were trying to maintain their positions. That agreement was held to be valid in law by the Soviet Union as late as the summer of 1940, for it paid over a sum of 7.5m. gold dollars in compensation for Germany's renunciation of it.⁹

On 20 October the army commander-in-chief within the area of the 'commander-in-chief East' ordered the establishment and consolidation of an outpost line of resistance capable of repulsing a possible enemy attack with the forces then available and of covering the deployment of reinforcements. To ensure rapid transportation of troops, the principal railway, road, and com-

⁵ Directive No. 4 of 25 Sept. 1939, point 4, and No. 5 of 30 Sept. 1939, point 3: *Hitler's Directives*, 8-10. ⁹ Fabry, *Hitler-Stalin-Pakt*, 158-9, 241; see also *DGFP* D viii, No. 200; *ibid.* ii, No. 319; and sect. I.m.6. at n. 354 (Müller).

munication lines were to be developed and protected. An instruction along these lines also went out on 26 October to the 'frontier sector North' in East Prussia (Defence District I).¹⁰ The drastic reduction in army formations, and in particular of construction units, which began shortly afterwards, set strict limits to such intentions. An additional major strain on all transport routes and accommodation facilities was caused by the repatriation of Germans from Soviet territory in line with the resettlement agreement.¹¹

These security measures were not merely standard military practice, but also reflected Hitler's mistrust of Stalin's political intentions with regard to the future course of the war. That mistrust was shared by the top generals and emerged also in the military arguments against Hitler's intention of going on the offensive in the west.¹² Altogether it may be assumed that Hitler's liaison with Stalin, that utterly surprising reconciliation of two regimes regarded as totally irreconcilable, met with scarcely any genuine approval among the nationally conservative generals or among the middle class sharing that attitude. The *rapprochement* had created the prerequisite of the aggressive war against Poland, but once this war was concluded efforts were being made to keep the 'sacrifices' made for that alliance as slight as possible. The initiation of offensive plans in the west meant that Germany's—as yet limited—dependence on Soviet good will was bound to assume immeasurable dimensions, the more so as the Wehrmacht's prospects of success were not being viewed with a great deal of confidence.

Colonel-General Ludwig Beck, Halder's predecessor in the post of chief of the Army General Staff, expressed these reflections in a number of memoranda after September 1939.¹³ Beck believed that the future actions of the Soviet Union, now it had been drawn into European affairs by Hitler, might give rise to serious, possibly even mortal, danger to Germany. About the middle of November 1939 he spoke of the German military success against Poland as being halved by the 'Russian colossus having been set into motion' westwards.¹⁴ The support received by the German war effort from the Soviet

¹⁰ BA-MA RH 2/v. 390. The transportation of reinforcements into and beyond the outpost line of resistance and the establishment of bridgeheads were to be ensured in the event of defence becoming necessary. The OKH guideline was based on Hitler's directive of 30 Sept. 1939: see *Hitler's Directives*, No. 5. Notes compiled by Keitel on a conference with Hitler on 17 Oct. 1939 sum up German military interests in Poland under point 6: 'to ensure that the territory, in the role of a forward glacis, is of military importance to us and can be utilized for deployment.' In the present context this measure was unequivocally concerned with security, and not with deployment-planning against the Soviet Union. Indeed the latter would scarcely be plausible at a moment when preparations for an offensive in the west were still in dispute. Text in Wagner, *Generalquartiermeister*, 145.

¹¹ On this see, *Diktierte Option*, ed. Loeber.

¹² Leeb's and Rundstedt's memoranda in Jacobsen, *Vorgeschichte*, 83, 121. On the struggle over the preparations of the campaign in the west see *Germany and the Second World War*, II, 232 ff.

¹³ Beck's memoranda in Groscurth, *Tagebücher*, annexe II, Nos. 64–74, pp. 474 ff. Of interest, with a bearing on Halder's degree of confidence *vis-à-vis* Toppelskirch and Beck, is Maj.-Gen. von Toppelskirch's (OQu IV) comment on No. 64.

¹⁴ Beck's memorandum of 20 Nov. 1939, *ibid.* 487.

Union, he argued, would never be sufficient for a protracted war; it was questionable, and it was leading to a partnership in which Germany was the donor and the Soviet Union the recipient.

These observations, along with the fundamental attitude to the 'Russian question for Germany', were in line with Halder's views. Beck believed that Soviet objectives lay in the Baltic region and in the Dardanelles.¹⁵ Thus the old Balkan problem was reopened once more. By occupying former territories of the Austro-Hungarian monarchy, the Soviet Union had gained access to Romania and substantially improved its strategic position in the Balkans compared with 1914. The Soviet Union would 'always pursue only Russian objectives. It was now able at any time to exert strong pressure on 'our eastern front'.

The same question agitated the general staff of the army, especially as the strengthening of the Soviet position in its newly gained territories was proceeding simultaneously with an almost complete withdrawal of combat-ready German forces from the eastern front and with preparations for a campaign in the west.

On 28 November 1939 Halder instructed Major-General Karl Adolf Hollidt, the chief of staff of the commander-in-chief East ('Oberost'), to prepare a study of 'Security in the east against Russia while the war in the west continues'. At the same time he demanded from the Department for Foreign Armies East a study of possible developments of Germany's relations with the Soviet Union.¹⁶ The conclusion of this study was that the disposition of the Soviet formations in Poland was compatible both with the idea of defence and of an operation into Germany. It pointed out that the Soviet Union must be assumed to have 150 fully effective rifle divisions, of which 100 were active and 50 were reserve divisions. Raising another 50 divisions was possible without any personnel problems. As, however, these would have a lower degree of efficiency because of a shortage of weapons, calculations were, for the time being, based on 150 divisions. Of these, a total of 70 were regarded as tied down elsewhere:¹⁷ 10 against Finland, 18 against the Baltic States, 6 against Romania, 30 rifle divisions on the Transcaucasian frontier, in Central Asia, and in the Far East, and a further 6 divisions in the interior of the Soviet

¹⁵ Beck's memorandum of autumn 1939, *ibid.* 490 ff. Beck's military and political foresight is no less astonishing than his apparently total severance from the information and thinking of the army general staff after his departure from office.

¹⁶ Studie Oberost, 11 Jan. 1940; Studie Fremde Heere Ost, Dec. 1939; both in excerpt in BA-MA RH 2/v. 390. At the same time the Abteilung Frd Heere Ost (Dept. Foreign Armies East) prepared a 'Werturteil über die Rote Armee nach den Berichten über den Einmarsch in Polen, im Baltikum und in Finnland' [Assessment of the Red Army's performance according to reports on its invasion of Poland, the Baltic, and Finland], which was submitted on 19 Dec. 1939: BA-MA H 3/1726. Its basic tenor reflected the impression gained from captured Polish documents; excerpts in BA-MA H 3/675.

¹⁷ It was on the basis of this calculation that Brauchitsch, in his report to Hitler on 21 July 1940, spoke of '50-75 good divisions' in the Red Army: see sect. I.V.1(b) at n. 67. Besymenski, *Sonderakcie 'Barbarossa'* (1968), 248, gives a figure of 4.2m. Red Army men in the field as early as 1939.

Union. It was assumed that the operational objective of an attack on Germany would initially be western Poland and eastern Germany, but such an attack was described as probable only in the event of the German army having been smashed on other fronts. A further prerequisite of such an attack, it was thought, was the clarification of the situation *vis-à-vis* Japan and a consolidation of conditions within the Soviet Union, especially in the border regions and in the Baltic States. Moreover, the military development of an operational basis in Poland would have to be completed first; this required primarily an improvement in rail and road conditions. Finally, it was also to be expected that the 'Red leadership' included in its considerations the question of how far Germany's 'home front' might be weakened by Communist uprisings.

Hollidt's study proceeded from the assumption that the objective of a Soviet attack would be the destruction of Germany's military instruments of power and her economic production potential, the restoration of the old frontier in the Baltic region, domination of the Baltic Sea, and the revival of pan-Slavism in the Balkans, Czechoslovakia, and Poland. A military attack by the Red Army would seek to gain the San-Vistula-Narev line as quickly as possible, in order to thrust deep into German territory: along the lower Vistula, to the Upper Silesian industrial area, and to the Odra line above Breslau (now Wrocław). The study finally concluded that the Red Army, because of its inadequate operational training, would prefer a simple operation, relying on massive superiority, with two groups deployed in the two directions of Warsaw-East Prussia and the Sandak-Sandomierz line. However, both military studies assumed that an attack by the Red Army was not impending.

The conclusion of the Soviet-Finnish war on 12 March 1940 and the resulting Soviet demands on the Baltic States to secure the cession of military bases induced the Army High Command to assess the situation anew. At the same time the Amt Ausland/Abwehr (Foreign Intelligence Department) produced a study on possible further developments in the Near East. Our main concern here is the evaluation by the Army High Command, whose principal interest continued to be focused on the growing strength of the Red Army. The situation report of the Department for Foreign Armies East, dated 29 April 1940, pointed out that, although the troop movements did not reveal any clear intentions, the Soviet Union was nevertheless taking military measures to support its policy in the Near East and in south-eastern Europe. 'Whether or not Russia undertakes an offensive operation against Romania in the foreseeable future therefore depends solely on political conditions. Militarify it is capable of doing so.'¹⁸

After the opening of the campaign in the west a new phase of Soviet military 'glacis security' measures began. First the units in Lithuania were reinforced;

¹⁸ Studie OKW/WFA Abt. L-Aus/Abw No. 494/40, 'Die militärpolitische Lage im Nahen Orient' [The military-political situation in the Near East], 21 Mar. 1940, BA-MA RW 4/v. 35 (copy); Lagebericht OKH/Frd Heere Ost: BA-MA H 3/1726.

on 15 June strategic locations were occupied. The governments of the three Baltic States were invited, in the form of ultimatums on 15 and 16 June, to form pro-Soviet governments and to allow the Red Army access to the bases 'in sufficient strength'. This marked the beginning of the end of their sovereignty. The process was concluded at the beginning of August when they were declared to be Soviet republics.

The ultimatum to Romania, demanding the cession of Bessarabia and Bukovina, marked the end of that phase of the Soviet Union's political and military safeguarding of its western forefield.

These developments triggered new reflections in the Army General Staff on what forces from the western army could most speedily be transferred to the east. In addition, a reliable assessment of the Red Army acquired overall importance. Given the continuation of the war against Britain, the question which now arose—beyond the above-mentioned doubts on the viability of German agreements with the Soviet Union—was that of a possible enemy coalition. These reflections concerned, above all, the United States and the Soviet Union.

All intelligence on military conditions in the Soviet Union was collected and evaluated by the Oberquartiermeister IV in the Army General Staff (Lieutenant-General Kurt von Tippelskirch), who was informed on the development of the military situation by Abteilung Ausland/Abwehr (foreign intelligence) in the Wehrmacht High Command as well as by the attachés.¹⁹ Captured Polish army documents proved a valuable source in this respect.²⁰ Information on foreign-policy developments came from the foreign ministry's representative (Hasso von Eitzdorf) to the commander-in-chief of the army.²¹ Decisive importance for opinion-forming within the Army General Staff on the Soviet Union and the Red Army, especially in Halder's case, attached to the reports of the military attaché in Moscow, General Köstring. Köstring—who had been reporting on the Soviet Union continually since the autumn of 1935, had a good command of Russian, and, in spite of all obstacles, basically trusted his own judgement—believed that an evolutionary process was under way in the Soviet Union which made an aggressive policy unlikely. He emphasized this view of the foreseeable future even more strongly after having been briefed on

¹⁹ In addition to their reports through the normal diplomatic channels, the military attachés also reported their observations and judgements 'semi-officially' direct to OQu IV, who, according to their importance, passed them on to Halder. These private letters are very much instances of personal opinions and no substitute for the reports proper. This needs to be borne in mind especially with regard to Köstring's letters published by Teske. His reports on the Red Army are not extant in their original text, but in evaluations by Abteilung Frd Heere Ost and in H. von Eitzdorf, Handakten (PA). Critically on Köstring: Besymenski, *Sonderakte 'Barbarossa'* (1968), 243, and Hillgruber, *Strategie*, 228–9, 'Rußland-Bild', 296. The following quotations of Köstring are from Teske's edition, without individual references. Reports by the intelligence agencies: BA-MA H 3/673.

²⁰ Polish assessment of the Red Army: BA-MA H 3/675.

²¹ This group of sources also includes Weizsäcker's reports to a small circle in OKH; these are referred to by Halder (*Diaries*) on 26 and 30 June 1940.

Germany's intentions *vis-à-vis* the Soviet Union by the chief of the general staff on 3 September 1940.²² Thus in October 1940 he described the trends to be observed in all fields as a 'peaceful revolution' linking up with 'earlier developments'. 'The political system will not undergo any change, but may perhaps receive minor improvements.'²³ And at the time of Molotov's visit to Berlin he remarked: 'I keep repeating: the great Soviet Union has no use for war, now less than ever, because the army and the country are undergoing a restructuring and reconstruction' of which 'the results will not come to fruition for some years'. He added: 'But also, time and again, my old sermon: come out of the war strong! That is the only way for an as yet unorganized Europe to set limits to the future plans of an expansionist drive that calls itself "world revolution", "liberation from the capitalist yoke", "protection against capitalist encirclement", or something similar.'²⁴ If one tries to reduce Köstring's observations to a common denominator, in so far as they are reflected in his military-political reports to Tippelskirch, one is left with the impression that the military attaché in Moscow believed a war against the Soviet Union to be pointless, as all economic and even political concessions could be obtained from Stalin by other means so long as the German armed forces were undefeated and strong.

Halder, however, did not accept this assessment of Soviet interests with its conclusions. His own judgement of the situation was different. What to Köstring seemed a tendency towards a more bourgeois Soviet Union and a renunciation of its claim to world revolution in favour of domestic development was seen by the chief of the general staff as a symptom of the Red Army's enhanced fighting strength.

Reports on the Red Army's performance in Poland, Finland, and Bessarabia suggested a gigantic war-machine which was about to remedy any shortcomings revealed during those operations.²⁵ Its greatest weakness was thought to be the lack of a trained middle-ranking and senior leader class, which had been lost as a result of the purges of 1937-8 and had not yet been replaced. Its armament, on the other hand, was judged to be modern, even though outdated weapons had not yet been replaced in every unit.

It was impossible to gain any clear idea of the intention behind the troop movements to the frontier areas. The Red Army, it was pointed out, should not be underestimated; emphasis on and exaggeration of its mistakes were hostile propaganda by the Western powers. Neither should the lessons learnt from its advances in Poland and Romania be overestimated; after all, the Red Army had not been seriously challenged there. The Red Army's poor outward

Werturteil über die Rote Armee* [Assessment of performance of the Red Army], PA, Handakten Etzdorf, No. 26.

appearance was weighed up against its marching performance and the functioning of its deployment. Köstring emphasized that the 'generally tough, undemanding, willing, and brave soldier' was no longer the 'good moujik' familiar from the First World War; there had been a cultural improvement and a rise in intelligence. The quality of equipment, however, was not up to the standard of a Western army.¹ For the time being the Red Army was not capable of the large-scale operations of a war of movement, and at a numerical ratio of 1 to 2 or 3 it was 'not superior to us'.

The experience of the Finnish Winter War seemed to be of more topical importance: there the Red Army—in contrast to its advance into eastern Poland, the Romanian territories, and the Baltic countries—had demonstrated its battle-worthiness. Intelligence on this was being evaluated by the Department for Foreign Armies East of the Army General Staff.²⁶ This then was the overall impression:

- Lack of initiative and stereotyped operation resulted in losses at the beginning of the war.
- Accumulation of large numbers of troops on the Karelian isthmus led to supply difficulties.
- In an attempt to achieve success primarily by mass employment, the Red Army failed to assess correctly the effect and applicability of the different branches; in particular it attached excessive expectations to the performance of armour.
- There was a lack of co-operation between the various branches, especially in artillery support for advancing infantry and in artillery barrages.
- Attacks in deep waves resulted in heavy losses which only failed to result in reverses owing to the numerical inferiority of the Finns and the ample supply of new attacking divisions.

It was found that the course of that war had indicated that the Red Army was not fully equal to modern requirements, but had recognized its shortcomings and drawn conclusions from the many lessons it had learnt. These included above all the restoration of officers' undivided power of command, new directives for the training of senior leaders, and intensification of troop-training.

Special attention was stimulated by Köstring's reports on the evaluation of the lessons of the Finno-Soviet war in the area of Red Army leadership and training. Criticism of the activity of the political commissars on the part of the political directorate was the first signal, in January 1940, that the command structure would be transformed in favour of the sole command authority of the military commanders.²⁷

The introduction of generals' ranks was regarded as a sign of the tightening of command and as an unambiguous shift of responsibility to the superior in the chain of command. The exercises held under the supervision of People's Commissar Marshal Timoshenko in August 1940 on the basis of experience of the Winter War and the regulations subsequently issued were given a good deal of attention, more especially the marshal's call for greater discipline and intensified manoeuvres under warlike conditions. The repeal, by a decree of 5 August 1940, of the decree of August 1937 on the reintroduction of military commissars in the Red Army and Navy and the adoption of new disciplinary penal regulations for the Red Army on 12 October 1940 were interpreted as evidence of a profound reshaping of the forces. In the opinion of the German officers, the Red Army seemed to be making a huge effort to transform itself into a first-rate modern force, equipped with up-to-date military technology. Above all, a superior's duty to implement an order by the use of Draconian full powers aroused attention. Under that regulation a superior officer could not be called to account if, 'for enforcing obedience and the maintenance of discipline and order', he resorted to his weapon.

All measures for the strengthening of the internal structure of the Red Army and the advancement of its state of training were summed up in Timoshenko's order No. 30, dated 21 January 1941, on 'combat and political training in the training year 1941'.²⁸ Timoshenko demanded that officers and men should thenceforward be trained solely in accordance with the requirements of war and that substantial results were to be achieved by the autumn of 1941. He made it the duty of all military commanders, down to platoon leader, 'fully to identify' with that order.

Assuming the maintenance of the rate and scope of the development and modernization of the Red Army, of its training, and of the tightening of its command structure, it could well reach a state within the foreseeable future when its offensive strength and the determination of its commanders made it capable of any military action. To bridge that period in peace and without conflict had to be, in the German judgement, the most important aspect of Stalin's policy. At the same time, however, the question arose whether that process of irresistible strengthening could still be interpreted as purely defensive.

man intelligence sources and their value. Of interest here is intelligence in the Soviet Union, Finland, Romania, and Hungary. Within the limit of their reach, the Soviet Union was under surveillance by two permanent listening-posts (Königsberg—now Kaliningrad—and Warsaw), as well as by two listening companies (Lyck and Lancut), which transmitted their reports direct to Amt Ausland/Abwehr. Additional intelligence was provided by aerial surveillance of the frontier and by the frontier surveillance service. See BA-MA, 18. Armee, 17562/1, diary entry of 22 July 1940; also BA-MA H 3/675. On findings concerning the Red Army's air forces see the section by Boog, I.iv.2b of the present volume; BA-MA RH 19 I/119, 123, 125 (situation reports of Abt. Frd Heere Ost). Halder, *Diaries*, 549 (14 Aug. 1940), viewed the changed position of the commissars as an improvement of the Red Army's structure. On this see sect. I.ii.2 at n. 115 (Hoffmann).

²⁸ Given in translation in BA-MA RH 19 I/123; *ibid.* for Disziplinarstrafordnung [disciplinary penal regulations], 12 Oct. 1940.

Considerable attention was aroused also by efforts towards a general enhancement of the Soviet population's willingness to fight. Appeals for 'military discipline and bearing', introduction of an eight-hour working day and a six-day working week, a ban on the free movement of labour, introduction of compulsory vocational education and four years' obligatory labour service for juveniles, combined with an arousal of national sentiment—all these suggested a tightening of the performance potential of the Soviet Union. This tremendous transformation seemed, in the field of foreign policy, to demand maintenance of neutrality and avoidance of conflict with a powerful adversary. Domestically this process, described as an 'evolutionary transformation of all-embracing scale', required a number of years, if not decades, before it would come to fruition.

The information gathered on the Soviet Union in the course of 1940 was presented in an official publication, 'The wartime armed forces of the Union of Socialist Soviet Republics', issued on 15 January 1941.²⁹ The influence of the reports of the military attaché in Moscow is clearly perceptible, as in the statement that 'Communism of doctrinaire type' had been abandoned 'in favour of an authoritarian despotically guided class state'. The stages of reorientation of the Red Army's command structure and organization on the basis of the lessons of the Finno-Soviet war were traced. On the subject of the armaments industry it was stated that it was entirely modern in its equipment and capable of producing serviceable war material and, in the event of war, laying in certain amounts of stockpiles. Adequate supplies could be expected for the first few months of the war; after that bottlenecks would appear due to a shortage of skilled workers and machine-tools. The relocation of the main enterprises of the armaments industry to the regions east of the Urals had been fully realized since 1928. The army of the Soviet Union was described as follows.³⁰ Subordinated to the people's commissariat for defence were 16 military districts and 2 military commissariats. The structure of the army was unclear; all that was known was that at least eleven armies had been formed in the west. It was to be assumed that the senior staffs for the army groups ('fronts'), armies, and operational groups were provided from the commands of the military districts and armies. On paper 11–12 million men were available for the wartime army (as a basis for mobilization), but there was doubt whether that figure could be reached in view of the resulting labour shortages and the shortage of commanders and material.

The total strength of the Red Army was assumed (in January 1941) to be as follows:

²⁹ OKH/GenStdH/OQu IV, Abt. Frd Heere Ost (II), No. 100/41, pts. 1 and 2. The figures in Besymenski, *Sonderakte 'Barbarossa'* (1968), 248, with which researchers still operate, are not reproduced any more correctly than some sections of the text. This results in regrettable misjudgements by users. The official publication was issued in 2,000 copies and may be seen in BA-MA.

³⁰ See also sect. I.11.2 at nn. 135 ff. (Hoffmann).

- at least 20 armies
- 20 rifle corps
- 150 rifle divisions
- 9 cavalry corps
- 32-6 cavalry divisions
- 6 mechanized corps
- at least 36 motorized-mechanized brigades.

The number of rifle divisions located in Europe was assumed to be at least 121 at the end of 1940. There was no clear idea, however, on how these forces were disposed.

In all the Department for Foreign Armies East reckoned, in the event of mobilization, on

- 107 rifle divisions of the first wave
- 77 rifle divisions of the second wave
- 25 rifle divisions of the third wave

i.e. altogether 209 rifle divisions.

An increase in the approximately 32 cavalry divisions or the 2 independent brigades (which in the event of war could be brought up to division strength) was not expected.

The number of armoured fighting vehicle regiments among the army troops, or the number of special artillery units, was not known. At least 40 artillery regiments were thought to be at the disposal of the supreme army command. In addition, allowance had to be made for an unspecified number of very heavy batteries, a few independent artillery regiments, 'fortified zones', anti-aircraft units, 20-30 battalions of sappers, 25 railway regiments, motor-vehicle transport battalions, gas-warfare battalions, 9 airship detachments, 1 independent airship group, as well as searchlight battalions.

After the raising of the wartime army, assuming roughly 200 rifle divisions and corresponding numbers of other units, the following manpower strength was assumed:

army in the field approximately	4.0m.
rearward services approximately	0.6m.
home defence units approximately	1.6m.
TOTAL	6.2m.

Added to these were the frontier guard units, which came under the people's commissar of the interior. In the event of war the duty of the frontier guard corps was to provide cover for the army's deployment; after that it was to be integrated into the army in the field.

The Red Army's armour was regarded as an élite force. Nevertheless, it was believed that, because of inadequate combat training and training in co-operation with other branches, it was incapable of conducting a modern war of movement with far-ranging operations by compact formations. Technically,

too, the tanks that were known seemed outdated, for the most part copies or developments of foreign models.

The observed troop movements were not interpreted as a deployment for an offensive but attributed to the difficulties of moving major formations under wartime conditions. Of the assumed large formations, 15 divisions, according to the calculations of the Department for Foreign Armies East, were tied down in Finland or engaged in the protection of Leningrad, and 7 were in the Caucasus; 29 rifle divisions, 7 cavalry divisions, and 5 motorized and mechanized brigades were in the Far East and Central Asia. It was expected that, if necessary, 4 divisions could be brought up from Siberia. Added to these were the reserves of the supreme command, among which the 8 artillery divisions of 4 regiments each deserved attention, as well as the corps artillery.

As for Soviet operational intentions, it was assumed that the bulk of the forces were deploying either north or south of the Pripet marshes in order to halt any German attack by striking at its flanks. However, whether the Red Army 'consider[ed] itself capable of such an operation in view of its commanders and training, and also in terms of transport facilities, seem[ed] doubtful'.

The Department for Foreign Armies East concluded that the strength of the Red Army rested upon its bulk and the quantity of its weapons, and upon the frugality, toughness, and bravery of its individual soldiers. That was why special achievements could be expected of the Red Army in defence. 'The ability to hold out, even in defeat and under heavy pressure, is particularly in line with the Russian character.'

These assumptions and a brief account of Soviet combat instructions for attack, defence, and ambush warfare were laid down in a 'Leaflet on the peculiarity of Russian warfare', completed on 25 January 1941.³¹ This also made the point that the Soviet soldier, in contrast to his operations in the Finnish Winter War, when he had fought with a lack of enthusiasm, would be inspired by the idea of defending his proletarian fatherland. In conclusion it stated: 'All in all the Russian is better in defence than in attack. In defence he is tough and gallant, and usually allows himself to be killed at the spot where his leader has placed him.'

An attempt at presenting a comprehensive idea of the picture the Wehrmacht leadership and Army High Command had formed of the strength of the Red Army and the abilities of its leaders cannot confine itself to the military information here reproduced. The recipients of that information viewed the Soviet Union not merely as a state with whose forces a clash of arms had to be considered for reasons of rivalry or the assertion of territorial claims; for them Lenin's and Stalin's state was an exceedingly multilayered and incalculable structure. Memories of the effect of political agitation organized from Moscow during the years following the First World War were just as

³¹ OKH/GenStdH/OQu IV, *Frd Heere Ost*, *Merkblätter*, BA-MA library.

lively as the impression left behind by the Red Brigades in the Spanish civil war. Communism as a threat to the bourgeois national state was a natural constituent also of the image of the enemy in the minds of the generals. Another part of it was the traditional image of the giant empire in the east, whose encroachment on Germany had been prevented by the battle of Tannenberg in 1914. The generation which made the military decisions in 1940 based its picture of Russia on experiences, reports, and assumptions the value of which as objective information was only partially verifiable. The 'Bolsheviks' were seen as the authors of the collapse in 1918, they stood for the demoralization of the army and the home front, they were ultimately held responsible for the upheavals in postwar Germany. Quite apart from political propaganda, which until August 1939 had ceaselessly proclaimed the peril of Bolshevism, and more particularly of 'Jewish Bolshevism', military propaganda too—for instance in the 'Accounts of the postwar operations of German troops and Free Corps', published in 1936 by the Research Institute for War and Army History—had helped to create the image of a politically indoctrinated fanatical population of the Soviet Union.³²

Yet another component of the traditional image of Russia was the expectation of the internal collapse of the giant empire, from which the Wehrmacht High Command was hoping to profit.³³ However, in Moscow on 10 October 1940 Embassy Counsellor von Walther expressly opposed any inclusion of rebellions by national, ethnic, or religious groups as a calculable positive factor in military plans. Having learnt of such plans in the Wehrmacht High Command—presumably through Embassy Counsellor Hans Heinrich Herwarth von Bittenfeld, a cousin of Lieutenant-Colonel Bernhard von Loßberg on the Wehrmacht operations staff—he approached the foreign ministry's representative in the Army High Command, Hasso von Etzdorf, and uttered an explicit warning:³⁴ in the event of a defensive war the Soviet government would have the whole population behind it; there would be no break-up into nationalities, and uprisings should not be expected. In the event of a German attack there would undoubtedly be severe setbacks, but not a collapse of the USSR. Like Köstring, Walther also believed that the Soviet Union would not risk an attack and would seek its objectives in areas which did not infringe German interests. He further pointed out that the western territories of the Soviet Union would merely be a burden to the German conquerors, seeing that the

³² On the problem of the long-term effects of the experiences of the German eastern army after the armistice of Brest-Litovsk see *Rückführung des Ostheeres*, 5–6. There the cause of the disintegration is given—along with the condition of the troops—as 'Bolshevik propaganda', whose principal exponents were the Jews. See also *Der Weltkrieg 1914–1918*, xiii, 387, 397; on this also Frantz, 'Rückführung des deutschen Besatzungsheeres'; Fischer, *Deutsche Truppen und Entente-Intervention*, also discusses the actual role of soldiers' councils and their falsified presentation. On the judgement of the German officer corps on Russian warfare see *Der Weltkrieg 1914–1918*, ii, 45, 52, 314, 317, but see also pp. 324 ff.

³³ See the 'Loßberg-Studie', Besymenski, *Sonderakte 'Barbarossa'* (1968), 311.

³⁴ Herwarth, *Against Two Evils*, 193; Walther's letter to Etzdorf: Gibbons, 'Opposition'.

entire agriculture was mechanized and that the necessary fuel could be obtained only from Soviet-controlled areas. This meant that the expected relief from the 'Ukrainian bread-basket' would not materialize. After the war Köstring repeatedly emphasized that he had warned Halder against war with the Soviet Union. The majority of the Moscow embassy staff believed that Stalin was willing to make sacrifices in order to preserve peace, and that Germany could not expect to derive any advantage from a war.³⁵ In consequence they saw no point in a war in 1941 and—in Köstring's case this is a matter of record—regarded the Soviet Union, which they believed was on the way to becoming a 'national state' and was increasingly deviating from the principles of the Communist International, as a future partner, at least as long as the Wehrmacht was undefeated and strong. This implied a successful and definitive conclusion of hostilities against Britain.

Despite the very incomplete information on the military potential and combat strength of the Soviet Union, the Army High Command believed that it had grasped the essential elements of the 'gigantic war-machine' of the Red Army. In the balance of its strengths and weaknesses, there appeared to be a preponderance of those problems which could be solved only in the long term—such as the lack of a competent senior officer corps, backwardness in troop training in line with the requirements of a modern war of movement, and insufficient modern war material for *all* units.

In the summer of 1940 both Hitler and the military high commands proceeded from the assumption that a direct threat to Reich territory need not be expected from the Red Army. Considerable misgivings, however, persisted with regard to tranquillity in the Balkans. All measures taken, especially those for the training of leaders at all levels, were seen as endeavours to turn the Red Army into a highly modern fighting force. Quality was now being added to sheer bulk. At the end of that development there could well stand an army capable of any attack, and certainly able to lend support from its forward positions to any far-reaching demands of the political leadership. Certainly, in the event of dissonance in the political arrangements between Hitler and Stalin, as was indeed the case on the occasion of Molotov's visit to Berlin in November 1940, the Red Army was a fighting force to be taken seriously.

During the second phase of the campaign in the west Halder had reason to feel uneasy in view of the parallel changes occurring along Germany's eastern frontier. He had to consider what new tasks might have to be assigned to the army there.

³⁵ *General Köstring*, ed. Teske, 249, 264, 304 ff. Köstring's deputy, Col. (Gen. Staff) Hans Krebs, as late as 9 Apr. 1941 reported that he could see no indications of an enhanced preparedness for war on the part of the Red Army and on 22 Apr. 1941 confirmed Soviet anxieties about confrontation with Germany after the rapid course of the Balkan campaign; see *General Köstring*, ed. Teske, 302 ff.

(b) Early Phases in Planning within the Army High Command up to July 1940

In expectation of an early end to hostilities in the west and of the conclusion of peace in the foreseeable future, both Hitler and the Army High Command were examining the question of what sections of the army should be kept on an operational footing in the event—still considered a possibility—of a continuation of the war against Britain. As a final stage a 'peacetime army' of approximately 70 divisions was envisaged, including roughly 30 motorized and armoured formations. As an intermediate solution, while the war continued, an army reduced to 120 divisions was decided on, with armour and motorized formations maintained at the planned strength.³⁶ The prerequisite of this far-reaching measure, with the war still continuing, was, according to the chief of the Army General Staff on 15 June 1940, 'that with the imminent final collapse of the enemy the task of the army has been discharged and inside enemy territory we shall be able to carry out undisturbed this restructuring as the basis of our peacetime organization'.³⁷ The main effort in the war against Britain was to be made by the Luftwaffe and the navy, whose material and personnel requirements, including armaments, now enjoyed priority. As part of the reduction of the existing approximately 155 major formations to the size of the transitional army, the Army High Command envisaged the transfer of 15 battle-worthy divisions to the east, to protect the frontier; simultaneously the formations of the commander-in-chief East were to be dissolved.³⁸

Although the transfer of divisions after the conclusion of a campaign was a perfectly normal procedure, it was then acquiring special importance in view of the major upheavals in the political scene in the Baltic countries and in Romania. On 18 June Halder discussed with Major (General Staff) Reinhard Gehlen (then still in the Home Fortification Department but shortly afterwards assigned to the 'Eastern Group' of the Army General Staff) what he expected of those divisions. Halder's diary notes make it perfectly clear that he envisaged an offensive type of defence; further strengthening of fortifications was therefore to be continued only on a reduced scale. This is what he noted:

Basic policy: Only the minimum! Everything we have should be used for offensive action

Defence:

- (a) A system of tank obstacles laid out along river lines.
- (b) Organization permitting instant employment of all forces.
- (c) First-class net of roads and railways to move these forces.

³⁶ Halder, *Diaries*, 429–30 (28 May 1940); 'Führer Conferences', 108–9 (Hitler on 4 June 1940); Müller-Hillebrand, *Heer*, ii, 62 ff. On the restructuring of the army see sect. I.IV.1(h) at n. 187.

³⁷ Halder's conference in Versailles on 28 June 1940, BA-MA RH 19 III/141; Halder, *Diaries*, 490 (3 July 1940).

³⁸ See Müller-Hillebrand, *Heer*, ii, 52 ff., and Map. I.IV.1. The 155 formations do not include the brigades or the units of the Waffen-SS which are listed in the army's order of battle.

- (d) Strategic placing of special defence groups which would canalize enemy invasion operationally (not tactically!).
- (e) Maximum use of minefields.³⁹

These cues cover the core of the instructions to Eighteenth Army HQ, which was to be in charge in the eastern part of Reich territory and in the occupied part of Poland. They constituted the guidelines for the work of the Eastern Group of the operations department during the following weeks. The consequences considered by Halder for the restructuring of the army in the event of its being engaged in the east will be referred to at a later stage.

To start with, Hitler on 23 June 1940 approved the envisaged reduction and restructuring of the army.⁴⁰ He expected Britain to give in; in case she continued to fight her only hope of success was to draw the United States or the Soviet Union into the war. The main concentration of the new disposition of forces, as envisaged by him and the commander-in-chief of the army, would clearly continue to be in the newly occupied western territories, where 67 divisions and mobile formations would be stationed, as against only 17 divisions in the east, and with the defence of Norway being reinforced by a total of 7 divisions. There was no mention of employing armoured formations with the army in the east, nor was there any mention of mobile troops in connection with Eighteenth Army HQ.

The transfer of Eighteenth Army was to be explained to the Soviet Union as representing a 'return to the homeland'.

The minutes of that conference show that it was concerned solely with matters relating to the securing of the conquered territories in the west. A thrust by armoured formations towards the Mediterranean was considered in the event that the armistice did not materialize as expected.

Halder made the restructuring and reorganization of the army the subject of a conference with the heads of the principal departments of the Army General Staff on 25 June. By then, following the conclusion of the armistice with France and his own previous briefing on the military situation beyond the eastern frontier, he added a new point of view to his considerations: the creation of 'Striking power in the East'.⁴¹ This appears to be the first development of his ideas on the operational channelling of enemy penetrations by 'special defence groups'.

Several motives can be identified for this fundamental change in the planning ideas of the chief of the Army General Staff. The first of these may well have been the rapidly changing strategic situation east of Germany's frontiers. The speed with which the Soviet leadership was transforming its territorial holdings in the Baltic States during the final phase of the war in the west, the

³⁹ Halder, *Diaries*, 473 (18 June 1940). On this section see Leach, *German Strategy*, 52 ff.

⁴⁰ Halder, *Diaries*, 48-1 (23 June 1940), and Loßberg's minute, OKW/Abt. Landesverteidigung No. 33110/40 Chfs., 24 June 1940, BA-MA RW 4/v. 581; Irving, *Hitler's War*, 137-8. For the organizational aspects see sect. I.iv.1(h).

⁴¹ Halder, *Diaries*, 484 (25 June 1940).

renewed Soviet claims to Bessarabia, and most of all the concentration of massive forces along the Romanian frontier, aroused increased attention in the Army High Command.⁴² Halder does not seem to have expected that the Soviet leadership, disregarding German interests and applying ultimatum-style pressure, would carry out the occupation of Bessarabia and, in addition, claim Bukovina. There was, in addition, a growing danger that the unstable situation in the Balkans, marked as it was by the Hungarian-Romanian conflict, the vacillation of Turkey, and the ambitions of Italy, might deteriorate dramatically. If the Soviet leadership were to favour one of the rival groupings, the situation in the Balkans might get out of hand.⁴³

Unlike Hitler, however, Halder at the end of June 1940 did not believe that the use of the army against Britain could be entirely ruled out. Britain remained the main enemy, and in order to overthrow that enemy—given the fact that all of Europe was under blockade—certain prerequisites would have to be created in the east. The following measures should therefore be seen from this overall strategic aspect.

Halder was doubtful, to say the least, whether Britain would 'do the reasonable thing' and put an end to the war. If Britain were to opt for continuing the war, then, Halder believed, the war would be protracted,⁴⁴ with all the consequences of a long war. Halder doubted whether the navy and the Luftwaffe were able to deliver the decisive blow to defeat Britain. The first discussions with representatives responsible for those services soon confirmed that profound differences existed both on the direction and on the operational and technical execution of a landing operation.⁴⁵ The view was certainly held in the Army High Command that a rapid decision in the war against Britain was not to be expected. So what could be done in the meantime? The possibility that at some time in the war the Soviet Union might have to be considered as an adversary, despite the conclusion of the treaty of 23 August 1939, had never been ruled out. The question now arose of what role the Soviet Union's attitude could play in Britain's decision to continue the struggle. In the background, moreover, there was the even more alarming threat of the enemy

⁴² See sect. I.IV.1 at n. 17. On this see Myllyniemi, *Baltische Krise*, 122 ff., also Tippelskirch, diary notes of 12, 19, 20, 24, and 25 June 1940, BA-MA RH 2/v. 1478. Köstring's reports are also relevant in a general way.

⁴³ Halder's connections with the Hungarian and Romanian general staffs testify to the fact that he was far from relying on the political skill of the foreign ministry, but used his own information in order to form a judgement. See Tippelskirch, diary note of 8 Apr. 1940 (approach by the chief of the Hungarian general staff), 28 Apr.–6 May 1940 (journey to Bucharest, Sofia, Belgrade), BA-MA RH 2/v. 1478. Intensive observation of all military developments in the Balkans was reflected in 'situation reports East', which in turn formed part of the materials presented by Tippelskirch; see BA-MA RH 19 I/119. Hitler too saw this region as the real potential danger-point and commented accordingly. See Stegemann, 'Hitlers Ziele', 97.

⁴⁴ Halder, *Diaries*, 480 (22 June 1940); see also Hillgruber, *Strategie*, 144 ff.

⁴⁵ On 'Sea Lion' see Klec, *Seelöwe*, and id., *Dokumente*. The controversies between the high commands of the Luftwaffe, the navy, and the army are reflected in the diaries of Halder (e.g. the entry for 30 July 1940) and of the Wehrmacht operations staff in OKW, and in the navy C.-in-C.'s reports to Hitler.

coalition of 1917 if the United States were left enough time to prepare her entry into the war and if Japan's passive attitude in the Pacific permitted America to focus its attention wholly on the European theatre. In that case a situation would arise which the Army High Command saw as the worst possible scenario: a war of attrition on several fronts, of unpredictable duration, but bound to lead to the same end result as in 1918.

Regardless of whether in this situation Hitler decided to concentrate all efforts against the British mother country or on the war in the Mediterranean area, Germany's dependence on Soviet good will and material deliveries would inevitably increase. That the Soviet Union was quick to seize any advantage as it arose had been proved by events of the past few months. Thus a sober assessment of the real power situation beyond Germany's eastern frontier was bound to lead the chief of the Army General Staff to record a disturbing deterioration of Germany's strategic position. Along with the threat to the irreplaceable ore deliveries from Sweden, a threat which increased with the strengthened position of the Soviet Baltic Fleet in the Gulf of Finland, the main source of worry was the Soviet military presence in the vicinity of the Romanian oilfields, which were indispensable to any motorized warfare by Germany. Calculations of the range of Soviet bombers, moreover, revealed that the Silesian armaments and industrial centres could at any time be exposed to attack from the air.⁴⁶

A further motivation for Halder's reflections and decisions stemmed from his understanding of the duties and responsibilities of the chief of the Army General Staff. On 24 June 1940 he instructed the OQu IV, Lieutenant-General von Tippelskirch, to direct the military attaché in Moscow to brief Marshal Voroshilov on the troop movements in the east of the Reich; these were not to be seen as a threat to the Soviet Union.⁴⁷ The fact that he saw this as coming within the duties of the chief of the general staff makes it a lot easier to understand the development which began on 25 June. After the war Halder himself repeatedly confirmed the autonomy of that preliminary decision by claiming for the 'military leader' the right to 'protect his country against enemy violation by moving to the attack himself, provided the politician can give him the chance of succeeding' while observing the principles and forms of international law.⁴⁸ In this context it should be recalled what role his predecessor Beck, then assisted by Manstein and Halder, had tried to achieve for a

⁴⁶ BA-MA RH 20-2/139 (notes of Lt.-Col. (Gen. Staff) Feyerabend, who served in the army general staff operations department from 21 July 1940). Halder's reflections are contained in Halder, *Diaries*, 490 (3 July 1940), and Heusinger and Henrici, *Feldzug in Rußland*, MGFA, T-6b, 1, 18 ff. For an assessment of the situation in the east and of the Red Army in July 1940 see the enemy-situation section of the deployment instruction for Eighteenth Army HQ, BA-MA, 18. Armeec, 17562/2.

⁴⁷ Tippelskirch, diary notes of 24 June 1940, BA-MA RH 2/v. 1478.

⁴⁸ Halder, *Hitler as War Lord*, 39; even more drastically in Bor, *Gespräche*, 195, 201, where the 'war lord' positively becomes the 'thought leader' of the politician. 'War lord' here refers to the all-embracing role of Ludendorff in the First World War.

'Reich chief of general staff' as a director of all Wehrmacht operations in the war.⁴⁹

Haider's diary frequently shows how close he seemed to be to that objective, especially at the height of the war in the west. He suffered what he regarded as the utter ignorance of Hitler and the Wehrmacht High Command on all operational issues in the secure knowledge that his own thinking and the training of his general-staff officers would lay the foundation of victory.⁵⁰ *Vis-à-vis* Colonel-General von Brauchitsch, the commander-in-chief of the army, he also clearly insisted on recognition of his extensively understood range of responsibilities and his post.⁵¹ From this point of view it is entirely in line with the logic of military thought that measures should be initiated in good time which would result in the occupation of foreign territories and the seizure of a 'forfeit' for the further development of the war.⁵²

The order for the transfer of Eighteenth Army HQ to the east of the Reich territory and for the formation of a new army from 15 infantry divisions to be likewise transferred there was issued on 26 June 1940.⁵³ The task of that army was defined on 29 June as securing the frontier against Lithuania and the Soviet Union. Preparations were to be made to halt any enemy forces on the San-Vistula line, if not before, and on the East Prussian frontier, so that a counter-attack could be mounted as soon as reinforcements had arrived. For that event the 'Group Guderian' with two corps commands (mot.), 4 armoured divisions, and 2 infantry divisions (mot.) was placed under the army command. These divisions were to be moved to the areas around Berlin and Breslau (now Wrocław). The existing duties of frontier security under 'Oberost' remained unchanged so long as his units were not dismissed. The change of name to 'Military commander in the Government-General' (MiG) inaugurated its transformation into a territorial quartermaster staff.

On 3 July Halder recorded in his diary the opening of talks with the chief of the operations department, Colonel Hans von Greiffenberg. Both men proceeded from the belief that a blow against the Soviet Union would mean the

⁴⁹ Müller, *Beck*, 103 ff., 133-4; *Keitel*, ed. Görlitz, 123 ff. (memoranda).

⁵⁰ Typical are the following entries in 1940: Halder, *Diaries*, 414-15 (22 May), 424 (25 May), 428-9 (28 May), 431-2 (30 May), 443-4 (6 June), and 449-50 (8 June). Some of his criticism is aimed at the army C.-in-C. and at the C.-in-C.s of the army groups; essentially, however, it is clearly directed at Hitler and the Wehrmacht High Command.

⁵¹ Halder, *Diaries*, 95 (1 Oct. 1939); *KTB OKW* i. 135-6 more outspokenly still in Schall-Riaucourt, *Aufstand*, 127—otherwise this work should be treated with caution with regard to sources.

⁵² Heusinger and Henrici, *Feldzug in Rußland*, MGFA, T-6b, 41-2, confirm the independent character of Haider's reflections and thus also the thesis that his way of thinking was essentially presented to Hitler on 21 July 1940: 'It seems that Hitler learnt of these reflections on 21 July 1940, when Halder in a report spoke of the uncertain attitude of the Soviet Union.' The territories earmarked by Halder for conquest 'could prove very useful as forfeits in connection with the intention to achieve an early peace after the scoring of successes in the east'.

⁵³ OKH/GenStdH/OpAbt No. 375/40, 26 June 1940 (order for the regrouping of the army), and 'Instruction to Eighteenth Army HQ', 29 June 1940, BA-MA, 18. Armee, 17562/2; the latter document is reproduced in *Fall Barbarossa*, No. 64.

end of Britain's hopes of successfully continuing the war.⁵⁴ Further ideas emerged on 4 July in an oral briefing of the commander of Eighteenth Army, Artillery General Georg von Küchler, and his chief of staff, Major-General Erich Marcks.⁵⁵ Halder pointed to the Soviet troop concentrations in the area east of Lvov and south of the Lithuanian frontier. There was no 'political reason' for any hurry. The army HQ was instructed to work out a proposal for the conduct of operations. This was submitted on 9 July and, following examination and approval by Halder, became part of the 'Deployment Instruction for Eighteenth Army', dated 22 July 1940 and signed by von Küchler.⁵⁶ The instruction was based on the idea that, in the event of a conflict with Russia, substantial German forces would be employed in the east; until they arrived there Eighteenth Army HQ would need to secure the eastern frontier. In organizing defence on the upper San and in East Prussia the bulk of the forces was to be disposed in such a way that Soviet preparations for attack could be broken up by a German attack. For that purpose the divisions of the military commander in the Government-General and of 'Group Guderian' would be available in addition to the divisions of the army. Two attacking forces were to be formed: one to strike in a south-easterly direction (Lvov-Tarnopol) and the other in a north-easterly direction (Bialystok). All plans and measures of the Army High Command were designed to create the prerequisites for offensive action. This applied not only to the sphere of operational planning, to the training of the new formations—which was anyway proceeding according to the directives for the restructuring of the army—or to the accelerated bringing up of the troops, but above all to the building and improvement of roads, troops' quarters, and communication links. Accordingly, on 13 July Marcks declined to take over the defensive construction work of 'Oberost' on the grounds that the army HQ intended to solve its task offensively.

In the area of construction, above all in the provision of militarily useful traffic routes and quarters, difficulties arose immediately on account of the ill-defined command structure. Outside operational areas it was normally a military commander or the commander of the reserve army who would issue directives and orders on behalf of the army commander-in-chief. But now—under 'peacetime conditions' as it were—an army HQ was acting in the Government-General and in Military District I (East Prussia) as a command staff, claiming the status of a field command authority and demanding the performance of services.

Halder had first addressed this problem as early as 4 July, but was unable to

⁵⁴ Halder, *Diaries*, 490–1 (3 July 1940).

⁵⁵ *Ibid.* 492 (4 July 1940); BA-MA, 18. Armee, 17562/2 (note by Marcks).

⁵⁶ BA-MA, 18. Armee, 17562/2. Its preparation in the general staff was in the hands of Feyerabend (see above, n. 46). He had to gather information on the Soviet Union, calculate the range of its air forces, and assess the presumable attitudes of Finland and Romania, as a basis both for map exercises and for deployment instructions for Eighteenth Army: notes by Feyerabend, BA-MA RH 20-2/139.

offer any solution in terms of chain of command, as he was unable to refer to a directive by Hitler. And without such a directive neither the Military District commander nor the civilian authority could be made to accept instructions from an army HQ. A formal change was brought about only when, after a report by the army commander-in-chief and following new directives from Hitler, dated 31 July 1940, for preparation for war against the Soviet Union, the Wehrmacht High Command on 7 August issued a quasi-ministerial instruction—the guidelines ‘on build-up East’—addressed principally to the civilian authorities. This was not, therefore, a fundamental war-preparation measure by the Wehrmacht High Command, but rather a ruling in the administrative sense.⁵⁷ However, the difference between the Army High Command directive of 29 June and the ‘deployment instruction’ of 22 July is significant for the way Halder’s thinking developed after 18 June. Whereas the earlier document envisaged only the repulse of a Soviet attack with subsequent German counter-attack, the ruling now was that a German attack was to be mounted as soon as offensive intentions were observed on the enemy side. Both documents provided for the moving up of reinforcements: the earlier version after the opening of the enemy attack, the later version in the rather elastic ‘event of conflict with Russia’—which meant, most probably, according to the actual state of the feared incursions in the Balkans or on the Romanian frontier. No matter how the connection between the ‘deployment instruction’ and the independent idea of seizing a ‘forfeit’ is interpreted, i.e. in connection with a resumption of the struggle against Britain or a serious blockade, their offensive character, given the potential consequences, cannot be denied.⁵⁸ In the final analysis this was not a case of offensive defence within the framework of a war already in progress, but an act which represented the opening of a war. The further development of these plans during the next few days—after an anything but precise instruction by the army commander-in-chief following a conversation with Hitler—suggests that Halder was fully aware of those consequences.

Halder’s reflections were based primarily on the Red Army’s presumed intentions and on its ability to mount a military operation in line with its identifiable disposition and strength in the area near the frontier. This showed a considerable concentration of forces in two areas of main effort, interspersed with mechanized units (see Map I.IV.1). In spite of that deployment and concentration, the Army General Staff did not believe that the Soviet political

⁵⁷ On the meaning of those guidelines there is some uncertainty in the literature, going back to Jodl’s and Warlimont’s evidence before the Nuremberg tribunal; see Warlimont, *Hauptquartier*, 127. But the guidelines were neither a fundamental order nor a camouflage order. It is highly probable that they were based on a request by the army C.-in-C.; this is confirmed by Müller-Hillebrand, *Heer*, i. 66. For the text of the ‘Guidelines on build-up East’ of 7 Aug. 1940 see BA-MA, 18. Armee, 17562/3. Halder’s notes of 31 July 1940 defined Hitler’s instructions more clearly than *KTb OKW* i. 5 (1 Aug. 1940). The contents of the guidelines are given in Greiner, *Oberste Wehrmachtführung*, 293–4, closest to the original.

⁵⁸ See above, n. 52; Halder, *Diaries*, 516–17 (22 July 1940).

leadership was planning to use those troops offensively against Germany;⁵⁹ it would, however, be able with those massed troops to mount an offensive towards the south-west 'at any time or in the event of a change in the political situation'.

Halder's precautionary measures were therefore entirely justified. It may be assumed that by issuing the deployment instructions to Eighteenth Army he had gone to the very limit of what he could set in motion without orders from Hitler, and that he wanted to prepare for a situation which he believed would inevitably be facing the German Wehrmacht.

The inconsistent character of the 'deployment instruction'—in terms of clear military objectives—was criticized on 29 August by Colonel Fritz Bayerlein, the first general staff officer of 'Group Guderian'.⁶⁰ He proposed that the areas of operation be substantially extended in line with the mobility and combat strength of the divisions. He also listed the objectives which arose logically from Halder's plans: in the south, thrusts towards Chernovtsy, an operation along the Dnestr with a view to encircling the forces deployed on the Romanian frontier, and an operation in the direction of Kiev, followed by an advance of the left wing down the Dnieper to the south. In case the group was to be used in the north, Bayerlein likewise rejected the loosely phrased directive and proposed the launching of an offensive from East Prussia to both sides of Tilsit towards Vilnius and Minsk. The seizure of Minsk would mean the severance of all links with Leningrad and Moscow. Both proposals were in line with the subsequent disposition of the armoured groups, as was his call for joint operation with the infantry and for keeping supply-routes clear for the exclusive use of the armoured units. Marcks's reaction was that a clear definition of objectives was not possible until the 'event' materialized; he therefore notified the general staff officer that 'Group Guderian' was to confine itself to the tasks set out for it in the 'deployment instructions'.

Simultaneously with the 'deployment instructions', on 22 July the commander of Eighteenth Army, Colonel-General von Küchler, passed on a ruling from the Army High Command designed to scotch rumours about German-Soviet relations.⁶¹ Such rumours were bound to arise with the arrival

⁵⁹ Evaluation of enemy situation, 22 July 1940, in the deployment instruction to Eighteenth Army; it was thought that there might be a Soviet offensive against Romania, i.e. the oil wells: BA-MA, 18. Armee, 17562/2.

⁶⁰ BA-MA, 18. Armee, 17562/3. Walde, *Guderian*, 113, more or less passes over this 'critical' period in silence. It should be remembered, however, that 'Group Guderian' at the time was a corps staff without troops under its command and that the whole business was probably viewed as a map exercise within the framework of training.

⁶¹ Weisung ObdH über das deutsch-russische Verhältnis [Directive of the C.-in-C. of the army concerning German-Russian relations], 17 July 1940, BA-MA RH 19 I/122. See also *General Köstring*, ed. Teske, 264-5 (1 Aug. 1940). Weinberg ('Entschluß', 302) connected the text of the order of the commander of Eighteenth Army, dated 22 July 1940, which he found in the documents of the Nuremberg trials, with the defensive instructions given to Eighteenth Army on 29 June 1940. Acceptance of Küchler's statement that Eighteenth Army HQ had been moved to East Prussia and that the troops had not arrived until September has blurred the picture; see Hillgruber, *Strategie*, 231. In fact, Eighteenth Army HQ assumed command at Bydgoszcz on 4 July

of the formations in the east. The troops were to be told that this was an operation to protect newly won living-space, to put on a show of strength for the Poles, and to prepare for the future peacetime accommodation of the army. Inside the general staff of Eighteenth Army, however, the connection between a possible future operation and the overall war situation was clearly understood. On 25 July the first general staff officer and the enemy-situation analyst recorded in the army's war diary that a Soviet deployment would be identified in good time and that surprises from the north could be ruled out.⁶² A conflict could conceivably arise from the fact that, in the event of a 'crisis in the German-British war', the Soviet Union might occupy further parts of Romania, which Germany would not tolerate. If, following a favourable development of the German-British war, Germany demanded the surrender of Bukovina, the following situations could arise:

- (1) under pressure of the German deployment the Soviet Union would yield;
- (2) it would yield only after German occupation, i.e. after a war with limited objectives and means; and finally
- (3) a last possibility would be the acceptance of war by the Soviet Union along the entire front, 'i.e. march on Moscow'.

To those officers war with the Soviet Union was clearly only a matter of time. This view was possibly reinforced by a request on 23 July 1940 from Colonel von Greiffenberg, head of the Army General Staff's operations department, that Marcks should hold himself ready during the next few days to go to the High Command at Fontainebleau for a week or so⁶³—a consequence of the conference Hitler had with the commanders-in-chief of the Wehrmacht services on 21 July 1940. (That conference will be dealt with later.)

The above measures of the Army High Command were at the same strategic level as the reflections on the continuation of the war against Britain, summarized by Major-General Jodl, chief of the Wehrmacht operations department, in a memorandum on 30 June 1940.⁶⁴ Haldehad turned his attention to what he considered the more dangerous land-war enemy and, on his own

1940 and the bulk of the formations had arrived by the end of July: Weinberg, 'Entschluß', 302 n. 11.

⁶² AOK 18/Ia, diary entry of 25 July 1940, BA-MA, 18. Armee, 17562/1.

⁶³ AOK 18/Ia, diary entry of 23 July 1940, *ibid*.

⁶⁴ Hillgruber, *Strategie*, 157 ff. The main idea behind Jodl's memorandum, however, seems to have been an attempt to ensure, for the further conduct of the war, an effective joint leadership of the Wehrmacht. This is suggested also by the fact that a 1937 memorandum on the top structure of the Wehrmacht in war, by the then C.-in-C. of the army, Col.-Gen. Freiherr von Fritsch, was brought up on 17 May 1941: see Keitel, ed. Görnitz, 123 ff. (See also Müller, *Heer*, 293-4, memorandum OKW chief of staff of 19 Apr. 1938: *IMT* xxxviii, 35-50, No. 211-L). All the services insisted on their traditional rights and usages. Even in the areas of administration and law there was no unified joint direction. On 4 Nov. 1940, admittedly, a Wehrmacht quartermaster staff was set up, which, however, 'with full preservation of the quartermaster arrangements of the separate Wehrmacht services', was summoned only occasionally and did not become effective: BA-MA RW 4/v. 145.

responsibility, had initiated measures which were well ahead of the decisions of the supreme commander. Towards the end of June, though, he was perhaps able to find his strategic thinking confirmed in a remark by State Secretary von Weizsäcker of the foreign ministry, who reported that Hitler was keeping 'a steady eye on the East'; he believed that 'Britain probably still needs one more demonstration of our military might before she gives in and leaves us a free hand in the East'.⁶⁵ Halder's instruction to Colonel von Greiffenberg, head of the general staff's operations department, to examine the possibilities of a campaign against the Soviet Union as a means of forcing that country to acknowledge Germany's dominating role in Europe, shows that Halder on his own initiative made political objectives part of his military reflections and plans. The instruction to Eighteenth Army, formulated in the course of his conference with Kückler and Marcks on 4 July, fits into the same framework. At that point of planning and preparations by the Army General Staff, by Eighteenth Army HQ, and, up to a point, by the chiefs of staff of Eighteenth Army's corps, Hitler summoned the commanders-in-chief of the army and navy for a discussion of the further military development of the war.⁶⁶ On 21 July 1940, two days after Hitler's Reichstag speech in which his unsuccessful attempts to reach an 'arrangement with Britain' were reflected only in meaningless 'peace offers', the central question was what made the British continue the struggle. Hitler saw the answer in British hopes of help from the United States and of an entry into the war by the Soviet Union—as indeed he had remarked on 23 June. He realized that an invasion of Britain would involve very great risks; he therefore wanted to consider a landing only in the event that there was no other way to 'finish off England'. In the discussion of a possible British-Soviet combination the principal aspects were the threat to

⁶⁵ Halder, *Diaries*, 487 (30 June 1940). There is some room for doubting the reliability of the attribution of that remark to Hitler, knowing as one does Halder's planning. This was more probably an exchange of identical views between Halder and Weizsäcker. If one bears in mind the anxieties then felt about a Red Army intervention in the Balkans, the limitations of any intended 'turning towards the east' become obvious. There seems to be no doubt that the main topic of that conversation was a speedy armistice with Britain, not any far-reaching 'eastern plans'. That Hitler, just like the entire Wehrmacht High Command, the foreign ministry, and all other political agencies, was carefully watching developments in Romania is obvious. In addition, Soviet attempts with regard to Yugoslavia were being realized, and the Baltic States had not been forgotten either.

⁶⁶ Halder, *Diaries*, 515 ff. (22 July 1940), and 'Führer Conferences', 119–20 (21 July 1940). This conference was concerned with questions of the continuation of the war against Britain; the Soviet Union and the United States had to be borne in mind as possible allies of Britain. The combat strength of the Red Army, what German forces would have to be put up against it, and what objectives might be attained by a German attack—these were only secondary issues at the conference. Since the arguments are entirely in line with Halder's intentions as reflected by the measures already taken, it seems clear that the figures, objectives, and directions of the operations were presented by Brauchitsch. Halder's notes, in the form of cues, do not allow for a reliable attribution of the statements to individual participants. Halder himself abandoned his subsequent (handwritten) attribution of the report to Hitler (in his working copy of the transcript of his war diary): 'Actually by his staff (Jodl)'; in the published work it appears as 'can no longer be reliably ascertained'. See Halder, *KTB* ii. 32 n. 9 (not in trans.), and BA-MA N 220/42, 114. Deletion by the editor is also a possibility.

German oil supplies from Romania and the possibility of Soviet air attacks on the German hydrogenation plants in Upper Silesia. Although Hitler did not believe in an imminent British-Soviet coalition, he noted that Stalin was flirting with Britain in order to keep her in the war. This would tie the Wehrmacht down and he, Stalin, would be able to snatch what he wanted. Nevertheless, this clear hint of an extension of the Soviet sphere of power in recent weeks was not equated with any indications of Soviet offensive preparations against the Reich. Hitler eventually ordered that preliminary thought should be given to the solution of the 'Russian problem'. In general terms he emphasized his interest in a speedy conclusion of the war, even though there was no cogent need for this now that the situation was far more favourable than in the First World War.

This was followed by a brief report by the commander-in-chief of the army on planning work and calculations performed within the general staff of the army. This report corresponds so closely with the measures ordered by the Army High Command for the restructuring of formations and the dates by which this was to be completed, including the instructions to Eighteenth Army, that it is difficult to reconstruct any participation by Hitler in that exchange of ideas, except for commonplace observations. The creation of a Ukrainian state and of a Baltic league of states, the separation of Belorussia, and the creation of a strong Finland entirely matched military concepts which had been ever since the First World War. The information that 50-75 'good' divisions would have to be expected came from the Department for Foreign Armies East; against them 80-100 German divisions would be needed.⁶⁷ There was some concern about whether the Luftwaffe would be able to cope with operations in the east as well as against Britain, assuming a simultaneous opening of the attacks in the autumn of 1940. The operational routes of the Baltic area and the Ukraine were also contained in Halder's concept. The role to be played by Finland, on the other hand, was not clear; the most plausible assumption was that co-operation was envisaged in a thrust beyond Leningrad and in protecting German domination of the Baltic Sea. Perhaps this was a cue of Hitler's.

The various points of Halder's notes on the report of the commander-in-chief of the army make it clear that what Hitler had sketched out was not a 'great war' aiming at the defeat of the Soviet Union, but a military concept which seemed to agree with Halder's present ideas as well as with the deployment orders to Eighteenth Army. Opposition within the Wehrmacht High Command to a date of attack as early as the autumn of 1940 seems not therefore to have been directed against Hitler's precipitate demand⁶⁸ but to have been a reaction against the timetable contained in Halder's concept.

As indicated above, Halder must have been aware of the 'grand solution' which seemed to follow from his assessment of the situation. It seems logical,

⁶⁷ This calculation is based on the enemy assessment reported in n. 17 above.

⁶⁸ Hillgruber, *Strategie*, 222.

therefore, that, having been informed by the army commander-in-chief of Hitler's remarks, he immediately embarked on working out new planning approaches. On that very same 22 July he briefed the heads of the operations department and the Department for Foreign Armies East; on 24 July he briefed the military geography department and assigned the first tasks.⁶⁹ On 26 and 27 July Foreign Armies East and the operations department submitted their first reports.⁷⁰ At the focus of attention was the initial disposition for the operation. Colonel von Greiffenberg, the head of the operations department, proposed the creation of a strong southern group. Halder, on the other hand, was considering a more powerful northern group, to be employed against Moscow, in order subsequently to compel the strong enemy forces in the Ukraine to do battle with reversed fronts.

Regardless of all this, preparations for an invasion of Britain were still the main concern of the Army General Staff. Halder, moreover, was even thinking about the raising of colonial troops for the future.⁷¹ In consequence, it was not possible for him, or for the head of the operations department, who had at that time also assumed the duties of OQu I, to work out quietly the basis of a new major campaign. Thus on 23 July 1940, the day after his briefing by Brauchitsch, Halder ordered the chief of staff of Eighteenth Army to hold himself ready for this task and to come to his headquarters.

No matter how far independent thinking, planning, and issuing of instructions within the realm of the army had advanced, Hitler's decision alone was crucial for their development and conversion into actual preparations for an aggressive war. It was on 29 July that he informed Artillery General Jodl, the head of the Wehrmacht operations department, that he had decided to attack the Soviet Union in May 1941. Preparations should be put in hand.⁷² Given the structure of Germany's top military leadership, what this new directive meant for Wehrmacht High Command was initially no more than co-ordination of the requirements arising from the army's tasks with the other two services and their adjustment to the capacities of the war economy; it did not imply any operational planning comparable to that of the Army General Staff, let alone authority to issue orders.

The great conference on the overall war situation at Hitler's Berghof on 31 July⁷³ was opened with a report by Grand Admiral Raeder, the commander-in-

⁶⁹ Halder, *Diaries*, 518 ff. (under the dates given).

⁷⁰ *Ibid.* 521 ff.; Feyerabend, notes of 28 July 1940, BA-MA RH 20-2/139. The decisive consideration for Halder was the need to reach Moscow by the fastest route and there to smash the bulk of the Red Army. This he regarded as the prerequisite of a political collapse of the Soviet Union.

⁷¹ Halder, *Diaries*, 474 (19 June 1940). Although there was no order from Hitler on this subject, the activities of the colonial-policy department of the NSDAP had spread over to the Wehrmacht and given rise to numerous enquiries about service in the colonial army: OKW/AuswAmt/Abw. Koloniale Unterrichtungen Nos. V and VI (6 Sept. and 5 Oct. 1940), BA-MA RW 4/v. 145.

⁷² Hillgruber, *Strategie*, 222-3.

⁷³ At the conference on 31 July 1940 the C.-in-C. of the navy remained present only until he had concluded his own report; the Luftwaffe was represented by Jeschonnek. Hitler's 'discussion

chief of the navy, on the state of preparations for a landing in England.⁷⁴ That operation for the defeat of Britain, until then unquestionably at the centre of planning, was now being queried both by Hitler and by the Army High Command. Hitler realized its dependence on weather conditions and technical prerequisites, as well as on the success of the Luftwaffe, and therefore, given that mid-September was the latest possible date, asked what might be done to bring Britain to her knees if the landing had to be either abandoned or postponed until the following May, the date regarded as most favourable by the navy. He proceeded from the belief that the war 'as such' had 'been won'. Britain's determination to hold out was based on hopes of the Soviet Union and the United States. If the Soviet Union was eliminated, the United States need no longer be expected to join the war because Japan would then have undergone an 'enormous strengthening' in the Pacific region. Once the Soviet Union was smashed, Britain's last hope would be crushed. Germany would then be 'master of Europe and the Balkans'.

His decision, therefore, was to eliminate the Soviet Union militarily as quickly as possible. To do that it was not enough to occupy a specific territory: the entire state would have to be shattered at a single blow.⁷⁵ Preparations would take until the following spring; that was why he was laying down May 1941 as a provisional date. After that, there would be five months left for the execution of the operations. Hitler also commented on operational problems. He spoke of attack by way of two thrusts, one towards Kiev and the other via the Baltic States towards Moscow. Eventually the two thrusts were to link up, presumably beyond Moscow. A partial operation against the oilfields of Baku might be contemplated later. Romania and Finland could be considered in the role of allies, but not so Hungary. The territorial gains from this war, as he saw it, would be the Ukraine, Belorussia, and the Baltic States. Finland was to expand as far as the White Sea. Altogether Hitler calculated that 180 divisions were needed, 120 of them for the east. This meant that, with an existing strength of 120 divisions plus 18 'furlough divisions', 40 divisions would have to be newly raised. This should be done in areas free from air raids, i.e. beyond the reach of the British Air Force.

partners' on the 'eastern question' were therefore Keitel, Jodl, Brauchitsch, and Halder. In reply to Hitler's question about what could be done against Britain during the winter, Brauchitsch recommended German support for the Italian attack towards the Suez Canal by the provision of two armoured divisions. This was based on Jodl's memorandum of 30 June 1940; see Warlimont, *Hauptquartier*, 124. Hitler himself suggested the seizure of Gibraltar: 'Führer Conferences', 125 (31 July 1940). On the 'peripheral war' see Hillgruber, *Strategie*, 178 ff.

⁷⁴ Halder, *Diaries*, 530 ff. (31 July 1940); *KTB OKW* i. 3 ff. (1 Aug. 1940); Hillgruber, *Strategie*, 222 ff.; Warlimont, *Hauptquartier*, 126 ff. Brauchitsch and Halder, prior to that conference, had been briefed on the Red Army and, in assessing the overall war situation, were agreed that it was wiser to maintain 'friendship with the Russians'; admittedly they did not argue this point of view with Hitler on 31 July 1940; Halder, *Diaries*, 530 (30 July 1940); Tippleskirch, diary note of 29 July 1940, BA-MA, RH 2/v. 1478.

⁷⁵ This has to be understood as a direct reference to the limited objectives presented by Brauchitsch on 21 July 1940.

Hitler's remark on the new units in the 'eastern region' was the occasion for the guidelines of the Wehrmacht High Command 'on build-up East' of 7 August 1940. The first operational reflections came from Lieutenant-Colonel (General Staff) von Loßberg, chief of the 'Group Army' in the Wehrmacht operations department.⁷⁶

On 1 August Halder briefed the departmental heads in the Army General Staff and instructed them to examine what questions concerning command tasks had been raised by Hitler's decision. Lieutenant-General Rudolf Bogatsch, the Luftwaffe general attached to the army commander-in-chief, was also informed on that day of the outcome of the conference in so far as it concerned support for the ground troops. The requirements arising in all fields from the raising of 40 divisions were discussed by Halder with the heads of the organization department and the operations department. Another subject discussed was the armaments basis of the future mobile army. That same day, moreover, Halder gave attention to the training of new general-staff officers for the army of 180 divisions.⁷⁷ It may be worth mentioning that Halder not only performed this transition smoothly, but that he did not, either to his closest colleagues or to his old intimates of the resistance circle, or even to his no doubt carefully locked-up diary, confide the profound shock which, according to later testimonies, Hitler's sudden decision caused him.

(c) *Army Group B as 'Security against the East'*

The planning work initiated in August in the Army High Command, as well as in the Wehrmacht High Command, was now based on Hitler's explicit decision of 31 July. According to the fluctuations of the overall strategic situation, the staffs were examining ever new projects to eliminate Britain. Diversions were caused by Hungary's mobilization against Romania, by Italian ambitions in the Balkans, and by Finland's inclusion in the general strategic concept. These aspects will be dealt with elsewhere.⁷⁸ They are mentioned here merely as irritants to which the main work of building up the army was subjected. Within the Army General Staff, planning for the war in the east proceeded as ordered by Halder. Thus Major-General Wagner, the quartermaster-general of the staff, submitted initial ideas on the organization of supplies on 9 August,⁷⁹ and Lieutenant-Colonel Feyerabend dealt with matters concerning the army's deployment and order of battle⁸⁰ that had to be solved in connection with the envisaged restructuring of the army and

⁷⁶ Loßberg embarked on his work 'end of June-beginning of July'. According to his report, Jodl, at the very first briefing on Hitler's intention to attack the Soviet Union, had added as its strategic concept that it was important to form points of main effort on the flanks; see Heusinger and Henrici, *Feldzug in Rußland*, MGFA, T-6b, 39. Loßberg had given his plans the code-name 'Fritz' and later proposed to Jodl that it should be changed to 'Barbarossa'; see letter from Loßberg to W.-E. Paulus, 7 Sept. 1956, IfZ ZS 97, and Paulus, *Entwicklung*, 175 ff.

⁷⁷ Halder, *Diaries*, 530 (30 July 1940), 536 (1 Aug. 1940). For Halder's independent ideas in the organizational field prior to Hitler's directive see sect. I.iv.1(a) at n. 39.

⁷⁸ See sect. I.iv.2 (Förster) and I.vi (Ueberschär).

⁷⁹ Halder, *Diaries*, 544 (9 Aug. 1940).

⁸⁰ Memorandum by Feyerabend, 8 Aug. 1940, BA-MA RH 20-2/139.

the creation of 40 new divisions. Halder in his diary noted that the reorganization was to be carried out 'next fall', followed by a 'gradual transfer to the East'.⁸¹

This planning work, however, was substantially affected by Hitler's reactions to Soviet activities against Finland and Romania. On 21 August he expressed the wish for 196th Infantry Division to be reorganized into a mountain division in response to Soviet pressure, and for the SS brigade stationed in northern Norway to be reinforced. He also asked for an immediate transfer of an armoured division to East Prussia. The Red Army had occupied the Mariampol corner of Lithuania in violation of the agreement; this gave rise to difficulties which, in the already tense atmosphere created by the foreshadowed ultimatum to Romania, aroused extreme mistrust in Hitler.⁸² On 26 August, finally, Hitler demanded the reinforcement of the army in the east.⁸³ As a first step ten infantry divisions and one armoured division were to be transferred. By 30 August the commander-in-chief of the army proposed the transfer of Army Group B headquarters as well as of Fourth and Twelfth Army HQs; orders for this were given on 12 September.⁸⁴

Army Group B command, under Field Marshal Fedor von Bock, was to hand over its area of command immediately to Army Group C (Leeb) and to transfer Fourth Army HQ, 2 corps HQs, and 4 divisions from its own command area to the east. From the command area of Army Group A (Rundstedt) 2 infantry divisions were to be transferred to the east, and from that of Army Group C Twelfth Army HQ with 2 corps HQs and 4 infantry divisions, as well as 1st Armoured Division. On 7 September the following forces were transferred east from the command area of the director-general of training: 1 corps HQ, 3 armoured divisions, and 2 motorized infantry divisions; 9 infantry divisions were to be transferred into Reich territory from the west for reorganization. According to the directive of the army commander-in-chief, dated 9 September 1940,⁸⁵ Bock's army group would be responsible for cover-

⁸¹ Halder, *Diaries*, 555 (19 Aug. 1940).

⁸² Hitler's instruction for reinforcements in East Prussia and northern Norway, for the fortification of the Baltic coast with artillery batteries: *KTB OKW* i. 46; Eizdorf's report: Halder, *Diaries*, 560-1 (23 Aug. 1940). On Mariampol: Halder, *Diaries*, 559 (23 Aug. 1940); Fabry, *Hitler-Stalin-Pakt*, 241 ff.; Hillgruber, *Strategie*, 231. Eizdorf's report is recorded, much more fully than by Halder, in Tippelskirch's diary entries of 22 Aug. 1940, BA-MA RH 2/v. 1479.

⁸³ On 27 Aug. 1940 Halder complained about Hitler's 'pipedreams' and his irresolution in making decisions. Hillgruber, *Strategie*, 240 ff., sees this in connection with the 'continental bloc' concept. Study of Hitler's military monologues of that time conveys the impression of volatility as a permanent state unless there was an external compulsion to make a firm decision.

⁸⁴ Halder, *Diaries*, 564 ff. (26, 27 Aug. 1940). Tippelskirch records in his diary entries that the situation was being regarded as extremely critical (BA-MA RH 2/v. 1479); likewise Feyerabend (BA-MA RH 20-2/139). The intention was to provide adequate forces for a landing in England, for the occupation of the 'rest' of France, and for an offensive against the Soviet Union. On the transfer to the east see Halder, *Diaries*, 566 (30 Aug. 1940). Order of the C.-in-C. Army: BA-MA RH 2/v. 522, as well as BA-MA, 18. Armee, 17562/2; Müller-Hillebrand, *Heer*, ii. 150, annexe 18.

⁸⁵ BA-MA, 18. Armee, 17562/2; Halder, *Diaries*, 574 ff. (5, 6 Sept. 1940). On 2 Sept. 1940 the C.-in-C. Army asked the chief of the army operations staff to issue instructions for measures to camouflage the transfer; on 6 Sept. 1940 Jodl passed these on to Amt Ausl./Abwehr: *KTB OKW* i. 973, annexe 29; Hillgruber, *Strategie*, 236 ff.

ing Germany's eastern frontier from (but excluding) Slovakia to the Baltic. Its task was to repulse any attack, thereby providing the prerequisite for German offensive operations. The army group was, moreover, to continue strengthening ground fortifications, although such work would have to yield priority to road- and bridge-building and to the development of the communications network. In addition, the army group was to make sure that the arrival of the forces now placed under its command—by then no fewer than 35 divisions⁸⁶—or any other measures did not suggest an offensive threat to the Soviet Union. On 20 September Army Group B HQ took over command from Eighteenth Army HQ, which until then had been responsible for 'security against the east'. Fourth and Twelfth Army HQs assumed their new tasks on 23 September 1940. The main effort of Army Group B during the autumn months was focused on reorganization and training, as well as on the speediest possible construction of overland communications and provision of troop accommodation and catering.

(d) *The Operational Studies by Marcks and Loßberg*

Hitler's decision of 31 July to crush Russia was formulated, in operational terms, as a directive to bring down that state in a *single* blow; conquest of territory was not enough, and remaining stationary in the winter was dangerous.⁸⁷ In line with his remarks of 21 July⁸⁸ he depicted the outlines of the planned operations as follows: 'First thrust: Kiev and securing flank protection on Dnieper. Air force will destroy river crossings Odessa. Second thrust: Baltic States and drive on Moscow. Finally: Link-up of northern and southern prongs. Thereafter: Limited drive on Baku oilfields.'

These, then, were the main elements of the plans to be worked out by the Army General Staff—the swiftest possible seizure of the bulk of the Red Army and a limitation of the period of operations to the summer and autumn of 1941. The two main operational directions ranked equal.

The chief of the Army General Staff, as mentioned above, had issued his first instructions on the conduct of operations and on organization as early as 22 July. On 23 July Major-General Marcks, the Eighteenth Army chief of staff, was given advance notice to hold himself ready for a briefing by Halder at Army High Command headquarters in Fontainebleau.

Major-General Marcks's study gained fundamental importance for the further planning in the Army General Staff, and therefore, despite having been repeatedly published, deserves somewhat more extensive discussion here. Another study, providing some insight into the ideas of the Wehrmacht High Command leadership, though not necessarily those of Hitler, was prepared by Lieutenant-Colonel (General Staff) von Loßberg. This will be discussed here only to the extent that it diverges from Halder's and Marcks's basic views.

Marcks arrived in Fontainebleau on 29 July and was at once briefed by Halder on the now more comprehensive tasks ahead. In agreement with the head of the general staff's operations department, Marcks initially regarded the creation of a point of main effort on the southern sector of the front—the operational group Kiev—as the most obvious solution. Halder, on the other

hand, believed that the basis indispensable for that plan, Romania, was politically rather uncertain, and that the existence of the river barriers of Dnestr and Dnieper argued in favour of a shift of the point of main effort of the attack. His decisive argument, however, was his belief that the capture of Moscow would mean the end of the campaign and that, in consequence, the shortest approach to Moscow should be chosen.⁸⁹ In accordance with Halder's preliminary considerations, as well as with Hitler's directives of 31 July, Marcks therefore prepared a draft for the conduct of operations with the main effort concentrated on the central sector, the principal objective being the capture of Moscow by way of the 'land-bridge' of Smolensk. After two more reports to Halder on 5 and 6 August, Marcks submitted his 'Operations Outline East'.⁹⁰ What data were available to him at the time can no longer be established. But he certainly had access to the estimate of the enemy position by the Department for Foreign Armies East and presumably also to the draft study on the Soviet Union by the Military Geography Department of the Army General Staff.⁹¹ He also used an excerpt from Tukhachevsky's book *Advance over the Vistula*.⁹² This described the terrain where the main effort of the German operation was to be made. Tukhachevsky had come to the conclusion that the terrain south of the lower Berezina was totally unsuitable for operations by major formations. The most favourable terrain for military movements, he had argued—with regard to both road and rail communications—was north of that region, between Lepel and Dvina.

All operational ideas, both of Halder and Hitler, proceeded from the belief that the eastern army had to be deployed in two groups, south and north of the Pripet marshes. In view of the importance of terrain conditions, which would favour the enemy, it is worth recording briefly how these factors were being assessed by the Army General Staff.

The Military Geography Department had been working since July 1940 on consultative documents for the operations department and for equipping the troops with maps.⁹³ The 'First draft of a military-geographical study of Euro-

⁸⁹ Ibid. 535-6 (1 Aug. 1940).

⁹⁰ Ibid. 540-1 (5, 6 Aug. 1940). A contribution also came from Lt.-Col. Feyerabend, until then Ia of XXXX Army Corps, who asked how the troops were to be prepared for the operation in terms of training and organization: Feyerabend's notes, BA-MA RH 20-2/139.

⁹¹ See 'Operationentwurf Ost'. Jacobsen, *Marcks*, 88, overlooks his preliminary work since 4 July 1940.

Tuchačevskij, *Pochod za Vislu: Lekcii, pročítannye na dopolnitel'nom kurse Voennoj akademii RKKA 7-10 fevralja 1923 g.* [The March beyond the Vistula: Lectures Given at the Advanced Training Course of the Red Army Military Academy, 7-10 Feb. 1923] republished in Tuchačevskij, *Izbrannye proizvedenija*, vol. i, here p. 115.

⁹³ For Halder's instruction to the Mil. Geo. Dept. see *Diaries*, 519 (24 July 1940). GenStdH/Abt. für Kriegskarten und Vermessungswesen [Dept. for war maps and geodesy] (IV. Mil. Geo.): Erster Entwurf zu einer militärgeographischen Studie über das Europäische Rußland [First draft of a military geographical study of European Russia], No. 10a, just like the assessment of the Red Army, probably goes back to Köstring. But see also Hillgruber, *Strategie*, 228 n. 93. Ritter von Niedermayer's article 'Sowjetrußland: Ein wehrpolitisches Bild' conforms with Köstring. The basic elements of the findings are contained in the *Wehrgeographischer Atlas der UdSSR* [Military geographical atlas of the USSR], edited by Niedermayer in 1941.

pean Russia' was completed by 10 August and was available in printed form. What should be emphasized, however, is not so much the speedy and extensive geographical description and assessment of the terrain as the very unusual form of a military evaluation under point 10a, probably included at the last moment. This stated: 'Centres to be considered as especially rewarding for occupation are the Ukraine, Moscow, and Leningrad.' The Ukraine, it continued, was the most valuable part of the Soviet Union because of its industrial and agricultural wealth. The Caucasus with its oil wells was probably too far removed from the German sphere of power. But even if all these territories were conquered the war would not necessarily be concluded, as beyond the Urals and the Caspian Sea there was the vast Asian Russia, which was no longer a wilderness. It had 40 million inhabitants, agricultural and industrial resources, and, in its western part, rail links to the Urals and Orenburg. The 'chief enemies in any attack' were space and climate; the utmost importance attached to the colossal extent of the territory.

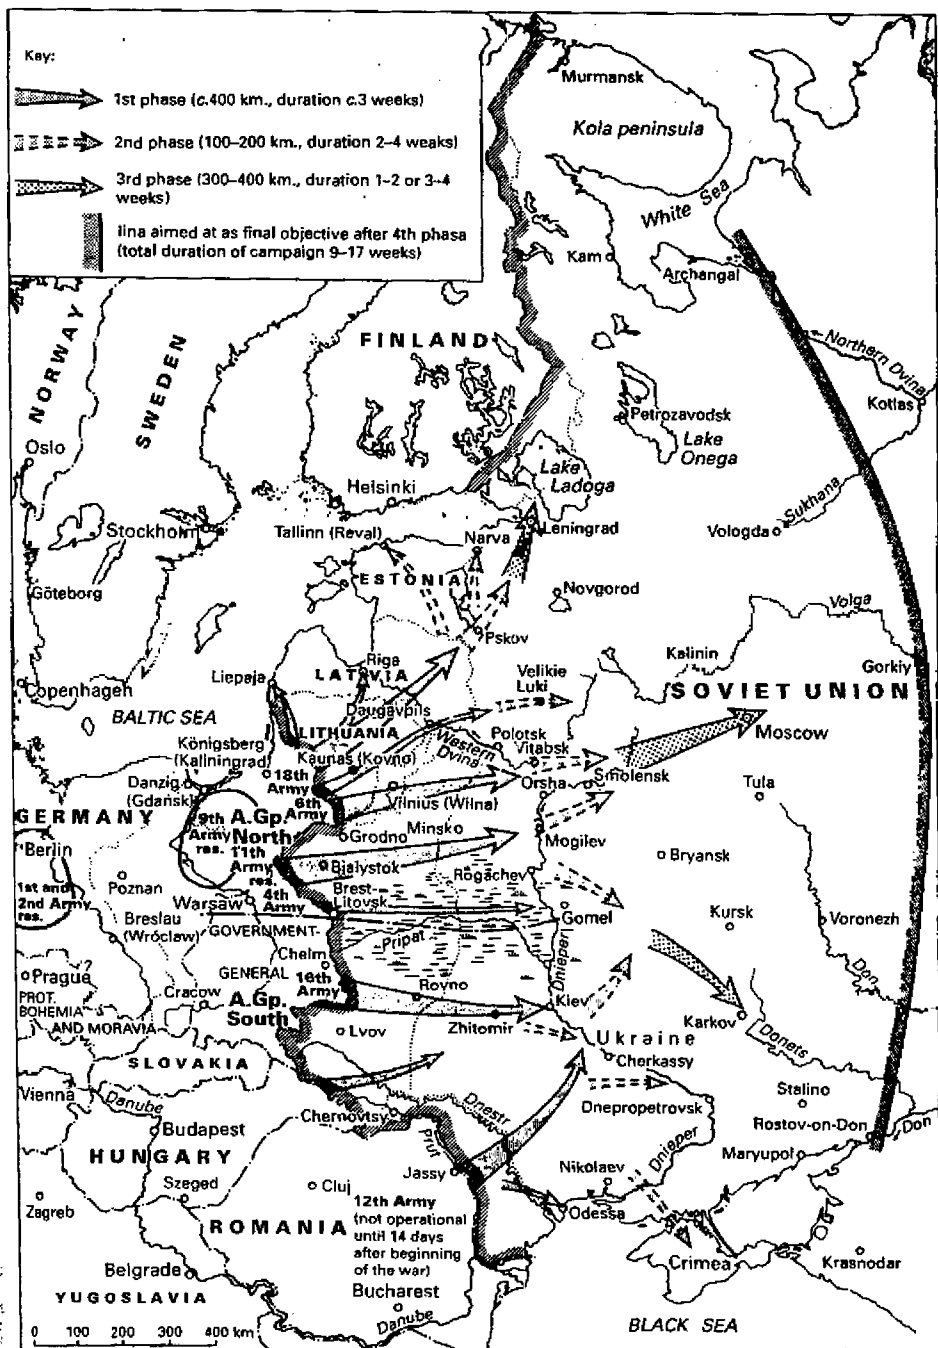

This and the succeeding study of the Military Geography Department were based on the latest available data, along with older reports, maps, and other material. It was not possible, however, to obtain accurate information on road conditions or other transport facilities beyond what was to be found in the literature.

It was believed that the principal obstacle on what would be the central sector of a future eastern front was the Polesye region, the Pripet or Rokytno marshes.⁹⁴ This was regarded as not negotiable by major military formations, a belief based also on Soviet and Polish judgements. The account of the 1918-20 war between the Soviet Union and Poland, published by the Army General Staff (War History Department) in 1940, relied largely on reports from those countries and represented the experience of a war of movement in that terrain.

The few days available ruled out any more detailed examination of the question of mobility in that territory. Nevertheless, Hitler and—on his instructions—the Army General Staff continued to concern themselves with that problem.⁹⁵ Other natural barriers, such as the tributaries of the Dnieper and the Dvina running north to south, or these rivers themselves, were expected to be lines of major enemy opposition. A general assessment of the soil structure and vegetation of the area to be covered was put in hand, as from the outset adequate road and rail networks were not expected. The infantry in particular would have to resort to improvised methods of advance. The route most favourable to Moscow in terms of terrain and transport, indeed the only one promising success to armoured forces, was by way of the 'Smolensk gap', the land-bridge Minsk-Orsha-Smolensk. Geographical constraints governing the opening of operations as well as the structure of the attacking forces obviously

⁹⁴ Philippi, *Das Pripjetproblem*, 19 ff.; Furlani, 'Pripjet-Problem und Barbarossa-Planung', 286 ff. The author overlooks both the data of the Mil. Geo. Dept. and the extract from Tuchačevskij used by Marcks.

⁹⁵ See sect. I.iv.7(f) at n. 152.

MAP I.V.2. Operations Draft East (Major-General Marcks), 5 August 1940

called for the equipment of the formations with engineer and construction units. There was also an indisputable need for mobile troops to gain control of bridges, river crossings, and roads as quickly as possible, regardless of flank cover or following infantry. Transport, terrain, and climatic conditions from the outset dictated a limited period of operations and a need for the greatest possible speed in all operations.

Major-General Marcks's 'Operations Outline East' assumed a final operational objective along a line from the lower Don to the middle Volga and northern Dvina.⁹⁶ The Ukraine and the Donets region were to be occupied as sources of foodstuffs and raw materials, and Moscow and Leningrad as centres of the armaments industry. The capture of Moscow as the political, intellectual, and economic centre of the USSR and the resultant destruction of the Red Army would, Marcks believed, bring about the break-up of the Soviet Union. To achieve that main objective, a thrust north of the Pripet marshes was considered the best solution, because the roads along which operations were bound to proceed were in a good condition. While the sparsely wooded region south of the marshes would be suitable for battle, its lack of roads and the obstacle presented by the Dnieper would greatly restrict freedom of movement for military operations.

Marcks expected that the German attack would be opposed along a defensive position for the protection of Greater Russia and the eastern Ukraine; offensive action was to be expected only from the Soviet air force and navy, especially submarines. He considered a coalition between Britain and the Soviet Union to be a certainty in the event of a German attack, and that would lead to a blockade of Germany. For its completion, a Soviet incursion into Romania was probable; heavy air raids on the oil region would have to be expected. Marcks believed that the Red Army would opt for delaying warfare until it had reached prepared defensive positions roughly along a line Dvina-Berezina-deep Pripet marshes-Prut or Dnestr. He even thought a withdrawal as far as the Dnieper possible.

Marcks estimated the overall strength of the Red Army at 151 infantry divisions, 32 cavalry divisions, and 38 motorized-mechanized brigades.⁹⁷ Of this total, 55 infantry divisions, 9 cavalry divisions, and 10 motorized-mechanized brigades were tied down against Japan, Turkey, and Finland; this left 96 infantry divisions, 23 cavalry divisions, and 28 motorized-mechanized brigades available against Germany. These forces would have to face a German superiority of 24 armoured divisions,⁹⁸ 110 infantry and mountain divisions, 12 motorized divisions, and 1 cavalry division—altogether 147 divisions. It could therefore be expected that, once penetrated, the Red Army would no longer be

⁹⁶ See above, n. 91.

⁹⁷ Marcks referred specifically to the assumptions of the Department for Foreign Armies East.

⁹⁸ These 24 armoured divisions come from a calculation by Halder: *Diaries*, 429-30 (28 May 1940); they can be found also in Feyerabend's diary notes of July 1940, BA-MA RH 20-2/139.

able to rally its forces, spread out as these would be over a long front, for concerted counteractions and, after some fighting, would soon succumb to the superiority of the German troops and their officers. The Red Army's air force, on the other hand, was regarded by Marcks as an opponent to be taken seriously; its defeat would take some time. The Soviet navy, with its superiority of surface units and submarines, was probably capable of interfering with ore transports from Sweden and with traffic in the Baltic. It certainly ruled out any German landings on Soviet or Finnish territory as well as any regular supply shipments through the Baltic. Only after the capture of the Baltic ports would the Soviet navy find itself in a hopeless position. In that event the only remaining link between Britain and Russia would be through the Arctic Ocean and the White Sea; this route should be threatened at a later stage by Finland's entry into the war.

In agreement with Halder,⁹⁹ Marcks intended the main thrust of the German army to be towards Moscow. The guiding idea in this was to defeat and annihilate the bulk of the Soviet northern group to the west of, within, and east of the upper Volga area; once Moscow and northern Russia were in German hands the army would turn south, in order, through co-operation with the German southern group, to conquer the Ukraine and eventually gain the objective of securing the line Rostov-Gorkiy-Archangel. This operation was to be covered on its northern flank by a force to be deployed across the lower Dvina in the direction of Pskov and Leningrad. Its task would be to seize the Baltic ports and Leningrad. A possible later southward turn, in order to co-operate with the main group, might be considered.

The breakthrough from East Prussia to Moscow was considered difficult, leading as it did across the forest and lakeland belt between Dvina and Dnieper. It was expected that the main battles would be along the six main high roads; these were to be captured by swift action. As the few existing roads had to be reserved for the armoured and heavy formations, Marcks demanded that special preparations be made for the advance of the infantry with regard to organization, equipment, training, and leadership. No doubt Marcks would have liked to assign the main role to the army's southern group in view of the importance of conquering the Ukraine. In his view an attack from Romania, with additional forces from northern Hungary, Galicia, and south-eastern Poland, could become a major offensive capable of deciding the outcome of the war, aiming across the Dnieper at Moscow. Such an attack, as Halder explained on 1 August, was prevented by political conditions in the Balkans, such as the still uncertain participation of Hungary and Romania, as well as by transport conditions in those countries. In consequence, only a massive attack from Galicia and southern Poland was to be launched against Kiev and the middle Dnieper. Having crossed that river, these forces, in close co-operation

⁹⁹ See sect. I.iv.1(d) at n. 103.

with the main operation north of the Pripet marshes, were to advance either on Kharkov or towards the north-east.

As an attack out of Romania could not be dispensed with, an army was to be held ready on Reich territory, to move into Romania across Hungary as soon as the war began and there to undertake the protection of Romania and cover for further deployment. After that, the Romanian army could be expected to mobilize and deploy on the Prut. About two weeks into the war that army could be expected to cross the Prut with the bulk of its forces—i.e. at a time when, according to Marcks's expectations, the army advancing from Galicia would already be engaged near Zhitomir. Both armies were then to advance jointly towards the middle Dnieper.

The most important condition for success, according to Marcks, was surprise and the speed of the offensive movement. To that end, mobile troops in all the armies had to break through the Soviet forces at the first encounter, west of the river and forest positions, in order, with Luftwaffe support, to gain control of the forest zones and the river crossings. The infantry, following close behind, was to cut off and destroy the penetrated enemy forces. Some infantry units were to attach themselves to the mobile forces and extend their gains. Because of the small number of through roads the armoured and motorized formations had to be gathered together extremely tightly, which would result in considerable in-depth echelonment. With the steadily increasing breadth of the area of operations the insertion of massive army reserves would be required, rendering the establishment of new army commands, and probably also a new army group command, necessary in the northern sector. Because of the distance of the chosen objectives, the natural obstacles, and the consolidated defensive positions of the enemy, and also because of the urgent need for a rehabilitation of the units and the enlargement of the entire supply system, Marcks essentially envisaged three phases of the conduct of operations, as follows.

In the first phase the enemy, fighting a delaying action, was to be thrown back to his defensive position. That defensive position was assumed to be on the Dnieper-Dvina line, i.e. some 400 km. from the starting-line. For this operation Marcks allowed approximately three weeks for the bulk of the infantry divisions. If the advance of the armoured divisions succeeded so rapidly that major enemy formations were encircled and the establishment of a coherent defensive front was prevented, the outcome of the campaign could conceivably be decided in this early phase.

The second phase amounted to a struggle for the forest areas and river courses adjacent to the Soviet line of defence. For the penetration of that zone, between 100 and 200 km. deep, Marcks allowed two to four weeks. Here either the decisive breakthrough had to succeed or else the scattered sections of the Red Army would have to be defeated one by one.

The third phase was to result in the capture of Moscow and Leningrad and in a penetration of the eastern Ukraine. This involved covering 400 and

300 km. respectively. Whether this third phase could be directly linked up to the second would depend on the extension of railway tracks and on the state of the army's motor-vehicles. Another crucial factor was whether the defeated Red Army would need only to be pursued or whether it would still be offering resistance with battle-worthy units. In the latter event replenishment of tanks and motor-vehicles would, according to Marcks, require a period of three to six weeks.

Eventually, a fourth phase was to see the pursuit to the Don, the middle Volga, and the northern Dvina. Marcks assumed that following the capture of Kharkov, Moscow, and Leningrad there would be no cohesive Soviet armed forces left in existence. Total occupation of the territory up to the Rostov-Gorkiy-Archangel line, he argued, was neither possible nor necessary. This final phase could be accomplished by mobile troops and infantry divisions in a 'railway advance' within three or four weeks.¹⁰⁰ Marcks calculated that the overall time required for the campaign was between nine and seventeen weeks. In the event that the Soviet government did not fall or sue for peace by then, a pursuit all the way to the Urals might become necessary. Even though Russia, with her forces crushed and her most valuable European territories lost, would no longer be capable of active military operations, she might yet, from an Asian base, remain in an indefinite state of war.

Marcks thus took up the idea of point 10a of the 'First draft' of the Military Geography Department, but without drawing any conclusions from it at this time.¹⁰¹ Halder did not accept this formulation of Marcks's; he clearly believed that it must be possible so to prepare the army that a decision would be forcibly brought about at Moscow.

Marcks's study had benefited from the fact that its author had intensively concerned himself, ever since Halder's first reflections of 4 July on an offensively handled defence, with questions of the conduct of operations against the Soviet Union. He was guided by Halder's directives and by consideration of the time available for mobile warfare.

Examination of the organizational, training, and equipment aspects demanded by Marcks was in the hands of Lieutenant-Colonel (General Staff) Feyerabend, who, ever since mid-July, had studied questions of the army's order of battle for deployment in the east.¹⁰² In an appendix of his own to the Operations Outline East he demonstrated the connections between these problems and the tactical employment of the troops. Proceeding from the geographical conditions and the transport networks of the individual areas of advance, he called for a renewed examination of experience from the Polish campaign. As all effective roads had to be kept for the exclusive use of the

¹⁰⁰ The concept of a 'railway advance' was evidently taken over by Marcks from accounts of the advance of the German troops in the Ukraine in 1918.

¹⁰¹ This realization probably goes back to Köstring, or to the first draft of Mil. Geo. (above, n. 93). Marcks returns to it: see sect. I.iv.1(d) at n. 90.

¹⁰² Feyerabend's diary notes, BA-MA RH 20-2/139.

mobile units, foot troops were to be directed to secondary tracks and open country. Structure and equipment of those units therefore had to be in accordance with that need. Feyerabend's conclusions provided the basis for the directives for the build-up of the army in the east.

Major-General Marcks's operations proposal, formulated within a few days, closely followed the instructions given him by the chief of the Army General Staff. These did not include either observations on the overall war situation or an examination of political developments that might lead to the opening of hostilities in the east.

Marcks had been working most energetically on the execution of his task since 4 July, and had evidently asked himself a number of questions which he could not or did not wish to put to Halder. Having submitted his study, he clearly realized which way the war would develop; he therefore summed up his reflections in a kind of balance sheet. These culminated in the question whether the presumed attitude of a future enemy coalition could be said to have a probability bordering on certainty.

Approximately four weeks after submitting his Operations Outline he sent a memorandum to Lieutenant-General von Tippelskirch, senior quartermaster IV, which attempted to predict the conduct of the war and of operations by an enemy coalition, or just by the Soviet Union, as a reaction to a German attack.¹⁰³ This 'Evaluation of Situation Red', dated 10 September 1940, went to an officer who was a close personal friend; Marcks was presumably hoping that he would either give him a reliable answer or else pass his paper on to the chief of the Army General Staff.

Marcks assumed that the intended short campaign against the Soviet Union would instantly give rise to an enemy coalition, in due course to be joined by the United States, which was in any case already involved economically. Turkey would follow suit, thus realizing an 'old English war plan', a blockade designed to exhaust German-Italian military resources. That was a precondition for going over to the offensive. In its initial phase the strategy demanded total strangulation by sea; this, in Marcks's view, was guaranteed. Just as in his Operations Outline, Marcks proceeded from the assumption that, during the first phase of the war, the 'Red slide' could rely on German transports across the Baltic being paralysed by Russian and British forces; in consequence, the need for the Russians to attack Sweden with a view to cutting off Swedish ore supplies to Germany would be eliminated. An Allied attack on Romania might be a possibility, provided it could be fitted into the framework of the Red Army's overall operations. Marcks expected air raids on the western half of Germany—the British, he believed, would be capable of such attacks in the winter of 1941–2—and these would be supplemented by Soviet air attacks on the eastern part of the Reich. The enemy coalition would probably assume

¹⁰³ Letter from Marcks to Tippelskirch, 10 Sept. 1940; see Tippelskirch's reply, 3 Oct. 1940, as well as a letter from Lt.-Col. Kinzel (head of the Department for Foreign Armies East), 3 Oct. 1940, BA-MA, 18. Armee, 17562/9.

that a German invasion of Britain had been postponed and that the Soviet Union would be attacked first. The Soviet Union would have to bear that attack until such time as a general offensive could be launched simultaneously by the Red Army in the east and by a broadly planned landing of British-American troops in the west. In the event of a speedy exhaustion of the German forces in the east, such an offensive was possible in the course of 1941, but it was more probable in 1942. The task of the Red Army, therefore, would be to stand up to the German attack while preparing its own offensive. For that the armaments centres around Leningrad and Moscow, control of the naval bases in the Baltic, and holding on to the raw-material bases in the Ukraine were the prerequisites.

The crucial question in Marcks's operational reflections was how the Red Army command could ensure the protection of these vital regions while simultaneously pulling out major forces for the encirclement and annihilation of the German army. In order to achieve this, the Red Army would have to use its mobile units, taking advantage of the difficult terrain in the sector of the main German attack against Moscow, to fight a delaying action. If the Red Army were to engage only in rearguard action, the German armies would advance too fast. If it engaged major forces well forward, it would be running the risk of premature defeat. The German attack would have to be finally halted at a prepared position, such as along the general line Riga-Polotsk-Berezina-Pripet-Dnieper down to its estuary, to ensure that the bases for a counter-offensive were defended and the bulk of Soviet forces preserved. In the event of a further retreat the Red Army would risk being torn asunder. It was incapable of set battles by separate groups and would have to be pulled back to the Volga. In that case it would become dependent on the industrial centres in Siberia and the Urals, as well as on American supplies. These could be cut off by Japan, though Marcks did not expect Japan to enter the war on the German side. Crucial for the German conduct of the war, in Marcks's opinion, was the conquest of the Ukraine and control over communications in the Baltic. After that, there was no need to fear a blockade; the principal prerequisite of victory for the 'Red coalition' would have disappeared.

By emphasizing the importance of control over Baltic maritime communications and over the Ukraine, Marcks reverted to his first operational reflections, which, in his Outline, had been reduced to the assertion that an attack from Romania was 'necessary in any case'.

In assessing the likely response of the enemy, Marcks assumed that the Soviet military command would probably act systematically; he thought that the construction of several defensive zones by the Red Army was conceivable. This revealed the risks of a German attack much more clearly than the operational study did, since the entire German timetable, including the pauses for rehabilitation and replacement, might be called into question.

Marcks assumed that the massive concentrations in the west of the Soviet Union were not preparations for an attack but were designed to secure the

newly acquired territories. The Red Army, he thought, would act defensively 'because that is in line with the situation and also with its character'. He expected that it would defend itself along the line envisaged by him. Delaying resistance, combined with counter-thrusts costly for the attacker, might then enable the Red Army to prepare for the 'second act'. The German armies would then be in danger of being pinned down for the winter at the last Soviet line without having fought the decisive battle. Marcks therefore concluded that the greater the element of surprise in the outbreak of war, the greater the chance of defeating major forces near the frontier. This to him was an indispensable condition of the success of the campaign, and hence of a decisive victory before the 'Red coalition' would come into effect. He therefore concluded: 'Any serious operation by major Russian forces west of the large forest zone and the large rivers can only be welcome to us', emphasizing once more that such a form of engagement would be a positive 'good turn'.

The answers which Marcks received from Lieutenant-General von Tippelskirch, the senior quartermaster IV, and from Lieutenant-Colonel Kinzel, head of the Department for Foreign Armies East, certainly did not do full justice to his arguments. Tippelskirch rejected the idea of a British-American landing on the European continent; instead he expected an offensive in North Africa for the gradual conquest of Libya. Its objective, after the expulsion of the Italians, would be the creation of air-bases for the struggle against Italy. However, the consequences of such an operation, though undoubtedly unpleasant for the conduct of the war by the Axis, would not include the tying down of German forces to an extent that would substantially improve the Soviet Union's prospects of launching an attack or even of mounting a defence. Japan, Tippelskirch believed, would enter the war. Generally he thought that 'a war between Germany and Russia [would] not be triggered off by the *Russian* side during the next year'.

Tippelskirch's letter with its superficial theses offered no answer to Marcks's central question of what would happen if the war were protracted by the 'Red coalition'. Lieutenant-Colonel Kinzel proceeded from the belief that the fortified defensive line assumed by Marcks was unsuitable for the Soviet defence; while the industrial areas around Leningrad and Moscow were admittedly beyond the range of the Luftwaffe, the eastern Ukrainian industrial region, which was important to the Red Army, would be within German range. Kinzel therefore concluded that the bulk of the Red Army would stand and fight west of that line, or else would fall back, in delaying action, across the Dnieper eastward to the Volga, and on to the Urals. But that was a task which the Soviet command would scarcely be able to tackle, among other things with regard to supplies. In reply to Marcks's question concerning what form of combat the Red Army would choose if it accepted battle in western Russia, Kinzel declared with assurance: 'Its regulations and its megalomania demand attack, but its fear of the German army paralyses its resolution.' As for the

Soviet thrust into Romania, also assumed by Marcks, Kinzel thought that that was the least pleasant possibility. If it succeeded, Germany would be reduced to what oil she still had in her containers. But as the Russians would not themselves start a war, that bold decision could be discounted.

Running like a red thread through Marcks's questions about the strategic and operational response of the enemy, and equally through the highly unsatisfactory answers he received, was the concern that the campaign might take longer than envisaged and might expand into a world war. Alongside the lessons learnt on the battlefields of the First World War, which had resulted in a well-thought-out training and re-equipment of the entire *Wehrmacht* as well as in the operational concept of mechanized, 'lightning-like' co-operation of all service branches, which had brought victory in Poland and in the west, different lessons were also being remembered. These included consideration of geo-strategic conditions and, more especially, the dependence of the war economy and food supplies on the resources of German-dominated western Europe. The economic aspect of that situation has been discussed elsewhere; at this point mention should merely be made of the underlying fear of a blockade. Blockade did not only mean being cut off from overseas imports in wartime; it also meant hunger, continuing for years after the conclusion of a peace treaty. The blockade had not only made the First World War army dependent on substitute materials of all kinds, but it had also brought Germany's ally Austro-Hungary to the verge of collapse in 1917; it had exposed the hereditary lands of the Habsburg crown to political extortion by Hungary, and suggested military intervention in the Ukraine as the only solution in 1918. This, then, was the area with which operational plans—though under totally different conditions both in western Europe and in the Balkans—were now again concerned.

Halder made that point as early as 28 June, when he explained to his assembled general-staff officers the need for a military administration outside the authority of the army on the grounds that all efforts must now be concentrated; it was no longer a case of a blockade of Germany but of a blockade of the whole of Europe. This was said by Halder at a moment when Germany had control of all the wealth of agricultural France, of Denmark and the Netherlands, of the ore deposits of Belgium and—expected soon—the regions of surplus production in Hungary, Romania, and western Poland, not to mention the contractual wheat deliveries from the Soviet Union.

It was this mental hangover from the blockade complex of the First World War, and remembrance of the dependence of an entire national economy on barter trade with sympathetic partners because of a shortage of foreign currency well into the 1920s, that explains the arguments not only of military men but also of Hitler, who would feel blockade-proof and armed against entire continents only after the acquisition of the Ukrainian bread-basket, that reputed *El Dorado*. Against that belief neither the calculations of agricultural

experts nor the warnings from the embassy in Moscow, nor even the experience of the interventionist army of 1918-19, cut any ice at all.

The question why Tappelskirch did not pass on Marcks's important and far-sighted study to the chief of the Army General Staff, where it could have provided the basis for an examination of the problem of space and time within the overall planning, cannot be readily answered.

The other operational outline to be considered here, the 'study' by Lieutenant-Colonel von Loßberg, was produced over a much longer period of research and under different working conditions. Whereas the chief of the Army General Staff had at his disposal a fully trained staff of officers, as well as all the departments of the Army High Command, Loßberg essentially depended on the people immediately around him and on information from the operations department of the Army General Staff. As there was no such thing as a joint staff for the direction of the Wehrmacht in war—the name 'Wehrmacht operations staff' introduced on 8 August 1940 instead of 'Wehrmacht operations department' resulted in no significant change—it may be assumed that Loßberg's initial work was designed primarily to keep his chief, Artillery General Jodl, informed and to examine Hitler's intentions as to their military feasibility.¹⁰⁴ Jodl, as a former general-staff officer, was in an exceedingly difficult position *vis-à-vis* Halder, who was incomparably better and more directly informed on the army's problems.¹⁰⁵ As recently as in his memorandum of 30 June Jodl, after the victory over France, had not even considered a military attack on the Soviet Union as a means of weakening and defeating Britain.¹⁰⁶ During the exchange of ideas between Halder and Brauchitsch on 21 July, if not before, Jodl must have learnt that a war in the east was being considered. He commented on this project in a memorandum explaining that an attack as early as the late summer of 1940, the date initially suggested by Hitler, was impossible for military reasons.¹⁰⁷ Hitler abandoned that timetable, which was presumably based on a misleading reproduction of Brauchitsch's 'report' on 21 July. On 29 July Jodl informed the general-staff officers of his department that Hitler intended to open the war against the Soviet Union in May 1941.¹⁰⁸

¹⁰⁴ *KTB OKW* i. 111 ff.; Klink, 'Organization'.

¹⁰⁵ *KTB OKW* i. 185 E.

¹⁰⁶ Hillgruber, *Strategie*, 157 ff. It is, however, quite inconceivable that Jodl should not have followed the (surely much-discussed) developments in the Baltic region and on the Romanian frontier. Certainly there was no instruction from Jodl to Loßberg to concern himself with 'eastern questions'. Loßberg began certain preliminary studies 'on (his) own initiative' in July, according to another version 'about the turn of June-July', including the provision of maps of the Soviet Union. (See above, n. 76.)

¹⁰⁷ This memorandum has not yet been found. If the assumption made above (sect. I.IV.1(b) at n. 66) about a report by Brauchitsch on Halder's preliminary work is correct, it would not have taken much convincing to dissuade Hitler from his timetable. That, during the western campaign, he resolved 'to come to grips with that danger as soon as our military position makes it at all possible' was confirmed by Jodl on 7 Nov. 1943, though without any indication of a date: Jodl's note in Jacobsen, 1939-1945, 315. For publication of the whole report, with notes for the annexes, see *IMT* xxxvii. 360 ff.; *KTB OKW* iv/1. 1534 ff.

¹⁰⁸ *KTB OKW* i. 3 ff.; Warlimont, *Hauptquartier*, 126-7.

The decisive signal for the start of preliminary work was given to the Wehrmacht operations department by Hitler's conference with the Army commander-in-chief and the chief of the Army General Staff in the presence of Keitel and Jodl on 31 July 1940.¹⁰⁹

Jodl thereupon instructed the Home Defence Department to compile the material for a draft order and to make preparations both for the transfer of units to the east and for the raising of new units in those areas by issuing guidelines to the high commands of the three Wehrmacht services as well as to the appropriate supreme Reich authorities. It would seem that the point of departure for the strategic reflections in the Wehrmacht operations department was the problem, touched upon by Hitler at his conference on 31 July, of involving Finland and Turkey. Similarly, the settlement of the disputes between Hungary and Romania and the subsequent involvement of Romanian territory called for military-political preparations falling within the responsibility of the Wehrmacht High Command. In order to clarify the operational consequences Jodl issued instructions for the preparation of an appropriate study.

Loßberg's 'Operational Study East' was not completed until 15 September 1940; it was therefore able to include not only Hitler's above-mentioned directives and Jodl's guidelines, but also material supplied by the Army General Staff.¹¹⁰ For that reason extensive parallels to Marcks's study are inescapable. Here, however, attention will be focused on the points diverging from Marcks.

Loßberg proceeded from the view that the Red Army was already in a state of mobilization and that, in consequence, no substantial increase in the number of its formations was to be expected before the spring of 1941. He also accepted that Soviet forces were tied down against Finland, on the Romanian frontier, in the Caucasus, and in the Far East.¹¹¹ As for the Red Army's combat procedure, he assumed three options:

- (1) an attack into the incipient German deployment;
- (2) acceptance of the German attack in the deployment areas near the frontier, with Soviet positions on the two flanks—the Baltic and the Black Sea—being held;
- (3) withdrawal into the depth of Russian territory in order to saddle the attacking German army with the difficulties of extended communications and hence of supplies, with a counterstrike to be launched at a later date.

¹⁰⁹ See the previous n.; also Halder, *Diaries*, 530 ff. (31 July 1940).

¹¹⁰ 'Operationsstudie Ost', published in Besymenski, *Sonderakte 'Barbarossa'* (1968), 307 ff., unfortunately without the appendices; republished in *Fall Barbarossa*, 126 ff.

¹¹¹ These 'tied-down' formations, whose appearance at the front in the west of the Soviet Union was ruled out, were considered unavailable in the calculation of German superiority, although there was no firm basis for that assumption in terms of foreign policy. The only doubts on that point were voiced by Marcks in his 'Assessment of Situation Red' (see above, n. 103).

The first option, in Loßberg's opinion, was unlikely because of the inability of the Red Army's command and personnel to mount an attack on a grand scale against, for instance, East Prussia or northern Poland. There might indeed be minor actions against Finland or Romania, but in the case of Finland these would not improve the Soviet position but, on the contrary, in the event of a German attack towards Leningrad would result in a threat to those forces.¹¹² An attack against the Romanian oilfields, aimed at smashing Germany's supply-base, possibly performed only by Soviet flying formations, would have to be repelled by the German 'instructor' units and by organizing Romania's defence. Thus the future German military mission in Romania became something like an 'advance party' of the German southern flank.¹¹³

The most probable variant, Loßberg believed, would be that of the Red Army meeting the German attack in the western areas of the Soviet Union because it could not surrender the most valuable parts of its territory without a fight. For the same reasons as those stated by Marcks, he would welcome the Red Army's decision to stand and fight in strength at an early stage.

The most unfavourable variant, in his opinion, would be that of the Red Army meeting a German attack with only minor units while the bulk of its forces were setting up defensive positions along the great river barriers of the Dvina and Dnieper. Major-General Marcks had described this very situation as the prime objective to be aimed at by the Soviet military leadership; conquest of this defensive zone represented the second move of his proposal for the conduct of operations.

For the German strategic effort Loßberg likewise distinguished two operational areas, separated from one another by the Pripet marshes. In favour of a main effort in the north—just as in Marcks's study—were better communications and the German interest in gaining swift control of the Baltic region as well as in a possible co-operation with XXI Group to be launched across Finland, and finally the chance of reaching Leningrad and Moscow.¹¹⁴

In favour of a main effort in the south were the threat to Romania, easier supplies from the Romanian oilfields, and finally the importance of the Ukraine. Unlike Marcks, Loßberg from the outset proposed the establishment of two army group commands to conduct the envisaged main effort in the north. The principal direction of attack was to be with the more southerly army group, whose task it would be to encircle the Soviet forces in the Minsk area and then to thrust on in the general direction of Moscow. Here strong motorized formations would have to be employed, based on the Minsk–Moscow highway. The more northerly army group was to attack from East Prussia

¹¹² The assumption of a possible new Soviet attack on Finland, i.e. primarily against the coastal area in the south and against Åland, was bound to result in priority being given to the securing of the Baltic ports for German purposes.

¹¹³ See sect. I.v.3 (Förster).

¹¹⁴ 'XXI Group' was transformed into Army Command Norway; the German formations employed in Finland later became Twentieth (Mountain) Army.

against and across the lower Dvina. According to how the situation developed, the group engaged in the main effort was to be temporarily wheeled towards the north in order to cut off the Red Army formations facing the German northern flank. Loßberg's proposal of an attack with partial forces from northern Norway towards Murmansk is likely to have been related to soundings in Finland, initiated at Hitler's command in August. The bulk of the German and Finnish formations was to be deployed in southern Finland: initially they were to tie down the Russian forces and subsequently, as soon as Army Group North approached Leningrad, thrust forward to meet it.

The operation south of the Pripet marshes was to be conducted, according to Loßberg's draft, with about two-thirds of the army's total strength, with the objective of enveloping the enemy forces between the marshes and the Black Sea from both sides and annihilating them. The main effort of that operation, according to him, would be the thrust of a major force from southern Poland, in an east-south-easterly direction, covered by a strong left flank. In the course of the operation this was to close up against the Pripet marshes and later against the Dnieper. Another force, to be brought up at the start of the operation, was to strike northwards from the area north of the Danube estuary—covered by the Romanians, now to be regarded as allies, and by the German forces in Romania—and thus to cut off the eastward retreat of any Soviet forces fighting south of the Pripet marshes.¹¹⁵

The two groups of the eastern army were then to co-operate east of the Pripet marshes to attack the final military objective, only then to be defined. The choice of that objective would depend on whether the Soviet Union was still capable of action once it had lost its western territories and its link to the Baltic Sea. As a very distant objective Loßberg named the general line from Archangel via Gorkiy and the Volga to the Don. An advantage for the German conduct of operations, Loßberg believed, would be the difficulties which the Soviet government would presumably encounter in the Ukraine; these should be manipulated by agents of the foreign-intelligence department. As for the Soviet air force, he did not, in spite of its numerical strength, credit it with the ability to mount a centrally controlled major operation.

Loßberg, much like Marcks, saw the task of the Luftwaffe as supporting German ground operations at their points of main effort, disrupting the railway network, and securing key points by the employment of paratroops and air-landed units. In his assessment of the operational opportunities of the navy Loßberg, again much like Marcks, proceeded from an assumption of Soviet naval superiority; the prime tasks therefore were securing the German coastal forefield and blocking the exits from the Baltic against attempted break-outs by enemy naval units. Not until Soviet naval bases, including

¹¹⁵ Such a thrust from Romania was in line with Marcks's original intentions, which, however, he did not pursue after Halder's directive of 1 Aug. 1940.

Leningrad, had been eliminated by the army's operations could secure maritime communications between the Baltic region and Finland be expected; only then could supplies for the northern wing of the army be brought in by sea.¹¹⁶

After the bringing-up of the formations of Army Group B (35 divisions) by the end of October Löffberg did not believe that any further reinforcement of the army in the east was necessary; otherwise the Soviet Union might feel threatened and might take appropriate countermeasures.

The main outlines given here of the drafts for the operational planning of the Army General Staff and the Wehrmacht operations department characterize the assumptions on which the two staffs based the preparation of the final operational plan and the deployment directive. Both Marcks and Löffberg regarded the Soviet adversary as neither ready nor willing to attack Germany. His principal advantage was the vastness of the territory and the large number of formations that could be fielded. This advantage, however, seemed offset by the assumed inability of the Red Army command to withdraw major formations from rapid seizure by the swiftly advancing German spearheads of attack. It was assumed, therefore, that it would be possible to smash the bulk of the Red Army as soon as the Dnieper-Dvina line was reached, or overcome, and that a decision could be brought about even in this initial phase of the campaign. If that was not achieved, a pause would have to be called in operations in order to rehabilitate the army and reorganize it in accordance with new main efforts of attack. Both drafts assigned the main effort to the army group advancing on Moscow north of the Pripiet marshes; the reasons were predominantly those of transport geography, i.e. operational reasons, even though political considerations probably played a part. The assumed clear superiority of the German forces led both authors to assign additional tasks to the army group engaged in the main effort. Löffberg believed a northward wheeling of some formations of that group to be possible and necessary, while Marcks called for a southward wheeling in support of the neighbouring army group. This idea was to affect both the further planning of operations and the course of operations themselves.¹¹⁷

¹¹⁶ It is not clear whether Löffberg had approached the navy for an opinion on these questions; this would emerge from the (so far still missing) appendices.

¹¹⁷ In yet another operations study by Inf. Gen. Georg von Sodenstern, the chief of staff of Army Group A (renamed Army Group South on 1 Apr. 1941), the idea of full concentration of forces on the principal objective, Moscow, is developed in exemplary form. However, it is uncertain to what extent this study, dated 7 Dec. 1940, influenced decisions within OKH. Proceeding from the vastness of the territory and the extent of the front line, as well as from the enemy's presumed line of resistance along the river courses, he described a large encirclement by the inner flanks of the army groups north and south of the Pripiet region as the only chance of reaching the principal objective of Moscow within the time available. The two army groups, 'South' and 'North', were to be covered against diversionary attacks from the Pripiet marshes by a weaker army group to be deployed against the marshes. This central army group would also drive the strong enemy forces—assumed by Sodenstern to be located there—into the developing pincers of the two neighbouring army groups. The outer flanks of Army Groups North and South would only need securing. The objective of the operation was neither the Baltic Sea as far as

(e) *Planning by the Army General Staff and Directive No. 21*

On 3 September 1940 Lieutenant-General Friedrich Paulus, newly appointed Oberquartiermeister I (senior quartermaster I), assumed the co-ordination of all preparatory planning work of the Army General Staff.¹¹⁸ Basing himself on the preliminary studies by Marcks and Feyerabend, as well as on the more detailed directives of Halder, he concentrated on the operational starting-situation and on the army's order of battle. In all his personnel calculations he still had to take into account the retention of strong formations and headquarter staffs for the attack against Britain. On 29 October Paulus reported to Halder.¹¹⁹

Italy's attack on Greece on 28 October 1940, however, turning the spotlight once more on the Balkans, rapidly changed the political and military starting-position for planning the attack on the Soviet Union. On 4 November Hitler decided to abandon his plan of dispatching an armoured formation to Libya and instead to consider a thrust across Bulgaria to the Aegean Sea.¹²⁰ This was to prevent the British from establishing air-bases in Greece for raids on the Romanian oilfields, and generally to thwart the creation of an anti-German front in the Balkan region, including Turkey. At the same time, preparations for the capture of Gibraltar, the occupation of the Cape Verde and Canary Islands, and the invasion of Britain were to be speeded up. The struggle against Britain clearly enjoyed priority, and Directive No. 18 of 12 November, which incorporated all the above ideas, seemed to assign no more than subordinate significance to planning for the eastern campaign.¹²¹ Moreover, a decision was to be made only after the submission of the army's plans.¹²²

During the first few days of December Paulus staged a map exercise which, proceeding from Hitler's strategic objectives and from Halder's operational

Leningrad, nor the Black Sea. In view of the subsequent difficulties suffered at the hands of an enemy in the Pripet area by Army Group South, whose chief of staff Sodenstern was, it is significant that Sodenstern did not insist on this initial plan. See 'Sodenstern-Studie', reproduced in abridged form in Philipp, *Das Pripetproblem*, 13 ff. This study is not identical with the preliminary work of Army Group A (later South) command, as reflected in 'Map exercise Otto' (BA-MA RH 19 I/70). A remark by Sodenstern of Jan. (recte 5 Feb.) 1941, reported by the future Inf. Gen. Walter Buhle, that the outcome of the map exercise showed the war to be lost, is not compatible with the impression actually gained from the exercise and must therefore be doubted. On this see Uhlig, 'Das Einwirken Hitlers', 210, and, more especially, Hillgruber, 'Rußland-Bild', 308.

¹¹⁸ Halder, *Diaries*, 540-1 (6 Aug. 1940); Philipp and Heim, *Feldzug*, 30 ff.; Paulus, 'Ich stehe hier auf Befehl', 40 ff.

¹¹⁹ Halder, *Diaries*, 642. Paulus's memorandum has not so far been found.

¹²⁰ Halder, *Diaries*, 673-4 (4 Nov. 1940).

¹²¹ That 'programme' was so far-reaching that Halder began to doubt whether planning for the war in the east still played the decisive part. He intended to confront Hitler with all his projects and call for a clear decision: Halder, *Diaries*, 673-4 (4 Nov. 1940); see also above, n. 83. On Directive No. 18 see *Hitler's Directives*, 39 ff.

¹²² On Molotov's simultaneous visit see Halder, *Diaries*, 689 ff. (14-16 Nov. 1940), 719 (3 Dec. 1940); KTB OKW i. 174; Hillgruber, *Strategie*, 300-1 (which also gives a list of the extensive literature). Tippelskirch, diary entries for 11, 14, 16 Nov. 1940, based on briefing by Etzdorf, BA-MA RH 2/v. 1479; DGFP D x, Nos. 325, 326, 328, 329.

directives, was designed to yield information on the German strength that would be required, on the most favourable conduct of operations and on the presumed reaction of the enemy. In the presence of the departmental heads in the Army General Staff and a few other officers, as well as the Luftwaffe general attached to the commander-in-chief of the army, the appropriateness of the preparations made so far was examined on 2, 3, and 7 December.¹²³ The results of the first two sections of the exercise—the conduct of operations up to the achievement of the first objectives along the Kiev–Minsk line—were included immediately in the version of the plan presented by Halder to Hitler. This applied, in one instance, to the launch of Army Group South from Romania and southern Poland, where the map exercise had shown that, because of the difficulties of deployment in Romania, the forces available, and command problems, the main effort had to be clearly assigned to the group advancing from Poland. In another it emerged that, in order to destroy the bulk of the enemy forces in the central sector, strong infantry forces would have to be added to the armoured groups for the great battle of encirclement envisaged in the Minsk area, to ensure that the envelopment was rapidly completed by the infantry, with the armoured forces being freed for the further advance. For Army Group North it emerged that its task of occupying the Baltic States would result in a lagging-behind of its right wing and hence in a threat to the flank of Army Group Centre. Generally the most important finding of the exercise was that a swift decision of the campaign by the encirclement and capture of Moscow could be achieved only if Army Groups South and North both saw their main task as providing flank cover for the rapidly advancing Army Group Centre. After the achievement of the first objective, a line along the middle Dnieper south of Kiev, thence Rogachev–Orsha–Vitebsk–Velikie Luki–Pskov–Pjarnu (a line regarded as the base for the decisive attack on Moscow), a pause of about three weeks would have to be called for developing supply-lines (rail and road), and for rehabilitation and resupply. After that, on the fortieth day from the start of the war in the east the offensive was to be resumed.

The assumption was that the Red Army, having by then suffered great losses, would not stand and fight the decisive battle on that line, but would wish to exploit the space around Moscow to gain time for reinforcement. For that reason Army Group Centre would have to resume its offensive as soon as possible, even if the other two army groups were unable to go into action at the same time.

For the resumption of its operations Army Group South demanded the temporary provision of armoured forces on its northern wing to enable it to strike from the area south of Kiev and south of Gomel across the Dnieper and

¹²³ Halder had himself briefed by Paulus on 2 Dec. 1940; on 3 Dec. he took part in the discussions on the second part of the conduct of operations: Halder, *Diaries*, 715–16 (2, 3 Dec. 1940); Paulus, *Ich stehe hier auf Befehl!*, 107 ff. The data contain a few mistakes on the structure of the army in the east; these are due to lapses of memory.

Desna, with the aim of cutting off the enemy group east of Kiev. Army Group North likewise demanded armoured forces from the centre of the front in order to support its right wing and reach the line from Velikie Luki to Lake Ilmen. While conceding the need for such support, all the commanding officers ultimately refused to have the main thrust towards Moscow thus weakened. Halder eventually ruled that Army Group South, echeloned to the right, with a strong northern wing close against Army Group Centre, must open the attack. Army Group North was to advance with a strong right wing. In the direction of Leningrad the enemy was at first to be tied down; in the Baltic region he was to be contained. The timing of the attack on Leningrad would hinge on the progress of the offensive against Moscow.

The report on the Army High Command's operational intentions was made to Hitler on 1 December 1940.¹²⁴ In very typical manner Hitler seized that opportunity to indulge in a rambling monologue—a wearying one for the army officers, who were working under great pressure—on general strategic problems with only marginal relevance to the task in hand.

He opened the conference with a survey of the war situation. Having explained his view on the situation of the Italians in Albania and Libya, and having assured his listeners that no German army units would be transferred to North Africa, he reaffirmed his interest in eliminating the British and French from North Africa. The seizure of Gibraltar formed part of that area of planning. In the Balkans he saw success of the threats against Greece in the fact that the British would be prevented from attacking Romanian sovereign territory with 'auxiliary forces'. He believed that the Turks were also working in that direction, from fear of seeing a new theatre of war emerging in the Balkans. Such a theatre, however, would arise if the Greeks continued to tolerate the presence of British troops; in that case a German attack through Bulgaria would become necessary. Preparations for that eventuality ('Marita') were to be put in hand. Such a campaign against Greece would not affect other plans; Romania would certainly fight alongside Germany against the Soviet Union; the future fate of Finland was likewise linked to a German victory. This general survey of the options touched upon in Directive No. 18, supplemented by the lessons of Molotov's visit, now culminated in the unequivocal statement that the decision on hegemony in Europe would be made in *the struggle against Russia*. This observation by Hitler was addressed to the commander-in-chief of the navy, even though at the same time he conceded the importance of the Mediterranean strategy. The army commanders were once more confirmed in their impression that Hitler's Directive No. 18 showed that he had not yet finally decided in favour of an absolute priority for the campaign in the east. This impression was further strengthened by the announcement that Gibraltar was to be seized and the Balkan campaign to be fought before the campaign against Russia. If a Balkan campaign turned out

¹²⁴ Halder, *Diaries*, 721 ff. (4, 5 Dec. 1940); *KTB OKW* I. 203 ff. (5 Dec. 1940), 981-2 (appendix 41).

to be unnecessary, the units there would be ready to move against the Soviet Union. Following the capture of Gibraltar, two divisions were to be earmarked for North Africa. All this implied an unpredictable length of time during which offensive forces would be tied down.

Hitler further explained that success in a war against the Soviet Union depended on the choice of the most favourable moment. This applied not only to weather conditions but also to the state of armament and combat-readiness. Whereas the Red Army was inferior in both those respects, the Wehrmacht by the following spring would be at a peak in terms of officers, men, and material. This was a clear hint of the date of attack to be aimed at, but it was not an order to concentrate all available efforts on the project. Hitler emphasized that the Red Army was to be split up in major encirclement operations and 'strangled in parcels'.¹³⁵

It was then Halder's turn, evidently also at some length, to report on the state of his planning activities. After an exposé of the geographical conditions, Halder stated that the Dnieper-Dvina line was the most easterly position from which the Red Army could protect the core of its industrial region. The German intention, therefore, must be to prevent the enemy from establishing any cohesive resistance west of the two rivers. An especially strong assault group (Army Group Centre) was to thrust towards Moscow from the Warsaw area. As for the two neighbouring army groups, Army Group North was to push towards Leningrad and Army Group South with a main effort towards Kiev. For the sector of Army Group South he envisaged three armies, one of which was to advance from the Lublin area, the second from the Lvov area, and the third from Romania. The ultimate objective of the operation was a line roughly along the Volga and the area of Archangel. As for forces, Halder envisaged 105 infantry divisions and 32 armoured and motorized divisions; major portions of these, divided among two army commands, were to follow up as a second line. Eleventh and Second Army commands were earmarked for that role.

Hitler declared his overall agreement with the operational intentions submitted to him. He emphasized the importance of preventing the Red Army from establishing a cohesive defensive line. He left unresolved the question of whether the advance should aim at Moscow or east of it and he did not comment on Halder's overall operational objective, the Volga-Archangel line.

What was important, he stressed instead, was to make Army Group Centre strong enough to wheel considerable portions of its forces, northwards in order to encircle the enemy forces in the Baltic region. Thus the fundamental principle of Halder's plan, priority for the seizure of Moscow, was called into question. On the southern wing Hitler unambiguously assigned the main effort to the northern group: it was to thrust beyond Kiev and, coming from

¹³⁵ This was Halder's diction; comparison of the entries in his diaries with those in *KTb OKW* offers insights, beyond factual complementation, into Halder's spontaneous reactions and his assessment of Hitler and OKW—as well as into his own self-assessment.

the north, accomplish the encirclement of the enemy forces in the Ukraine. A later advance, 'with units, possibly, from Romania', was by no means in line with Halder's proposed concept of a large-scale envelopment starting from the areas of Lublin, Lvov, and Romania.

In point of fact this concept, as will be shown elsewhere in this volume, was to have provided for two encircling moves, the inner one of which, aiming from Lvov towards the south-east, required a second prong coming across the Carpathians. This would have called for Hungarian forces, or at least for the Hungarian government's consent to a transfer of German troops to the Carpathian front. Hitler, however, firmly rejected any arrangements with Hungary: neither did he see any war aim for Hungary in the Soviet Union, nor was he prepared to pay for Hungary's participation by concessions at the expense of Romania or Yugoslavia. It was therefore quite impossible for Halder to name the real objective envisaged by him for some of the forces advancing from Lvov, let alone to disclose his Hungarian contacts.¹²⁶

It was typical of the atmosphere of the conference, and indeed of Halder's relationship with Hitler, that these very substantial differences in attitude were never discussed, and that Hitler proceeded from the assumption that his roughly outlined basic concept had to be accepted by Halder, while Halder in turn was confident that developments up to the moment of decision would prove him right and that Hitler would then have to yield to his, Halder's, judgement.¹²⁷ Conflict during the campaign was thus assured from the start.

On 13 and 14 December Halder assembled the chiefs of staff of the army groups and armies.¹²⁸ He outlined the whole spectrum of Hitler's exposé and repeated his fear, first recorded by Marcks, that Britain would try, with the aid of Turkey and the USSR, to strangle the German oil basis in the Balkans; that had to be forestalled. The decision on hegemony in Europe would be made in Russia, that was why preparations had to be made for the campaign. For the army this meant a single-front war, for which 130-40 divisions would have to be made available; the Luftwaffe and the navy, on the other hand, would have to fight on several fronts. These statements not only reflect the purely operational approach intended for the audience in question, but also leave no doubt about Halder's belief that the campaign could be concluded successfully in the time envisaged. The main effort of future work would be in the areas of raising and training the formations and of creating all the prerequisites of deployment.

On 14 December the floor was given to the departmental chiefs in the Army General Staff; in addition, Colonel Erich Buschenhagen, chief of staff of the army in Norway, spoke of plans for operations in northern Finland. There was no discussion of the points in Hitler's directives which differed from Halder's

¹²⁶ See sect. I.v.4 (Förster).

¹²⁷ On Halder's attempt to pin Hitler down see sect. I.iv.1(e) at n. 138.

¹²⁸ Halder, *Diaries*, 735 ff. (13, 14 Dec. 1940); for the time schedule and participants see Halder, *KTB* ii. 462-3 (not in trans.).

concept. Again Halder evidently believed that his plans would prevail and that Hitler would eventually approve them, as he had done in the west.

Within the Wehrmacht's operations department Hitler's guidelines were now being transformed into a formal directive. Put down in black and white, the above-mentioned differences were bound to emerge clearly. Thus Jodl on 6 December pointed out to the Home Defence Department (which was working on the text) that, whatever happened, Hitler intended to continue the advance in the Balkans ('Marita') as far as Athens, whereas Halder's calculations of the forces required were based on an occupation only as far as Salonika.¹²⁹ Hitler moreover considered the possibility, in the event of offensive action against Turkey, of employing a further six divisions beyond the six envisaged for security duties. However, the planners of the deployment instructions for the war in the east were subject also to external influences. On 8 December the head of the Ausland/Abwehr (foreign counter-intelligence) department, Admiral Wilhelm Canaris, reported that Franco was no longer willing to enter the war alongside Germany.¹³⁰ Dino Alfieri, the Italian ambassador, painted the situation of the Italian troops in Albania 'in the blackest colours'. More reports on the unreliable attitude of the 'Weygand Army' in Syria and North Africa were coming in, inducing Hitler to order preparations for the immediate occupation of 'residual' France. With the abandonment of the plans concerning Gibraltar the struggle in the eastern Mediterranean was bound to gain in importance. This situation was reflected in Directive No. 20, Operation Marita, where the occupation of all of Greece was stated to be the objective. The connection with the operation in the east was provided by item 6, which stated that, following the conclusion of Operation Marita the bulk of the forces would be withdrawn for employment elsewhere.¹³¹

The requirements resulting from all these operational reflections seemed to the Wehrmacht operations department to exceed the scope of what was possible to such an extent that, during the drafting of its plans for the war against the Soviet Union, it felt that comment had first to be invited from the separate Wehrmacht services.¹³² A request was therefore addressed to the naval operations command for comment on the issue of a war on two fronts from its point of view. The response was a clear rejection. Following Hitler's exceedingly optimistic expectations for the spring of 1941, voiced on 5 December, the Luftwaffe was asked what forces it considered necessary for the maintenance of the air war against Britain and for the indispensable protection of German territory—in other words, what forces could realistically be employed in the war against Russia. Lieutenant-Colonel von Loßberg was asked for an opinion on the situation in the Mediterranean as seen by the army. Initial calculations

were also put in hand of fuel requirements, allowing for the loss of Soviet deliveries. In addition, General Thomas, head of the War Economy and Armaments Department, produced a study of the economic consequences of a war against the Soviet Union.¹³³

On 12 December 1940 Lieutenant-Colonel von Loßberg submitted the first draft of Directive No. 21.¹³⁴ That text underwent revision by Jodl; the occupation of Petsamo and protection of the Arctic Ocean route were included. Moreover, according to a note by Major Deyhle, Jodl's adjutant, a 'later move out of Romania' was envisaged. Whether this addition was in line with the result of the conference of 5 December as seen by Jodl, or whether it was based on a 'recollection' by Halder, who was being kept informed on the progress of work on the directive, remains an open question. It is conceivable that Jodl, in line with Halder's known views, initially envisaged no more than the creation of a point of main effort at the northern wing of Army Group South, together with a halting of the formations released from the Balkan operation, possibly for the envelopment operation from the north. On 14 December the text was returned to Loßberg for further revision. On 16 December the revised draft was submitted to Jodl, with a note that the Luftwaffe's comment on a war on two fronts and the fuel issue was still expected. On 17 December Jodl reported to Hitler. Now followed the written finalization of Hitler's intentions, which, as had been discernible as early as 5 December, diverged from Halder's report;¹³⁵ the text had evidently been personally dictated by Hitler. The concept of the main effort in the sector of Army Group Centre remained unchanged, except that the thrust, once the enemy west of the Dnieper-Dvina line was smashed, was to be redirected to the north with strong mobile forces in order first of all to defeat the enemy there in co-operation with Army Group North. As a result, possession was to be taken of the Baltic States with the Baltic coastline. Only when this more urgent task (as Hitler saw it) was 'settled' were offensive operations to be resumed for the seizure of 'the most important transport and armament centre, Moscow'. Only an unexpectedly rapid collapse of Soviet resistance would justify going for the two objectives simultaneously. It proved possible, evidently through Halder's efforts, to replace the word 'settled' by 'made safe', which meant that there was no firm assignment of units.¹³⁶ The idea of wheeling round strong forces even before Moscow was reached is already found in Loßberg's study; he regarded the

¹³⁵ *Hitler's Directives*, No. 21, pp. 49 ff., according to the second copy (the copy of the Naval High Command). The working copy of the Wehrmacht operations staff is the fourth copy; it is initialised by Loßberg, Jodl, Warlimont, and Keitel, and signed (in full) Adolf Hitler. Warlimont's initials are dated 16 Dec. A film copy of the fourth copy, final version with corrections, was the source of *IMT* xxvi. 47, and Jacobsen, 1939-1945, 180 ff.; BA-MA RW 4/v. 522.

¹³⁶ Halder's attempts to tie Hitler down are attested in Heusinger and Henrici, *Feldzug in Rußland*, MGFA, T-6b, 70. This was not, therefore, simply a stylistic 'improvement' but a substantial amendment.

securing of the Baltic sea communications as an important issue. It may be assumed that, in deference to Halder's arguments, he put that idea aside until such time as Hitler, on 17 December, directly demanded its inclusion in the text of the directive.

Jodl's exact role in Hitler's decision to make what Halder had proposed as a secondary operation into the main purpose of the second phase of the campaign—whether he actually suggested it or merely consented to it—can no longer be reliably established.¹³⁷ The minute of the conversation between them on 17 December records that, following the elimination of Soviet forces in the Baltic region, Hitler expected the final suspension of fighting on that sector of the front. That would also ensure the safety of ore deliveries.¹³⁸ A mere security task, performed in conjunction with the Finns, would scarcely bind any forces, but on the contrary release the bulk of the army group for the attack towards the south, i.e. for the encirclement of Moscow.

The plan for Army Group South was also finalized in a form which eliminated earlier uncertainties. The Romanian formations were now to support the German southern wing, at least initially, tying down the enemy where no German forces were stationed, and generally to provide auxiliary services in the rearward area. The idea of the main effort of the army group's attack from the Lublin area in the general direction of Kiev was kept, while the forces in Romania were to advance across the Prut, forming a long-range encircling prong. There was no longer any mention of an envelopment operation from the Lvov area.

After the conclusion of the battles north and south of the Pripiet marshes efforts were to be made, 'within the framework of a pursuit', to gain rapid control of the economically important Donets basin on the one hand, and of Moscow on the other. Although the capture of this city would be a 'decisive success', politically and economically, there was no suggestion of an operational move that would, as Halder saw it, decide the war.

Halder must surely have immediately realized the consequences which might arise from such a divergence of opinions on the conduct of operations. In order to commit Hitler after all to his own view, he arranged for the inclusion of one clause in Directive No. 21, just before the section on the conduct of army operations. It now read: 'Approving the intentions reported to me.' This made sure, at least, that any divergent decisions by Hitler would be seen as such and would provide justification for counter-arguments.

As an overall operational intention, it was laid down that the bulk of the Soviet army was to be annihilated in the west of the Soviet Union and that the

¹³⁷ Löffberg informed Halder on 8 Jan. 1952 that Jodl had agreed with Hitler's decisions against the objection of the Home Defence Department (Army), i.e. himself: Heusinger and Henrici, *Feldzug in Rußland*, MGFA, T-6b, 68. Hence Hitler's changes on 17 Dec. to Löffberg's formulations (probably inspired by Halder) in the first version of the directive, *KTb OKW* i. 233 (17 Dec. 1940).

¹³⁸ *KTb OKW* i. 996 (annexe 45).

withdrawal of combat-ready forces was to be prevented. Next, a line was to be reached from which the Soviet air force could no longer strike at Reich territory. The ultimate objective of the operation was to be a Volga-Archangel line, from which, 'if necessary', the last remaining Soviet industrial region in the Urals could be eliminated by the Luftwaffe.

The task of the units stationed in northern Norway continued to be the protection of Norway and the securing of the nickel-ore mines of the Petsamo area and of the Arctic Ocean route. As an offensive operation jointly with Finnish forces the capture of the Murmansk railway was envisaged. The principal task of the bulk of the Finnish army was to be the tying-down of as many Soviet forces as possible by means of attacks west of, or on both side of, Lake Ladoga as well as the capture of Hanko (Hangö). The army was to employ all available units for these operations, while maintaining the security of territories gained so far. Luftwaffe operations were restricted by the instruction to protect the air-space over the Reich and to continue offensive operations against Britain, in particular against her seaborne supplies. The main effort of the German navy, even during the war in the east, was to continue to be unequivocally aimed against Britain. After the elimination of the Soviet fleet in the Baltic the German navy's task would be to ensure supplies to the northern wing of the army. Finally Hitler ordered that 15 May 1941 was to be the date for readiness to attack. Proceeding from the directives for the Wehrmacht services, the commanders-in-chief now had to make their own preparations and report to Hitler, with intentions and timetable, through the Armed Forces High Command.

The weeks to follow also revealed differences between the army command and Hitler in another, even more fundamental, respect. On 9 January 1941 Hitler took the opportunity of a conference on the overall war situation, attended by the Wehrmacht chief of staff, the army commander-in-chief, the chief of the Wehrmacht operations staff, the chief of the Luftwaffe General Staff, and the chief of the operations department of the naval operations staff, to explain once more, in the presence of the Reich minister of foreign affairs, his political and strategic reasons for Operation Barbarossa.¹³⁹ 'The British enemy, he argued, was being propped up by her 'hope of the United States and Russia'. 'Stalin, the master of Russia, is a clever fellow; he will not act against Germany openly, but it has to be expected that, in situations difficult for Germany, he will increasingly create difficulties.' The economic negotiations with the Soviet Union had proved the justification of Hitler's view.¹⁴⁰ Hitler by then realized that his war-economy, and hence also his power-political, elbow-room was shrinking all the time. However, control of the 'immeasurable wealth' of the Soviet Union following a successful campaign would, as he saw it, enable Germany in the future to wage a 'struggle against continents'. While he described the Red Army as a 'clay colossus without a

¹³⁹ *KTB OKW* i. 996 (annexe 45) 253 ff.

¹⁴⁰ See sect. I, III. 1(b) at n. 66 (Müller).

head', he also warned against underestimation of the enemy. That was why the attack was to be made with the strongest possible forces. Once more he emphasized that the most important task was the 'severance of the Baltic region'. In a typical, well-thought-out sequence he listed the following operational objectives: 'annihilation of the Russian army, seizure of the most important industrial regions, and destruction of the remaining industrial regions.' He stuck to these priorities also at the extended conference of 3 February on the deployment directive for Barbarossa. If, however, the Red Army succeeded in a large-scale withdrawal, priority would have to be given to the capture of the Baltic region and Leningrad in order to 'gain the most favourable supply basis for further operations'. In that case the centre of the front would have to hold back to allow the flanks to outmanoeuvre the enemy.¹⁴¹ Hitler's arguments therefore remained unchanged throughout. Conquest of war-economy bases, both to supply the German troops and to force the enemy to his knees, remained his main objective. Halder, on the other hand, saw the dangers of such a large-scale operation and of a dissipation of forces which would then be lacking for the main attack on Moscow. He believed that with the success of that decisive battle the economic conquests were bound to fall into Germany's lap unaided.

The above-mentioned far-ranging expansiveness of Hitler's observations on the future points of main effort in the war led the army commander-in-chief to doubt, even when Directive No. 21 was issued, whether Hitler was really serious or merely bluffing.¹⁴² As the outcome of a conference with Brauchitsch on 28 January 1941 Halder noted in his diary: 'Barbarossa: Purpose not clear. We do not hit the British that way. Our economic potential will not be substantially improved.'¹⁴³ Added to this were misgivings about a possible 'southern front'. If Brauchitsch and Halder were not convinced of the strategic necessity of an attack on the Soviet Union, and indeed foresaw risks in the event of a war on two fronts, they would have had an opportunity a few days later, on 3 February, of urgently voicing them to Hitler, just as Field Marshal von Bock had earlier done *vis-à-vis* Hitler and Halder.¹⁴⁴ Yet both of them remained silent, and Halder used his own means to fight for his operational plan. He made a note for his report to Hitler¹⁴⁵ to the effect that the basic concept was laid down by Directive No. 21 so that its execution alone could be the subject of his report. That report, therefore, no longer constituted an exchange of information on intentions and forces to be employed; basically it was confined to essentials, Halder being well aware of what detail he could go

¹⁴¹ Halder, *KTB* ii. 266 ff. (2, 3 Feb. 1941; not in trans.). Whether Halder raised the points he had jotted down for his report to Hitler is uncertain. On the diverging points, neither did Hitler vigorously react to the starting move of Army Gp. South, which was not in line with his directive, nor did Halder with regard to the switching of the main effort to the Baltic countries. He did not include in his diary Hitler's observation that the operational plans should once more be gone through: *KTB OKW* i. 297 ff. (3 Feb. 1941), 1000 (annexe 48).

into without provoking Hitler's interference. After Halder's report on the deployment plan Hitler called for Halder's map material and concerned himself with it for some time to come. Halder used the occasion to ask for Hitler's agreement to the involvement of Hungary in his plans, but Hitler disregarded his request. This meant the loss of another corner-stone of Halder's operations plan for Army Group South; clearly, therefore, he could not inform Hitler about it. This aspect will be examined elsewhere in the present volume.

(f) *The Deployment Directive for the Army*

Once the basic ideas and guidelines for the conduct of the war against the Soviet Union had been laid down in Directive No. 21, the Army General Staff for its part needed to finalize intentions and timetables, and thereby to issue instructions to army group and army commands. Following the command report to Hitler, these instructions were signed as Deployment Directive Barbarossa by the commander-in-chief of the army and thus became binding orders for the army.¹⁴⁶

A first draft of that directive was before the chief of the general staff on 22 January. Its first version, dated 31 January 1941, provided the basis for Halder's report to Hitler on 3 February.¹⁴⁷ In view of subsequent interference by Hitler and the resulting amendments, it will be necessary to examine that report more closely, in terms of both content and form.¹⁴⁸ According to the record in the war diary of the Wehrmacht High Command (*KTB OKW*), Halder at first concerned himself in great detail with the Red Army; next he mapped out the German operational approach and the instructions to the separate army groups, without, however, essentially going beyond the data laid down in Directive No. 21. The record shows that Halder dealt in greater detail with the conduct of operations north of the Pripet marshes. On the tasks of Army Group South the record contains only a single sentence: 'A.Gp. South will advance south of the Pripet marshes and across the Dnieper.'

The major part of his report was concerned with questions of detail.¹⁴⁹ Halder had good reasons for reporting with great reserve on the conduct of operations by Army Group South; on a number of points the deployment directive (in the version of 31 January 1941) far exceeded Directive No. 21. Thus the task of the army group was laid down as to thrust forward from the

¹⁴⁶ 'Reports by the commanders-in-chief' on envisaged measures were mentioned already in Directive No. 18 of 12 Nov. 1940, where a further directive was foreshadowed 'as soon as the basic outlines of the army's operational plans' were submitted and approved; see *Hitler's Directives*, No. 18.

¹⁴⁷ *Aufmarschanweisung 'Barbarossa'* [Deployment directive Barbarossa], published in its final version: Halder, *KTB* ii. 463 ff. (not in trans.); draft of 22 Jan. 1941 and first version with all amendments: BA-MA RH 19 I/67. The final version with all amendments published in Halder, *KTB*, but under the date of 31 Jan. 1941, is misleading.

Lublin area with strong armoured forces and, once Kiev was reached, to push southwards along the Dnieper in order to create a pincer movement with the army advancing from Romania for the encirclement of the enemy's forces. After that, the Dnieper crossings were to be secured, providing freedom of movement either for subsequent operational co-operation with the forces operating in northern Russia or for new tasks in southern Russia. Exceeding the provisions of Directive No. 21, the task assigned to Twelfth Army operating out of Romania, in addition to a rapid northward advance towards Seventeenth Army and Armoured Group 1, already envisaged Odessa as an objective, provided an opportunity arose for its surprise capture. The armoured wedge of the army group, Armoured Group 1, was to advance rapidly towards Kiev, along with Sixth Army and with units of Seventeenth Army; thence, with the bulk of Seventeenth Army, it was to thrust towards Twelfth Army, whose mobile formations were *subsequently* to be switched to Armoured Group 1 as quickly as possible. Sixth Army on the left wing, supported by units of the armoured group and providing cover towards the Pripet region, was to advance towards Zhitomir. Completely absent from Hitler's directive was the employment of part of Seventeenth Army with a group to advance from the Carpathians, from Hungary.¹⁵⁰ That employment of Army Group South, however, depended on two conditions: first, the units of Twelfth Army employed on Marita had to be returned to the army and rehabilitated; second, Romania, Hungary, and Slovakia would have to be prepared for the deployment and would have to support it. On 12 February the army group requested the employment of military forces of those states. This applied primarily to Romanian units: their three 'core divisions' and the motorized brigade were to be engaged in the offensive moves of Twelfth Army. Another six or seven divisions, the entire cavalry, and the Romanian army troops were to follow the German forces to the Dnestr and there take over the protection of the front. A further six to eight divisions were to be made available for occupation and security tasks. The main purpose of employing the Romanians was the freeing of German units for the attack.

Halder evidently had not met with opposition from Hitler when he reported to him on the conduct of operations on 3 February. Even his proviso that, if Twelfth Army was not available, the offensive in the form it was planned should be abandoned, caused no changes in the deployment directive.¹⁵¹ On 7

¹⁵⁰ Plans of Army Group South; map exercise 'Otto' of 5 Feb. 1941, BA-MA RH 19 I/70 and 67a. On 24 Feb. The operations department approved the initial move and intentions of the army group. The use of airborne troops and naval units for the capture of Odessa was to be examined. This plan, like the involvement of Hungary, went far beyond the scope envisaged by Hitler: Forstermeier, *Odessa 1941*, 19-20.

¹⁵¹ This is probably due to the fact that Halder did not go into his measures concerning operational leadership, or at least not to an extent that might arouse Hitler's opposition. This is suggested also by Halder's careful formulation of how to notify the Hungarians: *KTB OKW* i. 299. Halder's provisos are in the notes for his report, Halder, *KTB* ii. 266 ff. (2 Feb. 1941; not in trans.).

March, however, Hitler, having examined the Army High Command's materials and considered developments in the Balkans and Greece, decided that the offensive from Moldavia was to be scrapped; first of all the Marita attack, extended down to the Peloponnese, would swiftly eliminate all danger-spots in the Balkans once and for all. This would require the entire Twelfth Army. As a consequence he ordered that only the units necessary for security were to be left at Romania's eastern frontier and that the attack by Army Group South was to concentrate wholly on an envelopment thrust with its northern wing.¹⁵² This presupposed that Sixth Army and Armoured Group 1 would quickly reach Kiev and Zhitomir, and that the bulk of the armoured forces would then be moved south along the Dnieper. Thus the problem of securing Sixth Army's left flank against enemy action from the Pripet region acquired increased significance—possibly a decisive significance for the success of the operation.

The draft of the study of the Pripet marshes, which Hitler had called for, was completed by the Foreign Armies East department on 12 February.¹⁵³ It contained little more than a compilation of readily available sources, with quotations on the set of problems. The military assessment was based primarily on difficulties of terrain, through routes, and railway lines. On 18 February Halder heard about the study and ordered it to be processed. This paper differed from the original on only one point, but one that seems vital. While the draft had contained the observation that the only military operations feasible in that terrain were guerrilla actions, and that the principal significance of the region lay in the fact that it represented a massive obstacle to the attacker, it nevertheless made the point that an army in control of the railway would be able to move its troops in all directions of the compass. Its final conclusion ran: 'It seems therefore that a threat from the Polesye to the flank and the rear of the armies advancing towards Moscow or Kiev is very much within the realm of possibilities.' This sentence was deleted from the final version of the study, dated 21 February, the version submitted to Hitler. Instead, the study now arrived at the conclusion which Halder had reported to Hitler as early as 3 February—that it had to be assumed that individual mobile Russian units, especially cavalry, would operate against the flanks of the

¹⁵² *KTB OKW* i. 347 ff.; the order to the chief of the Wehrmacht operations staff was not passed on to Halder until 17 Mar. 1941. See *ibid.* 360 ff.; Halder, *Diaries*, 831 ff. (17 Mar. 1941).

¹⁵³ This problem is discussed here because it gave rise to particular difficulties for the flanks of Army Groups Centre and South in the initial phase of the offensive, difficulties which went far beyond the tactical scope and which it proved impossible to eliminate throughout the period of occupation. For bibliography see above, n. 94; also Entwurf der Abteilung Frd Heere Ost [Draft of the Foreign Armies East Dept.], Capt. (Gen. Staff) von Brunn, 12 Feb. 1941, BA-MA RH 2/v. 1923; 'Studie über das Prijet-Gebiet' [Study of the Pripet region], 21 Feb. 1941, BA-MA RH 2/v. 1928. The discrepancy discussed below must have been noticed by the official responsible: because of it and because of the conclusion from it the study was classified as 'Chefsache' on 25 Feb. 1941 and it was forbidden to pass it on to subordinate command authorities (BA-MA H 3/1, fo. 2047/216); Halder, *Diaries*, 832 (17 Mar. 1941); Philippi, *Das Prijetproblem*, 5.

assault groups. In addition, minor actions (up to regimental strength) were possible at any time. The Russians, fighting on their own ground, were used to difficult conditions and would be able to count on the willing support of the population. In the end, continuous aerial surveillance was recommended as the best way of establishing the whereabouts of major formations and their movements. Hitler's instruction in early March that the points of passage through the marshes should be covered by mines at any rate represented a clear decision;¹⁵⁴ even after submission of the Army High Command study he remained unconvinced that the marshy region was free from danger. On 17 March he told Halder that 'allegedly whole armies could be moved there'.¹⁵⁵

Halder's particular method of dealing with Hitler in order to make his views—which represented those of the Army General Staff—prevail was to lead in the future to considerable friction, to a nerve-racking tactic of the chief of the general staff, and eventually to his capitulation. On the other hand, Hitler had from the very beginning left no doubt about his determination that he would not leave the conduct of the war in the east in the hands of the Army High Command. And he enforced that decision.

The decision, which formed in Hitler's mind on 8 March,¹⁵⁶ also called for new decisions on the part of the army command. Pressed by the chief of the Wehrmacht operations department, Hitler on 17 March ordered the abandonment of the Twelfth Army's attack as part of the envelopment move of Army Group South; instead he ordered all mobile forces becoming available from the Greek operation to be switched to reinforce Armoured Group 1. He justified this major intervention in Halder's operational planning by misgivings about the weakness of the Hungarian and Romanian armies. There was no sense, he argued, in basing operations on forces whose availability could not be counted on. This decision therefore finally put an end to Halder's second, closer offensive move by the inner wing of Seventeenth Army and the group of forces that was to have come from the Carpathians, pinned down the enemy, encircled him, and prevented him from withdrawing.

Accordingly, on 8 April the operations department amended the deployment directive for Barbarossa and at the same time made new dispositions about Army High Command reserves. The reserves, which were to have been kept ready for the northern sector in the Warsaw area, were now reduced in favour of reinforced reserves in the Rzeszów area, the objective being the provision of additional forces for the long-range one-sided thrust of Army

¹⁵⁴ *KTB OKW* i. 350 (8 Mar. 1941).

¹⁵⁵ Halder, *Diaries*, 832 (17 Mar. 1941). 'Allegedly' is probably a mistake by Halder.

¹⁵⁶ *KTB OKW* i. 350; Halder, *Diaries*, 831-2 (17 Mar. 1941). Halder fought in vain for his project, also using the argument that any halt in Moldavia would enable major enemy forces to withdraw to the Dnieper. Because of Hitler's decision, at the same time, 'in no way' to involve Hungary in Barbarossa and to draw upon Slovakia only for deployment and supplies, the planned attack by a group from the Carpathians had to be abandoned. On 27 Mar. 1941, admittedly, the situation changed again as a result of the preparations for an attack on Yugoslavia.

MAP I.V.3. Deployment Directive Barbarossa

Group South. Instead of Twelfth Army HQ, Eleventh Army HQ from the army reserve was now assigned to command the German, and subsequently also the Romanian, formations.

With the definitive version of the deployment directive for Barbarossa, dated 8 June 1941, the army groups and armies were assigned the following tasks. Within the framework of Army Group South, Eleventh Army had to protect the Romanian region, which was vital to the German war effort. By feigning deployment it was to tie down major enemy forces and prevent any orderly retreat by them by striking into their movements.

The prime task of Armoured Group 1 was, in conjunction with Sixth and Seventeenth Armies, to break through the enemy lines between Rawa Ruska and Kowel and, by way of Berdichev and Zhitomir, to gain the Dnieper at and below Kiev. Thereupon, without losing time, it was to continue its attack in a south-easterly direction along the Dnieper, prevent the enemy from withdrawing behind the river, and destroy his forces by attacking them in the rear.

Seventeenth Army, having successfully broken through enemy positions north-west of Lvov, was to dislodge the enemy in a south-easterly direction by a vigorous advance of its left wing. It was to gain the Berdichev-Vinnitsa area at an early date in order to continue its attack, according to the situation, in a south-easterly or easterly direction. Sixth Army was to attack on both sides of Lutsk and, while providing cover for the northern flank of the army group, push ahead towards Zhitomir with the strongest possible forces. Thereupon it was to be ready to wheel south-eastwards to the west of the Dnieper in order to prevent the enemy from withdrawing, and to defeat him.

The task of Army Group Centre remained essentially as formulated in Directive No. 21. Its objective was to scatter the enemy forces in Belorussia and to concentrate the mobile forces advancing north and south of Minsk, as a prerequisite of co-operation of major forces with Army Group North for the annihilation of enemy forces in the Baltic region and around Leningrad.

Within that framework Armoured Group 2 was instructed, in co-operation with Fourth Army, to break through at and north of Kobrymin and to advance towards Slutsk and Minsk. There it was to link up with Armoured Group 3 attacking north of Minsk and with Ninth Army. The two armoured groups were then to prevent the enemy from establishing a solid line of resistance along the upper Dnieper and the upper Dvina. The two infantry armies were to complete the encirclement and annihilation, prepared by the armoured groups, in the Biatystok-Minsk area. Fourth Army was then to force a crossing of the Berezina and gain the Dnieper at Mogilev; Ninth Army, having annihilated the enemy at Minsk, was to reach the Dvina at Polotsk.

Instructions to Army Group North likewise, apart from minor amendments, followed Directive No. 21. Its task was to destroy the enemy forces in the Baltic region, occupy the Baltic ports, and eventually, by the capture of Kronshtadt and Leningrad, deprive the Soviet naval forces of their bases. For that purpose mobile forces were to be brought up from Army Group Centre.

Armoured Group 4, in conjunction with Sixteenth and Eighteenth Armies, was to push towards the Dvina at Daugavpils (Dvinsk) and establish bridge-heads. In addition, it was to reach the area north of OPOCHKA as rapidly as possible and from there, according to the situation, advance further in a northerly or north-easterly direction.

Sixteenth Army, after breaking through enemy forces on both sides of the Ebenrode-Kaunas (Kovno) road, was to occupy the northern bank of the Dvina at Daugavpils and then follow Armoured Group 4.

Eighteenth Army was to thrust forward along the Tilsit-Riga road and cut off the enemy south-west of Riga. Next it was to advance swiftly towards the Ostrov-Pskov line to prevent the enemy forces south of Lake Peipus from escaping. In addition, Estonia was to be cleared of the enemy and preparations were to be made for the occupation of the Baltic ports and of the islands of Saaremaa (Ösel), Hiiumaa (Dagö), and Munu to ensure a surprise capture as soon as the situation allowed.

The task of Army Command Norway, which was directly subordinated to the Wehrmacht High Command, remained unchanged: it was primarily the security of Norway and of the ore-mines of the Petsamo area. The version of 31 January had made an offensive against the Murmansk region, involving units of the Finnish army, dependent on the Swedish railways being made available. If this was not the case, an attack could be launched with two or three divisions from the Rovaniemi area and north of it, aimed at Kandalaksha Bay, with the objective of cutting off the Soviet forces to the north. In the event of the railway being available only for supply transports, direct attack was envisaged from northern Lapland via Petsamo against the ports of Murmansk and Polyarnyy. An amendment of 31 May 1941 emphasized the need to defend the Norwegian coast; the forces employed to that end were not to be substantially weakened by Barbarossa, but on the contrary reinforced. The attack on Murmansk, initially to be more fully hemmed in, was now made dependent on the provision of additional forces; the operation against Kandalaksha was no longer mentioned at all. The objectives initially envisaged for the army in the south of Finland were, in the final version, exclusively assigned to Finnish units. They were to eliminate Hanko at an early stage, cover the deployment of German forces in the north, and immediately afterwards, in step with the advance of Army Group North, attack the Soviet forces at their south-eastern front.

With the issuing of the directive at the end of January 1941 the army group and army commands were enlisted in the detailed preparation of the deployment movements.¹⁵⁷ The army groups had to submit their demands and drafts

¹⁵⁷ Halder, *Diaries*, 832 (15 Dec. 1940). On that day he envisaged the processing of the deployment directive by the army group chiefs of staff. Army Group B passed on the instructions to Seventeenth Army HQ for processing (for Army Group South), to Fourth Army HQ (for Army Group Centre), and to Eighteenth Army HQ (for Army Group North). Armd. Group Guderian was to process the employment of all the armoured groups. See BA-MA, 18. Armee,

by the middle of February, and the armies—involving corps HQs and, as far as necessary, divisional staffs—had to process their instructions by the middle of March. To that end all command authorities not yet situated within the sphere of Army Group B had to transfer working staffs to the army group. The camouflaged take-over of command was to be accomplished by the army HQs between 3 April and the beginning of May.

The documentation customary in connection with military deployment directives—on the enemy, one's own forces, communications, supplies, and air support—was frequently, following the issuing of the first version of the directive, not studied or updated until weeks or months later. Time and again Halder intervened to co-ordinate or correct, not always in agreement with his commander-in-chief, whose occasional encroachments into his sphere of authority—which, in Halder's eyes, was the whole army—he instantly rejected.

Specialized aspects of the further preparation of the army's operations will be discussed elsewhere in this volume in so far as its scope permits. Closely related to operational plans were the issues of supplies for the army and of the force to be raised for that particular sector of the war. A brief outline of the quartermaster-general's service and of the organizational structure of the army is therefore indispensable.

(g) *The Preparations of the Quartermaster-General*

It was the duty of the quartermaster-general in the Army General Staff 'to supply the army with everything necessary for its striking power' and 'to shield it from anything that could impair its employability'.¹⁵⁸ This definition, first laid down in 1935, provided the foundation for the preparations that had to be made by the quartermaster-general for the war against the Soviet Union, although the changes which had occurred since the beginning of the war were taken into consideration.¹⁵⁹

On 1 August 1940 Halder informed Major-General Wagner, the chief of the quartermaster-general's staff, of Hitler's intention to have preparations put in hand for war against the Soviet Union.¹⁶⁰ Wagner immediately began his

17562/8. Marcks, as early as 19 Nov. 1940, had prepared a first draft of 'Considerations of an Offensive out of East Prussia' for the initial move of Army Group North. The map exercise of Armad. Group Guderian, which, after the reflections of July–August, can hardly have found itself faced with an entirely new situation (see above, n. 60), concluded that 11 days were needed for an advance to the Dnieper: Halder, *Diaries*, 814 (28 Feb. 1941); Bericht Pz.Gr. 3/Ic, BA-MA RH 21-3/v. 423; on Fourth Army HQ see Meier-Welcker, *Aufzeichnungen*, 95 ff.

¹⁵⁸ H.Dv. 90, *Versorgung des Feldheeres* [Supplies for the army in the field], pts. 1 and 2, 1 Apr. 1935. This regulation was further developed, especially pt. 2 with its numerical data. The 'Handbuch für den Generalstabsdienst im Kriege' [Manual for general-staff service in war] (H.Dv. g. 92) refers to this.

¹⁵⁹ On the development of military administration in war see Umbreit, *Militärverwaltungen*, 13, 85 ff. (Poland), and *Germany and the Second World War*, II, 138 ff., 260 ff.

¹⁶⁰ Halder, *Diaries*, 535 (1 Aug. 1940). Wagner, as chief of staff, had been *de facto* in charge of the department since 1935, but did not become quartermaster-general until 1 Aug. 1940. The previous quartermaster-general, Lt.-Gen. Eugen Müller, became general (special duties) with the C.-in-C. of the army; see sect. I.IV.1(g) at n. 173. On Wagner's personality and work see Wagner, *Generalquartiermeister*, with contributions by officers close to him.

planning work in the areas of organization and infrastructure, proceeding from the general principle that the vastness of the future theatre of operations, the speed of the German advance, the length of supply-lines, and the poor transport facilities would demand the most economical use of supplies and means of transport.

On 12 and 15 November 1940 Halder had himself briefed on the 'basic aspects of supplies in the event of an operation in the east'.¹⁶¹ On the assumption of an army of about 3 million men, 300,000 horses, and 500,000 motor-vehicles, the central questions were those of the location of materials required, installation of repair workshops for motor-vehicles in and immediately behind the zone of operations, and the establishment of supply districts within the areas of the army groups and of the army in Romania. These supply districts were to be replenished by the chief of transport from supply assembly-points in Reich territory. This arrangement provided the basis of guidelines for the development of the railway network, of unloading and transloading stations, and of bridge-building and communication links. Halder in this context described supplying the army in the field as a *leadership task* which could not be tackled by organizational means alone.

Along with the planning of the army's material supplies and the replenishment of stores, Wagner devoted himself to training the officers in his service branch for the tasks awaiting them.¹⁶² The emphasis was on preparations for quartermaster service at corps and division level. To this end, allowing for the far-ranging movements to be expected, exercises were staged for quick adaptation of supplies to the intentions of the command and for the calculation of supplies and transport facilities needed. Attention was paid to the differences in the supplies of mobile forces on the one hand and infantry formations on the other, and the quartermaster officers earmarked for armoured and motorized units were specially trained for the problems of large-scale and engagement-determined attacks. In addition they had to concern themselves with the problems of military administration, i.e. the utilization of occupied territory.

Once the 'Deployment Directive Barbarossa' had been issued, all the preparations of the quartermaster-general were formulated as its appendix 6 and summarized in the 'Directions for Supplies', which were updated and issued in stages.¹⁶³

In his general guidelines for supplies to the troops (part A) the quartermaster-general applied the lessons of the campaign in the west, which had shown that direct supplies from Germany via the quartermaster services of the armies were no longer possible. He therefore created command authorities at the level

¹⁶¹ Halder, *Diaries*, 685, 690. Halder concerned himself intensively with the transport problem as the basis of supplies. See Rohde, *Wehrmachtstransportwesen*, 173 ff.; Pottgießer, *Deutsche Reichsbahn*, 21 ff.

¹⁶² Richtlinien für die Ausbildung der Generalstabs-offiziere im Quartiermeisterdienst [Guidelines for the training of general-staff officers in the quartermaster service], 13 Nov. 1940, BA-MA RH 2/v. 155.

¹⁶³ BA-MA, Pz.Gr. 4/Qu, 22,392/41.

of army groups; these were directly answerable to him and thus able to organize supplies from an expert point of view, independently of the orders of army group HQs.¹⁶⁴ They were responsible for the supply districts, which in turn controlled supply sections within the area of each army. It was there that supply-depots were to be established; these would make it possible, before the opening of an operation, to bridge a fourteen-day suspension of supply transports. In addition, the following stores were to be set up: 2 sets of ammunition for all weapons, 8 consumption quotas of fuel in barrels, 2 further consumption quotas in non-movable tank stores, and 20 sets of daily food rations.

Part B of the instructions contained the regulations for the individual army group areas. These laid down the further route of supply-channels to the armies and assigned supply- and service-units. For Army Group North use of the sea route was envisaged as soon as the war at sea and the progress of land operations permitted.

The entire supply plan after the opening of operations was based on the assumption that during the whole operation, estimated to take four or five months, the army would essentially live off the land and provide itself with everything that could be manufactured within the country or was found there. The dependence of supply management on the transport system constituted a major problem. It was assumed that limited railway capacity would not be available until two weeks after the start of operations. As, moreover, it was not to be expected that any rolling-stock would be seized intact, it was decided to convert the railway network to the German gauge; this necessitated the provision of appropriate construction units and the speediest possible organization of work-teams from prisoners of war and the native population.¹⁶⁵ As for German transport capacity, the quartermaster-general, in addition to the army's transport units, had at his disposal a 'Großtransportraum' (large-scale transport pool), made up of vehicles of the German Reich railway, industry, and other truck fleets; these were brought together under the control of the 'Nationalsozialistisches Kraftfahr-Korps' (NSKK: National Socialist motor transport corps). This transport capacity could be made available only shortly before the start of operations; it was to be integrated in the supply services of the armoured formations in such a way that requirements of ammunition and fuel were punctually available in the form of 'hand baggage'. Supply districts were enjoined to exercise the strictest control over the use of this valuable transport capacity in order to make sure that it did not 'seep away' in the units.¹⁶⁶ The importance Halder attached to road-borne supplies, including

¹⁶⁴ Orders affecting the conduct of operations had to be signed by the chiefs of staff; on this see Wagner, *Generalquartiermeister*; Fährdrich, 'Aufgaben und Arbeit' (MS MGFA T-8-2); also Weinknecht, 'Ostfeldzug', 261 ff.; Rücker, 'Vorbereitungen', 313; Eckstein, 'Tätigkeit', 272 ff.

¹⁶⁵ For the movement of the bulk of the infantry divisions 15,000 *panie* peasant carts, complete with drivers and horses, were hired in Poland and subsequently also in the Ukraine: Halder, *Diaries*, 892 (28 Apr. 1941).

¹⁶⁶ Order of the quartermaster-general of 29 Apr. 1941, BA-MA, Pz.Gr. 4, 22,392/41. 'Hand

their effect on operations, emerges from his note for his report to Hitler on 3 February 1941: '*Motor vehicle must accomplish everything.*'¹⁶⁷

The field branches of the quartermaster-general were staffed by the end of March 1941 and thus assumed supervision of the replenishment of depots. The idea was that the troops would go into action with 1 set of ammunition, 5 consumption quotas of fuel, and 4 days' rations. Supplies for the mobile units, especially of motor-fuel, were to be ensured for the initial period by stocks carried in the 'large-area transport pool'; beyond that, intermediate stores were to be set up about 100-200 kilometres behind the front, so as to keep transport lines short. The infantry formations were not expected to make such rapid progress and would therefore, at least initially, be supplied from stationary depots. A pause for rehabilitation once the first objectives were reached—some 300-400 kilometres beyond the jumping-off line—would be necessary for reasons of supplies; this had been taken into account by the operational planners.

The quantities of ammunition to be stockpiled in the supply districts were laid down on 17 February 1941 as shown in Table I.iv.4. Approximate figures for reserves of ammunition stockpiled on 20 June 1941, including quantities added up to 25 June 1941, are given in Table I.iv.5. In addition there were 20 trainloads of mobile Army High Command stores and 80 trains available for loading.

The preparatory planning described above was in line with past supply practice, allowing for the necessary adjustments called for by the vastness of the space and its peculiarities. Planning was based on military necessities and was exclusively within the control of the chief of the Army General Staff and the quartermaster-general.

The situation was rather different in the area of instructions on the subject of military sovereignty, security, and administration in the rearward army areas, and prisoners of war.¹⁶⁸ Regulation of these questions depended primarily on the intentions which Hitler developed with regard to the future political conditions in the territory of the Soviet Union. On 18 December 1940 the Wehrmacht operations department, as a supplement to Directive No. 21, had issued a draft of 'Guidelines in special areas', which presumably dealt with the purely military treatment of the issue of occupation administration; the contents of this may be surmised from the new regulation. On 3 March Hitler rejected the draft and instead ordered a set of regulations going far beyond the military aspects of security and administration in a war-zone.¹⁶⁹ This contained

'baggage' was the requirement to be provided to the mobile units by the 'large-scale transport pool'.

elements of a future permanent domination, a task outside the traditional scope of any armed forces. Once again Hitler revealed to the generals his objective of creating a number of dependent territories, comparable in status to colonies, in the Soviet regions to be conquered. Their basis should be a

form of 'socialism', which, by excluding both the bourgeois intelligentsia with its aim of a Greater Russia and the existing 'Jewish-Bolshevik intelligentsia, would eliminate any future threat to the Reich'. The political administration and the forcible securing of those territories was outside the responsibilities of the Army High Command. Having accomplished its operational tasks at the front, the army was to be reduced to a minimum—an idea from which the Army High Command also proceeded in its operational plans.

As an intermediate solution, until the formation of their own 'governments', Hitler envisaged that these territories would be run by 'Reich Commissariats', supported by the military forces of Wehrmacht commanders. These forces, moreover, had to be available to the army for whatever tasks the security of operations at the front demanded. In order to prevent a 'settling down' of the army in the entire zone of operations, the sphere of responsibility of the army commander-in-chief was from the outset to be confined to as narrow an operational area as possible.

Another provision of this concept was that not only would the military opposition at the front have to be broken as quickly as possible, but any sign of resistance to the occupying forces would have to be nipped in the bud. To that end the employment of the Security Service of the SS was envisaged, alongside the Secret Field Police, which had in the past been charged with such tasks as the executive of both the Abwehr (military counter-intelligence) and the army in the field. The task of the SS in the operational zone was, above all, instantly 'to render harmless Bolshevik chieftains and commissars'.¹⁷⁰ Three months later, at the beginning of the war against the Soviet Union, a series of guidelines, ordinances, and orders had been issued on this set of problems; these have since become the subject of extensive discussion. As, however, the origin, meaning, and application of these instructions can be adequately judged only with a knowledge of organizational competences, and because the responsibility of individuals for their consequences can only then be truly established, it is necessary to examine the instructions briefly at this point.

Proceeding from Hitler's above-mentioned fundamental decision, on 5 March the Wehrmacht High Command notified the Army High Command that further regulations were due to be issued in good time prior to the beginning of the offensive. In line with existing practice, the legal departments of the two high commands were involved in the drafting, with assistance from the Army and Luftwaffe General Staffs and from the quartermaster departments concerned. For the Army High Command the officers responsible were Lieutenant-General Eugen Müller, general (special duties) attached to the commander-in-chief of the army, and the quartermaster-general. Müller,

¹⁷⁰ Ibid. 341. Wagner's report to Hitler on 13 Mar. 1941 was concerned with policing matters, i.e. the employment of the police in the rearward army areas and questions of entry to the operational area. On 17 Mar. 1941 Wagner reported on the OKW guidelines: see Halder, *Diaries*, 828 (13 Mar. 1941), 834 (18 Mar. 1941).

whose service designation assigned him to the commander-in-chief of the army, came under the 'Legal Affairs Group in the Army High Command'. In line with his service instructions, however, this group dealt only to a minor extent with matters assigned to it by the commander-in-chief; these were procedures reserved to him as the senior legal officer, regulation of powers relating to the confirmation of verdicts, the right of pardon, and the quashing of verdicts.¹⁷¹

In all other matters the general (special duties) attached to the commander-in-chief of the army, and hence the Legal Affairs Group, acted according to the directive of the chief of the Army General Staff. These were predominantly:

- control and supervision of the practice of criminal law in the army in the field and *vis-à-vis* the population of the occupied territory: in this area provision was made for co-operation between the Legal Affairs Group and the general (special duties) on the one hand and the Army Affairs Department of the Army General Staff on the other, whenever matters of discipline and criminal jurisdiction converged; further, co-operation with the Army Personnel Department in criminal cases involving officers, and with the quartermaster-general with regard to the application of criminal law relating to the local population;
- co-operation with the War Administration Department of the quartermaster-general with regard to questions of martial law, criminal jurisdiction in the occupied territories, and the law relating to prisoners of war;
- co-operation with the senior quartermaster IV on matters of international law.

This meant that the formal severance of the Legal Affairs Group from the quartermaster-general's sphere, i.e. the Army General Staff, was *de facto* rescinded for all matters relating to the army in the field and the zone of operations by virtue of Halder's right to issue instructions to the 'general (special duties) attached to the commander-in-chief of the army'.

Hitler's directive on the 'practice of jurisdiction in the Barbarossa zone of operations and on special measures by army personnel' of 5 March, together with his ordinance of 13 May 1941, meant that military administration was to confine itself to securing the material assets needed by the German forces, their transportation and storage, and their protection and distribution.¹⁷² In addition, they were obliged to co-operate with 'the agencies of the Reich Leader SS'. These, however, were already engaged in security and reconnaissance tasks, with the further intention of establishing permanent domination.¹⁷³

¹⁷¹ Der ObdH/GenStdH/GZ (I) 1. Staffl No. 2182/40 geh., 29 Sept. 1941, signed p.p. Halder, BA-MA RH 19 III/146.

¹⁷² See Diagram I.v.4. This concerns administration by the army, not the military administration authorities. Ordinance on jurisdiction: OKW/WFSt/L (IV/Qu) No. 44178/41 g.Kdos. Chefs., 14 May 1941, BA-MA RW 4/v. 577.

¹⁷³ 'Regelung des Einsatzes der Sicherheitspolizei und des SD im Verband des Heeres' (Regu-

The ordinance on the practice of jurisdiction contained four sections. The first of these dealt with the treatment of criminal actions committed by enemy civilians in the rearward areas and by irregulars. The ruling that collective punishment could be ordered by an officer not below the rank of battalion commander reflected Halder's anxiety, on the one hand, to ensure the safety of the troops and, on the other, to prevent arbitrary action or violence by individuals. The second section stated that, in the event of criminal actions by members of the German Wehrmacht against the local population there was no obligation to prosecute, except for certain crimes of violence. This was justified by the Bolshevik influence on the 1918 revolution in Germany and during the postwar period. In such cases the senior law officer had to decide whether a juridical penalty was called for or whether disciplinary punishment was sufficient.

Section 3 made it the duty of commanders in the field to brief all their officers on section 1 thoroughly and in good time.

Fourthly, their legal advisers were to be notified of the regulations and of verbal reports to the commanding generals on the subject of the leadership's political intentions. Only verdicts in line with those intentions were to be confirmed.¹⁷⁴

The commander-in-chief of the army issued these guidelines on 24 May 1941, accompanied by supplementary instructions. To begin with, he emphasized that the measures taken in the area of security and rapid pacification should not be allowed to detract from the principal task of the army, and that the drastic procedure laid down by Hitler applied to serious cases of insurrection. Criminal actions of a lesser kind were to be punished according to the decision of an officer. In accordance with the supplements, which had to be regarded as absolutely mandatory, it was the duty of superior officers to prevent arbitrary acts by individual members of the forces at all costs. The suspension of jurisdiction in the occupied territory was seen as a temporary state of affairs; proposals for its restoration from army HQs up to army groups, and thence to the Army High Command, were expected.

This was Brauchitsch's understanding; during the period which followed it was passed on verbally by the general (special duties), the quartermaster-general, and the competent judges to the command authorities down to division level.¹⁷⁵ As in the ordinance itself, it was now expressly laid down that

lation of the employment of the security police and the SS security service within the structure of the army], OKH/GenStdH/GenQu/Abt. Kriegsverwaltung, 28 Apr. 1941, and 'Grundsätze für die Zusammenarbeit zwischen Geheimer Staatspolizei und den Abwehrdiensten der Wehrmacht' [Principles of co-operation between the secret state police (Gestapo) and the counter-intelligence services of the Wehrmacht], 23 Dec. 1936, BA-MA RH 19 III/388, 271. See the regulation during the Balkan campaign, 2 Apr. 1941, OKH/GenStdH/GenQu/Abt. Kriegsverwaltung No. II. 0308/41, BA-MA RH 31-I/v. 23.

¹⁷⁴ A clear ruling was indispensable to Wagner because his instructions required a legal basis and time was running short.

¹⁷⁵ OKH/Gen.z.b.V.b. ObdH/Gr.R.Wes. No. 80/41 g.Kdos. Chefs., 24 May 1941, BA-MA RH 22/155. For the passing on of this ordinance see BA-MA RH 19 III/722, annexes 24, and 37; Pz.Gr. 3/Ic, Tätigkeitsbericht [Activity report] No. 2, Jan.-July 1941, BA-MA RH 21-3/423, reproduced

the second section, relating to criminal proceedings for excesses committed by members of the German forces, was not to be publicized. In all cases where only disciplinary punishments for criminal acts were being considered, it was necessary to examine whether that was sufficient or whether criminal proceedings should be started.

This meant that the legal position should be aimed at which had applied in the past and which was laid down in article 16a of the 'Decree on military criminal proceedings in war and during special operations', as well as in an ordinance of the commander-in-chief of the army on the subject of disciplinary punishment.¹⁷⁶ That legal ordinance of 1938 ruled that no action might be taken without court proceedings against citizens of enemy countries who had committed punishable actions against the occupying power. Admittedly, a proviso was added even then, to the effect that 'the rulings of the present ordinance for proceedings against citizens of enemy countries' might need amending 'if in those countries the procedural rules and their application do not guarantee the same legal security'. This undoubtedly meant that their application could be restricted to those enemy countries which recognized the Hague Land War Convention and the Agreement on Prisoners of War. Neither was recognized by the Soviet Union in 1941.

As for the guidelines on the treatment of political commissars, Brauchitsch likewise curbed arbitrary actions by ordering that the prerequisite of proceedings against that circle of persons must be 'that the individual in question places himself, or intends to place himself, against the German Wehrmacht by a specific identifiable action or attitude'. The 'disposal' of commissars with the fighting forces had to be accomplished discreetly outside the combat zone proper, on the order of an officer, after the commissars had been separated from their men.

That was the legal position which the army commander-in-chief laid down in his ordinances. What divergences occurred in practice, and under what

in garbled form in Jacobsen, 'Kommissarbefehl', Docs. 14, 19, according to NOKW 2672. Regrettable in particular is the omission of the justification for severe penal measures (paragraph A) and of paragraph B on the sole decision of the senior law officer in penal measures against German servicemen.

¹⁷⁶ Verordnung über das Sonderstrafrecht im Kriege und bei besonderem Einsatz (KSSVO) [Ordinance on special criminal law in war and during special operations] and Verordnung über das militärische Strafverfahren im Kriege und bei besonderem Einsatz (KStVO) [Ordinance on military penal proceedings in war and during special operations], 17 Aug. 1938, with amendments in H.Dv. 3/13 and analogous service instructions of the Luftwaffe and navy, with evidence of publication and of the amendments in *RGBl.* (1939) and (1940). Based upon it is the ordinance of the C.-in-C. of the army, 12 Nov. 1939, *HVBl.* (1939), pt. C. No. 1071.

Judgements on the attitude of the C.-in-C. of the army have so far failed to take appropriate note of the fact that reference was expressly made to the invocation by the army C.-in-C. of the authority deriving from Article 16a of KStVO. There was certainly a serious effort by Brauchitsch to avoid the tightening of the regulations that was being feared and to maintain the existing legal position. This can be shown even after the commencement of operations (see sect. II.1.1(b) at n. 172). It is also obvious that the interpretations of the juridical situation in the press, which fail to take note of the text of the above-mentioned ordinances of 1938-9, miss the point.

conditions they were ordered, tolerated, or punished is another question—one that will arise from case to case. To demote Brauchitsch's ordinance to the status of a non-committal formula, or to view it solely as a measure for the preservation of discipline—even though that is of overriding importance in any army in the world, if only in the interest of orderly combat—does not seem fair.

The regulations in the field of executive power were to have far-reaching consequences on the work of the quartermaster-general. His department's administrative tasks in the Barbarossa zone of operations were determined, and greatly circumscribed, by the guidelines on special areas supplementing Directive No. 21 and the subsequent service instructions for Wehrmacht commanders, as well as by the activity of the Economic Staff East.¹⁷⁷ Wagner in consequence proceeded from the assumption that the systematic administration and utilization of the occupied country was a *cura posterior* and no business of the army's.¹⁷⁸ At the same time, any senseless destruction or wastage of assets of value to the war effort had to be avoided within the area of the fighting forces.

Collection of material of value to the war effort was regulated by guidelines of the economic organization on 14 May 1941; these applied to the entire occupied territory.¹⁷⁹ Although their primary purpose was to keep the army supplied, preparations were to be made at the same time for the utilization of the occupied territory for the Four-year Plan. In consequence, the economic staff with its economic agencies was, even within the army's zone, no longer subordinate to the army's command authorities. The quartermaster-general, however, was exceedingly concerned to achieve the most efficient possible collection and utilization of any material for the army, not only because of supply shortages but also because of foreseeable transport bottlenecks. Thus, in addition to the administrative regulations and the 'Guidelines for booty, confiscation, and exacting of services', which concerned fiscal questions relating to the property of the Red Army and civilian population, he issued an 'Order for the securing of booty during operations'.¹⁸⁰

Army and corps commands were instructed immediately to secure captured stocks for keeping military operations going—primarily foodstuffs, motor-fuel, motor-vehicles, horses and horse-drawn vehicles, ammunition, weapons and equipment, medical material, and (to some extent) clothing. All unwanted stocks were to be passed on to the command agencies of the quartermaster-general. Each Wehrmacht service was to receive only the portion of booty used by it; specific equipment was to be handed over to the Luftwaffe or the navy. The decision on the final allocation of motor-vehicles

¹⁷⁷ On the general issue of economic planning see sect. I.III.2(a) (Müller).

¹⁷⁸ Part c of Wagner's instructions (above, n. 168).

¹⁸⁰ Befehl für die Erfassung der Beute [Order for the securing of booty], BA-MA H 17/28; 'Richtlinien für Beute, Beschlagnahme und Inanspruchnahme von Dienstleistungen' [Guidelines on booty, confiscation, and exacting of services], with Jodl's comment on misgivings by the Foreign Department, BA-MA RW 4/v. 525 and H 3/1.

was to be made by the Plenipotentiary-General for Motor Transport. An attached list of urgently needed material clearly revealed the gaps in German stockpiles.

The zone between the rearward area of an army ('rückwärtiges Armeegebiet') and Germany, or the Reich commissariats, or Germany's allies, was called 'rearward army area' ('rückwärtiges Heeresgebiet'). For the discharge of the great variety of tasks to be expected, the creation of HQ staffs 'commander rearward army area' for the three army groups was ordered on 15 March 1941. The three staffs, 101, 102, and 103, were set up from the staffs of the general (special duties) attached to the commander in France and in Belgium and Northern France, and the general (special duties) III in the Army High Command. Allocation of troops proceeded gradually in the form of three security divisions.¹⁸¹

In view of the expected speedy execution of the campaign the duties of the commander of the rearward army area were to be of a temporary character only. The commander, answering directly to the army group HQ, exercised executive power in accordance with the directives of the general commanding the army group; he was responsible for the security and utilization of the country. Objects to be safeguarded were supply-bases, supply-routes, transport centres and bridges, transport, airfields, railways, and signals communications. Added to these were the guarding of prisoners of war, their employment, and the guarding of stores left behind and of captured stocks.

The commanders of the security divisions were to act in agreement with the command agency of the quartermaster-general, the senior quartermasters of the separate armies, the managers of supply-depots, and the communications commanders. A small number of well-equipped bases for supplies and for controlling the country were to be set up.

Field garrison HQs and local garrison HQs were to be equipped as permanent posts in accordance with directives from army group HQs. With the security and police forces under their command they were to secure strong points against enemy action.

Field gendarmerie and police units were to be employed in traffic control and maintaining order. Intervention groups (one regiment) were to be held available at tactically important points and employed against scattered enemy forces or emerging bands. To that extent these formations came under the command of the army group commander-in-chief.

For technical tasks (electricity, water, gas) and workshops the armies had technical battalions at their disposal; each army group, moreover, had a detachment of the Technische Nothilfe (Technical emergency service). Their tasks were to be co-ordinated by the command authorities.¹⁸²

¹⁸¹ Establishment instruction of 15 Mar. 1941, BA-MA RH 22/1-2. Guidelines for the training of the security divisions and of the forces under the command of the commander of the rearward army area of 21 Mar. 1941, BA-MA RH 21-2/v. 100.

¹⁸² See Hampe and Bradley, *Die unbekannte Armee*, 35 ff.

From the very outset the Army High Command refused to allow the quartermaster-general any additional forces for the discharge of these manifold tasks beyond his nine security divisions. Wagner was referred to the offer of the police to provide forces for that purpose. This represented a first step towards co-operation, which led to the assignment of battalions of regular police to the commanders of the rearward army areas. The other side of the coin was that these forces, in personnel terms, simultaneously came under the command of the 'senior SS and police commanders'. More far-reaching arrangements, relating to the sphere of the security police, granting it the right to arrest 'important individuals (leading *émigrés*, saboteurs, terrorists, etc.)' and to execute civilians on its own responsibility, led, according to a diary entry by Halder on 25 March 1941, to a protest by Brauchitsch, who had evidently not been informed, although his signature stood under the agreement of 28 March. Brauchitsch now insisted that an immediate separation be carried out between the range of duties of the Secret Field Police and the SS Security Service; he authorized army group and army commanders, if they saw fit, to suspend their activities if these were apt to interfere with the progress of operations.¹⁶³ This arrangement, proposed by Brauchitsch, became irrelevant the moment the army's own security agencies ceased to be available in sufficient numbers.

The quartermaster-general's range of duties thus overlapped, *inter alia* in the field of military security and administration in the widest sense, with the theoretically entirely separate areas of occupation policy and economic management. The staffing of the garrison HQs, of the security units, and the rest of the rearward services inevitably called for 'helping out' wherever the fighting front, the economic organization, or any other authority required services. But the overriding task remained the provision of supplies to the army in the field; here the quartermaster-general was dependent not only on strategic and operational decisions, but also on the capacity of the transport system and on the work performance of the Todt Organization, the Reich Labour Service, and the prisoners of war. It was these that would decide whether or not the army in the east was viable and whether its operations could be sustained.

(h) *The Structure of the Army in the East and Deployment*
(See *Annexe Volume, No. 1*)

Organizational measures normally reflect proposed control of a future development or intended reactions to it. Isolated consideration of the organization of a military force therefore has justification only in terms of pure history of military structures. If, nevertheless, the structure of the army in the summer of 1940 is specifically examined here, then the purpose is to provide a clear overview, one which will make it possible to describe the problems of its

¹⁶³ This was in line with the regulation first ordered by Halder for the Balkan campaign on 2 Apr. 1941.

technical and material equipment. These in turn were governed by the overall management of personnel and material.

To begin with, it should be made clear that the restructuring and reorganization, as well as the training and equipment, of the army for a combat task against an enemy superior in numbers and material potential, occupying a geo-strategically vast territory, could obviously not merely be a reshaping or restructuring of the existing fighting force; it had to be a new structure from scratch, calling for an infringement of the criteria of personnel selection valid in the past as well as for consideration of the limits of any rearmament. The extent to which personnel and material resources were necessary, or feasible, would depend on strategic objectives and on the anticipated expenditure of forces. Finally, a decision would have to be made on what tasks were to be assigned to the army and which would be performed by war-service labour, the Reich Labour Service, the Todt Organization, and other Wehrmacht auxiliaries. The transport sector at any rate was dependent, both for organization and for the practical implementation of its tasks, on the personnel of the Reich railways and of the railway administrations of occupied Europe operating under Reich railway management.

The assessment of the presumed further development of the war, both by Hitler and by the military high commands, at the height of the campaign in the west was reflected towards the end of May in a reorientation of the disposition of forces. On 28 May 1940 Hitler, expecting an early arrangement with Britain, informed the commander-in-chief of the army of his intention to have the army gradually reduced to a peace footing.¹⁸⁴ The eventual total strength to be aimed at was 24 armoured and 12 motorized divisions, as well as 30-40 other divisions. Along with the intention to modernize the army and keep it available solely for security tasks in the broadest meaning of the term, the reduction of the approximately 160 mobilized major formations was to meet the manpower needs of the economy, especially an intensified rearmament of the Luftwaffe and the navy. First calculations by the organization department of the Army General Staff suggested a useful structure of 22 armoured divisions, 11 motorized, 24 infantry, and 6 mountain divisions; in addition an initial requirement was indicated for a separate airborne army of 6 infantry and 3 mountain divisions.

The prerequisite of a restructuring of the army along these lines was the conclusion of a secure peace. Until such time, a transitional army was to be created, utilizing the experiences of the operations recently concluded and effectively relieving the manpower needs of industry. On 12 June the organization department of the Army General Staff submitted a rough calculation which provided for the disbandment of 40 divisions. On 15 June Hitler endorsed this proposal with a first directive demanding that, even before the conclusion of the campaign in the west, a start should be made on the

¹⁸⁴ See sects. 2 and 3 of the present chapter.

doubling of the mobile units and the reduction of the overall strength of the army to 120 divisions.

In spite of a flare-up of the political and military scene in the Baltic countries and along the Romanian frontiers—which was closely watched by the foreign ministry and by the Wehrmacht—Halder on 16 June arranged for the transfer of surprisingly weak army units to the east, as against the disposition of forces elsewhere. A mere 15 divisions were to be moved to the east, compared with a strength of 85 divisions, 20 of them mobile, in the west. For securing Norway and stepping up the pressure on Sweden Halder envisaged a total of 12 divisions and 2–3 armoured formations. However, the reconstitution of 45 major formations by means of material to be held in readiness remained an option under consideration.

On 18 June the organization department's detailed and comprehensive plan was ready to be submitted. Alongside the modernization of the army and its reduction to the size envisaged by Hitler, the plan already contained a first suggestion of Halder's concept for the repulse of a possible attack by the Red Army, which had just then begun to move westwards. On 23 June Hitler approved the views and the structural proposals of the army commander-in-chief.

The very next day the army group commands were given a first briefing on general intentions. On 26 June the 'Order for the Regrouping of the Army' was issued, followed on 30 June by the order relating to the reduction and restructuring of the army. On 28 June Halder in person, at Army Group B headquarters in Versailles, briefed the representatives of the operations and quartermaster departments of the army groups and armies on all the measures planned, proceeding from the assumption that the main weight of the war effort, 'so long as the political situation remains unchanged', would lie with the Luftwaffe and the navy.¹⁸⁵ The head of the operations department emphasized in his report that priority would be given to initiating the transfer of the units earmarked for the east; the mobile units were to set off at once. The staff of 'Group Guderian' were to hold themselves available in Berlin for Eighteenth Army HQ; the mobile divisions and corps commands would initially come under the Director-General of Training for rehabilitation and would then be placed under the tactical command of Eighteenth Army HQ.

In accordance with the order of 30 June, 35 divisions were to be disbanded and dismissed—as it seemed, for good. These were the divisions of the 5th and 6th wave, the local rifle divisions (altogether 18 units), 4 positional divisions, and 13 divisions of the 3rd wave.¹⁸⁶ The older age-groups, including men born in 1908, were to be discharged; the younger men were to be assigned to units which would continue to exist. Generally, there was to be an assimilation of

¹⁸⁵ Minutes of the conference and the orders concerned, BA-MA RH 19 III/141.

¹⁸⁶ The subdivision of the army into 'waves' was carried out—proceeding from the peacetime army—in order to identify the units which were equivalent in terms of equipment and combat-readiness. See Müller-Hillebrand, *Heer*, ii. 122–46, 153 ff.; and sect. I. III.4 (Müller).

personnel and equipment to the divisions of the 1st wave. The last third of the 1919 class and the 1920 class were to be called up for the autumn of 1940 and trained.¹⁸⁷

Disbanding, restructuring, and replenishing the units were the duty of the Director-General of Training. Training and commanding the units, however, remained the duties of the command authorities of the field forces. The divisions were given a new order of battle; this was partly based on recent experience concerning the relationship between the size of a unit and the effectiveness of its command—this applied to the armoured and mobile units, as well as to the light divisions—and also on the limits set by the availability of weapons, equipment, and motor-vehicles. Alongside the divisions, the army troops, which were assigned to army groups and armies for special tasks, on a case-by-case basis, were lifted out of their previous subordinate positions to become the core of mobile formations shortly to be established and of new army troops. Simultaneously, army troops had to be rapidly assigned to Eighteenth Army command. Primarily, however, the 4 armoured and 2 motorized divisions which were grouped together under XXX (mot.) Army Corps and XVI Army Corps and whose engagement-planning was in the hands of XIX (mot.) Army Corps, the 'Group Guderian' in Berlin, had to be transformed to fit into the new structure and rehabilitated.¹⁸⁸ The army commander-in-chief's order of 30 June 1940 took account of Halder's estimate of the situation at the end of June to the extent that, beyond the establishment of a combat-ready army of the above-mentioned size, the Director-General of Training had to make preparations for the raising of 20 'occupation divisions' in such a way that this could be put into effect at any time after 15 September. Moreover, preparations were going ahead for the assembly of captured weapons for the establishment of further divisions. This meant that the framework of the 120-division army was already exceeded.¹⁸⁹ Eventually the general staff declared the reduction of the army to be impossible if its combat-readiness was at the same time to be maintained. The result was that Hitler, following a report by the commander-in-chief of the army, decided on 13 July

¹⁸⁷ Befehl ObdH/GenStdH/Org.Abt. No. 969/40, 30 June 1940, BA-MA RH 19 III/141. The 1921 and 1922 classes were called up on 1 Mar. and 1 May 1941; see Müller-Hillebrand, *Heer*, ii, 101.

¹⁸⁸ OKH/Chef HRüst u. BdE betr. Auffüllung und Auffrischung von Pz. und mot. Div. [re replenishment and rehabilitation of arm'd. and mot. divisions], 18 July 1940, BA-MA RH 19 III/147. That rehabilitation had to be completed by 31 Aug. 1940; after that date elements of units had to be surrendered for the establishment of new units. Even during restructuring of these units, readiness to move off within 72 hours was to be maintained for combat-worthy elements.

¹⁸⁹ It would be difficult to dismiss altogether a connection between this provident intra-army enlargement and Halder's ideas after 15 June 1940. The 10 envisaged motorized infantry divisions of the army were further augmented by 3 divisions of the Waffen-SS and the 'Großdeutschland' and 'Leibstandarte Adolf Hitler' brigades, the Brigade 900, and the Armoured Brigades 100 and 101, equipped with captured tanks and set up in France. Halder moreover envisaged 25 battalions (from the divisions to be disbanded) for the guarding of prisoners: Halder, *Diaries*, 496 (5 July 1940).

1940 to disband only 17 of the 35 divisions. The bulk of the men of the remaining 18 divisions were merely to be granted leave while remaining available to the army. This measure was ordered on 22 July, one day after Hitler's briefing from Brauchitsch.¹⁹⁰ Rearrangement of the call-up classes and replenishment of all units to the level of the 1st wave were postponed; certain priorities now had to be observed.

Hitler's decision of 31 July 1940 to have preparations started for a war against the Soviet Union created a new situation in the areas of army structure, including the planned restructuring, and the assignment of existing material and of material yet to be provided, and in that of training; all these went far beyond the organizational set-up envisaged. Now the army was to be enlarged to 180 divisions, and the reserve army and army troops, originally scheduled at 20 divisions, extended and equipped. This enlargement of the army took place under the difficult circumstances of preparations for a landing in Britain—these preparations had to be maintained—and of the intensified reinforcement of Eighteenth Army with army troops and the provision of construction units, equipment, and all kinds of material of which the Director-General of Training had only a limited supply.

By September the replenishment of existing divisions and their equipment had progressed sufficiently for partial units to be designated as the cores of divisions to be newly established.¹⁹¹ On 26 September the transformation of infantry divisions into armoured and motorized divisions was initiated. Parts of the 9 divisions which were laying off men were moreover to be used for establishing the 4th and 5th Mountain Divisions, and for re-establishing the 20 infantry divisions of the 11th and 12th waves. Only these two waves, along with the motorized units and army troops, could be regarded as genuinely battle-worthy new units. But here too a restriction had to be accepted, since of the 10 divisions of the 12th wave 4 were being established only as 'light divisions'. These divisions had just 2 instead of the usual 3 infantry regiments; they had fewer weapons and were intended for operations in impassable terrain. Another peculiarity was the 5th Light Infantry Division (mot.), which was earmarked for North Africa and part of whose core personnel had come from 3rd Armoured Division.

Replacement of the releases, which affected nearly all the divisions of the army after September 1940, came initially from the reserve detachments, provided that these included trained personnel. In addition, there were the untrained recruits enlisted in October.

Battle-worthiness could be established only in stages for the separate waves.

¹⁹⁰ Ibid. 491 (3 July 1940), 506 (13 July 1940), 523 (19 July 1940); OKH/GenStdH/Org.Abt. No. 1102/40, 22 July 1940 betr. Verringerung und Umgliederung des Feldheeres [re diminution and restructuring of the field forces], BA-MA RH 19 III/141; also Müller-Hillebrand, *Heer*, ii. 63-4.

¹⁹¹ Müller-Hillebrand, *Heer*, ii. 78 ff., table 19; OKH orders for the establishment of new divisions: BA-MA RH 19 III/147.

The last of the battle-worthy divisions to reach that state of readiness by mid-May 1941 were the armoured and motorized formations.¹⁹² The main reason for this late date for the highly technical formations was the shortage of tanks, vehicles, and equipment. Motor-vehicles were only gradually being provided, and 20th Armoured Division and the motorized infantry divisions were uniformly equipped with French material. This required the setting up of appropriate replacement columns and depots. For the divisions of the 11th and 12th waves French vehicles with caterpillar tracks (*genilettes*) were made available for the creation of anti-tank units. Altogether 4,930 captured armoured vehicles, including ammunition trailers, were used for that purpose. Armoured Brigades 100 and 101 were likewise set up in France on the basis of captured material. This motley equipment, further increased by Czech production and what was left of Polish booty, not only caused difficulties in training and operational use but also created friction in the entire supply process. It must be obvious even from this haphazard selection of instances that the material equipment of the ground forces for the intended war against the Soviet Union was based primarily on existing army material, with captured equipment available as a second string, new production being drawn upon only as a third resort.¹⁹³

The reorganization of the major army formations in September 1940 was based on the assumption that in the west there remained only security tasks, and that the mobile and battle-worthy formations earmarked for the Soviet Union would gradually have to be moved back to Reich territory. These changes, which coincided with the final phase of the deployment of the eastern army, were initiated by the subdivision of areas of command and by the creation of new command authorities.¹⁹⁴ The three existing army group commands were increased by a further one (D); this was intended to remain behind in the occupied western territories. Army Group C HQ was transferred to Dresden on 1 November 1940; there it was given the task of supervising the training and instruction of the divisions stationed on German war territory, and ensuring their combat-readiness. These units, whose material and personnel were supplied by the military districts, thus came under the command of a field-force authority; this, it was intended, would safeguard the Army General Staff's interests with regard to their future employment. To this end, Eleventh Army HQ (Leipzig) and Second Army HQ (Munich) were placed under the Army Group command.

For the command of the mobile formations—armoured divisions and

¹⁹² The following data according to Haider, *Diaries*, 588–9 (17 Sept. 1940), 746 (23 Dec. 1940), 852 (3 Apr. 1941). On combat-readiness, however, note the limitation for 'Group Guderian' and for the formations to be employed in the Balkans after Jan. 1941. On 6 June 1941 Haider observed: 'The armoured divisions in the east are not the same as last year in the west' (minute of his report at Zossen, AOK 18/1a, KTB, BA-MA 19601/2).

¹⁹³ See sect. I.iii.4 at n. 434 (Müller).

¹⁹⁴ Müller-Hillebrand, *Heer*, ii. 68 ff., establishment instructions with the new orders of battle: BA-MA RH 19 III/146 and 147.

motorized infantry divisions¹⁹⁵—the staffs of XXII Army Corps (Armoured Group 1) and XIX Army Corps (Armoured Group 2), set up during the western campaign and there named after their commanding generals von Kleist and Guderian, were increased by two and on 16 November (7 December in the case of Armoured Group 4) renamed Armoured Group 1-4 HQs.¹⁹⁶ These group commands were intended to assume the leadership of a multiplicity of mobile units during operations; outside operations their superior army commands were to regulate their employment. This subordination to an army HQ subsequently resulted in considerable friction, aggravated by personal disagreements. These emerged even at the initial stage of an operation and called for considerable diplomatic skill on the part of Halder and the army commander-in-chief.

The principal task of these command authorities was training based on the lessons of the western campaign and on the combat conditions likely to be encountered in a future theatre of war. By means of regular inspections and submission of up-to-date reports on the state of the divisions an accurate picture of their combat-readiness was obtained.¹⁹⁷ Exempt from that supervision were the divisions of the 13th and 14th waves, which were to be used as occupation troops; they were composed of the 'divisions on leave', to be recalled when released from the armaments industry, mines, and agriculture after January 1941. Altogether 84 divisions were either restructured or newly established by 1 April 1941.¹⁹⁸

The main effort of the army was in the areas of training and equipment. These activities, however, were disrupted for some of the units by an envisaged employment connected with the dispute between Hungary and Romania, a dispute verging on war itself, and by the assembly of Twelfth Army, later also of Second Army, for the campaign against Greece and Yugoslavia.¹⁹⁹

Intensive training was also started for the officer corps by the War Academy, and courses were organized for medium-ranking and unit commanders. Of particular importance to Halder was the training of general-staff officers both

¹⁹⁵ The term 'mobile formations' is used here for the formations listed, even though initially only the armoured units and the cavalry division were so designated.

¹⁹⁶ OKH/GenStdH/Org.Abt., 16 Nov. 1940 for Armd. Gps. 1-3, 7 Dec. 1940 for Armd. Group 4. Reorganization to the new wartime strength took place with effect from 13 Dec. 1940: BA-MA RH 19 III/146.

¹⁹⁷ These reports are found, for example, in H.Gr. C, BA-MA RH 19 III/148 and 149. Training of the armoured groups was supervised by Armoured Group 3 HQ. Second Army HQ was placed under Army Group B at the beginning of April and was subsequently employed against Yugoslavia. Eleventh Army HQ ('Command Staff Munich') transferred to Romania at the beginning of May as 'Command of the German Forces' there.

¹⁹⁸ Halder, *Diaries*, 547-8 (12 Aug. 1940).

¹⁹⁹ See sect. 1.1.2 at n. 82 (Förster). On the disruptive effects on army development see Müller-Hillebrand, *Heer*, ii. 83 ff. From 28 Mar. 1941 onwards Halder (*Diaries*, 842-3) was calculating the rehabilitation periods for the formations, especially the mobile forces; see also Halder, *Diaries*, 855 (4 Apr. 1941), 861-2 (7 Apr. 1941). Apart from the delay of Barbarossa, Halder was uneasy about the prematurely tied-down OKH reserves.

for existing staffs and for those to be newly set up.²⁰⁰ The requirement for general-staff officers—beyond those already available and allowing for the existing reserve of 64 officers—amounted to 138. To that end two courses of approximately ten weeks' duration were set up.²⁰¹ The number of general-staff posts, however, increased from 982 in November to 1,053 in the spring of 1941 because of the demands of the quartermaster-general for his field agencies attached to the army groups, for the security divisions and the commanders of the rearward army areas, and for liaison staffs. Because of the shortage of qualified officers, eligible for general-staff training on account, of their age, and in view of the great needs of the fighting forces for new posts and for the replacement of over-age front-line officers, it was decided to appoint reserve officers to the posts of third general staff officers (Ic, responsible for enemy situation) at divisions, corps HQs, and the new army HQs; these now had to be trained.²⁰² On 9 November 1940 Halder issued an order for the training of general-staff officers; this stressed the need for 'instruction in the ideas of combat conditions in the enlarged Greater German territory'.²⁰³

The guidelines for the training of the troops were issued as early as July 1940.²⁰⁴ Training of recruits, performed partly in the field army and partly in the reserve army, was reorganized by ordinance of 21 September with regard to the classes to be called up—1919 (remainder) and 1920. The training period was estimated at three months, as against the eight weeks customary until then

²⁰⁰ These were 1 army group HQ (D), 3 army HQs (Fifteenth, Eleventh, Seventeenth), 14 corps HQs, 2 Higher Commands, and three agencies for the rearward areas. In addition, general-staff officers were needed for 42 divisions, as well as, after Feb.-Mar., for the 'divisions on leave' and for the staffs of the Wehrmacht commanders in the east.

²⁰¹ OKH/GenStdH/GZ, 'Die personelle Entwicklung des Generalstabes des Heeres während des Krieges 1939/1942' (Personnel trends in the Army General Staff during the war, 1939-42), BA-MA RH 2/v. 238 and v. 154-7.

²⁰² These Ic officers came from a great variety of professional groups. Their selection no doubt allowed for the belief that, during tranquil periods, the Ic would largely be concerned with troop care and 'intellectual armament'. Generally speaking, however, this abandonment of a branch of the general staff to reserve officers testifies to its low assessment; it was always regarded only as a short-term appointment. The most prominent exception was Gehlen—which only confirms the thesis.

²⁰³ In his order (BA-MA RH 2/v. 238) Halder especially emphasized instruction in operational thinking on the next higher command level, the conditions of leadership of motorized units, and the prerequisites for an adequate quartermaster service: Halder's note to the chiefs of staff re further training of general-staff officers, 14 May 1941, BA-MA RH 21-2/v. 100; orders and appointments in H.Gr.C/OI, Training of general-staff officers, 10 Sept. 1940-31 Jan. 1941, and 16 Jan. 1941, BA-MA RH 19 III/153, 154; Guidelines for the training of general-staff officers in the quartermaster service, 13 Nov. 1940, BA-MA RH 19 III/153; Map exercise of the quartermaster-general within the framework of Army Group South, Feb. 1941, BA-MA RH 3/v. 132. Note should be taken in this context of the connection with the map exercise 'Otto' of the Army Group South HQ on 5 Feb. 1941.

²⁰⁴ ObdH/GenStdH/Az 34 GZ, 5 July 1940, 'Guidelines for troop service in the occupied territories after conclusion of operations', BA-MA RH 19 III/152. This order also regulated the responsibilities of the individual command authorities and of the General (special duties) II for the Reich war territory. Otherwise, needless to say, all other army regulations continued in force; they were further modified by the training department in the Army General Staff and enormously multiplied. In addition, there were the training orders of the individual armies with their 'off-shoots' down to company level.

in the reserve army. On 7 October 1940 the commander-in-chief of the army eventually issued guidelines for field service in the winter of 1940-1; the introduction made the point that 'what matters now is that the time available in the winter is used to the full for enhancing the training of the troops in all areas in such a way that by the spring they will be ready for whatever task the Führer assigns to them'.²⁰⁵ The generals commanding army groups and armies were to ensure that individual experiences of the troops in the western campaign were not generalized; the troops should 'on the whole' be trained 'for fighting an equal opponent'.

Special emphasis was placed on 'spiritual armament', i.e. explanation of the purpose of the war by unit commanders. A list of written sources, including speeches by Hitler and excerpts from *Mein Kampf*, was followed by an elucidation of the concept of 'living-space': Germany's war aim was the safeguarding of 'living-/economic space', not the subjugation of neighbouring peoples. Autarky was defined as independence from imports of vital commodities.

On 21 February the commander-in-chief of the army issued a set of guidelines to which special attention was directed.²⁰⁶ They emphasized the demand for training 'officers and men in a ruthless spirit of attack, boldness, and resolute action, inspired by confidence in the superiority of the German soldier over any opponent and by unshakable faith in final victory.' This was followed by directives fully tailored to the difficulties of war in the vastness of the Soviet Union, with its sparseness of roads; they stressed the need for a rapid functioning of the command apparatus, for supplies to be viewed as part of tactical leadership, protection of exposed flanks, and security for lengthy supply-lines. Defence against attacks, ambushes, and deceptions was also to be practised; this applied equally to reserves, resting troops, and rearward services, which had to expect action not only by mobile enemy forces but also by paratroops, sabotage teams, and agents. All branches were to be trained in preventive and swift use of their anti-tank weapons. Advancing and attacking spearheads were to be reinforced by high-penetration artillery pieces; armoured units were to practise conflict between tanks. Movement was not to be halted because of tank warnings. Officers and men had to learn to manage with few, bad, and inaccurate maps. Special emphasis was placed on the need for rapid co-operation between different service branches and on speedy contact with the Luftwaffe. The Balkan campaign too left its trace in an instruction from the Training Department on 28 May. Central to success were adaptability and swift action by commanders; frequently it would not be possible to proceed by written orders but instant decisions would have to be taken instead. Instructions on the supervision of movement along roads as-

Training was also based on examples garnered from the Red Army's field-service regulations and from Soviet periodicals illustrating attack and defence by a Soviet rifle division: BA-MA RH 20-20/124.

²⁰⁶ Guidelines ObdH/Ausb.Abt., BA-MA 21-2/v. 100.

signed for the advance also made allowance for the conditions to be expected in future.²⁰⁷

To ensure supervision of the observance of the training guidelines, the schooling of officers and men in the spirit of the guidelines, and fulfilment of the resulting requirements of discipline and good order, the commander-in-chief of the army appointed the former quartermaster-general in the Army General Staff, Lieutenant-General Müller, for 'special duties'.²⁰⁸

Transfer of the headquarters staffs and units of the western army to the east was embarked upon towards the end of 1940.²⁰⁹ After the withdrawal of the mobile units, of the 'Vosges group' already earmarked for Twelfth Army, and of 22nd (Airborne) Division, the Army Groups A and D still had over 52 infantry divisions and 1 police division at their disposal. These were transferred, in several stages starting in February, to Germany and to the armies deploying against the Soviet Union, in such a way that eventually there were only 4 divisions of the 6th wave left in the west as battle-worthy units. All other units to be transferred in exchange, up to a final strength of 38 divisions, were divisions on leave and divisions of the 3rd wave, hence scarcely mobile or combat-ready. Eventually, on 22 June 1941, all that remained to Army Group D HQ in the west was First, Seventh, and Fifteenth Army HQs, 2 corps HQs, and 6 higher commands. Of the 38 divisions, the police division having been transferred as a reserve to Army Group North, 5 were earmarked as army reserves and were due to be moved to the eastern front after 4 July.²¹⁰

The tasks of the troops in the occupied western territories will be briefly outlined here in order to show how little could be withdrawn from the west if a real crisis were to arise. The coasts had to be guarded and made secure, order had to be ensured in the occupied territory, and the demarcation-line with unoccupied France had to be controlled with the help of the customs frontier guards. Alongside these tasks, the occupation of the territory of unoccupied France had to be made possible, a move ('Attila') that might become necessary in the event of a crisis in North Africa. In an emergency the units could only be made mobile by the confiscation of civilian motor-vehicles.²¹¹ To sum up, the diagrams of the order of battle (Annexe Volume, No. 2) and on material equipment (Diagram I.III.3 above), show clearly that, in terms of numbers and equipment, the reconstruction and enlargement of the army was completed by the beginning of the Barbarossa offensive, and that the

²⁰⁷ Generally speaking, the training guidelines conformed to the demands made by Lt.-Col. (Gen. Staff) Feyerabend as part of his Operations Study East.

²⁰⁸ On the general (special duties) attached to the C.-in-C. of the army see above, n. 170, and Müller-Hillebrand, *Heer*, II, 96.

²¹¹ BA-MA RH 2/v. 427.

fact that forces were tied down in the south-east²¹² and in the north of Europe would not greatly impair the eastern army for the *intended short-term* campaign. The organization of the army troops in accordance with the requirements of the main effort of concentration, with the conditions of the terrain, and with the technical command facilities was likewise on the whole satisfactory, allowing for recourse to captured equipment and new acquisitions. Even so, certain shortages were to be expected in the engineering, especially the bridge-building, units, shortages which it was not possible to remedy in advance but which would have to be overcome by the use of captured and makeshift material. Calculations of manpower reserves, like all other plans, were based on operations being completed before the onset of winter.

The first two major transfers of troops and headquarters staffs from west to east in July and September 1940 had, by the end of the year, resulted in the assembly of 34 divisions, including 6 armoured divisions, under the command of Army Group B, divided into three armies.

As a result of the deployment plan for Greece, Twelfth Army HQ was replaced by Seventeenth Army HQ on 1 January 1941. In three stages a total of 1 armoured group HQ, 6 army corps HQs (including 2 motorized and 1 mountain), 17 divisions, 1 brigade, and 1 independent regiment were transferred to the Marita deployment area. These units were taken from all three army-group areas and partially replaced in the west by the 'divisions on leave' recalled after February.²¹³ The 13th and 16th Armoured Divisions were in Romania as 'instructional staff' under the chief of the army mission there.²¹⁴ Hitler's decisions on 17 and 27 March to occupy Greece down to the Peloponnese and all of Yugoslavia meant that a further army HQ, 5 army corps HQs, and 15 divisions were transferred.²¹⁵

The consequence of the transfer of such major formations, as well as of the abandonment of a Twelfth Army attack across the Prut, was a complete transformation of deployment conditions.²¹⁶ Instead of the planned movements from the west and from Reich territory, major transfers now had to be carried out, first into the Balkans and subsequently, after the conclusion of

²¹² Not even the release of 35,000 Reich Railway clerks and employees, made necessary by the sudden deployment for the extended Balkan campaign, had any serious effects on the deployment in the east. See Halder, *Diaries*, 852 (3 Apr. 1941), 949-50 (7 June 1941). Halder was trying to create reserves, *inter alia* by preparing the establishment of the 16th wave, i.e. local rifle units which might, in an emergency, release battle-worthy troops: Halder, *Diaries*, 919 (14 May 1941), 938 (27 May 1941), 934-5 (22 May 1941). See Müller-Hillebrand, *Heer*, ii. 86.

²¹³ Schematic order of battle of the army as of 10 Feb. 1941 (BA-MA); Müller-Hillebrand, *Heer*, ii. 83 ff.

²¹⁴ See sect. I.v.3 at n. 43 (Förster).

²¹⁵ Second Army HQ had been envisaged as an OKH reserve and until then had supervised rehabilitation and training in the south of Germany.

²¹⁶ Halder, *Diaries*, 839 (25 Mar. 1941), 848 (31 Mar. 1941). Twelfth Army HQ was replaced for commanding the German units in Romania by Eleventh Army HQ, which had originally been earmarked as an OKH reserve for the northern sector of the eastern front. Thus the command reserves, including those of corps HQs, were essentially used up.

operations there, all the way to the centre and north of the front against the Soviet Union. This concerned all the armoured and motorized units of Armoured Group 1, as well as the bulk of Second and Twelfth Armies.

Prior to the opening of the Balkan campaign, Haider had calculated its duration, the relevant transport times, and the time needed (three weeks) for the rehabilitation of the units employed there. He thus arrived at a possible date for an attack on the Soviet Union, when, with insignificant exceptions, the units could be stationed in the envisaged areas of operation. That date was 22 June and Hitler approved it. While the available time benefited the equipment and training of the troops, the deployment of the motorized units cost large quantities of fuel and resulted in heavy wear and tear of the vehicles, quite apart from the curtailment of the time left for operations before the onset of winter. The expected rapid progress of the initial operations in the Balkans made it possible to suspend the further transfer of units on 12 April.

With the first two deployment echelons having been moved to the eastern front after mid-February, the third echelon—now that the date of the attack had been laid down—could be brought up by 20 May. This comprised 17 divisions and army troops transferred from Germany. A further echelon (4 A) brought 9 divisions and army troops from the west; the final echelon, from 3 to 23 June, consisted of 12 armoured and 12 motorized divisions from the Reich, the west, and the south-east.²¹⁷ The final phase also saw the assignment of the heavy rail-borne artillery which was brought up from the Channel coast.²¹⁸ This super-heavy artillery was available only for the 'jump-off' and was shared out among the army groups as follows:

- South: 4 artillery pieces K5, each with 90 rounds
- Centre: 8 artillery pieces K5 and 2 of type 'Karl'
- North: 4 artillery pieces 'Bruno' (short) with 30 rounds

Transport of these artillery pieces and construction of the positions demanded a major effort. Stretches of track had to be kept clear and improved. Work on the track alone, it was calculated, would take two engineer battalions two weeks per unit. In view of the prolonged blockage of the railway routes during deployment as well as the impossibility of camouflaging such extensive installations, Seventeenth Army HQ and Army Group North wanted to forgo the use of those batteries altogether. In the end they were employed at the points of the main effort of the breakthrough.

Even before these units arrived at their destinations, the relevant command authorities, army group HQs, army HQs, and armoured group HQs at first took over the operational map exercises and, from April onwards, their commands, though in a camouflaged form and under a variety of designations.²¹⁹

²¹⁷ Halder, *Diaries*, 894-5 (30 Apr. 1941).

²¹⁸ Order relating to the employment of this, the heaviest, artillery and reflection on this since March: BA-MA RH 2/v. 1325; also Luser, *Secret Weapons*, 17 ff.

²¹⁹ OKH/GenStdH/Op.Abt., 14 Feb. 1941, re working staffs for Barbarossa, BA-MA RH 2/v. 1325.

Plans for the replacement of personnel, just like strategic, operational, and economic plans, were based on the assumption of a short campaign. The units of the field army, including replacement battalions, were established by the middle of June; anything still becoming available in the reserve army was earmarked for supplies and replacement.²²⁰ On 20 May 1941 Colonel-General Fromm reported to Halder on the consequences of these plans.²²¹ The field replacement battalions contained 90,000 men, already being transferred. The reserve army comprised 475,000 men, of whom the Luftwaffe claimed 90,000. Thus a total of 385,000 men were left as replacements for the army. Estimated losses during the first two months in the 'frontier battles' were approximately 275,000 men, with another 200,000 in September. This meant that the army's trained reserves would be exhausted in October. The next class to be called up was that of 1922, though strictly this was not due to be called to the colours until November, when manpower from the eastern army would be released for industry. Of that call-up class two-fifths were with the Labour Service, a considerable portion of them already employed within the framework of the eastern army's construction units and hence virtually available to the field army. If that age-group was not called up earlier there would be the danger of the army entering the winter without trained replacements. Halder believed that that was a risk he could take. If one considers the numerous improvisations in terms of personnel and material during the raising of that army, the lack of material reserves, especially of motor-vehicles and their equipment, and the failure to take manpower and production measures to ensure capacity in the area of equipment replacement for the army, the military leaders had no choice but to rely on a swift campaign. There was no room for serious setbacks, any more than for an extension of the planned duration of operations into the winter. For neither of these contingencies were there any preparations prior to 22 June 1941.

The combat value of all divisions was assessed by the Army High Command as follows.

Divisions capable of any offensive action

21 armoured divisions	of which 2 were undergoing rehabilitation, 1 of these (20th) with shortcomings in training
13 mot. infantry divisions	of these 6 with shortcomings in training
3 mot. brigades	(1 in rehabilitation)
95 infantry divisions	of which 18 were not yet employed as units
4 mountain divisions	
1 cavalry division	

Divisions of somewhat lesser offensive strength

6 infantry divisions
2 mountain divisions

²²⁰ Halder, *Diaries*, 895 (30 Apr. 1941).

²²¹ *Ibid.* 929-30 (20 May 1941).

Divisions of reduced offensive strength and mobility

19 infantry divisions

Divisions of little offensive strength and mobility

22 infantry divisions

Divisions for security tasks and locally limited operations

15 infantry divisions

9 security divisions

TOTAL: 210 units²²²

German forces in the east as of 20 June 1941 totalled:

3,050,000 men

625,000 horses

600,000 motor-vehicles (incl. armoured scout cars)

3,350 armoured fighting vehicles (excluding armoured scout cars)

Artillery

4,760 light artillery pieces

104 army AA guns (88 mm.)

2,252 heavy artillery pieces

30 super-heavy high-/low-angle guns²²³

Of the 21 armoured divisions (including 5th Light Division), 2 had to be deducted for Libya and 2 were in Germany for reorganization—these were already to be re-equipped for operations following Barbarossa—which meant that 17 armoured divisions were left for the eastern army. Of the 13 motorized divisions, all were available, including the 3 divisions of the Waffen-SS, as were also the three motorized brigades ('Großdeutschland', 'Leibstandarte Adolf Hitler', and Brigade (mot.) 900).

The position with regard to officers in the field army at the beginning of the offensive on 22 June 1941 was that the numerical establishment was above emergency level, with a reserve of 300 officers available for the army groups. An interesting feature was the increased assignment of active officers to the units to be employed at the point of main effort: in the armoured, motorized, and mountain divisions there was a 50:50 ratio between active and reserve officers; among the divisions of the 1st, 4th, and the newly created 11th and

²²² 'Beurteilung des Kampfwertes der Divisionen nach dem Stand vom 20. Juni 1941' [Assessment of the combat value of the divisions as of 20 June 1941], BA-MA RH 2/v. 427; Müller-Hillebrand, *Heer*, ii. 99–100. Observations on the officer situation according to notes by Kuchler and his chief of staff on the conference between Halder and the departmental heads in the Army General Staff, 4 June 1941, AOK 18/Ia, KTB, BA-MA, 18. Armee, 19601/2; Halder, KTB ii. 440 ff. (4 June 1941; not in trans.).

²²³ Reports of the Inspector of Artillery and the quartermaster-general, 20 June 1941, BA-MA RH 2/v. 1326.

12th waves the ratio was 35:65; for the rest of the divisions it was 10:90. The numbers of young replacements were considered adequate—only just so among battalion commanders, whereas the proportion, among regimental commanders was good.

As for the material equipment, Halder observed that the armoured divisions were not the same as in the west: organizational adjustments and the maximum utilization of makeshift devices were to be dealt with at superior levels. The replacement battalions of the armoured and motorized divisions were not motorized, and were therefore unable to follow the mobile troops. They had to be supplied and moved by the armies until such time as they could be pulled forward by the armoured groups' own means of transport.

The bulk of the formations in the west and south-east was composed of divisions of little offensive strength and mobility, with some suitable only for security tasks. The only possible mobile reserve was available in France: 2 armoured brigades equipped with captured armour. This meant that a supplementation of the eastern army could not, in the short term, be effected from the west. Nor, with the exception of the 2 mountain divisions, could any battle-worthy units be obtained from south-eastern Europe, let alone from Norway. These German forces were joined in Finland on 22 June by 2 infantry divisions under German command and 15 divisions and 2 brigades under the command of Field Marshal Baron Carl Gustav Mannerheim.²²⁴

On the southern sector of the front the following Romanian forces were available, under the command of Eleventh Army HQ: 4 infantry divisions, 3 cavalry brigades, and 3 mountain brigades, though some of these had to be seen only as blocking and security units. Of the German divisions, 6 were fully capable of attack, 1 to a limited degree only. These German units were earmarked for the thrust across the Prut to the Dnieper, with support from the Romanian armoured brigade (still in training) and the fully mobile units to be supplied after 22 June.²²⁵

It may therefore be stated that the German army entered the war against the Soviet Union with all the units which, given the material circumstances, it was possible to equip for combat at all. The Romanian allies were considered to be as weak as in fact they were; the Finns could be considered only for a push towards Murmansk and for relieving the thrust of Army Group North. Hungarians and Slovaks, whose participation was confidently expected, were regarded as suitable only for occupation purposes. Regardless of the combat value of their units, Germany's allies represented on the hand an irreplaceable resource from the war-economy point of view, while on the other, having to be supplied with all war materials, they constituted a permanent drain, one that was acceptable only on the assumption of a short war.

²²⁴ On Finland see sect. I.vi.4 (Überschär). I.vi.4.

²²⁵ See the instructions to Eleventh Army, given at sect. I.iv.1(f) at n. 156. The concentration of the German units in the north of the army made it possible to embark on the thrust to the north-east at an early stage.

In addition, the theatres of war in Africa and the Balkans were diverting substantial forces of the Luftwaffe, the army, and the navy from the future principal front, and in particular proved a great strain on fuel supplies.

Once the limited stockpiles were exhausted, German fuel production and Romanian deliveries would have to meet the requirements of the war effort as well as of the entire European industry. The Wehrmacht operations department had borne this aspect in mind from the start and therefore exerted some influence on the planning of operations.²²⁶ On 4 May it submitted data showing that the Axis powers had stockpiles of 1.5 m. t. of mineral oil; these would be sufficient until the end of August, after which date only 850,000 t. would remain. For the further conduct of the war it was therefore necessary to occupy the oil region of the Caucasus. Even on the assumption of extensive destruction, it was calculated that that region would be able to supply 300,000 t. of oil for the Wehrmacht, as well as 900,000 t. for the agriculture of the occupied territories in the east. Transportation on the required scale would be possible only by sea, which meant that the routes through the Mediterranean would have to be made safe. Operational lines across the Donets region to Krasnodar and Maykop-Groznyy thus appeared to be pre-determined. In that situation, however, the chief of the Army General Staff rejected a request from the War Economy Staff to Eleventh Army HQ, dated 12 June 1941, that after the opening of operations the oil region of Droghobycz in Galicia should be occupied as soon as possible. That, Halder said, was a political matter; he refused to accept economic demands addressed to the operational branch.²²⁷

(i) *The Assessment of the Red Army before the Attack*

From the time of observations made during the Polish campaign, calculations of the strength of the Red Army by the Foreign Armies East department of the Army General Staff had been essentially based on such sources as incomplete long-range reconnaissance, agents and expatriates, reports from military attachés, and information which allied intelligence services were able to supply.²²⁸ With aerial reconnaissance and the development of radio intercepts, the basis of information-gathering was considerably widened, so that, following the issuing of the deployment directive for Barbarossa and preliminary work for the Balkan campaign after mid-March 1941, a substantially more accurate picture was obtained of troop movements, the location of headquarters staffs, and especially the stationing of the mechanized formations.

At the same time, the Army General Staff realized that the German deployment could not be effectively concealed; the question therefore arose which of

²²⁸ See sect. I.iv.1 at nn. 16 ff.

the enemy movements were to be interpreted as reactions to German moves and which concentrations of troops near the frontiers, that had been progressing since the early summer of 1940, suggested offensive intentions.²²⁹ The general principle of the above-quoted Red Army field service regulations still applied:

Any attack on the socialist state of workers and peasants will be repulsed with the whole might of the Soviet Union, and military operations carried into the land of the enemy aggressor. The Red Army's combat operations will always be aimed at the annihilation of the enemy. Forcible attainment of a decisive victory and the total smashing of the enemy are the basic aim of any war forced upon the Soviet Union.

Although as recently as September 1940 Lieutenant-Colonel Kinzel, the chief of Foreign Armies East, had dismissed offensive operations by the Red Army as 'megalomania', that assessment was not necessarily valid for ever. Foreign Armies East, in its 'Situation Report No. 1', dated 14 March 1941 and released the following day, summarized the changed picture of the Red Army as follows.²³⁰

1. Partial mobilization was in progress; probably four classes would be called up. This was difficult to assess numerically, as the Red Army had been partially mobilized for some eighteen months. It was impossible to tell whether the existing units were being brought up to full wartime strength or whether new divisions were being raised.

2. Troops of all branches were being moved from the Moscow military district in the direction of Minsk-Smolensk, and there were westward moves in the Baltic region: Red Army forces were closing up on the western frontier.

3. Trial air-raid alarms and blackout exercises were being conducted in major cities, in addition to orders for total blackout of certain towns.

4. There was a growing 'war psychosis'. The general population—sometimes boastfully, sometimes anxiously—were frequently referring to an imminent war. Officers' families in near-frontier areas were being moved to the interior of the country.

In a further situation report of 20 March the department noted that rail transports had been occurring in the Baltic region since 10 March, carrying infantry and tanks towards Lithuania. According to unconfirmed reports, new army corps commands had appeared at the centre of the Soviet front, with 5 divisions and a motorized-mechanized brigade; on the southern front there

²²⁹ The date of the German attack had been almost publicly discussed since March 1941. See the reports of the military attachés to OQu IV from Helsinki, Moscow, Stockholm, and Tokyo, BA-MA III H, 1001/8, 13, 19, 20. See also the Abwehr reports, BA-MA RH 19 I/123. Besides, the opening of the war against Finland had shown how quickly an attack on the Soviet Union could, if necessary, be arranged. Concentrations of Soviet armoured formations facing Army Group North from 7 Mar. 1941 onwards were interpreted as deployment: AOK 18/1a, KTB, 7 Mar. 1941 and following entries, BA-MA, 18. *Armee*, 17562/17.

²³⁰ BA-MA RH 19 III/722; report of 20 Mar. 1941, *ibid.*; see also *Fall Barbarossa*, Doc. 19, pp. 87 ff.

were 4 army corps commands, 7 rifle divisions, and 5 motorized-mechanized brigades. Such a massive concentration of mechanized and armoured units led to the conclusion that local Soviet offensives on the lower Prut could not be ruled out, even though, generally speaking, the Red Army might be expected to display a defensive attitude.

The reports on the Red Army movements induced Hitler on 25 May to warn the Wehrmacht operations staff that Russian preventive measures were possible over the next few weeks and that a reliable defence against these must be ensured.²³¹ On 4 April Halder observed that the Foreign Armies East department had been obliged to amend its compilations and that a substantially larger number of enemy formations would have to be expected than previously thought.²³²

In early May 1941, according to Colonel (General Staff) Krebs, Köstring's deputy in Moscow, Halder still considered the external appearance of the Soviet officer corps to be 'decidedly bad', and as making a 'depressing impression'—a second-hand assessment of little evidential value with regard to combat-worthiness.²³³

More important was the evaluation of Soviet regulations and of the accessible literature, to be found, alongside a presentation of the Red Army according to the latest data, in the supplement to *Kriegswehrmacht der UdSSR* [Wartime forces of the USSR] of 30 April. After a discussion of the rules of engagement for the troops, special attention was devoted to the armoured forces; it was found that their rules of engagement had not yet been finally discussed.

As a matter of principle, armoured support was to lend the necessary penetration power to any attack. Each body of troops, according to its task and situation, should have an armoured reserve at its disposal, to lend greater efficacy to its own reserves. Large mechanized formations were to break through the enemy's front or strike against its flank or rear. Infantry divisions at the point of main effort of an attack should have two tank battalions; 'tying-down' groups were not given any tanks, or only enough to open breaches in wire obstacles. After that, the remaining armoured units were to form a long-range armoured group; this was to turn as a spearhead against the depth of the enemy positions. A decisive point was that the armoured groups were tied to the infantry's pace of advance. Instances of engagements of cavalry and mechanized troops were excerpted by Foreign Armies East from service regulations and the literature; these allowed for the conclusion that the use of independent armoured or motorized formations for far-ranging operations was not to be expected.

Five weeks before the opening of the attack, Foreign Armies East issued a number of information sheets and other documents on the Red Army.²³⁴ One

²³¹ OKW/WFSt/L, 25 Mar. 1941, BA-MA RW 4/v. 578. On concealment and signalling of a German offensive facing Moscow see BA-MA RH 2/v. 1325.

of these information leaflets (19/2) directly took up Hitler's remark of 5 June 1941 about the possible use of 'means of insidious warfare', implying the poisoning of foodstuffs and wells, nocturnal attacks on sentries, and sadistic treatment of prisoners and wounded. The leaflet emphasized the 'special character' of the campaign. Not only was the Red Army expected to offer stubborn resistance, but in the rear areas there might be a flare-up of subversive forms of combat, primarily on the part of political functionaries or, within the Red Army, political commissars. Although, in accordance with the much-quoted provisional field-service regulations of the workers' and peasants' Red Army, a commissar's duties, along with caring for the troops as well as any prisoners, were clearly concerned with political control and supervision in continuous collaboration with the Communist Party of the Soviet Union, this was no justification for denying him combatant status. Hitler's directives on the 'liquidation' of these military and political auxiliaries are discussed elsewhere in the present volume.

Knowledge of the strength and structure of the Red Army, as revealed by reconnaissance work of all kinds, still contained a lot of gaps, at least where formations and installations in the heart of the Soviet Union were concerned. Errors and mistaken attributions of units were therefore inevitable.

On the day of the attack on the Soviet Union, Foreign Armies East summarized its findings as follows.

In the 4 military districts of the western part of the Soviet Union the following formations were expected to be found:

Odessa Military District

- 11 rifle divisions
- 1 cavalry division
- 2 armoured divisions
- 5 motorized-mechanized brigades

Kiev Special Military District

- 45 rifle divisions
- 10 cavalry divisions
- 3 armoured divisions
- 10 motorized-mechanized brigades

Western Special Military District

- 35 rifle divisions
- 8 cavalry divisions
- 1 armoured division
- 10 motorized-mechanized brigades

Taschenbuch Russisches Heer, Merkblatt 19/2 über die Eigenarten der russischen Kriegführung [on the peculiarities of Russian warfare]. Vorläufige Felddienstordnung der Roten Arbeiter- und Bauernarmee [Provisional field-service regulations of the workers' and peasants' Red Army], 1936; Hitler's remark: BA-MA H 3/1, fo. 2047/64.

Baltic Special Military District

29 rifle divisions

2 armoured divisions

7 motorized-mechanized brigades

In addition:

7-8 paratroop brigades

Altogether, the following were identified in Europe:

145 rifle divisions

25½ cavalry divisions

10 armoured divisions

37 motorized-mechanized brigades

7-8 paratroop brigades

The following were calculated to be in Asia:

25 rifle divisions

8 cavalry divisions

5 armoured or motorized-mechanized brigades

Hence the assumed overall strength of the Red Army was:

179 rifle divisions

33½ cavalry divisions

10 armoured divisions

42 armoured or motorized-mechanized brigades

7-8 paratroop brigades²³⁵

Moreover, it was not ruled out that further formations might be in the process of being established in the Asian part of the USSR; however, no information was available on their size or special character.

Developments in the European part of the Soviet Union up to 20 June 1941 are shown in Table I.IV.3. Added to these Red Army troops there were the frontier guard units of the Ministry for Internal Security.²³⁶

A considerable part of the information on the Soviet Union, and especially its forces, came from radio-intercept data provided by the Ausland/Abwehr (foreign intelligence) department.²³⁷ On 9 June an agreement was concluded

on closer co-operation between the entire Abwehr and the field army, to avoid loss of time.²³⁸ 'Abwehr I', responsible for reconnaissance of the enemy, was to set up a forward operational staff, 'Walli I', near Warsaw; Abwehr teams of army groups and armies were to be attached to it. These were placed under the enemy-situation analysts (Ic) of the command authorities and had to accept assignments from them. The 'Abwehr II' teams were concerned with sabotage and actions in the enemy's rear. Squads of 25 men were to reconnoitre in a 300-km.-deep zone of enemy territory and protect vital transport centres against destruction. 'Abwehr III', working in conjunction with foreign-ministry representatives ('Künsberg Group'), was to secure the files of Soviet authorities and foreign missions. The focus of 'Abwehr II' operations was in the Baltic States and the former Polish regions of the Soviet Union, and in the direction of the Caucasian oilfields.²³⁹ The tasks assigned to the Abwehr seemed to be realizable because a certain resurgence of national and religious sympathy was expected in the territories concerned. There was no doubt about this in the Baltic countries, where increasing opposition to Soviet domination had been observed for some time. In the Ukraine, too, large portions of the population were expected to side with the Germans, at least passively and, after the arrival of Ukrainians serving with the Wehrmacht, perhaps even actively. The economically most important long-range objectives in the Caucasus were to be explored by an approach to the local people, who were ethnically and in terms of faith not part of the Russian Bolshevik 'nation', and were to be prepared for German occupation. However, the Abwehr had some difficulty in enlisting suitable teams of *émigrés* and other former local inhabitants, and the lack of appropriate staffing meant that the hoped-for success eluded it.

2. THE GERMAN AIR FORCE.

HORST BOOG

(a) *The Luftwaffe between the Battle of Britain and Barbarossa*

By the autumn of 1940 the Wehrmacht leadership—Hitler perhaps more clearly than Göring—realized that military victory over Britain was not to be expected in the foreseeable future through the air war alone.²⁴⁰ While opinions did not always agree as, time and time again, optimistic reports on the effects of Luftwaffe raids on England were coming in,²⁴¹ the chief of the Army General Staff was forced to admit that 'the effect on industrial plants' has not 'been critical'. Major-General Otto Hoffmann von Waldau, chief of the operations department of the Luftwaffe General Staff, observed that the German leadership had underestimated the British fighter force by a hundred per cent.²⁴² He did, however, believe that it would be possible to reinforce the Luftwaffe in the spring of 1941, even though in his opinion a fourfold increase would be necessary to 'bring [England] to her knees'. On the strength of British and other press reports, Hitler doubted the Luftwaffe's reports of successful action against Britain, and on 12 November, the first day of Molotov's visit, issued Directive No. 18, ordering the continuation of the 'already verbally ordered preparations for the east'. Almost at the same time, however, with the gradual reduction of the round-the-clock air offensive against London, carried out with an average of 200 bombers and fighters but ultimately without result, the real German economic air war against Britain began during the night of 14–15 November 1940 with a massed attack on Coventry, the centre of the British aero-engine industry.²⁴³ Thus the Luftwaffe was still primarily engaged against Britain.

Hitler's assessment of the air situation on 5 December 1940 represented a decisive step in the direction of the war in the east.²⁴⁴ In it he acknowledged that neither the Royal Air Force nor British industry could be greatly weakened by German air attacks. In spite of American aid, Hitler believed, the RAF would be no stronger in the coming spring than before, whereas the Luftwaffe would. A defensive conduct of the air war against Britain would therefore continue even with major portions of the German fighter force and anti-

²⁴⁰ See Below, *Hitlers Adjutant*, 245; *Germany and the Second World War*, II, 402 ff. On the hopeless situation regarding Luftwaffe files see Endres, 'Zum Verbleib der Luftwaffenakten', and Boog, *Luftwaffenführung*, 13–14. As most of the Luftwaffe records were destroyed at the end of the war, it is as a rule no longer possible to trace the decision-making processes of Göring, the Luftwaffe General Staff, or the Luftwaffe commands. Nevertheless, it may be confidently assumed that, on the whole, they were in line with the intentions of the army.

²⁴¹ See *KTb OKW* I, 123 (23 Oct. 1940), 125 (24 Oct. 1940); Halder, *Diaries*, 789 (20 Feb. 1941), BA-MA OKM, Case GE 969/PG 32969, fos. 98, 104–5, 208 ff.

aircraft units engaged in the east. As the campaign in the east was expected to be of short duration, major nuisance raids by night would continue to be possible against Britain. This unfounded optimism was reflected in Hitler's Directive No. 21—the Barbarossa directive—which set the signals for a war in the east and for a temporary abandonment of the air war against Britain. 'The air force', it stated,

will have to make available for this eastern campaign forces of such strength that the army will be able to bring land operations to a speedy conclusion and eastern Germany will be as little damaged as possible by enemy air attack. This build-up of a focal point in the east will be limited only by the need to protect from air attack the whole combat and arsenal area which we control, and to ensure that attacks on England, and especially upon her imports, are not allowed to lapse.

This showed that the warning by Major-General Hoffman von Waldau, chief of the operations department of the Luftwaffe operations staff—that the Luftwaffe was too weak for a war on two fronts²⁴⁵—was not being taken seriously. Indeed, the transfer (then being initiated) of X Air Corps to the Mediterranean area suggested that, beginning in the summer of 1941, the Luftwaffe would actually be involved in a war on three fronts.

While the operations department of the Luftwaffe General Staff had been engaged since the beginning of January with the three tasks outlined in Directive No. 21—home defence including nocturnal protection and the use of radio-location instruments; development of a navigational basis 'East' for the war in the east; and the regrouping and special training of the air units stationed in the west for the war against British supplies²⁴⁶—the night offensive against the British armaments industry continued. The principal targets in December were the great industrial cities in the Midlands, as well as the main ports on the south and west coasts of England, but above all London, which during the night of 29–30 December experienced a heavy attack on the City, enhanced in its effect by the circumstance that this was a Sunday night and the City was virtually deserted, so that the fires quickly gained a hold. As hopes of success in the strategic air offensive were dwindling, the main effort was shifted to operations against British supplies in co-operation with German U-boats.²⁴⁷ During January 1941 air attacks were intensified on the coastal cities of Cardiff, Bristol, Portsmouth, Plymouth, and Swansea. In February the main targets of the German bombers were the port and dock installations of Swansea on the Bristol Channel, as well as London and Chatham, and armaments factories and troop encampments.

The strategic reorientation of the economic air war against Britain was reflected in Hitler's Directive No. 23, 'Directives for operations against the

²⁴⁵ Halder, *Diaries*, 614 (7 Oct. 1940); LwFüStab Ia (KM) to 1./Skd 1L, 15 Nov. 1940, BA-MA OKM, Case GE 968/PG 32968, fo. 292.

²⁴⁷ Halder, *Diaries*, 725–6 (6 Dec. 1940).

British war economy', of 6 February 1941.²⁴⁸ With the acknowledgement that the German air war so far had not weakened the morale of the British people or, despite a presumed major decline in production, substantially affected Britain's industry, and with the realization that Luftwaffe formations would now have to be pulled out from operations against Britain to be employed in other theatres of war, aerial bombing of industrial centres was no longer seen as the way to deliver the strongest blow to Britain's war economy. Luftwaffe operations in the west were now to lend support to naval operations there, especially to the U-boat war, on which high hopes were pinned. Only *alongside* this task was the aerial-arms industry to be held down. The main targets henceforth were to be the principal British ports with their installations and shipyards, and incoming merchant shipping—not, however, naval units, which were difficult to sink in any case and attacks on which were linked with excessive German losses. Neither terror raids on residential districts nor attacks on coastal fortifications were expected to yield decisive results. Finally, the directive demanded, aerial and naval warfare against Britain was to be intensified, prior to regrouping for Barbarossa, mainly 'in order to feign the appearance of an attack on the British Isles being imminent this year'.

The Luftwaffe therefore supported the war against seaborne supplies by the creation, on 10 March 1941, of an 'Air Leader Atlantic',²⁴⁹ by U-boat reconnaissance and operations against shipping from bases in western France, by IX Air Corps flying from bases in Holland, employed mainly on the mining of British coastal waters, by the commander of naval air forces operating from Jutland, and by the Air Leaders North and Lofoten (under Air Fleet 5) engaging in reconnaissance and operations against shipping.²⁵⁰ In line with the reorientation, the air corps operating against Britain were instructed at the beginning of 1941 to reduce their missions in such a way that the formations for Barbarossa would once more become fully combat-ready without the British suspecting the real intentions of the Luftwaffe. In consequence, missions between large-scale attacks—which continued to be launched in good weather conditions—were reduced and attacks were predominantly made against targets where major losses were not expected. Inexperienced crews were generally employed against closer targets around the English coast, especially the south coast.²⁵¹

Meanwhile, the British defence effort had likewise been intensified by the incipient equipment of night fighters and AA batteries with radar. The radio-

²⁵¹ Deichmann, *Das II. Fliegerkorps im Einsatz gegen Rußland vom 22.6.–15.11.1941* [II Air Corps in operation against Russia from 22 June to 15 Nov. 1941], BA-MA Lw 107/80.

navigation procedure of the German bombers was increasingly being interfered with by the British—another reason for attacking closer coastal rather than inland targets, because these did not require radio navigation. Thus the situation of the Luftwaffe formations over England became increasingly difficult from January 1941. Its night attacks resulted in heavier losses and therefore diminished in intensity. Towards the end of February the British, responding to the German change of main effort, transferred major portions of their fighter and AA forces to the coastal areas, even though this meant a weakening of the air defences of some industrial centres inland.²⁵² Whereas prior to February 1941 only about a twelfth of all Fighter Command missions served the protection of British shipping, the proportion after April 1941 was approximately a half.

Following more Luftwaffe raids during March on London and its docks, as well as on other ports, when the big shipyards in the Glasgow area were put out of action for three to six months, Göring at the beginning of April gave orders for an intensification of the air war during the next few weeks in order to camouflage the deployment in the east.²⁵³ Next came numerous heavy and medium-strength night raids on coastal and industrial towns, all the way from the south coast to Scotland and Northern Ireland, but without recognizable focus. The climax and conclusion of the German nocturnal air offensive against the British Isles came during the night of 10–11 May 1941, when a huge raid was carried out on London with over 500 bombers. In its effects this was the heaviest of all air attacks on England: more than 3,000 persons were killed or injured, over 2,000 fires were started, nearly 150 water mains were destroyed, 5 docks and 71 vital installations received major hits, and nearly all the main railway stations were closed for weeks. In addition to the usual targets, numerous Royal Air Force bases were bombed in May. During the next few nights, until the end of June 1941, the number of aircraft launched against Britain each day dropped to a mere 50–60; moreover, most of these were fighters instead of bombers.²⁵⁴ Meanwhile, the build-up of British night-time air defences had come to some kind of halt. The share of night fighters in the shooting down of German raiders had risen to more than double the score for AA gunners, increasing from 0.2 per cent at the beginning of the air war to 5–7 per cent. There can be no doubt that German bomber losses over Britain at night—increasing as they were, though still rather slight—would have assumed intolerable proportions if the German air offensive had continued on a large scale.

The Luftwaffe's air offensive against Britain by night—especially in the light of Hitler's speech of 4 September 1940, when he announced that he would 'rub out' England's cities—has often been presented in the literature and in propaganda as a model of a war of terror from the air. Certainly it also bore such a character, especially as, just as with other air forces, it was accepted

²⁵² Collier, *Defence*, 286 ff.

²⁵³ See Weber, *Luftschlacht um England*, 179.

²⁵⁴ Lageberichte des Ob.d.L., LWFü.Stab Ic, BA-MA RL 2 II/230–48.

that, given the inaccuracy of existing bomb sights, residential areas were bound to suffer. Although, as a bonus, it was initially expected that this would diminish the British will to resist, an air war against civilians was not the primary intention. Even after Hitler's above-mentioned speech, Hitler, Göring, and the air-fleet commanders still endeavoured to aim their attacks on militarily relevant targets, reserving terror raids merely for reprisals within the meaning of international law—i.e. as exceptional actions—even though their main motivation may well have been fear of an intensification of similar attacks by the enemy.²⁵⁵ British official quarters confirmed after the war: 'Although the plan adopted by the Luftwaffe early in September [1940] had mentioned attacks on the population of large cities, detailed records of the raids—made during the autumn and winter of 1940–1941 do not suggest that indiscriminate bombing of civilians was intended'²⁵⁶—a statement that was confirmed by the daily air-situation reports of the Luftwaffe operations staff at the time²⁵⁷ but one that should also be seen against the background of the British doctrine and practice of carpet bombing.

Because of its impending deployment against the Soviet Union, the Luftwaffe had to suspend the night offensive against the British war industry without having achieved any decisive success—but also without having suffered a decisive defeat. Neither by its daytime attacks from August to October 1940 nor in the eight months of its nightly economic offensive had the British war industry been paralysed, Britain's seaborne supplies permanently severed, or the British people's morale broken. This failure was only partly due to leadership mistakes²⁵⁸ within the Luftwaffe, such as inadequate concentration on a point of main effort and lack of persistence in attacking vital targets, the premature abandonment of the struggle for air superiority against the British fighter force—including its radar system—and an overestimation of the effectiveness of a bomber and fighter force of inadequate range and bomb-load capacity. Comparison of the total of high-explosive and incendiary bombs dropped on Britain, mostly in night raids, between November 1940 and June 1941—approximately 32,802 t. or up to 53,595 t.²⁵⁹ if one includes the daytime raids between August and October 1940—with the roughly 2,450,000 t.²⁶⁰ dropped by the Allies in their strategic air offensive against Germany and the German-occupied European continent during the whole of the Second World

War in order to achieve sizeable results, albeit at a heavy cost in time and material, suggests that, if only for a lack of adequate means, the German air offensive against Britain never had any chance of succeeding. The Luftwaffe command, however—which just like other air forces at the time overestimated the effect of a bombing war—could not have realized that at the beginning of its air offensive. The 'Battle of Britain', which British historiography considers to have been decided in Britain's favour by 15 September 1940 (Battle of Britain Day), was certainly the first attempt in history by an air power to achieve victory in a war solely by an independent strategic bombing campaign. The Luftwaffe still completely lacked experience of that kind of warfare.

German losses of aircraft over the British Isles during the eight months of the night offensive averaged a total of 50–60 each month due to enemy action—a relatively slight figure compared with those suffered during the preceding daylight raids—even though the British had been able to read the Luftwaffe code since 22 May 1940²⁶¹ and thus knew at least some of the German targets. Far more serious were the losses suffered by the Luftwaffe on its own territory and without enemy action.²⁶² From the beginning of August 1940 to June 1941 the Luftwaffe lost a total of about 6,000 aircraft—of which 3,700 were total losses—as well as nearly 3,700 flying crews killed, 3,000 missing, and some 1,500 wounded. This represented some 60 per cent of all material and personnel losses of the flying formations in the war. Nevertheless, the number of available machines and crews, and especially their readiness for action, was far higher in mid-June 1941 than at the beginning of the German air offensive.²⁶³ In no sense was the Luftwaffe so weakened—certainly not by its night offensive—that it could never have recovered, even though many aircrews with peacetime training had been lost. The significance of the abandonment of the air offensive against Britain, in terms of the overall war, emerged fully only when the war in Russia was protracted well beyond expectation and only negligible forces were available for operations against Britain. That country was now able to produce its armaments without interference and thus to lay the basis for the Allies' subsequent strategic air war, which crucially weakened the German armaments industry. In addition, the abandonment of the air offensive and the invasion, together with certain other factors, was regarded in western Europe as a German defeat and encouraged local resistance against the German occupying power.

This was not realized by all of the handful of Luftwaffe leaders who, in July and August 1940, were briefed in confidence on Hitler's aggressive intentions in the east.²⁶⁴ It seems that Hitler developed his idea in lengthy conversations with Göring, to a point where the Reich Marshal himself no longer appeared to have much faith in the seriousness of the intended Luftwaffe effort against

Britain.²⁶⁵ This suggests that, given the strict secrecy surrounding the Army High Command's planning for the war in the east,²⁶⁶ the Luftwaffe General Staff was not yet actively participating in Hitler's thinking and was only subsequently involved.²⁶⁷ This in itself is an indication of the ancillary role envisaged for the Luftwaffe in the war in the east. Göring, as plenipotentiary for the Four-Year plan, was of course concerned with the overall planning for the east and the resulting realignment of armaments production from the requirements of a war against the enemy's overseas supplies to those of a continental war.²⁶⁸ In the middle of August 1940 he was instructed by Hitler to establish an air-base in northern Norway.²⁶⁹ In October Halder held conversations with Hoffmann von Waldau on matters of air operations during the winter of 1940-1, especially with regard to a Soviet air force considered poor but numerically strong,²⁷⁰ as well as with Lieutenant-General Rudolf Bogatsch, the Luftwaffe general attached to the commander-in-chief of the army, who had been informed on 1 August 1940 of the army's requirements concerning air support, and of the establishment of new reconnaissance and AA units within the framework of the envisaged enlargement of the army.²⁷¹

Hitler's Directive No. 18 of 12 November 1940 was certainly not drafted without the participation of Göring and his general staff. Simultaneously, however, plans were being made which aimed not towards the east but towards the south, at Greece, Spain, the Portuguese Atlantic islands, and southern France; indeed, these represented the burden of the directive. Measures for the establishment or extension of airfields in the east could be explained, and in fact were explained, as connected and with the transfer of Luftwaffe training from vulnerable bases in the west, and with the protection of the Romanian oilfields and of industrial centres in eastern and central Germany against possible Soviet bombing raids;²⁷² these were then feared especially by Hitler, but were not ruled out by the Luftwaffe either. The air-

²⁶⁷ As late as 8 Aug. 1940 the Luftwaffe operations staff asked the Army High Command for data on the establishment of a ground organization within the framework of 'Build-up East' (Greiner, *Oberste Wehrmachtsführung*, 295), and two weeks later the Luftwaffe group in the Wehrmacht operations staff still lacked detailed information on the 'grand design' behind that build-up: *KTB OKW* i. 43 (21 Aug. 1940).

base in northern Norway was to serve both operations against Britain and the protection of the nickel-mines at Petsamo. Hitler's aggressive intentions *vis-à-vis* the east—which, according to Below, remained unchanged even after the autumn of 1939—were possibly not yet entirely clear to the Luftwaffe command in the summer and early autumn of 1940. This view gains some support from the discussions of long-term air-force rearmament plans in progress about the middle of October 1940.²⁷³ The commander-in-chief of the army, at his conference with Hitler on 4 November 1940, similarly gained the impression that he had not yet taken the final decision on implementing his intentions in the east.²⁷⁴ On 25 November 1940, when Hoffmann von Waldau submitted to Artillery General Jodl, chief of the Wehrmacht operations staff, some data on the distribution of Luftwaffe forces in a war on two fronts, Jodl indicated to him that such studies should not be pursued any further for the time being;²⁷⁵ even on 3 December 1940 Jodl still observed that top priority in the armaments effort was held by 'anything necessary for the siege of Britain, which must not let up'. A 'large-scale campaign'—meaning a war against the Soviet Union—could, and indeed had to, be postponed until later if the armaments situation required it. At the time, however, he thought German armaments adequate for such a task. The armaments programme for the navy and Luftwaffe, on the other hand, especially for the air defences of Germany, must not be cut back.²⁷⁶

These circumstances might explain, at least in part, why Göring for a long time evidently regarded Hitler's thoughts on a war in the east as non-committal, and why it was only later, after Molotov's visit on 12 and 13 November, that he reacted to them critically.²⁷⁷ When Göring asked for a postponement of the enterprise he was doing so not on considerations of principle or international law, but for political and military reasons. He feared a war on two or more fronts, which Hitler, to judge from *Mein Kampf*, did not wish to wage either. He was convinced that Soviet rearmament was directed against Germany, because of the ideological differences between communism and National Socialism, but he did not believe that it would be completed before 1942-43, or even 1944. He was hoping that Germany would by then have reached an arrangement with Britain, though not perhaps 'peace through victory'; to that end he wished to continue to employ the Luftwaffe in massed strength, undiluted by any second theatre of war, to ensure that the sacrifices made so far were not in vain and that the British were prevented from rebuilding their aircraft industry undisturbed. Göring's alternative concept envisaged a weakening of Britain by striking at the western and eastern

It is possible that Göring repeatedly voiced his arguments against a war in the east over a period of several weeks.

accesses to the Mediterranean. With this plan he hoped to divert Hitler from Russia, or at least to keep him from attacking in the foreseeable future.

Hitler closed his mind to these arguments and pacified Göring—who had emphasized the detrimental effect on the Luftwaffe of its uninterrupted employment since the beginning of the war²⁷⁸—with the promise that he would be able to resume his air war against Britain within six weeks and that, after the speedy conclusion of the eastern campaign, several hundred thousand men would be made available to him for the aircraft industry.²⁷⁹ These assurances and clearly favourable estimates of the enemy's air situation by the Luftwaffe operations staff/Ic, as well as personal reasons²⁸⁰—loyalty as an officer and leading National Socialist *vis-à-vis* Hitler, fear of losing his power, influence, and luxurious life in the event of further opposition—all these eventually led Göring to abandon his objections and, influenced by Hitler, to see the situation through his eyes. Ultimately Göring was convinced that Bolshevism would have to be eradicated some time, and so, despite occasional misgivings about the size of the territory to be conquered and the length of supply-routes, he believed in a swift victory of German arms, in the collapse of the Soviet state within a fortnight, and—still at that time—in the genius of Hitler, whom he regarded as an incomparable leader, one behind whom one might confidently march.²⁸¹ Hitler himself, during the weeks prior to the start of the campaign, was far more sceptical.²⁸² Deep down, however, Göring remained out of sympathy with the 'uncomfortable' war in the east and increasingly lost interest in the conduct of the war generally.²⁸³ Göring's alternative concept²⁸⁴ to Hitler's plan for the war in the east lacked any substance. It was a one-off reaction, not based on any serious alternative plan by the Luftwaffe General Staff.

Misgivings and divergent views, some of them in line with Göring's, were voiced also by other senior Luftwaffe officers,²⁸⁵ who showed a more realistic

²⁸⁵ See Boog, *Luftwaffenführung*, 115 ff.

assessment of the excessive demands that would be made on the Luftwaffe by a war on two fronts and by the vastness of an eastern theatre of war. These included State Secretary Erhard Milch, Major-General Hoffmann von Waldau (head of the Luftwaffe operations department), Lieutenant-General Hans-Georg von Seidel (Luftwaffe quartermaster-general), and Colonel-General Alfred Keller,²⁸⁶ Field Marshal Albert Kesselring,²⁸⁷ and Colonel-General Alexander Löhr (the commanders-in-chief, respectively, of Air Fleets 1, 2, and 4, earmarked for employment in the east); their doubts, voiced to Göring or Halder, produced no results. Löhr, together with Major-General Günther Korten, his chief of staff, favoured an exploitation of the successes achieved by his air fleet in the Balkans by a strategic strike into the eastern Mediterranean. Kesselring at that time was inclined to think likewise, even though he was unaware of Löhr's ideas. He had a low opinion of the Soviet fighting forces, based on their poor performance in the Finnish-Soviet Winter War, and relied on the superiority of the Luftwaffe with its experience of several victorious campaigns. Keeping communism out of Europe, even by a preventive strike, seemed to him worth any cost. He was thus expressing an anti-communist conviction widespread among Wehrmacht and public, despite concrete reservations about a war against Russia, a conviction which, regardless of divergences of opinion, was a uniting factor among the Luftwaffe leadership.

Another reason why the Luftwaffe leaders fell in line rather smoothly with the intended war in the east can be found in the few remarks known to have been made by Air General Hans Jeschonnek, chief of the Luftwaffe General Staff.²⁸⁸ In the First World War, in contrast to Milch, he had fought only in the west; in the 1920s he had come to know the Soviet Union as a backward country. In spite of his misgivings that, in the event of an additional war in the east, the Luftwaffe's activity so far would be greatly curtailed, he was 'absolutely for a fight', with a 'positive attitude' to the new tasks. The reason why he did not object, or react more critically, to the idea of a war in the east was probably that he was then receiving daily reports showing that the independent strategic employment of bomber forces against the British armaments industry and morale was not yielding any perceptible results. This finding was in line with similar experience from the First World War and the war in Spain, as well as with the results of studies conducted between the wars. It was, moreover, in line with existing Luftwaffe doctrine, which envisaged an independent long-range bombing war only after a congelment of the front lines on the ground, or else if there was no other way of bringing about a decision

²⁸⁶ Plocher, *Krieg im Osten*, 39-40, MGFA Lw 4/9.

²⁸⁷ Kesselring, *Memoirs*, 85-100; *IMT* ix, 183.

²⁸⁸ On Jeschonnek's misgivings see Minute C/Skl of a conference with Gen. Jeschonnek, chief of the Luftwaffe General Staff, on 4 Jan. 1941, BA-MA OKM, Case GE 970/PG 32970, fo. 33, and Below, *Hitlers Adjutant*, 255; on his positive attitude to the war in the east see Lt.-Gen. (retd.) Schmid, in Suchenwirth, Jeschonnek, 79, MGFA Lw 21/5, Hoffmann von Waldau, *Persönl. Tagebuch* [personal diary], 120 ff., BA-MA RL 200/17, and evidence by Rear-Adm. (retd.) Mössel, dated 3 Sept. 1954, in Plocher, *Krieg im Osten*, 36, MGFA Lw 4/9.

in the war, i.e. as a last resort. This belief was based on the realization that operational and strategic bombing generally produced an effect on the land fronts only at a very late stage and at an excessive cost in material. Finally, this view was determined also by the fact that many senior Luftwaffe commanders came from the army and had their thinking moulded by Germany's geo-strategically unfavourable continental situation.²⁸⁹ What could be more natural in such a situation than to seek success where it had always been attained in the past: in aerial operations in support of the ground troops, as envisaged by the plan of the campaign against a supposedly weak Soviet Union? Was the lack of tangible success in strategic air warfare not further proof of the correctness of co-operative air warfare? The close links postulated by Directive No. 21 between Luftwaffe and army seemed to ensure that, even without long-range bombers, the Luftwaffe would be able to reach the more distant industrial centres of the Soviet Union by fighting its way forward, in conjunction with the army, until it had established suitable jumping-off bases. That was a kind of war which met Jeschonnek's ideas and expectations of success. After the disappointments of the air war against Britain he seemed to have positively longed for it, as suggested by his remark at the time: 'At last a proper war again!'

The Luftwaffe therefore had no influence on Hitler's decision to overthrow the Soviet Union in 1941—or only to the extent that by its expectations of success and its underestimation of the Soviet air forces and aerial-armaments industry (to be later discussed) it confirmed him in his decision.

(b) Assessment of the Soviet Air Forces 1939–1941

The order for an intensive reconnaissance of the Soviet Union was not given until, with Hitler's Directive No. 21 (Barbarossa), the political and military-strategic decision to attack that country had been made.²⁹⁰ On 10 January 1941 Colonel (General Staff) Josef Schmid, chief of the 5th (Foreign Air Forces) department of the Luftwaffe General Staff, was instructed to provide target data up to a general line Archangel–Leningrad–Lake Ilmen–course of the Dnieper, and to reconnoitre the Soviet air forces.²⁹¹ The order was received with surprise in the department as the air battle for Britain was not yet concluded.

Although the Luftwaffe, prior to that date, had engaged in routine reconnaissance towards the east, this had not yielded much information.²⁹² Ways and means of information-gathering were exceedingly limited because of the strict control and prohibition measures customary there. Work by agents was virtually out of the question; attempts to infiltrate them into senior political

and military positions had failed. The controlled Soviet press and specialized literature contained only general information and did not allow of precise conclusions on the strength, organization, or combat-readiness of the Soviet air forces. Radio monitoring had been able to supply a few valuable tesserae, but these did not add up to a complete mosaic. Not even the occasional high-altitude long-range reconnaissance missions flown since 1934 on behalf of the Wehrmacht High Command by the Special Staffel Rowehl,²⁹³ which was known as Air Staffel (special duties) and, after 1937, as 'Hansa Luftbild-Abteilung B' (Hansa Aerial Photography Department B), were able to cover the huge territory. Apart from a few separate pieces of information on the Russians' ability to build modern types of aircraft or to fly in formation for aerial reviews, General Köstring, the German military attaché in Moscow, had been unable to gain any deeper insight into the Soviet air forces or their armament potential.²⁹⁴ On the whole, German ideas of the Red Army's air forces were still largely coloured by the impressions gained by German officers and engineers during the period of secret German-Russian collaboration in the early 1930s. But at that time the Soviet air forces and aircraft industry were still in a state of development and learning. Subsequently, Stalin's purges had created the impression of a Soviet power without a military head.²⁹⁵

While the German Condor Legion in the Spanish civil war had been impressed by the new Soviet I-16 fighter, they had not been impressed by the performance of the Soviet flying crews. Their operational control seemed cumbersome and lacking in general staff training. At the same time, they managed to offset some weaknesses by skilful improvisation. Operations by the Red flying units were marked by inadequate concentration of forces and insufficient flexibility in attack and defence. The result was that they suffered excessive losses. The aircrews were courageous and eager over their own territory, but timid over that of the enemy. Outstanding pilots were the exception. Training in formation flying was inadequate, especially for fighters. Soviet bomber crews, because of a lack of adequate training, played only a subordinate part in Spain. Their principal form of action was close ground support. Anti-aircraft artillery, especially light and medium gunners, showed some progress. Communications revealed substantial shortcomings.²⁹⁶

Because of the scarcity of information on the Soviet Union the Luftwaffe attached particular importance to reports by Russian *émigrés* and German repatriates from the Soviet Union—especially as their derogatory attitude was in line with the strong traditional feeling of German cultural superiority and with the National Socialist thesis of the 'racial' superiority of Germanic

²⁹³ Rowehl, *Chronik der Aufklärungsgruppe des Ob.d.L.* [Chronicle of the reconnaissance group of the Luftwaffe C.-in-C.], 4, BA-MA Lw 108/16; Kahn, *Hitler's Spies*, 449–50; Eyermann, *Luftspionage*, ii, 131–2.

peoples over Slavs. That thesis, hammered into the Wehrmacht by National Socialist propaganda, played a part in preventing it from forming a realistic judgement of the Soviet Union and its air forces.²⁹⁷ Thus Major-General Hoffmann von Waldau, the normally cool and objective chief of the operations department of the Luftwaffe General Staff, called the Soviet Union a 'state of most centralized executive power and below-average intelligence'.²⁹⁸

The scanty and prejudiced pre-war information of the Luftwaffe General Staff concerning the Soviet air forces had already been reflected in the observations of the 5th department on the air situation in Europe, dated 2 May 1939.²⁹⁹ This recorded an increasing degree of haphazardness in the direction of the Soviet armaments industry and administration, as well as a lack of tight and unified leadership at the top of the armed forces. Reports to the effect that the Soviet air forces had a strength of 10,000–12,000 aircraft were deliberately dismissed. Instead, the figure assumed was only 6,000, of which 5,000 were front-line aircraft and only 3,300 in the European part of the USSR. The Soviet air forces, together with their ground organization and supply apparatus, as well as the anti-aircraft artillery, were regarded as highly vulnerable from the air because of their dependence on the transport network, which had always been considered the most serious bottleneck of the Soviet war economy;³⁰⁰ the striking power of the Soviet Union was thought to be slight and the chances of a vigorous Soviet air war against Germany were considered slim. The aircraft industry, it was thought, would at best be able to cover current needs and normal wear and tear. Operational use of the Soviet air force was expected predominantly in conjunction with the army. The idea of an independent long-range air war by heavy bomber formations was evidently not being pursued there. While it was not disputed that the present weaknesses in the Soviet air forces would one day be overcome, this was thought to be possible only at an 'Asian pace' and with inadequate organization. On the other hand, it was considered 'extremely probable' that the Soviet Union would 'collapse under heavy pressure from outside'.

Although information on the Soviet air forces was totally inadequate, and although the encounter with the Soviets during the occupation of eastern Poland in September 1939 provided no significant new insights, Hitler, after the conclusion of the German-Soviet agreements in August–September 1939, issued an instruction prohibiting any information-gathering on the Soviet Union as a matter of principle.³⁰¹ Hitler was happy to have his rear clear

towards the west and did not wish to provoke his new partner needlessly. The ban evidently did not affect routine general-staff evaluation of information, but it certainly caused Admiral Canaris, chief of the Ausland/Abwehr department in the Wehrmacht High Command, to forbid any Abwehr operations against the Soviet Union, now Germany's neighbour. It also seems to have resulted in a reduction, or even temporary suspension, of the strategic reconnaissance flights of the Rowehl Group over Russia.³⁰² Intelligence analysis of the Soviet Union by the Luftwaffe operations staff Ic (5th department) was further greatly reduced by the redistribution of the staff of the 'eastern group' (whose concern the Soviet Union was) to the 'western group' and by a failure of new information to materialize.³⁰³ Typical of the situation were the parting words of General Jeschonnek, chief of the Luftwaffe General Staff, to the new German air attaché, Colonel Heinrich Aschenbrenner: 'Establish the best possible relations with the Soviet Union and do not bother about intelligence-gathering.'³⁰⁴

Over the summer of 1940 Germany's relations with the Soviet Union were deteriorating, both because of the increasing importance the Soviet factor was assuming in Hitler's plans for the defeat of Britain and because of the growing scale of Soviet westward expansion. In consequence, eastern intelligence-gathering by the Luftwaffe was reactivated. At the beginning of October Hitler acceded to a request from the army, and personally instructed Lieutenant-Colonel Theodor Rowehl, commanding the reconnaissance group of the commander-in-chief of the Luftwaffe, to deploy suitable forces to reconnoitre the Soviet space to a depth of 300 km., concentrating on airfields, and to do so by 15 May 1941. Immediately afterwards Rowehl was once more, within a single week, to re-examine from the air all the Soviet airfields in the theatre of operations.³⁰⁵

The Luftwaffe General Staff was further confirmed in the optimistic picture it had arrived at in the spring of 1939 by what seemed a poor performance by the Soviet army and air forces in the Finnish-Russian Winter War of 1939-40. Even though there were some suggestions of a Soviet bluff, the weaknesses shown by them against Finland found their way into the estimates of more than the 5th department.³⁰⁶ What was evidently being overlooked was that initially only the forces of the Leningrad military district were engaged against Finland and that, during the previous summer, the Red Army had defeated a

³⁰² Eyermann, *Luftspionage*, ii. 139, dates the more than 500 violations of Soviet air-space by German reconnaissance planes to the year 1939 and the first half of 1941. For the latter period Koževnikov (*Komandovanie*, 28) mentions 324 air-space violations; *Geschichte des Großen Vaterländischen Krieges*, i. 562, lists 152.

Japanese army in Mongolia. At the end of November 1940³⁹⁷ Colonel (General Staff) Schmid, chief of the Luftwaffe operations staff's intelligence department, still assessed the Russian air force as not very strong and outdated, the anti-aircraft artillery as 'exceedingly mediocre', and the growth of the Soviet air forces in European Russia as a 'provisional deployment towards the west' which, 'in line with Russian conditions, [will] need a long time'.

Systematic air reconnaissance against the Soviet Union therefore did not start fully until the winter of 1940-1; at times it was greatly impeded by the weather. Reconnaissance missions were generally flown at an altitude of approximately 9,000 m. The aircraft used were He-111s, Do-215s, Ju-88Bs, and JU-86Ps, equipped with pressurized cabins and 'souped-up' engines. In line with Stalin's placatory policy at the time, the Soviet Union did not protest very strongly against these reconnaissance flights, of which it was well aware. Indeed, Soviet fighters were under orders not to fire at German reconnaissance planes. German crews repeatedly reported such—to them surprising—encounters in the air. After the war Soviet historiography blamed the 'traitor Beriya', who was then responsible for the frontier troops protecting Soviet air-space, for having 'practically' opened Soviet air-space to German aerial espionage by his ban on opening fire.³⁹⁸

From the end of 1940 onward the Abwehr department of the Wehrmacht High Command and the air attachés in Moscow, Ankara, Tokyo, Stockholm, Helsinki, Washington, and the Balkan States were, within the limitations of their possibilities, enlisted in eastern intelligence-gathering. The Rowehl group dropped agents by parachute. The network of radio-intercept posts was extended. A group of former Tsarist officers assisted in intelligence analysis and the breaking of the Soviet code. Radio intelligence in particular yielded valuable information, which then provided the basis for aerial photo-reconnaissance. In view of the short period of time available and the lack of preliminary work, the results of Abwehr operations were limited. The attachés were scarcely able to gain any insight into the Soviet air forces or their armaments.³⁹⁹

The only exception, up to a point, was the air attaché in Moscow. He managed to obtain the 'Red Commander's Atlas' with extensive data on railways and industrial enterprises, as well as a telephone directory which allowed some conclusions as to the extent of the industry in the Urals, but was

otherwise an isolated and superficial source.³¹⁰ In March 1941, on Göring's instruction, he gained the Soviet government's consent to an inspection of Soviet aircraft-industry armament and research centres by German experts. Along with the air attaché and the Luftwaffe engineers Tschersich and Schwencke (responsible for planning and foreign armaments under the Generalluftzeugmeister), representatives of Daimler-Benz, Henschel, Askania, Mauser, and other firms participated from 7 to 16 April in an inspection of various aircraft-industry establishments in Moscow, Rybinsk, Perm (Molotov), and elsewhere. The commission of experts was 'most impressed' by the size of the plants and the organization and quality of production. The well-known Russian aircraft designer Artem Mikoyan, a brother of the People's Commissar for Economic Affairs, gave the Germans an unmistakable warning on parting: 'We have now shown you everything we have and we are capable of. Anyone attacking us will be smashed by us.' The experts' detailed reports were disbelieved by the Luftwaffe operations staff and dismissed by Göring as exaggerated; the experts were regarded as victims of a Soviet bluff. Obviously that inspection tour could not provide a complete picture of Soviet aerial armaments, but it did convey a substantial partial impression. The report by the engineers that one of the aircraft-engine factories they had visited was larger than six of Germany's principal engine plants put together aroused Göring's anger. He forbade them to talk about it, called them defeatists, and threatened them with a concentration camp. Hitler, on the other hand, was deeply impressed by the reports. His reaction was: 'Now you see how far these people have already got. We must start at once.'³¹¹

By the end of April 1941³¹² the target study of the Soviet Union within the 300-km. zone, and for certain towns even beyond, was completed. Because of the lack of long-range aircraft, however, airfields in the interior of European Russia or industrial enterprises—in the Donets basin, on the middle Volga, but mainly in the Urals—were beyond German reach. Information on these in particular might have had a sobering effect on the Luftwaffe Operations Staff. In the circumstances, the eastern reconnaissance practised by the Luftwaffe Operations Staff Ic and the agencies under its control during the six months prior to the onset of the campaign will have to be seen mainly as tactical and less as strategic.

³¹⁰ See Plocher, *Krieg im Osten*, 256, MGFA Lw 4/1, and Nielsen, *Nachrichtenbeschaffung*, 142, MGFA Lw 17. According to Rieckhoff, *Trumpf oder Bluff?*, 251-2, and Baumbach, *Broken Swastika*, 154, Col. Aschenbrenner warned against the strength of the Soviet Union. According to the recollections of the former Gauleiter of Halle-Merseburg (Jordan, *Erlebt und Erlitten*, 217-18), Aschenbrenner, as late as the spring of 1941, had a low opinion of Soviet strength.

³¹² Nielsen, *Nachrichtenbeschaffung*, 149, MGFA Lw 17.

In May 1941 the Luftwaffe Operations Staff Ic published an information brochure on the Soviet air force, anti-aircraft troops, and aircraft industry, as at 1 February 1941.³¹³ This combined correct and incorrect data—some inspired by a strong sense of superiority—on the Soviet air forces and armaments potential. It concluded that the Soviet air forces, although they had been detached from the army and navy since 1936, continued to see their main role in direct support for these two services, especially the army. This was true even of heavy bomber formations, which were credited at most with the capacity to execute nocturnal nuisance raids into German territory but not daytime long-range missions; it was true also of the paratroops and air-landing units, which were short of transport aircraft, of the fighter units, except those directly under the Supreme Army Command for home defence, and of the ground-attack units, which were expected, under fighter cover, to work very closely with the ground forces and armoured units and to launch attacks on railways, transshipment centres, and columns on the move. More than in earlier campaigns, low-level attacks were expected against German ground forces and airfields near the front.

Information on the organization and command structure of the Soviet air forces was essentially accurate.³¹⁴ It was believed that it had been undergoing reorganization since April 1939, that this process was not yet completed, and that air corps and air brigades were being replaced by mixed and pure air divisions. In 1941 38 air divisions and 162 air regiments had been identified. Altogether 50 air divisions were believed to exist. In the event of war, it was thought, pure long-range bomber and fighter divisions would be placed under the command of the individual 'fronts' (army groups), mixed air divisions would be placed under the armies, and light bomber and ground-attack regiments would be temporarily placed under the army corps; in addition, all army staffs would have reconnaissance aircraft attached to them. It was assumed that there would be a reserve of long-range bomber and fighter divisions, as well as of long-range reconnaissance units under the People's Commissar for Defence, and that fighter divisions would be kept back for home defence in the rearward military districts to support the AA artillery there.

³¹⁴ See the Annexe Volume, No. 3, and sect. I.n.2 at n. 143 (Hoffmann).

In point of fact the Red air forces, according to Soviet postwar publications,³¹⁵ consisted of 70 air divisions and 5 air brigades at the beginning of the war. The air forces of the Supreme Command consisted of 13 long-range bomber and 5 fighter divisions and accounted for 13.5 per cent of the air forces. The flying formations of the ground forces, i.e. of the military districts (fronts), armies, and army corps, accounted for 86.5 per cent and consisted of 63 divisions; of these 9 were bomber, 18 fighter, and 34 mixed divisions. A further 25 air divisions were in the process of being set up. Since the beginning of 1939 the number of air regiments had increased by over 80 per cent. Of 118 air regiments in the five western military districts 34 were being refitted with new types of aircraft. In addition, 40 fighter regiments with 1,500 fighter planes were available for air defence. The navy had 1,445 aircraft in European Russia: the Arctic Fleet had 114, the Red Banner Baltic Fleet 707, and the Black Sea Fleet 624. In the five (out of thirteen) western military districts of European Russia the Luftwaffe was faced with at least 5,440 aircraft, concentrated mainly in the Western and the Kiev Special Military Districts. These comprised 1,688 bombers, 2,736 fighters, 336 close-combat aircraft, 252 reconnaissance aircraft, and some 430 machines in the army corps air squadrons. The inland military districts were equipped with outdated machines. (On the composition and disposition of the Soviet air forces see Annexe Volume, No. 3.)

The Luftwaffe Operations Staff Ic estimated the total strength of the Soviet air force at 10,500 combat aircraft belonging to formations, approximately 7,500 in European Russia and 3,000 in the Asian part. Only about 50 per cent of the machines were regarded as modern. The number of front-line aircraft—which did not include transport or liaison machines—was assumed to be 5,700 in the European part of the Soviet Union; only half of that total, i.e. about 1,360 reconnaissance planes and bombers and 1,490 fighters, were considered combat-ready.³¹⁶ However, a reinforcement of the fighter formations by 700 machines was expected during the first half of 1941, as well as re-equipment with 200–300 new models. In the bomber formations no substantial reinforcement was expected, but a 50 per cent re-equipment with up-to-date models. The number of fully trained pilots was estimated at 15,000, that of ground personnel at 150,000 men, and that of training machines at 10,000.

The deployment of the Soviet air forces continued to be viewed as a 'provisional westward deployment' by the Luftwaffe Operations Staff Ic and apparently interpreted as offensive.³¹⁷

³¹⁷ See Schwabedissen, *Russische Luftwaffe*, 31–2, MGFA Lw 22/1.

On the subject of the composition of the flying formations, their armaments and equipment, the Luftwaffe Operations Staff Ic had come to the following conclusions. An air division consisted of 3-6 air regiments. Air regiments were always 'pure', i.e. either fighter or reconnaissance or ground-attack regiments, etc. They corresponded to a German Gruppe and, in their turn, usually consisted of 4 squadrons (Staffeln). Although the theoretical wartime strength was 60 aircraft, a fighter or ground-attack regiment in fact had only 48, and a bomber or reconnaissance regiment only 36, aircraft. The actual strength of squadrons varied between 9 and 12 machines.

Reconnaissance aircraft were grouped together in reconnaissance air regiments, independent reconnaissance squadrons, and independent long-range reconnaissance squadrons; as a rule they came under the command of the air divisions. There were also independent squadrons for short-range reconnaissance, artillery-spotting, and liaison duties; tactically these came under the army corps but for supplies under the air divisions. The bulk of the reconnaissance forces consisted of the outdated R-5 and R-6 models. The few R-10s and I-16s were more modern. Organization of the fighters and long-range fighters was similar.

The principal fighter model was the I-16 (Rata). Alongside it there was the outdated I-15 with its variants I-151 and I-153. The Rata was considered a modern aircraft and was more manoeuvrable, albeit slower, than the Me-109. It was superior to German bomber aircraft, but its older plywood construction made it vulnerable to cannon fire and highly inflammable. This no longer applied to the newer metal version. The pilot was protected by the engine in front of him and 8-mm. armour behind. Its attacking weapons, four fuselage machine-guns, were not considered equal to those of German machines. Little was known about the MiG and LaGG models about to be introduced, and virtually nothing about a new twin-engined 'destroyer' plane.

The bomber force consisted of 'fast bomber' and 'long-range bomber' regiments in the appropriate air divisions. The former were equipped with SB-2s and SB-3s, copies of the American Martin bombers; the latter used DB-3s in addition to some older TB types. With a bomb-load of 1,000 kg. the penetration depth of the SB models was estimated at 600 km. and that of the DB-3s at about 1,200 km. The defensive armament of the SB models was considered poor, that of the DB-3s better. The former were believed to be suitable only for night attack, and only to a limited degree. No details were known of a new twin-engined bomber.

The ground-attack units were equipped with only a handful of the modern SB-1 and Vultee V-11 models; for the rest they relied on the outdated RZ, DI-6, I-15, and I-4 types. The transport units were organized in 'heavy air regiments', equipped predominantly with older models, and earmarked also for the transportation of paratroop and air-landing units. There were, in addition, a small number of ambulance aircraft attached to armies, corps, and divisions. The naval air units, organized in brigades and independent squad-

rons, did not meet modern requirements. There were no aircraft-carriers. As for aircraft armament, the 7.62-mm. 'Shkas' machine-gun had proved its worth in Spain and Mongolia. No details were known of aircraft cannon. High-explosive bombs of up to 500 kg. were assumed to exist, as well as fragmentation bombs of up to 15 kg., 2-kg. incendiary bombs, 2.5-kg. thermite incendiary bombs, and 10-kg. and 50-kg. oil-filled incendiary bombs. Only the I-16s and the SB-3s had fuel-tank shields. As for the bombing force, it was believed that only the formation leaders' machines were equipped with transmission and receiving equipment; refurbishment with new aircraft types, it was thought, would progress slowly. The fact that during the eighteen months before the beginning of the war 2,739 aircraft³¹⁸ of the most modern types had been produced—399 Yak-1, 1,309 MiG-3, and 322 LaGG-3 fighters, 460 twin-engined bombers of the Pe-2 type, and 249 IL-2 ground-attack aircraft, among the best close-combat planes in the world—was not known to the Luftwaffe Operations Staff Ic.

In contrast to 1939, the state of training of the flying personnel was regarded as generally good, though not equal to that of the Luftwaffe. Night- and blind-flying skills were considered inadequate, the ability of crews to act independently underdeveloped because of excessive formation flying, tactical training unsatisfactory, but combat-readiness in daytime and good weather was thought adequate.

Ground organization in the western part of European Russia, especially around Leningrad and Moscow, was found to be close-knit and still being extended, and new airfields completed since 1939 were known to exist in eastern Poland and in the Baltic region. According to the degree of technical equipment, a distinction was made between 'first-degree airfields' (corresponding to German air-bases and furnished with concrete hangars and runways, road connections, fuel-tanks, and bomb-depots), 'second-degree airfields', and 'third-degree airfields' (corresponding to German forward airfields without permanent structures), as well as a large number of airstrips. 'First-degree airfields' were, for the most part, the locations of the staffs of major air formations and their supply staffs. Supplies, coming under the Supreme Administration of Air Troops, were operated in peacetime by the military districts by way of 'main bases', corresponding to the German 'air parks', and movable air-bases under the control of the air divisions. Of some 2,000 identified airfields in western Russia only 200 were regarded as suitable for bomber formations. The remainder, because of a lack of installations, were often too exposed to the effects of weather, so that the whole organization had only limited value for the operational employment of flying formations. The advantage of mobile air-bases was put in question by inadequate transport routes. In point of fact, since the autumn of 1940 the runways of more than 250 airfields in the western frontier regions of the Soviet Union had been ex-

of 17 Feb. 1941. Order to command authorities, BA-MA RH 17/191;

tended, and 164 new airfields were built between 8 April and 15 July 1941, especially in the new frontier districts acquired by the incorporation of eastern Poland and the Baltic States. To ensure a high degree of combat-readiness and mobility, each air regiment had a main airfield, a reserve airfield, and a field airstrip assigned to it. For the same reason a start was made in April 1941 on severing the flying formations from their rearward services and organizing the latter on a territorial basis. In the western frontier military districts there were now 36 base areas, each designed to ensure supplies for between two and four air divisions.³¹⁹

In the opinion of the Luftwaffe Operations Staff Ic an independent communications system in the Soviet air forces did not exist. The controlling authority was the Inspectorate of Red Army Communications, to which the communications officers of the senior air staffs reported. Communications units existed with the air staffs of the military districts, air divisions, and air-bases, but not with the flying formations, which, had only on-board radio-telegraphy operators and other RT personnel. The principal means of communication was radio traffic. In critical situations there was often *en-clair* radio traffic, although this was against regulations. Aerial RT communications were regarded as poorly organized, the network was thought inadequate for a flexible conduct of air operations, and the RT personnel were considered to be lacking in skill.

Anti-aircraft artillery was part of the army and came under the command of army formations or the commanders of homeland air-defence regions, who also controlled the fighter arm and the air observer and air-raid warning services. It was believed that the Soviet army's AA artillery had a strength of 1,200 heavy and 1,200 light guns, in addition to 800 AA machine-guns and 700 searchlights; the home-defence and coastal AA artillery was thought to have 1,600 heavy and 1,800 light guns, as well as a substantial number of AA machine-guns and searchlights. Jointly the two organizations therefore had at their disposal over 700 heavy and 500 light AA batteries and at least 150 AA machine-gun platoons and 100 searchlight batteries. In actual fact, the homeland air defences had 3,659 guns, 1,500 searchlights, and 850 barrage balloons.³²⁰

The Soviet aircraft industry was estimated to comprise some 50 airframe factories, 15 engine plants, 40 plants for equipment and instruments, and 100 auxiliary enterprises, employing altogether over a million workers—250,000 of them in the airframe and engine works. No more than 50 per cent of production-plan targets were thought to be attained. Engine manufacture in particular was believed to be dependent on foreign models, production of equipment and instruments to be unsatisfactory, and air safety, in consequence, to be greatly diminished. New light-metal alloys had not proved satisfactory, and Stalin's purges had left weaknesses in industrial management. There was a

³¹⁹ Koževnikov, *Komandovanie*, 20 ff.

³²⁰ *Geschichte des zweiten Weltkrieges*, iii. 511.

continuing shortage of adequately trained engineers and skilled workers. For that reason improvements in production or technological progress were considered unlikely. The known centres of Soviet aerial armaments were the Moscow and Leningrad areas, and the regions of central Russia, the Ukraine, and the Urals.³²¹

Despite the Soviet Union's large oil deposits, especially in the Caucasus and the Urals, its fuel situation was regarded as unsatisfactory because of increasing consumption, great losses in transport, and wastage at processing plants. There was a particular shortage of aviation fuel. Even in peacetime it had been possible to supply the flying formations and the army only by severely cutting back on the requirements of industry and the population. The centre of the Soviet armaments industry and war economy was still believed to be west of the Urals, mainly in the Ukraine and the Donets basin. Soviet intentions to transfer 40–50 per cent of overall industrial production to the Urals and the Kuznetsk basin by the beginning of the 1940s were not believed to be even remotely realizable. There was insufficient knowledge of the development of industries in Asian Russia or in the Far East.

It was further believed that the railways, which handled 90 per cent of freight and passenger traffic, were not adequately developed. Development of inland waterways, which carried only 8 per cent of freight traffic, would still take a long time. The road system seemed to be incomplete, too thin on the ground, and in poor condition; it was certainly unable to relieve the railways to any great extent. Thus only the railways were credited with any military importance. Civil aviation—among other things in view of its intended transformation to military uses in wartime—was regarded as significant for the Soviet Union; technical improvements of the road network, however, and the fleet of aircraft were considered primitive, and the military uses of civilian aviation therefore inadequate.

Summarizing its findings, the Luftwaffe Operations Staff Ic arrived at the conclusion that, in spite of its threefold or fourfold numerical superiority,³²² the Soviet air forces' striking power was substantially less than that of the German Luftwaffe. In view of the vastness of the territory to be covered, the numerical strength of the front-line formations was insufficient. Doubts were expressed whether training and operational leadership were enough to ensure close co-operation with the ground forces. The cumbersome nature of operational command, believed to be hard and ruthless but lacking in training for

³²¹ See Schwabedissen, *Russische Luftwaffe*, 61–2, MGFA Lw 22/1; *Jahrbuch der deutschen Luftwaffe 1939*, 39–40; *Handbuch der neuzeitlichen Wehrwissenschaften*, iii/2. 400. No notice was evidently taken of the highly positive judgements of the French air industrialists Louis Breguet and Henry Potez in 1936 on the great achievements and manufacturing progress of the Soviet aircraft industry. see Col. (ret'd.) Schuettel, *Entwicklung und Beurteilung der russischen Luftwaffe bis zum Kriegsbeginn mit Sowjetrußland* [Development and assessment of the Russian air force prior to the beginning of the war with the Soviet Union], 26–7, BA-MA Lw 107/68, or Schwabedissen, *Russische Luftwaffe*, 62–3, MGFA Lw 22/1.

³²² I. Skl, KTB, pt. A, 275 (22 June 1941), BA-MA RM 7/25.

modern operations, as well as the difficult communications, did not suggest a systematic creation of operational or strategic main efforts in response to the situation. The leadership, moreover, tended towards rigid patterns, was impeded by Party control, and was incapable of standing up to an opponent with modern equipment. Ground organization was backward, supply organization was poor. Russians, finally, had no natural technical gifts. For all these reasons it was estimated that the combat-readiness of the Soviet air forces was only 50 per cent of their actual capacity, and hence inadequate. In a war against a well-equipped modern adversary this figure would soon drop further. The combat-readiness of the entire air force, in view of the poor supply facilities and the dependence of airfields on weather conditions, could be jeopardized in a relatively short time by attacks on airfields and supply installations.³²³ Soviet AA artillery was poorly equipped and, apart from a few important cities, provided no adequate protection considering the size of the country and of the Soviet armed forces.

Although the Soviet war economy was regarded as safe well into the future, because of its wealth of raw-material resources, it had been incapable, even under peacetime conditions, of meeting the needs of the armaments industries while at the same time ensuring adequate supplies of foodstuffs, clothes, and consumer goods for the population. The quality of manufactured goods was still unsatisfactory in many areas, with production of rejects extremely high. All industries were suffering from a painful shortage of skilled workers and adequately trained managing staff. In the event of a prolonged war the aircraft industry would not be able to prevent a rapid decline in front-line strength. Disruption at the intersection-points of the east-west and north-south railway lines would have a disastrous effect on transportation and supply facilities. All other shortages, no matter how serious, would seem slight by comparison with such a failure of goods traffic in the event of war. The information brochure, however, also pointed out that, despite the existence of a number of bottlenecks in the war industry, the vast spread of the armaments industry and its concentration in safe areas would ensure that no branch of industry would be so badly interfered with as to disrupt the overall supply of the USSR to any decisive degree.

The Luftwaffe leadership's general picture of the Soviet air forces was entirely correct in many respects in the military field; this was later extensively confirmed not only by German Luftwaffe officers³²⁴ during the first phase of the campaign in the east, but also by postwar publications in Britain,³²⁵ the United States,³²⁶ and above all in the eastern bloc.³²⁷ The Soviet sources,

because of their presumably deliberate concealment of data, do not permit any reliable direct comparisons of strength. They do, however, show that at the beginning of the German attack the Soviet air forces were in a state of reorganization, of retraining on more modern machines, and of unreadiness, albeit in the expectation of a major confrontation—just as the German command had assumed. Also correct, though with certain reservations, were the German assumptions in the tactical-operational area: inability to wage an effective strategic bombing war,³²⁸ the offensive and co-operative³²⁹ character of the rules of engagement of the Soviet air forces, their structure and chain of command, the main effort of their deployment, the quality of the Soviet aircraft types, their armament and equipment, the poor standard of training, of the ground organization, of the supply-system, and of the communications network, the effectiveness of Russian AA artillery, the inactivity of Soviet paratroop and air-landing troops, the operational command's immobility and inadequate concentration of effort, and the poor striking power of the Soviet air force generally.

On the other hand, there was an underestimation of the value of pre-military education in the Soviet Union and of the Russian ability to improvise; this compensated for many shortcomings in ground organization, supplies, and transport routes. There was also the fact that the Russian soldier had been brought up to defend himself against air attacks with every means at his disposal, including camouflage and infantry weapons. There was, on the German side, a failure to realize that the unfavourable ratio of Soviet air strength to the vastness of the territory applied even more so to the numerically far weaker German Luftwaffe.

The biggest mistake was probably in the assumed number of Soviet machines. On 22 June 1941 the Luftwaffe operations staff believed that of 5,800 aircraft in the European part of the Soviet Union only 1,300 bombers and 1,500 fighters were fully combat-ready,³³⁰ although radio intercepts at the beginning of that month had established the presence of 13,000–14,000 front-line machines in western Russia.³³¹ Not until 19 July 1941 did Luftwaffe estimates approach the real figures. By then a total strength of 8,700 aircraft was believed to exist in the European part of the Soviet Union at the beginning of the campaign, made up of 4,000 fighters, 2,900 bombers, and 1,800 reconnaissance and other front-line machines; in addition there were some 7,500 trainer planes.³³² These figures were more or less in line with later unofficial Soviet data, according to which nearly a half of some 18,000 front-line aircraft

³²⁸ The principles of a strategic air war in a major conflict with a powerful enemy had not yet been worked out, because of a lack of appropriate experience. Organization of the air force was based on the lessons of lesser wars, such as that against the Japanese in 1939 and against Finland in 1939–40. The weaknesses of such an order of battle were revealed during the very first few weeks of the war. See Groehler, 'Anfangsperiode', 121.

³²⁹ The draft of the Red Army's field-service order of June 1941 stated: 'The main task of the air forces is to contribute to the success of the ground forces in combat and operation, and to ensure control of the air' (*Geschichte des Großen Vaterländischen Krieges*, I, 322–3).

³³⁰ BA-MA RM 7/25, 275.

³³¹ Hümmelchen, 'Luftstreitkräfte der UdSSR', 331.

³³² Ob.d.L., Fü.Stab Ic, Lagebericht No. 679, BA-MA RL 2 II/251.

were stationed in the western frontier districts, viz. 5,300 fighters (including 1,762 I-16s and 1,549 I-153s) 2,800 bombers, 450 reconnaissance machines, and 400 ground-attack aircraft.³³³ Thus German estimates of the front-line strength of the Soviet air forces prior to the campaign were too low by nearly a half, for those stationed in the European part of the Soviet Union by about 30 per cent, for fighters by a half, and for bombers by about a third—unless one takes as a basis the later German assumption of 28,265 Soviet front-line planes at the beginning of the eastern campaign.³³⁴ It is true that the Luftwaffe Operations Staff Ic had, rather boastfully, expected at least a threefold Soviet superiority in the air, which they optimistically regarded as more than offset by Germany's qualitative lead, but they had proceeded from the low estimates of Soviet combat strength—most probably excluding the home-defence and naval air formations and only counting pure war-planes available in the east, i.e. bombers, fighters, dive-bombers, and twin-engined 'destroyers'. The modern Soviet types, whose existence did not become known until shortly before the campaign, caused no concern because it was assumed that the war would be over before Soviet aircrews had a chance to familiarize themselves with them.³³⁵

Far more serious, however, was the German underestimation of the overall strategic sphere; this reflected the lack of overall strategic training of the Luftwaffe General Staff. The decisive aspect in a prolonged war of attrition was the Soviet Union's total potential; although such a war was regarded as the worst possible scenario, it appears to have been left out of consideration. What really was important was Soviet morale, economic and air-armaments capacity, and the relations between the civil and armaments sector in the Soviet economy. This last factor, in particular, was seen with western European eyes: civilian requirements were assessed far too high, and Russian determination and ability to restrict civilian needs were misread. Industrial development beyond the Urals and the switch of capacity to those areas were being underrated, as were the military importance of civil aviation and the actual performance and development potential of the transport system, of the Soviet economy in general, and the air-armaments industry in particular. In 1939 the Soviet Union was already producing some 2,000 more aircraft than Germany, viz. an annual total of 10,382,³³⁶ whereas even in February 1941 Colonel-General Ernst Udet, the Generalluftzeugmeister—(the Luftwaffe's Director of Air Armament), reported Soviet production as being only 600 aircraft per month³³⁷ and in May 1941 the Luftwaffe Operations Staff Ic

assumed an annual production capacity of only 3,500–4,000 front-line machines.³³⁸ In actual fact, in spite of destruction, relocation, and the loss of extensive industrial regions, the Soviet aircraft industry not only kept pace with that of Germany, but by 1941 surpassed it by more than 3,000, producing a total of 15,735 aircraft that year.³³⁹

(c) Preparations for Deployment

Given the requirement of nine to twelve months³⁴⁰ for the construction of an aircraft and hence for increasing aircraft production, industrial preparations for the war in the east with such a high-technology service as the German Luftwaffe should have started long before the military preparations: with the opening of the campaign originally laid down for mid-May 1941 they should therefore have begun no later than July 1940. As the war was going to be a land war, it would have been necessary in particular to increase the number of medium bombers, ground-attack, and transport aircraft earmarked for co-operation with the army, and also that of reconnaissance and fighter planes. But nothing of the kind was done. Admittedly, the main effort of the armaments industry was switched to the Luftwaffe and the navy, but that was intended for the struggle against Britain; besides, with an early switch back to production for the ground forces the earlier shift of emphasis was never carried out.³⁴¹ The technical department's Aircraft Delivery Plan No. 18 of 1 July 1940 remained in force almost unchanged until November 1940.³⁴² At that time there were no indications of intensified air-force rearmament against the Soviet Union. The Generalluftzeugmeister Udet had told his ministry of aviation staff after the western campaign that the war was now finished and all those aircraft were no longer needed.³⁴³ New developments in the pipeline, unless completed in 1940 or becoming effective in 1941, had been put on hold since February 1940.³⁴⁴ Production of the He-177 long-range bomber was postponed by three months and limited to just a handful per month. Not until January 1942 did production pick up with a few machines. Much the same applied to the Me-210, which Jeschonnek wanted as the standard short-range bomber—also to be used later for the eastern campaign—but which was simultaneously being developed as a hit-and-run bomber, destroyer, and reconnaissance machine. Here the lack of firm control by the Generalluftzeugmeister was particularly felt: for instance, he did not stop his friend Willy Messerschmidt from halting the development of the Me-110 (which itself was to go out of production) in order to develop a new machine with all its teething troubles—which in any case began manufacture only in

July 1941 and then in very small numbers. Altogether the German aircraft industry was suffering at the time from Hitler's armaments policy, Udet's incompetence,³⁴⁵ insufficient rationalization,³⁴⁶ and inadequate use of available capacity.³⁴⁷

The decisive reason, however, for the lack of a perceptible increase in aircraft production in the summer and autumn of 1940 seems to be that the Luftwaffe High Command evidently did not then expect a new campaign—either because it was not yet fully privy to Hitler's plans in the east or because it was not yet taking them seriously. At any rate, on 15 October 1940 Generalingenieur Tschersich, the Generalluftzeugmeister's planning chief, in a planning survey up to the year 1950 assumed a state of peace from 1 April 1941 onwards, with monthly aircraft losses of only 1 per cent as against 25 or more per cent in wartime; outdated models were to be replaced by new ones only to the extent of actual losses. Not until 1 April 1947 was a state of war once more assumed.³⁴⁸

Even as late as 15 November 1940 the operations department of the Luftwaffe General Staff stated: '[Germany's] own [aircraft] production at best ensures maintenance of the present strength. Expansion is impossible (either in personnel or in material).'³⁴⁹ This statement is in line with the programmes and programme drafts for aircraft production³⁵⁰ submitted by the technical department of the Generalluftzeugmeister after November–December 1940, i.e. at a time when the Luftwaffe too had received instructions to prepare for the campaign in the east. Generally speaking, during the period envisaged for the eastern campaign, summer–autumn 1941, these contain production figures for the various aircraft categories no higher (or only slightly higher) than earlier programmes, e.g. Delivery Plan No. 16 of 1 November 1939³⁵¹ or No. 18 of 1 July 1940. Only for bombers is a monthly production increment recorded of about 100 to approximately 350; for fighters there is an increment of only about 25–50 up to the end of 1941. Production of reconnaissance planes, dive-bombers, ground-attack aircraft, destroyers, and transport ma-

³⁴⁹ Lw.Fü.Stab Ia (KM) to IL [in the naval operations staff], 15 Nov. 1940, BA-MA OKM, Case GE 968/PG 32968, 292.

³⁵⁰ The following programmes and drafts are relevant: Lieferplan No. 18/2 (1 Oct. 1940); No. 18/3 (11 Nov. 1940); No. 19/1 (20 Nov. 1940 and 1 Feb. 1941); No. 19/2 (15 Mar. and 1 June 1941); BA-MA RL 3/990, 991, 1016, 993, 994, 1015. The calls for new constructions underlying the 'X-Fall-Studie 1941' [Study Case X 1941] with its substantially higher figures for bombers (480) were obviously not incorporated in the planning work (GL 1 No. 99/41 (ID) g.Kdos., 6 Feb. 1941, BA-MA RL 3/1104).

³⁵¹ C-Amts-Programm No. 16, LC 2 IA No. 855/39 g.Kdos., 1 Nov. 1939, BA-MA Lw 103/5.

chines was not increased. Indeed, for destroyer aircraft there was an actual decline in production targets; this was connected with retooling from the Me-110 to the Me-210. The production targets fluctuated at about 70 close-range and 65 long-range reconnaissance machines, 330-60 bombers, 250-300 fighters, 135 declining, to 100 destroyers, 60 dive-bombers, and 45 liaison and 42 transport machines per month. For 1942 the trend towards increased bomber and fighter production continued, with production of other aircraft categories remaining unchanged; however, for the bombers the graph began to flatten out. This, then, was the state of armaments planning in the spring of 1941; the earliest date that this production could have had an effect on operations in the east would have been at the end of what was planned as a short war. One is left with the impression that planning was mainly for the period after what was expected to be a swiftly won war in the east. In view of the fact that at least Göring and Jeschonnek had been aware of Hitler's eastern plans since the summer of 1940, the lack of an armament effort must be attributed also to the strong sense of German military superiority after the campaign in the west, to the feeling that British air raids would have only an insignificant effect on German territory—which it was believed could be handled by minor fighter forces³⁵²—and to an over-optimistic estimate of the Soviet enemy; this was shared also by Jodl. Belief in the superiority of German arms and the determination to maintain these chiefly against the British and Americans—the Russians were evidently not being considered then—and therefore to produce quality rather than quantity was reflected also in the instruction of the Wehrmacht High Command of 7 February 1941 on the urgency of the production programmes;³⁵³ that instruction governed priorities and the pace of the armaments programme up to the beginning of the eastern campaign.

Actual military preparations by the Luftwaffe for the eastern campaign seem to have begun shortly before Hitler's Directive No. 21 of 18 December 1940. In addition to the above-mentioned general tasks, this directive contained the following instructions for the new campaign: elimination of the Soviet air forces at the very start; next—or, if circumstances required, simultaneously—support for ground operations at Army Group Centre and on the wing of main effort of Army Group South; disruption of Soviet rail communications according to their importance to the operations; finally, the capture of nearby key transport locations such as river crossings by paratroop and air-landing forces. This last task was later abandoned. The most important sentences of the directive were: 'In order to concentrate all forces against the enemy's air force and for direct support of the army, the armaments industry is not to be attacked during the main operation. Only when ground movements have been completed can such air attacks be considered—primarily against the Urals region.' As the objective of the advance had been defined by the general line

³⁵² See Galland, *The First and the Last*, 114 ff.

³⁵³ Thomas, *Wehr- und Rüstungswirtschaft*, 283.

Volga-Archangel, it was obvious that any operational or strategic employment of the Luftwaffe would start at a later stage and that until then it would be tied to the army as an auxiliary arm. After that, would it still have sufficient strength to operate against the Soviet armaments potential in the depth of the country? The higher production figures envisaged for the second half of 1941, especially for bombers, suggest that German planning may not have been aimed solely against Britain after the achievement of the objectives in the east, but perhaps for the latter contingency as well. It was evidently thought that the ground battle could be accomplished with the Luftwaffe's existing strength, so long as that was maintained.³⁵⁴ All further directives and orders, including those for the army,³⁵⁵ emphasized the attachment of the Luftwaffe to the army. Thus Hitler at the end of March 1941 pointed out that 'air operations must be closely co-ordinated with ground operations. The Russians will crumple under the massive impact of our tanks and planes.'³⁵⁶ It is possible that the Luftwaffe operations staff was not entirely in agreement with such a use of its air strength: in a statement to the navy on the day of the opening of the campaign³⁵⁷ the Luftwaffe pointed out that it also had the task of destroying the enemy's armaments industry. Nevertheless, out of a total of 30 bomber Gruppen, 8 Ju-88 and Do-17 Gruppen, 4 Me-109 fighter Gruppen, and 3 Ju-87 dive-bomber Gruppen were equipped with bomb-aiming and -release devices for low-level attacks on marching columns and live targets.³⁵⁸

The talks in October 1940 had evidently been only preliminary contacts between Luftwaffe and army; in December 1940, however, the Luftwaffe general attached to the army commander-in-chief ordered the creation of new close-range reconnaissance Staffeln from those already in existence.³⁵⁹ At the end of January he and the chief of the Army General Staff agreed on the distribution of the Luftwaffe close-range and long-range reconnaissance Staffeln which came tactically under army command.³⁶⁰ Commencing from 15 March, they were to be transferred to the army command authorities already in the east (see *Annexe Volume, No. 2*). It was decided that the main effort of aerial reconnaissance should be directed towards main railways and trunk roads, as well as assembly areas of major enemy armoured and motorized formations. It was to be co-ordinated with ground reconnaissance and, to economize forces, to be carried out in close co-operation with air-fleet and air-corps staffs. Army groups and armoured groups were given priority in being

³⁶⁰ Halder, *Diaries*, 762 (27 Jan. 1941), 811-12 (27 Feb 1941); annexes 5a, 5b to OKH GenStdH OpAbt (IN) No. 050/41 g.Kdos. Chefs., 31 Jan. 1941, BA-MA RH 19 I/67, 147 ff.

furnished with reconnaissance Staffeln. Night reconnaissance units were stationed only at points of main effort of the attack. The long-range reconnaissance Staffeln were also to be used for ranging and adjustment of super-heavy artillery. The army, moreover, had several anti-aircraft units tactically placed under its command for the protection of the ground troops. I and II AA Corps, attached to Air Fleets 2 and 4, depended mainly on Armoured Groups 2 and 1, whose attack they were to support. In addition, along with the Luftwaffe's fighter units, they were responsible for the aerial protection of mobile units, airfields, and supply-routes.³⁶¹ Operationally, the mixed AA battalions were generally placed under the army corps, the light AA battalions under the armoured divisions. The staff of a Luftwaffe commander (Koluft) included a staff officer of the AA artillery; he regulated the use of AA artillery within the command area of the army in question. In order to improve channels of command, AA regimental staffs were soon set up, to which the AA battalions belonging to the army area were subordinated (see Annexe Volume, No. 2). The short- and long-range reconnaissance units, as well as AA and air-signals units, assigned and tactically subordinated to the army, came under the Luftwaffe commanders attached to army and armoured group HQs, who in turn in every respect came under the Luftwaffe commanders attached to the army group HQs. Heading all the Luftwaffe units subordinated to the army was the Luftwaffe general attached to the army commander-in-chief. In order to maintain close links with the army authorities and to keep the air fleets and air corps informed on the current ground situation and the army's requirements, air liaison commands were detailed to the armies, and air information liaison parties to army corps and armoured divisions.³⁶² In spite of the vastness of the territory, the army was given only 6 more long-range reconnaissance Staffeln than in the western campaign, in fact 16, including 3 newly established night reconnaissance Staffeln for the army group HQs. As against 30 close-range reconnaissance Staffeln in the western campaign, the army now had a total of 56 Staffeln, of which 20 were armoured-formation and 36 army reconnaissance Staffeln. The actual strength of the close-range reconnaissance Staffeln was generally only seven Hs-126 and FW-189 aircraft. The long-range reconnaissance Staffeln were equipped with Ju-88s and Me-110s, the night reconnaissance Staffeln with Do-17s. Neither in numbers nor in suitability of models were the aerial reconnaissance forces adequate.³⁶³

³⁶¹ See *Besondere Anordnungen für die Luftwaffe* [Special instructions for the Luftwaffe], annexe 5e to H.Gr. A (Süd) Ia No. 150/41 g.Kdos., 15 Feb. 1941, BA-MA RH 21-1/55.

³⁶³ Plocher, *Krieg im Osten*, 598-604, MGFA Lw 4/4.

On 28 January 1941 the Luftwaffe quartermaster-general, Lieutenant-General von Seidel, participated in a conference in Halder's office on co-ordination of ammunition and food supplies between army and Luftwaffe in the planned war in the east.³⁶⁴ When the issue of winter clothing for air crews came up, the army representatives objected vigorously: the campaign would be finished by winter.³⁶⁵ In the negotiations which followed it was decided to set up supply and transport liaison staffs as well as senior column commanders with the air fleets. Together with the army quartermaster agencies they would co-ordinate the transport columns of both services and ensure supplies for the air fleets.³⁶⁶ Arrangements were also being made for the supply from the air of encircled or isolated army units.³⁶⁷

In accordance with Hitler's fundamental Order No. 1 only the chiefs of staff, the Ia and Ic officers, the quartermasters and senior quartermasters, and the communications and senior communications officers—in addition, of course, to the generals commanding the air fleets and their chiefs of staff—were initially permitted to prepare themselves by reflection and study for their specific tasks in the eastern campaign; this they had to do under conditions of strictest secrecy. Generally speaking, the air-fleet staffs were informed in January–February 1941, and the corps staffs a little later, that Hitler had decided to go to war against the Soviet Union because Molotov, on his visit to Berlin, had made demands unacceptable to Germany. Soviet ground forces, it was claimed, had been so reinforced, and construction of airfields along the demarcation-line so intensified, in recent months that offensive intentions on the part of the Soviet Union had to be assumed. These had to be pre-empted.³⁶⁸ Quite a few officers interpreted the situation in the same way; to what extent this was a general feeling it is difficult to establish. The lower-ranking commanders were the last to be briefed on their new tasks.

The Luftwaffe command authorities envisaged for the war in the east set up small working staffs to carry out preliminary work for the campaign;³⁶⁹ thus Air Fleet 2 set up the 'Working Staff Gatow' in Berlin-Gatow in February 1941, in April V Air Corps set up its 'Working Staff P' in Zamość, and I Air Corps its 'Special Staff B' also in Gatow. VIII Air Corps, being tied down in the Balkans and in the battle for Crete, was unable to set up a small working staff in Berlin-

³⁶⁴ Gen. d. Fl. v. Seidel, in Plocher, *Krieg im Osten*, 38, MGFA Lw 4/9, gives the date as 28 Jan. 1941. See *KTb OKW* i. 282 (28 Jan. 1941); Halder, *KTb* ii. 256 ff. (not in trans.).

³⁶⁵ Questions put to Col. (Gen. Staff) (ret.) Wodarg on 21 Mar. 1972, MGFA. It is possible that Wodarg referred to a different conference about the same time.

³⁶⁶ The Luftwaffe supply liaison staff with Air Fleet 1 was set up by order of Luftgaukommando Belgien/Nordfrankreich—Quartiermeister/Tb No. 902/41 g.Kdos. of 31 Mar. 1941—and renamed 'Stab Kuttig' on 23 May 1941 (BA-MA RL 7/16); Dienststanweisung durch Luftgaukommando I, Ib (Fl.) No. 559/41 g.Kdos., 12 May 1941 (BA-MA RL 20/48).

Gatow under the Corps Ia, Major (General Staff) Lothar von Heinemann, until 20 May 1941. These camouflaged staffs were mainly concerned with preparations for transferring their formations and with updating and extending their ground organizations in the deployment areas assigned to them. They supervised the construction of new and the extension of existing airfields, runways and taxiways, troops' quarters, radio navigation and communication facilities, stockpiling of ammunition, fuel, and materials and equipment of all kinds, and the reconnaissance of new airfields, closer to the front line. On the basis of the target data provided by the Luftwaffe operations staff Ic they processed the orders for the first missions of their formations and played them through in war-games, map exercises, and discussions, as well as testing co-operation between flying formations, AA artillery, communications troops, and army formations. The working staffs also organized map exercises with the commanding officers of the air formations and of the Luftwaffe supply agencies to make sure supplies would function; these, however, for reasons of security, were staged only shortly before the opening of the campaign. The need for secrecy occasionally resulted in curious situations.³⁷⁰ Construction work was camouflaged as extension of the ground organization for flying-schools and replacement units for formations engaged in the west. Key officers from staffs which had not taken part in the western campaign were assigned to Air Fleet 2 and 3 HQs to acquaint themselves with the latest operational experience.

Particular importance was attached to rapid transferability of VIII (Close-combat) Air Corps, which would co-operate very closely with the army. This revealed shortcomings in the supply field. There was a shortfall of 15,000–20,000 t. of necessary transport capacity; even during the subsequent campaign it was not possible to make that capacity available and the forces had to resort to improvisation to overcome this handicap. As fighters and dive-bombers had only a short radius of action, but nevertheless had to advance swiftly with the armoured spearheads, it was necessary to ensure a rapid forward transfer of their jump-off bases and hence a rapid forward transfer of their ground services. To this end priority passes were issued to their commanders, to enable them to take a place in the most forward columns of the armoured formations. Field Marshal Kesselring, commanding Air Fleet 2, succeeded in getting Göring to agree to his additional demands³⁷¹ in view of the fact that the forces concentrated in the central sector would have to bear the main brunt of the campaign.

³⁷⁰ Thus Col. Hermann Plocher, head of Working Staff P, due to prepare the campaign for V Air Corps, and Col. Kurt Zeitzler, chief of staff of Armd. Gp. 1, who had been personally acquainted with Plocher for a long time, repeatedly met in southern Poland, and even stayed at the same hotel, while trying to conceal from each other the true reason for their presence there by resorting to all kinds of white lies. A few weeks later, shortly before the beginning of the war, they discovered that, as staff officers of their formations, they were supposed to work particularly closely together (Plocher, *Krieg im Osten*, 298, MGFA Lw 4/1).

³⁷¹ Kesselring, *Memoirs*, 85–9; *IMT* ix. 205; Plocher, *Krieg im Osten*, 307–8, MGFA Lw 4/1.

Of vital importance for the preparation of the deployment in the east was the work of the Luftgaukommandos (air region commands), as they were responsible for the ground organization in the Luftwaffe. A well-thought-out and smoothly functioning ground organization was the prerequisite of successful operation by the flying formations. The eastern Luftgaukommandos co-operated closely with the working staffs mentioned above. With the beginning of the campaign initially fixed for 15 May, work during the ensuing months proceeded under considerable pressure of time, so that improvisation was indispensable, especially as the required personnel and material were arriving only gradually. For reasons of security it was often impossible to employ Polish workers. German labour was in short supply, even though some Reich Labour Service units and a few Luftwaffe construction battalions were available. Motor transport consisted of a variety of types and was not sufficient to cope with all transportation tasks. Nevertheless, 105 airfields were enlarged or newly laid out in Luftgau II alone during the preparatory period or the first phase of the eastern campaign. Special difficulties attended the projects near the demarcation-line. Large-scale supplies of material had to be brought in during the hours of darkness. In daytime work proceeded behind screens. At the beginning of June the formations were informed of the jump-off bases assigned to them. Earlier notification had been ruled out for reasons of completion, command structure, and security. There was a 90 per cent success rate in the timely delivery of supplies for three days, at two missions per day. On 21 June the preparations were completed.³⁷²

In the course of the preparations an arrangement which had proved its value in earlier campaigns was again resorted to—the Luftgaustäbe z.b.V. (air region staffs for special duties).³⁷³ Two of these were set up in the area of each air fleet. They were the 'extended arm' of the Luftgaukommandos. It was their task to act as supply staffs and keep the formations fully supplied with material and foodstuffs, and immediately to establish a ground organization—i.e. airfield and airstrip HQs—in the newly occupied territories, to restore captured airfields, and to support the flying units in their reconnaissance of new airfields. In general, an 'air region staff for special duties' was instructed to co-operate with an air corps. The material problems of the 'air region staffs for

³⁷² On this see Air Gen. (ret'd.) Hellmuth Bieneck's paper on the history of Luftgau II, Posen im Zweiten Weltkrieg [Poznań in the Second World War], MGFA, uncatalogued, and Plocher, *Krieg im Osten*, 324-35, MGFA Lw 4/1. See also the war diaries of the airfield commands 3/I Neuhausen (BA-MA RL 20/69) and Siedlce (BA-MA RL 20/272), as well as Luftgaukommando I, Quartiermeister Qu No. 1031/41 g.Kdos./Qu 1, 23 Apr. 1941, betr.: Besondere Anordnungen für Planung 41, Ausbau der Bodenorganisation bis 15.5.1941 [re Special instructions for planning 41, development of ground organization until 15 May 1941] (BA-MA RL 20/51).

³⁷³ See Air Gen. (ret'd.) Walter Sommé: Aufstellung und Einsatz eines Luftgaustabes z.b.V. beim Krieg gegen Rußland von Ostpreußen aus [Structure and employment of an air-region staff for special duties in the war against Russia coming from East Prussia] (BA-MA Lw 107/67), and Dienstsanweisung für den Kommandeur des Luftgaustabes z.b.V. 1 [Service instruction for the commander of air-region staff for special duties 1], annex to Luftgaukommando I, 1b (Fl.) No. 1284/41 g.Kdos., 12 Dec. 1941, BA-MA RL 20/48.

special duties' were considerable, as it proved impossible to equip their transport columns and airfield HQs with a sufficient number of motor-vehicles. Attempts were made, however, shortly before the beginning of the campaign, to eliminate these shortcomings by unloading and movement exercises and by the utilization of all workshops within reach.³⁷⁴ For the rearward areas outside the Reich frontier 'air defence commanders' were appointed. Aerial defence of Romanian territory was the duty of the German Luftwaffe mission in Romania, in the Slovak-Hungarian region it was conducted by Luftgau XVII Vienna, in the southern Government-General by Luftgau VIII Cracow, in the north by Luftgau II, and in East Prussia by Luftgau I.³⁷⁵

Gradually and under conditions of strictest secrecy,³⁷⁶ the Luftwaffe formations, supported by radio deception and other measures, were withdrawn from operations against Britain. The first to be so withdrawn were the fighters, which were not needed for the night air offensive, and last the bombers, as the exponents of that offensive. The actual deployment of the Luftwaffe formations in the east took place during the first three weeks of June 1941 within the timetable approved by Hitler.³⁷⁷ However, these movements did not remain hidden from British radio intelligence, which was able to read the Luftwaffe code.³⁷⁸ As far as possible, the flying formations were first transferred to their home bases for a short period of rehabilitation; from there they flew to their deployment areas, avoiding major towns. The flights had to be carried out singly or in small units by way of remote intermediate refuelling bases. The motorized and ground-personnel sections were moved within the framework of the rail-borne overall deployment plan as far as, approximately, the Oder (Odra) line; from there they had to cover the final stretch by road. By noon of 21 June the formations had to be assembled at airfields at an appropriate distance from the front line, on the central sector west of the Vistula, where they were stretched out and camouflaged as far as possible. Attempts were made to transfer about the same number of trainer planes stationed there back to the west. There was total radio silence. Reconnaissance planes kept constant watch on the airfields, looking out for anything that might prematurely betray the Luftwaffe's deployment. Not until evening were the units allowed to fly to their jump-off airfields near the frontier, flying singly or at very low level. Where the airfields could be observed by the enemy, the German planes flew in only on returning from their first operational mission.³⁷⁹ VIII Air Corps,

which at the end of May and the beginning of June was still playing a major part in the capture of Crete, had only 14 days to accomplish its transfer. On 21 June it was still short of 600 motor-vehicles, 40 per cent of its aircraft, and a number of aircraft engines, transport columns, and communications equipment; this was painfully felt during the first few weeks of the attack.³⁸⁰ Mission orders were all ready at the jump-off bases, complete with maps and target data of future operational zones;³⁸¹ these had also been supplied to all Luftwaffe staffs in the east.

The deployment area extended behind an approximately 1,600-km. broad starting-front of the German army and its allies, and was aimed against an enemy front line roughly 2,400 km. in length between Odessa and Leningrad; added to this was the Finnish—German front line of about 1,000 km. The Luftwaffe's deployment was adapted to the operational and strategic objectives of the army, bearing in mind the two principal tasks of the Luftwaffe—elimination of the Soviet air forces by destroying them on the ground and in the air at the beginning of the conflict, followed by support for the army on the battlefield. Each army group had an air fleet assigned to it, and each army or armoured group at the focus of the fighting had one air corps (see Diagram I.iv.5).

In the area of Army Group South, Air Fleet 4 was under the command of Colonel-General Löhr (see Annexe Volume, No. 3). It was divided into IV Air Corps under Lieutenant-General Pflugbeil, stationed in eastern Romania, V Air Corps under Lieutenant-General Robert Ritter von Greim in the Lublin-Zamość area, II AA Corps under Lieutenant-General Otto Deßloch in southern Poland, and the German Luftwaffe mission in Romania under Lieutenant-General Wilhelm Speidel. Air Fleet 4 (see Table I.iv.5) numbered 887 aircraft, of which 694 were operational. Added to these, in the southern sector, there were 239 reconnaissance and courier machines tactically subordinated to the army; of these 208 were operational. In addition, there were a number (no longer accurately determinable) of Romanian aircraft, possibly about 600, of which 350 were front-line machines and 250 reserve or trainer planes³⁸²—and, after 27 June 1941, 48 Hungarian aircraft.³⁸³

24-8/44; Oberbaugruppe Süd, Oberst Gramm, Ia-No. 170/41 g.Kdos., 9 June 1941, BA-MA RH 21-1/55; AOK 18 Koluft Ia No. 21/41 g.Kdos. IX.Ang., 11 June 1941, BA-MA, 18. Armee, 17562/19, on the manner of transfer of ground personnel and aircraft. See also Plocher, *Krieg im Osten*, 309-17, MGFA Lw 4/1.

³⁸¹ Plocher, *Krieg im Osten*, 43-4, MGFA Lw 4/1.

³⁸² Data on the strength of the Romanian air forces on the eve of Barbarossa differ greatly. According to BA-MA RL 7/479 and 9/91, the number of aircraft was 399, or 672, or 353; according to Ploetz, *Kriegsmittel*, 327-8, it was 365 plus 235 reserve and trainer planes; according to Koževnikov, *Komandovanie*, 15, it was 623; Groehler, *Luftkrieg*, 294, speaks of 500 (423 of them engaged against the USSR), and *Soviet Air Force*, 30, of 504 aircraft.

³⁸³ Koževnikov, *Komandovanie*, 15, mentions only 48; Ploetz, *Kriegsmittel*, 319, mentions 232, and Csnadi, Nagyvárad, and Winkler, *A Magyar Repülés Története*, 232, report 363.

Sources: Report on the combat-readiness of the flying formations, 21 June 1941, GenSt GenQu 6. Abt. (I), 24 June 1941, BA-MA, RL 2 III/713; wall-charts of the C.-in-C. Luftwaffe as of 20 June 1941, BA-MA, o.S. 234; Order of Battle Barbarossa as of 16 June 1941, OKH GenStdH/Op Abt (III) (o.D.), Prüf-Nr. 15819, BA-MA, RH 11 III/32; *Soviet Air Force*, 29-30.

The Romanian aircraft and AA guns were of a variety of mostly outdated models of international origin. The flying formations generally came under the Romanian Air Corps. Each of the three Romanian air regions had a Romanian fighter Gruppe and two Romanian AA regiments assigned to it. The Romanian homeland defence AA artillery, like the Romanian flying formations, had been trained by the German Luftwaffe mission in accordance with the latest combat experience. In so far as it was assigned to the defence of Romanian oil production within the German air-defence area³⁸⁴ it came tactically under that area's commander.³⁸⁵ The Romanian fighters, however, did not come under his command. Romanian AA artillery was fully integrated in the German air reporting network which, since the spring of 1941, had been built up in Romania and Bulgaria. Civil air defence was a Romanian concern. It was intended that at the beginning of the campaign the duties of the German Luftwaffe mission in Romania—development of air defence and training of Romanian flying and AA formations—would be replaced by the combat duties of a 'field air district', i.e. the further development of a ground organization and an air reporting network, as well as the air defence of the Romanian oilfields.

A curious aspect of the structure of Air Fleet 4 was its lack of close-combat formations, even though a dive-bomber Gruppe had originally been envisaged for IV Air Corps. Instead the air fleet had at its disposal, for direct battlefield support, two Ju-88 bomber Gruppen equipped with dropping-devices for SD-2 anti-personnel fragmentation bombs and a fighter Gruppe similarly equipped.

The task of Air Fleet 4 was to help Army Group South, more particularly Armoured Group I, in its attack towards the Dnieper, to prevent the escape of any sizeable enemy forces eastward across the river, and generally to support the attack of the army group. This task included the paralysation of the Soviet air forces facing it by employing the bulk of its own forces at the start, and the continuous neutralization of its effectiveness against German ground operations by the use of adequate forces in the next phase as well. In addition, there was the elimination of Soviet communication centres and senior HQs. The air fleet's operations were at all times to be based on the grand operational objectives of the army. Intervention in local crises was authorized only if the overall situation permitted it.

IV Air Corps was instructed to co-operate directly with Eleventh Army and with the 'Admiral Romania', but it also had to support the Romanian Third and Fourth Armies. The combat zone of the corps had a width of 600 km. and a depth of 500 km. from Fokşani to the Crimea, and of 1,000 km. from Fokşani to Rostov. Having repulsed Soviet attacks across the Prut and destroyed the

³⁸⁴ See sect. I.v.3 at n. 754 (Förster).

³⁸⁵ See Air Gen. (ret.) Wilhelm Speidel, Bericht über die Tätigkeit der Deutschen Luftwaffenmission in Rumänien [Report on the work of the German Luftwaffe mission in Romania], BA-MA Lw 107/81.

Soviet air forces, and supply and communications facilities, it was later to support the advance of Eleventh Army. Moreover, in conjunction with the German naval commander Romania, it was to lay mines in the Soviet Black Sea ports and operate against the Soviet Black Sea Fleet and Soviet shipping.

V Air Corps was to co-operate directly with Sixth and Seventeenth Armies and, more particularly, with Armoured Group 1. For that purpose minor forces were to be set aside as a reserve from the start, despite the usual main tasks of the initial days. In the further course of operations, V Air Corps was to support the thrust of Armoured Group 1 and of Sixth Army to the Dnieper as far as Kiev and to prevent their flanks from being threatened by Soviet motorized units. There was a possibility that some of the corps' forces might have to be used temporarily against enemy forces flooding back from Galicia and for supporting Seventeenth Army; there was also a chance of employment in the north-western part of the combat zone of IV Air Corps. The initial front line of V Air Corps had a width of 350 km. and a depth, from Cracow to Rostov, of 1,500 km. The ground organization of Air Fleet 4 came under the Luftgau (air regions) XVII (Vienna) and VIII (Cracow), as well as under the German Luftwaffe mission in Romania. It was their task to ensure its supplies—with the aid of 'air region staff for special duties' 40 for IV Air Corps and 'air region staff for special duties' 4 for V Air Corps—and to provide it with new bases.³⁸⁶

Air Fleet 2 under Field Marshal Kesselring was in the deployment area of Army Group Centre. Its right wing was formed by II Air Corps under Air General Bruno Loerzer in the Warsaw-Brest-Litovsk-Dęblin area. On the left wing of the air fleet, in the Suwalki corner, was VIII Air Corps under Air General Dr Wolfram Freiherr von Richthofen. In addition, Air Fleet 2 had I AA Corps under Major-General Walther von Axthelm under its command.

Air Fleet 2 was the strongest of the air fleets deployed in the east. Of its actual strength of 1,367 front-line and transport machines, 994 were operational. Added to these were 244 reconnaissance and liaison aircraft assigned to Army Group Centre, of which 200 were operational. Nearly all the dive-bombers concentrated in the east were massed under this air fleet—more particularly under VIII Air Corps, with 5½ dive-bomber Gruppen as against 3 with II Air Corps. Moreover, 3 bomber, 1 dive-bomber, 1 destroyer, and 2 fighter Gruppen of VIII Air Corps were equipped with dropping-devices for 2-kg. anti-personnel fragmentation bombs for close combat. The concentration

³⁸⁶ Ob.Kdo. H.Gr. Süd Ia No. 900/41 g.Kdos., 20 May 1941, betr.: Ergänzung der Aufmarschanweisung Barbarossa [re Supplement to deployment directive Barbarossa], sect. 9 a-g, BA-MA RH 21-1/55; Gen.Kdo. IV. Fliegerkorps Abt. Ia No. 468/41 g.Kdos., 18 June 1941; Korpsbefehl No. 1 für die Kampfführung im Fall 'Barbarossa' [Corps order No. 1 for conduct of operations in case Barbarossa], and (trans.) Great [Rom.] General Aviation Staff, operations department: operational guidelines No. 34 for air-force units, 17 June 1941, both BA-MA RL 8/26; Plocher, *Krieg im Osten*, 352, 356-7, MGFA Lw 4/1.

of forces, especially of close-combat units, under Air Fleet 2 shows that here was the main effort of the attack and of ground support. This is further confirmed by the fact that the jump-off front line of both air corps between Brest-Litovsk and Suvalki was only about 300 km. wide. The distance from Warsaw to Moscow was about 1,100 km. Air Fleet 2 was to advance towards Moscow with Army Group Centre; in this move II Air Corps was to co-operate with Fourth Army, more especially with Armoured Group 2, and VIII Air Corps with Ninth Army, more especially with Armoured Group 3. I AA Corps was to support Armoured Groups 2 and 3 in their penetration of the frontier fortifications and in their subsequent advance. Food supplies, ammunition, and establishment of a ground organization in the newly occupied territories were the duty of Air Region 2, which for this purpose had the two 'air region staffs for special duties' 2 and 20 available to them.³⁸⁷

In the north, with orders to co-operate with Army Group North, was Air Fleet 1³⁸⁸ under Colonel-General Alfred Keller. The only flying formations he had were I Air Corps under Lieutenant-General Helmuth Förster and the units of Lieutenant-Colonel Wolfgang von Wild, the Air Leader Baltic,³⁸⁹ derived in late March from the Air Leader East. Air Fleet 1 was to support the operations of Army Group North from East Prussia towards the Dvina and further on to Leningrad. The three bomber Geschwader and the fighter Geschwader of I Air Corps were to assist Armoured Group 4 in its advance along a front of initially 200 km. width and a depth of operational area (to Leningrad) of 850 km. Except for two bomber Gruppen equipped for dropping anti-personnel fragmentation bombs, the corps, in common with the whole air fleet, had not been given any close-combat forces. The Air Leader Baltic had the duty of guarding the coastal flank and keeping it safe from surprise attacks by Soviet surface or submarine naval units; he also had to mine the ports of Kronshtadt and Leningrad, as well as the Neva as far as Shlisselburg, and later the White Sea Canal, and was required to operate against the locks on Lake Onega, protect convoy traffic in the Baltic east of 13° E., and support the army in the seizure of the Baltic islands.

Air Fleet 1 had only 592 front-line and transport aircraft at its disposal; of these 453 were operational. Army Group North had 176 reconnaissance and liaison machines attached to it, of which 143 were operational. The command authority responsible for the ground organization of Air Fleet 1 was Air Region 1 in Königsberg (now Kaliningrad); for the creation of a new ground organiz-

* The *Flugbereitschaften* (small units of a few liaison and/or transport aircraft for immediate use by staff members) and liaison and corps-transport Staffeln stationed with Air Fleet, Air Corps, and operations staffs are not included.

Sources: Tables of C.-in-C. Luftwaffe, Distribution of formations, 27 Oct. 1940-20 Dec. 1941, BA-MA Lw 106/6; Organization charts in BA-MA RL 7/11 and 12, also 475; Plocher, *Krieg im Osten*, MGFA Lw 4/6 and 7; Reports on the combat-readiness of the flying formations, GenStdLw GenQu 6. Abt. (I), BA-MA RL 2 III/713; *Soviet Air Force*, 31-3.

ation in the conquered territory and for keeping the formations supplied this had 'air region staffs for special duties' 1 and 10 subordinated to it.³⁹⁰ The deployment of the Air Fleet 5 formations aligned against the Soviet Union in 'Action Unit, Special Duties' (subsequently under the Air Leader Kirkenes) is described in the section by Ueberschär (II.III.1(c)) of the present volume.

Including the flying formations tactically under army command and all other transport, courier, and liaison machines, the Luftwaffe had a total of

³⁹⁰ On the deployment of Air Fleet 1 generally see Plocher, *Krieg im Osten*, 353-4, 360-1, MGFA Lw 4/1; also OKH GenStdH/GenQuAbtHeeresvers./Qu 1 No. 1/0257/41 g.Kdos. Chfs., 20 Mar. 1941, and other sources, BA-MA RL 7/16 and 20/48.

3,904 aircraft in the east (see Table II.iv.5). Of these, 3,032 were operational. Deducting the transport, courier, and liaison planes, i.e. those not directly engaged in the air war, the Luftwaffe, on the eve of the eastern campaign, had 3,275 aircraft stationed along the German-Soviet frontier; of these, 2,549 were operational reconnaissance, bomber, dive-bomber, destroyer, and fighter aircraft. Of the reconnaissance planes, 562 (469 of them operational) were tactically under army command, so that the Luftwaffe proper began the war in the east with 2,713 real war planes, of which 2,080 were operational.³⁹¹ If one further deducts the seven replacement fighter and destroyer Gruppen, some of which were stationed in the deployment area though predominantly used for training, one arrives at a figure of only 2,510, of which 1,945 were operational war planes available for front-line action under Luftwaffe command. A year earlier a few hundred more front-line aircraft had been assembled for the campaign against France.³⁹²

Even though the Luftwaffe was supported by about 900 aircraft of Germany's allies³⁹³ (including 70 of the Italian expeditionary corps), this was no great reinforcement in view of the Romanians' and Hungarians' lack of combat experience and the vastly greater territory in the east—about ten times that of the western theatre of war. In fact, the overall actual strength of the Luftwaffe front-line formations—5,599 aircraft, not counting courier and liaison machines—had increased only insignificantly, and its numerical combat-readiness had even slightly declined, since the beginning of May 1940.³⁹⁴

The effects of a war on several fronts were beginning to be felt; indeed, the Luftwaffe, with its engagement against Britain in the Mediterranean and the west, and with its aerial defence of Reich territory, was already involved in such a war. Of the above-mentioned total of Luftwaffe front-line aircraft on 21

³⁹¹ Koževnikov, *Komandovanie*, 15, gives the strength of the Luftwaffe assembled in the east as 4,000; Groehler, *Luftkrieg*, 294, gives 3,955, but more recently (in 'Stärke, Verteilung und Verluste der deutschen Luftwaffe') as at least 3,500. There is no doubt that the following data on the strength of the German air-force formations assembled against the Soviet Union are much too low: Feuchter, *Luftkrieg*, 168, reports only 1,300 operational bombers, dive-bombers, fighters, and destroyer planes; likewise Baumbach, *Broken Swastika*, 120. Bekker, *Angriffshöhe*, 462, speaks of 1,945 aircraft, of which 510 bombers, 290 dive-bombers, 440 fighters, 40 destroyer planes, and 120 long-range reconnaissance planes, i.e. a total of 1,400 aircraft, were operational. Plocher, *Krieg im Osten*, 203-4, MGFA Lw 4/1, gives the actual strength of the Luftwaffe in the east as 2,000 front-line machines on 20 June 1941, augmented by 230 transport and liaison planes, as well as 700 close-range and long-range reconnaissance aircraft tactically subordinated to the army. Numerical comparisons are meaningful only if command subordination (army or Luftwaffe) is indicated at the same time, as well as the aircraft categories or uses.

³⁹² According to *Rise and Fall of the German Air Force*, 66, the Luftwaffe began the western campaign with 3,530 front-line machines and 520 transport planes. See *Germany and the Second World War*, II, 279.

³⁹³ According to Koževnikov, *Komandovanie*, 15, Italy, Finland, Romania, and Hungary together provided 980 aircraft; Groehler, *Luftkrieg*, 294 ff., gives the air strength of Germany's satellites, including Croatia and Slovakia, as in excess of 1,000 machines; *Soviet Air Force*, 29-30, estimates the strength of the states fighting against the Soviet Union on the German side at 1,422 aircraft. See also sect. I.11.2 at n. 186 (Hoffmann).

³⁹⁴ BA-MA RL 2 III/707 (May 1940) and RL 2 III/713 (June 1941).

June 1941, more than 1,800 (1,200 of them operational) had to be kept back for other theatres or held in reserve. Their disposition was as follows (number of operational aircraft in brackets):

Aerial defence of the Reich (Luftwaffe Commander Centre)	282 (227)
Mediterranean/North Africa (X Air Corps)	423 (241)
West (Air Fleet 3)	861 (582)
North (Air Fleet 5)	200 (112)

Thus the Luftwaffe was able to field only about 68 per cent of its total actual front-line strength against the principal enemy, the Soviet Union. The degree to which these aircraft were operational can no longer be accurately determined, but the percentage ratio was probably much the same.³⁹⁵

Although the Luftwaffe had demanded the so-called Urals bomber as early as 1933-4, it still had no strategic long-range bomber with which it might have immediately attacked the industrial centres in the Urals. The average tactical depth of penetration³⁹⁶ of the German bombers, under combat conditions and with only half a bomb-load, amounted to only 900-1,000 km. Destroyers, dive-bombers, and fighters, unless fitted with extra fuel-tanks, were able to penetrate only about 375, 200, and 180 km. respectively into enemy territory (see Table I.iv.7 and Map I.iv.4). For bombers the depth of penetration was further reduced by their distance from the front line—in contrast to the fighters and dive-bombers, which were stationed well forward. They could count on fighter escorts for only a short distance. Nevertheless, at night and in poor weather they were able to cover substantial distances without fighter escort.

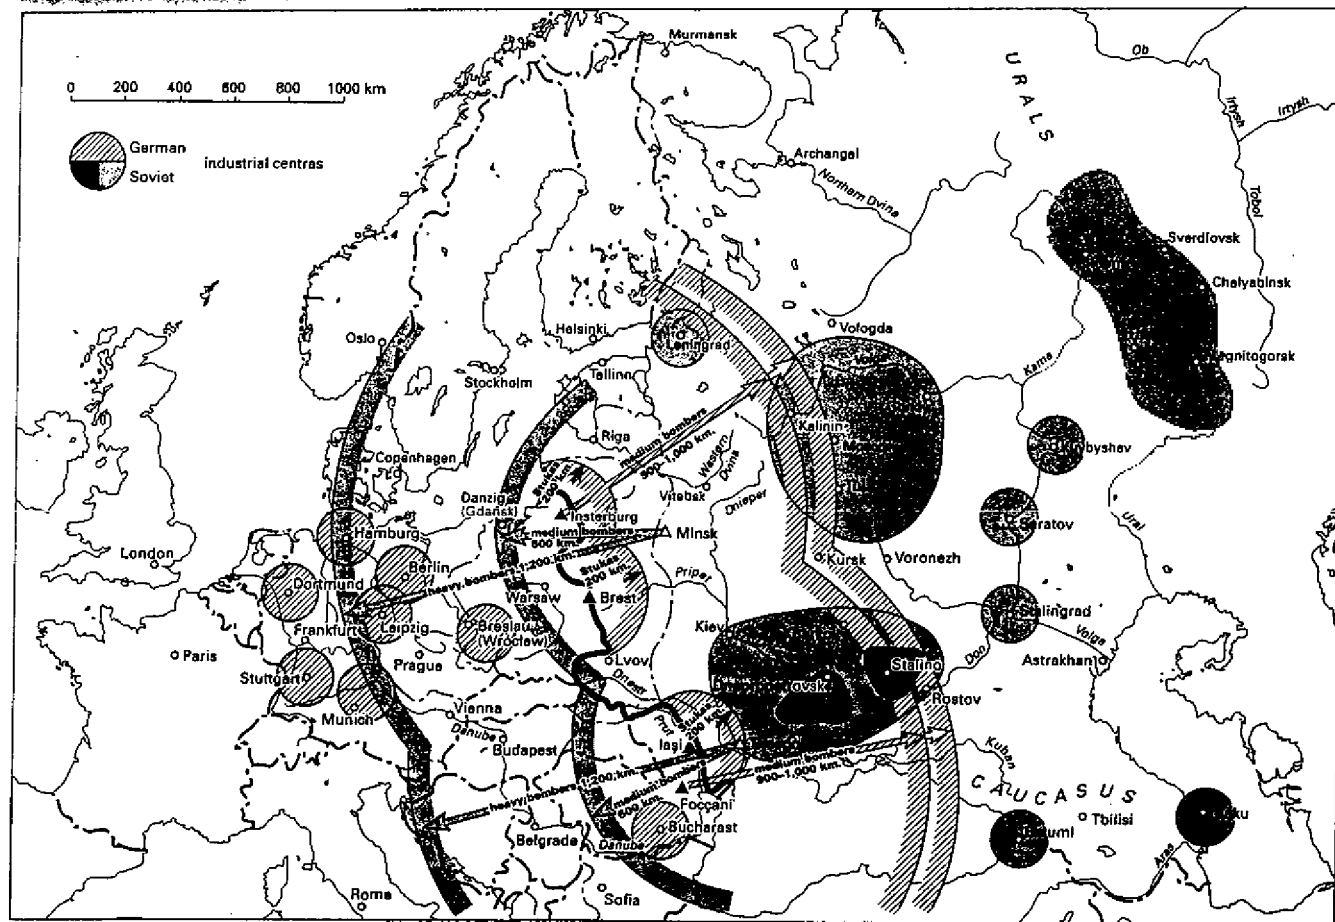

The strength of the AA artillery was continually enhanced and by the end of February 1941 consisted of 798 heavy and 827 medium and light batteries.³⁹⁷ On 30 June 1941, after a further increase, they were distributed among the different theatres of war as shown in Table I.iv.8. In consequence, 20 per cent of all heavy AA forces, 15 per cent of all medium and light batteries, and a little over 10 per cent of all searchlight batteries were stationed in the east.³⁹⁸

³⁹⁵ Vortrag über die Einsatzbereitschaft der fliegenden Verbände, Stand: 21.6.1941 [Report on the combat-readiness of the flying formations, as on 21 June 1941], GenQu 6. Abt. (I), 24 June 1941, BA-MA RL 2 III/713. Because of a shortfall of 800 replacement engines the bomber formations were thought to have begun the war in the east with only half their front-line strength (report by the former Luftwaffe quartermaster-general, Air Gen. (ret'd.) von Seidel, dating from 1949, 49, BA-MA Lw 101/3, pt. 2).

³⁹⁶ See Lw.Fü.Stab Gruppe T, 1 Apr. 1941, betr. Taktische Eindringtiefen [re Tactical depth of penetration], BA-MA Lw 106/9. The tactical depth of penetration is half the range—because of outward and homeward flight—or the greatest theoretical distance from a target, reduced by technical deductions allowed for in the flight-range tables and by tactical deductions, which for bombers, fighters, and destroyers amounted to 20% of the technical range as a safety margin allowing for flight extensions due to opposition or weather conditions, plus half-an-hour's flight time as a security against bad-weather landings or the need for the maximum permissible extension of flying time.

TOTAL	1,206	887	265

The opening of the campaign in the east was hardly delayed by the Balkan campaign, and mainly by logistical problems unconnected with it and by unfavourable weather in the eastern territories that spring. The snow melted very late, with the result that muddy ground conditions, affecting airfields and supply-routes, persisted until the end of May. This delayed work on roads, paths, airfields, and communications facilities, and hence the readiness of the jump-off bases to receive the flying formations. The two weeks thus lost to the operation were to be badly missed in the autumn. The Luftwaffe General Staff, however, was confident that by then it would be possible to 'have done with the Soviet Union . . . so that the full weight of the German Luftwaffe can once more be thrown against Britain'.³⁹⁹ After all, the Russian campaign was planned and prepared in conjunction and in parallel with the Balkan campaign.

3. THE GERMAN NAVY

ERNST KLINK

The strategic reflections of the naval war staff after the conclusion of the campaign in the west proceeded from the assumption that the defeat of Britain, the only remaining enemy, required a switch of the war effort from the army to the navy and air force.⁴⁰⁰ In the short term a direct landing in England was seriously considered as an appropriate strategy; however, even preliminary planning revealed that both the navy's own strength and the capability of the

³⁹⁹ Col. Schmid, chief of the Luftwaffe operations staff Ic, to Goebbels, in Tagebuch Joseph Goebbels, 29 Sept. 1942, IfZ ED 83/2. On the relationship between the Balkan and Russian campaigns in 1941 see Boog, *Luftwaffe im Balkanfeldzug*.

⁴⁰⁰ The ensuing account is based on Salewski, *Seekriegsleitung*, vols. i and iii; 'Führer Conferences'; Hüllgruber, *Strategie*, 144 ff.; Meister, *Seekrieg*; M.Dv. No. 601, Operationen und Taktik, *Auswertung wichtiger Erkenntnisse des Seekrieges* [Operations and tactics, interpretation of important lessons of the war at sea], vol. 12, *Der Ostseekrieg gegen Rußland im Jahr 1941*, OKM (Kriegswiss. Abt.), Berlin, Jan. 1944.

Luftwaffe, and indeed the army's requirements, would justify Operation Seelöwe ('Sea Lion') only as a last resort.⁴⁰¹ From July 1940, therefore, the naval war staff concentrated on U-boat and surface-unit actions against British supplies; demands made for allocations of raw materials, armaments capacity, and skilled workers to that end had been approved by Hitler on 30 June 1940.⁴⁰² However, the promised enlargement of the fleet was soon restricted again by a lack of co-ordination in the armaments programme of the three Wehrmacht services, the limitation of resources, and more particularly the priority given to the air war against Britain.

The concept of a war against Britain's supplies in the Atlantic—which the navy regarded as the only promising strategy for a quick end to the war before the United States entered it—was now being supplemented by plans for greater activity in the Mediterranean in order to strike at Britain by cutting off her connections to the Middle East and Egypt. Consideration of the consequence of involving the Italian navy, of enlisting Spain and France, or of operations against Gibraltar and some islands off the Moroccan coast resulted in a naval war-staff strategy championed by Raeder as an alternative to Hitler's plans for Sea Lion and Barbarossa. The navy's strategic ideas were thus in open conflict with the 'turning to the east' under preparation by the Army General Staff in accordance with Hitler's intentions.⁴⁰³ The Soviet Union's benevolent attitude had provided a number of advantages to the navy since the beginning of the war. Peace in the Baltic enabled the navy to withdraw forces needed in the Atlantic and for coastal defence.⁴⁰⁴ Any change in that situation was bound to be an additional burden in that it would make operations in the main theatres more difficult. The Soviet occupation of the Baltic States caused Raeder to call attention on 11 July 1940 to the denuding of the German Baltic bases of artillery defences and to request 'prompt information concerning developments in the east'. Although Hitler passed on the navy's request to the Wehrmacht High Command, he also believed that 'rearmament' of the naval bases with captured artillery pieces was necessary.⁴⁰⁵

Some time later, when information from the Wehrmacht operations staff suggested to the naval war staff that Hitler was considering military action against the Soviet Union,⁴⁰⁶ new ideas began to be considered. On 28 July

⁴⁰¹ On the plans for a landing in England see Klee, *Seelöwe und Dokumente*; Hillgruber, *Strategie*, 168 ff.; Salewski, *Seekriegsleitung*, i. 256 ff. See also *Germany and the Second World War*, vol. ii.

⁴⁰² Salewski, *Seekriegsleitung*, i. 262.

⁴⁰³ On the political and military prerequisites and implications, as well as the chances for a realization of that strategy, see *Germany and the Second World War*, ii. 366 ff., and *Das Deutsche Reich und der Zweite Weltkrieg*, vi. 275 ff.

⁴⁰⁴ On the co-operation between the German and Soviet navies see Salewski, *Seekriegsleitung*, i. 133 ff., 156 ff., and id., 'Basis Nord'.

⁴⁰⁵ 'Führer Conferences', 114 (11 July 1940).

⁴⁰⁶ Salewski, *Seekriegsleitung*, i. 65 ff. The naval operations staff did not, any more than the Army General Staff, depend on Hitler's hints about a changed situation due to the occupation of the Baltic States. Interest in Estonian shale was in itself sufficient reason; see Meier-Dörnberg, *Ölversorgung*, 33-4.

Rear-Admiral Kurt Fricke, chief of the operations department of the naval war staff, submitted his 'Reflections on Russia'.⁴⁰⁷ Fricke proceeded from the assumption that the Soviet Union and the United States had to be viewed as potential allies of Britain and that Anglo-American warfare would be confined to economic and naval-strategy measures. Germany's security demanded a deep forefield in which, on the one hand, her adversary's forces could be delayed by obstacles and, on the other, the necessary living-space created for the German people. Unreliable small countries had to be eliminated. The economy had to become as self-sufficient as possible. The Soviet Union offered itself for the exchange of raw materials and goods; under normal circumstances the two nations could derive the greatest benefit from it. On the one hand, the Soviet Union was 'an enigma' to Fricke because of the conflicting information about the country; on the other, he considered it so weak politically and militarily that, operating from a position of strength, one would be able to achieve any intended objectives by negotiation. At the same time he viewed the 'spirit of Bolshevism' as a danger and as a destabilizing factor that should be liquidated in the interest of Europe. Fricke mentioned the advantages of economic co-operation, which would also make a political arrangement possible, but he immediately limited that solution by referring to the Soviet Union's striving for territorial power and economic influence. War, he believed, could not remove the natural economic difficulties between great states but only shift them elsewhere by 'giving rise to new economic combinations'. It remains uncertain what Fricke meant by such new combinations.

The military part of the memorandum proposed that the Baltic be turned into a German *mare nostrum*; the dominant position of the Soviet navy was a serious if temporary danger there. Altogether the military strength of the Soviet armed forces was far inferior to that of Germany. In the event of a military conflict, occupation of an area up to the 'Lake Ladoga-Smolensk-Crimea line' was militarily feasible without difficulty. Fricke expected the Russian navy's resistance to collapse with the German seizure of the Baltic coast and Leningrad. 'Whether the capture of Moscow will be necessary will depend on the situation and on the time of the year.' Naval operations against the Soviet Union would have to start as a surprise strike, eliminating both the heavy surface units and the submarine force.

The freedom of movement of the Soviet navy was to be restricted by mines, U-boats, motor torpedo-boats, and destroyers. Luftwaffe strikes against ships and bases would have the greatest effect. Admittedly, Fricke assumed that the air war against Britain would have reached 'a certain conclusion', enabling 'the whole of the Luftwaffe' and a major part of light naval units to be engaged in the east. In conclusion he emphasized that it would not be possible to conduct

⁴⁰⁷ Published in Salewski, *Seekriegsleitung*, iii. 137 ff., commented on *ibid.* i. 357 ff. To what extent Hitler's conversation with Raeder in Brauchitsch's presence on 21 July 1940 played any part is uncertain.

Sea Lion and the war in the east simultaneously; an operation against the Soviet Union would clearly place the main burden on the army and Luftwaffe, which meant that armament capacities would be drawn upon at the expense of the navy.

Contrary to the forecasts and intentions of Köstring, the military attaché in Moscow, Captain von Baumbach, the naval attaché, recommended the smashing of the Soviet Union and its heavy industry, and the return of its population into a patriarchal and authoritarian agricultural state.⁴⁰⁸ Such ideas may have been designed to arouse sympathy on Fricke's part, but the naval war staff were primarily concerned with the dangers of a war on two fronts and the certainty of the United States entering the war on the enemy side. That was why Raeder, in conversation with Hitler, repeatedly argued his naval-strategy concept of seeking the decision of the war in the Atlantic and the Mediterranean.

At the Führer conferences and in his reports to Hitler after 21 July 1940 the commander-in-chief of the navy of course accepted Hitler's directives, but whenever he thought it necessary also argued against them.⁴⁰⁹ Raeder's report on 6 September was concerned with the problem of concentrating his weak naval forces and the date under consideration for an offensive in the east. He thought the most favourable time would be the melting of the ice in the Gulf of Finland, as the enemy would then still be impeded by the ice. Raeder once more emphasized the impossibility of a simultaneous execution of Sea Lion and the eastern operation; no doubt he was hoping that Hitler might yet decide in favour of concentrating the German forces in the Atlantic and Mediterranean. Raeder's arguments on 26 September were along the same lines, stressing once more that the Mediterranean was the strategic centre of the war. The Suez Canal had to be seized, German troops were to advance towards Turkey through Palestine and Syria. Then the 'problem of Russia' would look quite different. If anything, the Soviet Union was afraid of Germany. Hitler declared that he wanted to induce the Soviet Union to seek a way to the ocean by striking south, towards Persia and India.⁴¹⁰ Raeder produced figures on the strength of the Soviet fleet in Leningrad and once more tried to

⁴⁰⁸ Baumbach's notes for Rear-Adm. Fricke, dated 14 and 19 Sept. 1940, assume the continued pursuit of world revolution by the USSR as a 'law of history'. Hence a clash of the two political systems was inevitable sooner or later. In agreement with other comment from the German embassy in Moscow, however, he too warned against the illusion that the Soviet population would welcome an invading army as liberators: BA-MA RM 8/K 10-2/10.

⁴⁰⁹ Raeder was briefed by Hitler on 21 July 1940 but does not seem to have attached much importance to Hitler's observations on the Soviet Union; he certainly did not feel he had been instructed to work out a naval operations plan; see Salewski, *Seekriegsleitung*, i. 275 ff. For the ensuing paragraphs see the entries under the dates in question in 'Führer Conferences' and in the war diary of the naval war staff 1939-45, pt. A, vols. xii.

⁴¹⁰ The question of Soviet action in Transcaucasia had been examined by Amt Ausland/Abwehr as early as 21 Mar. 1940 in a study 'The military situation in the Near East'—at that time in reaction to a move by British and French forces towards eastern Turkey, Iraq, and Iran. It had then been described as undesirable because it might jeopardize oil deliveries to Germany: BA-MA RW 4/v. 35, and Leverkusen, *German Military Intelligence*, 155 ff.

dissuade Hitler from his eastern plans. For the same reason Raeder, after Molotov's visit on 14 November, recommended to Hitler a postponement of the Russian operation until after victory over Britain. The Baltic would be lost as a training-ground for German naval forces and the whole U-boat war would suffer. The Soviet Union was building up a navy with German help and was unlikely, for the next few years, to seek conflict.

On 3 December, when he reported to Hitler on Ireland's support and the possibility of landing on that island, he once again emphasized that 'nothing must be allowed to interrupt or weaken' the operations against Britain 'since they will have a deadly effect in the long run, perhaps even this winter. We must carefully avoid any loss of prestige by operations entailing too great a risk, since this would tend to prolong the war and would, above all, create a strong impression in the United States.' Raeder unequivocally regarded the Mediterranean as the next area of operations for overthrowing Britain. Hitler concurred, but evidently 'missed' Raeder's reference to planning for the east and reacted only with a remark on the conditions for an engagement in Ireland.

On 27 December 1940 Raeder again warned against embarking on the operation in the east.⁴¹ Otherwise the hoped-for decision in the Mediterranean could then no longer be brought about with Italian help. France and Spain should be more strongly involved in German measures. Maximum intensification of the U-boat and air war against Britain was called for. Hitler objected that, given the Soviet 'inclination' to interfere in Balkan affairs, the last continental enemy had first to be defeated 'before he can collaborate with Britain'. To that end the army had to be strengthened; after that, capacities would be fully concentrated on the Luftwaffe and the navy. Hitler feared Soviet intervention in Bulgaria and against Turkey, designed to gain control of the Straits. He now explained that Britain's war aim must be to defeat Germany on the continent and to bring the war to a decision there. Only its hopes of Russia and the United States were keeping Britain going. As soon as he perceived Britain's feelers, Stalin would act as an extortionist. The definitive loss of the Soviet Union as Britain's partner would make it possible to continue the war under tolerable conditions. Thus Germany's main enemy, in line with Raeder's concept, was Britain; the Soviet Union was Britain's 'continental sword'.

Viewed thus, the war against the Soviet Union was part of the overall war against Britain, the naval power. Raeder's attempt to ensure for the navy the principal role in the war for a decisive victory over Britain had definitely failed.

The basis of naval operations against the Soviet Union was the 'Combat instruction for the navy' of May 1939, produced after prolonged study within the naval operations staff; in its special instructions for the Naval Group

⁴¹ 'Führer Conferences', 162 (31 Dec. 1940). The same reasons were given for a rejection of a war on two fronts on 11 Dec. 1940 in the minutes demanded by OKW/L: see p. 238, BA-MA PG 31025. See *Das Deutsche Reich und der Zweite Weltkrieg*, vi. 276-7.

Commander East it initially envisaged only a defensive role. Not until the supplement issued on 19 August 1939 was an alternative planned which involved an offensive mine war to seal off the Gulf of Finland. The general principle, however, was the most economical use of naval units so as not to jeopardize the main effort in the Atlantic.⁴¹²

According to a Wehrmacht High Command instruction of 21 August 1940, the navy had to ensure the defence-readiness of the German Baltic coast by 1 April 1941.⁴¹³ The ports were to be protected by barrages and furnished with supply facilities. The heavy batteries were to be moved as far east as possible in order to protect the naval units operating there and to rule out enemy operations in the Bay of Danzig (Gdańsk). Directive No. 21 (Barbarossa) defined the navy's main task as the continuation of the war against Britain. For the Baltic, its orders were to safeguard sea transports to Finland and the Gulf of Bothnia, and to conduct mine-laying operations to bottle up the Red Fleet in Kronshtadt and Leningrad.

A characteristic aspect of the naval war in the Baltic was the tightness of the theatre; this greatly restricted the use of major units and made the navy dependent on continual co-operation with the Luftwaffe and the army. Reconnaissance and elimination of major enemy naval units were to be left to the Luftwaffe, in addition to its self-evident task of keeping the enemy's air forces in check. The army was to capture the ports from the land side by a rapid advance along the coast.

On 30 January 1941 the naval war staff submitted its operations plan.⁴¹⁴ Its central feature was still the laying of mine barrages in the Gulf of Finland and a limited attack on enemy units. The principal task was the protection of seaborne traffic to Finland, Sweden, and the eastern Baltic ports yet to be captured.

Although assessments of the future enemy referred to the 'relatively large number of ships', the naval war staff emphasized the low level of training and, above all, inadequate command skills: 'The decisive aspect of the performance of the Russian navy will presumably be the fact that its command is rigid and inflexible, that there is no willingness to take responsibility, and that no personal initiative need be expected.' Soviet submarine and mine-laying operations, on the other hand, were expected to represent a serious threat and to cause temporary disruption of German sea communications in the Baltic.

The army's advance along the coast, however, would probably yield considerable number of ships taken as booty for use in the war in the Atlantic. In

⁴¹² See 'Kampfanweisungen für die Kriegsmarine (Ausgabe Mai 1939)' [Engagement instructions for the navy—issue May 1939], with the incorporated supplement of 19 Aug. 1939 (1./Skl. Ia 173/39 g.Kdos. Chefs.), BA-MA RM 7/813, fos. 27 ff. and 37–8. See Salewski, *Seekriegsleitung*, i. 77–8 and 365–6.

⁴¹³ Salewski, *Seekriegsleitung*, i. 365 ff.

⁴¹⁴ The operations plan was verbally reported to Hitler by Raeder on 4 Feb. 1941: 'Führer Conferences', 176–7. See also war diary of the naval war staff 1939–45, pt. A, vol. xvii (Jan. 1941), 401 ff. (30 Jan. 1941).

polar waters it would be important to weaken the Soviet bases of Murmansk and Polyarnyy by massive air attacks and thereby to render British operational intentions in the Arctic Ocean more difficult.

With the expected capture of these ports from the land side the Soviet naval forces would probably try to move to Britain. According to the situation, an attempt would have to be made at least to cut off the surface units and engage them in battle. In the Black Sea achievement of naval superiority was ruled out from the start. The Soviet fleet was known to be vastly superior to the Romanian and Bulgarian units, and these could not therefore be expected to engage in offensive action.⁴⁵

In the circumstances the navy's only offensive operation within the framework of Barbarossa was naval warfare in the Baltic.

Command was exercised by Naval Group HQ North (General Admiral Carls). The operational commander of the naval war in the Baltic, under Group North, was the Befehlshaber der Kreuzer (B.d.K.: Commander of Cruisers), reinforced for this purpose by some of the staff of the Führer der Torpedoboote (F.d.T.: Leader of Torpedo-boats). To ensure liaison with the Finnish naval forces the Leader of Torpedo-boats, with the rest of his staff, was posted to Helsinki as 'Commander of German naval forces in Finland', where, in conjunction with the German naval liaison staff and the Finnish naval staff, he was to control operations in accordance with instructions from the Commander of Cruisers. There was therefore plenty of opportunity for overlapping of orders and misunderstandings throughout the rest of the war.

For the defence of the bases to be newly established in the east two naval commanders ('C' and 'D') were additionally provided; these were to advance along with the army. The weakness of German forces in the Baltic area was remedied—as a short-term measure, it was hoped—by drawing upon the Leader of Mining Vessels from the North Sea security area; he assumed control of the mine-seeking, mine-sweeping, and patrol services, except in the Gulf of Finland. First consultations between the German naval war staff and the Finnish navy were held on 28 May 1941; they were followed on 6 June by consultations between Group HQ North and the Finns on operational engagement plans. Requests from the Group HQ for the immediate utilization of the Åland Islands and the early occupation of Hanko and Suursari had been rejected by Hitler earlier, on 3 June, because he considered this a Finnish problem and probably wished to rule out additional demands.⁴⁶

On 29 May the formations were moved to the ports of the central and

⁴⁵ Offensive operations—primarily in mine warfare—were to be 'striven for': see Salewski, *Seekriegsleitung*, iii. 147 ff. See further the directives of the naval war staff of 6 Mar. and 6 May 1941, *ibid.* i. 370; also M.Dv. No. 601, 6 ff., and Meister, *Seekrieg*, 9 ff. Data on Soviet naval forces and ratios of strength are in M.Dv. No. 601, 3, and Meister, *Seekrieg*, 230 ff.

⁴⁶ Salewski, *Seekriegsleitung*, i. 372 ff., and M.Dv. No. 601, 9 ff. On Finland see sect. I.vi.4 (Ueberschär); Jokipii, *Laivasto-yhteistyö*.

eastern Baltic. By 18 June all units had reached their ports, including those in Finland, without incident. The first mine-barrages were dropped after 18–19 June in order to make sure that, after the start of operations on 22 June, Soviet ships could not leave harbour. After 14 June no German vessel was permitted to make for a Soviet port; Soviet ships were detained. At the western exit of the Gulf of Finland German mining units had been arriving in the skerries around Turku (Åbo) since 14 June; during the night of 21–2 June they laid mines, pursued by Soviet observers and fired on from the air.⁴¹⁷

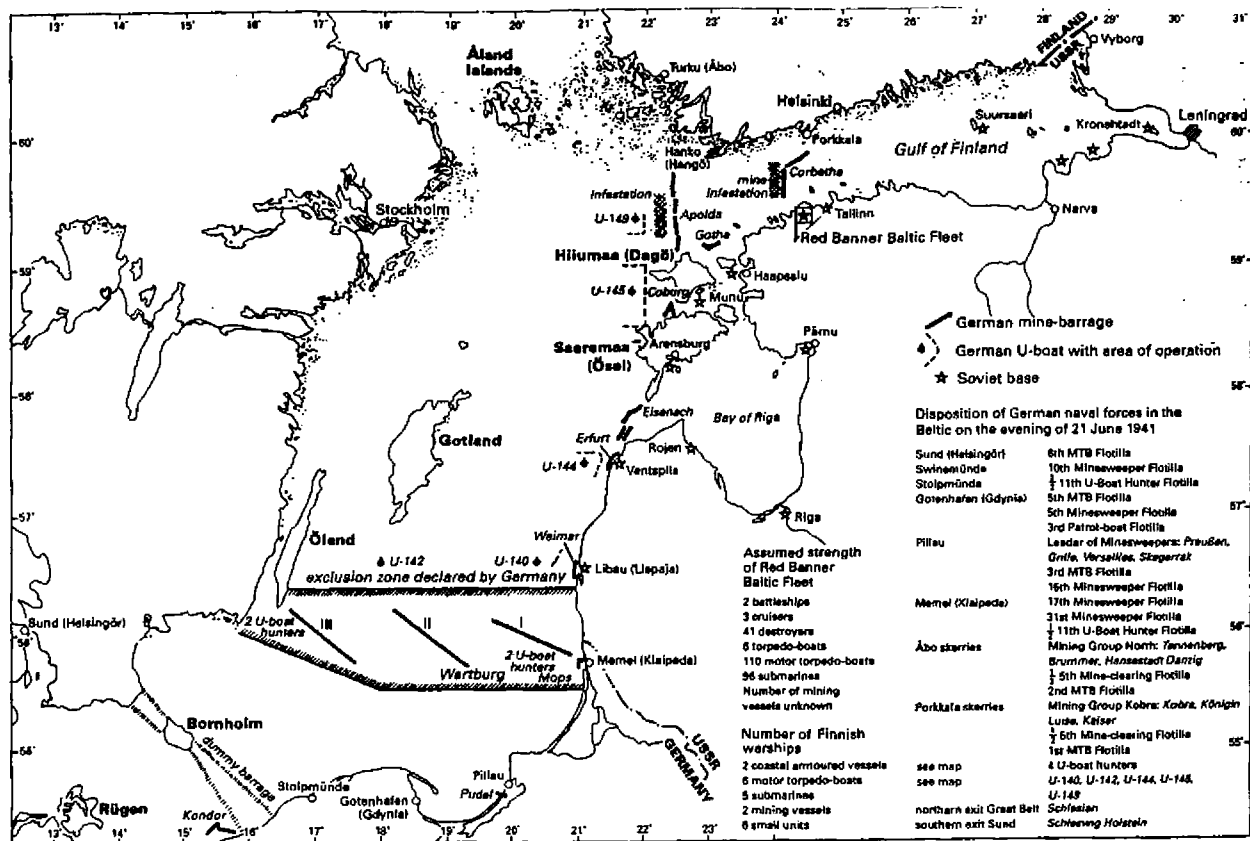

On 26 February 1941 Colonel-General Halder and Admiral Otto Schniewind, chief of staff of the naval war staff, discussed the problem of naval support for ground operations. Schniewind made it clear that no active support by the navy was possible; not even the coastal shipping envisaged for carrying supplies to Army Group North could be given protection. On 13 March discussions were held between the operations department and Admiral Karl-Georg Schuster, commanding Naval Group South, and Captain Otto Loycke, naval liaison officer with the commander-in-chief of the army, on the possibilities of sea transportation along the Black Sea coast to Odessa and beyond. However, in view of estimated Soviet superiority in the Black Sea these did not produce any positive results either.⁴¹⁸

The command agency North of the quartermaster-general envisaged the use of seagoing ships and transport barges to relieve transport capacity by rail and road; their use would depend entirely on the naval-war situation. Initially only the movement of individual small vessels close to the coast ('coastal sneakers') was possible. The following were held in readiness on Day B: 2 ships with food supplies and 4 ships with ammunition at both Memel (Klaipeda) and Königsberg (now Kaliningrad). Another 18 were held ready unladen; these were earmarked for supplies to Eighteenth Army and were to be brought up to Libau (Liepāja) as early as possible. These units were put under the operational command of Naval Commander D in Königsberg. For transportation across the Memel (Niemen) 2,250 t. of river-barge capacity, laden with ammunition, had been readied; a further 1,250 t. were lying unladen at Königsberg.⁴¹⁹ Even these relatively minor aspects of co-operation between the Wehrmacht services depended entirely on amicable agreement at lower level;

⁴¹⁷ On engagements prior to 22 June 1941 see 1. Skd to OKW/WFSt/L, 2 June 1941, BA-MA PG 31025.

⁴¹⁸ Halder, *Diaries*, 809 (24 Feb. 1941), 811 (26 Feb. 1941), 828 (13 Mar. 1941). The fundamental limitations on naval support for the army had already been explained to Halder by Capt. Loycke on 14 Aug. 1940: BA-MA PG 32087b. See also Salewski, *Seekriegsleitung*, i. 365 ff. For the result of the conference with Schniewind see Halder, *Diaries*, 811 (26 Feb. 1941).

⁴¹⁹ On 3 Feb. 1941 Halder drew Hitler's attention to the importance of supplies across the Baltic and the Black Sea: see Halder, *KTB* ii. 269 (2 Feb. 1941; not in trans.). Army Group C, command agency North of the quartermaster-general, 'Anordnung über die Ausnutzung der See- und Binnenschifffahrt der Befehlsstelle Nord' [Instruction on the utilization of seagoing and river shipping of command agency North], suppl. 8 to annexe 7 of Besondere Anordnungen während des Aufmarsches [Special instructions during deployment], 2 May 1941, BA-MA 22392/40.

arrangements at senior level, properly the task of the Wehrmacht operations staff, were being avoided.⁴²⁰

As can be seen from Map I.iv.5, which shows the initial situation of the sea war in the Baltic, the mine-laying and motor torpedo-boat formations equipped for offensive operations were supported also by five U-boats in the central Baltic in order to prevent evasive action or a breakthrough by Soviet surface units. In addition, German protective barrages had been laid around the ports of Pillau, Kolberg, and Stettin (now Szczecin) to protect them against penetration by enemy naval forces. At the suggestion of the German naval war staff, a further defensive measure was taken by the Swedish navy, which laid a mine-barrage between Stockholm and the boundary of Swedish territorial waters off the Åland archipelago.

⁴²⁰ Ruge, *Sea Warfare*, 156, and (taking his cue from him) Salewski, *Seekriegsleitung*, i. 373, believe that the Army High Command lacked understanding for a 'supply-route across the Baltic'.

V. Germany's Acquisition of Allies in South-east Europe

JÜRGEN FÖRSTER

I. ROMANIA IN THE POLITICAL AND ECONOMIC FIELD OF FORCE OF THE GREAT POWERS

As a result of Hitler's decision in the summer of 1940 to turn to the east, Romania, along with Finland, came within the range of German strategy. Whereas until then Berlin had emphasized only its economic interest in that country, additional objectives now came to the fore. Romania's inclination towards the Reich, from which sprang her participation in Hitler's war against the Soviet Union, was based on a complex convergence and interplay of historical, political, domestic, ideological, and economic factors. Along with Finland, Romania from 1941 to 1944 became Germany's principal ally against the Red Army, although no formal military alliance had been concluded nor any specific agreements made on common war aims with regard to the Soviet Union. The manner in which the Reich harnessed the forces of its allies to its own cart should not make one overlook the fact that the direction in which they were pulling was not solely up to Hitler, who in turn became dependent on his comrades-in-arms.

German foreign-policy in south-east Europe was favoured by the territorial outcome of the First World War and the consequences of the worldwide depression. The treaties signed in the Paris area in 1919-20 had brought about a political constellation in south-east Europe which was characterized either by support for or by opposition to the 'Versailles system'. While the beneficiaries of the territorial redistribution, Romania, Yugoslavia, and Czechoslovakia, had focused their foreign policy on the maintenance of their possessions, the policy of the losers, Hungary and Bulgaria, was marked by an aspiration for a revision of their frontiers. From the Soviet Union Romania had gained Bessarabia, and from the bankrupt stock of Austria-Hungary she had gained Transylvania, the Bukovina, and the major part of the Banat. As a member of the League of Nations and of the Little Entente, Romania was part of the French system of alliances in south-east Europe and a reliable partner in the 'cordon sanitaire' system against the Bolshevik Soviet Union,¹ which had not recognized the annexation of Bessarabia. Romania's foreign policy was likewise determined by her concern about Hungarian and Bulgarian revisionist intentions; and to defend herself against Soviet claims she had concluded an alliance with Poland in March 1921. While Romania by her gains had doubled

¹ For this section see also Annexe Vol., No. 4. On Romania's history after the First World War see Rhode, 'Südosteuropäische Staaten'; Roman, *Rumänien*; Lungu, *Romania*.

her area as well as her population, becoming the biggest state in south-east Europe, she had also changed from a national into a multinational state. According to the first general census of 1930, Romania had a population of 18.06 million, of which 71.9 per cent were Romanians, 7.9 per cent Hungarians, approximately 4 per cent each Germans, Ukrainians, and Jews, and 1.9 per cent Bulgarians. The main problem of Romanian domestic policy after the First World War was 'the amalgamation of the old kingdom and the newly acquired territories with their diverse social structures, their diverse historical and cultural evolution',² and their minorities. The minority problem was aggravated principally by the fact that the Hungarians in Transylvania and the Székler territory, where in some places they formed a majority of over 80 per cent, and the Bulgarians in southern Dobrudja (38 per cent of the population) wished to be reunited with their mother countries.

Romania was a constitutional monarchy, though the Crown was of particular importance in that the formation of the government was entirely in the hands of the king, who could also dissolve parliament at any time. As a result of the electoral system, parliament did not reflect public opinion since the overwhelming majority of seats went to the party which achieved 40 per cent of the vote. Moreover, a pre-war rule was still in force, 'according to which in Romania it was not the elections which determined the government, but the government which determined the elections'.³

A particularly pressing problem had been an agrarian reform in the old kingdom, where 60 per cent of the land had been in the hands of 5 per cent of the landowners. Although a strongly ideological land reform, completed in 1928, had eliminated the large estates and strengthened the Romanian peasantry, it had also, because of land fragmentation and high rates of interest on agricultural credits, resulted in 'correspondingly large indebtedness, especially of smallholdings, and in a basic anti-Semitism, as the creditors were often Jews'.⁴ In 1930 78 per cent of the population was employed in agriculture and only 7.2 per cent in industry. The petroleum industry, of which up to 75 per cent was foreign-owned, was the most important sector of the Romanian economy. In 1937 exports of oil and oil derivatives accounted for 41 per cent of total exports.

Patent manipulation and corruption in the formation of governments, as well as Romania's unsolved national and social problems, undermined confidence in constitutional monarchy and its representatives. The consequence was the emergence and rapid growth of radical and Fascist organizations. Thus the 'Legion of Archangel Michael', founded by Corneliu Z. Codreanu in 1927, developed within a few years into the fiercest domestic opposition to the monarchy and the established parties.⁵ The Legion did not see itself as a party

but as a movement, as a 'form of life'. It was organized as a militant order. In place of a political programme there was belief in the indispensable 'spiritual resurrection of the nation' and in a 'new man'. A fervent mythically Christian nationalism was linked with anti-capitalist and social-revolutionary ideas. Alongside a radical anti-Semitism and anti-Marxism the Legion's members were guided by anti-democratism, irrationalism, a cult of death, and an apologetics for war. The Legion saw the 'decisive means for national renewal' in the elimination of the Jews and their influence in politics, the economy, and culture.⁶ Corrupt politicians and Communists were also regarded as 'Jews' and reviled as 'foreigners'. In order to escape from its isolation and capture power in the state, 1929-30 Codreanu renamed the Legion the 'Iron Guard'. Its 'mission' was 'to hand out justice to the righteous and death to the wicked'.⁷ The successes of the National Socialists in the election of September 1930 in Germany were hailed by Codreanu as a 'victory for the entire Aryan race'.

National Socialist foreign policy after 1933 continued the south-east European policy of the Weimar governments, especially that of Brüning.⁸ Foreign-trade policy was not only a vehicle of foreign policy for weakening the French alliance system, but also pursued an objective with regard to Britain.⁹ Germany's 'urge towards the south-east' was to signalize her renunciation of colonial claims overseas and thus facilitate German-British understanding. After 1936 German foreign-trade policy acquired a new aspect as the scope and internal dynamics of German rearmament, and Hitler's foreign-policy 'programme', necessitated the country's economic mobilization in the form of the Four-year Plan.¹⁰ In that connection, Romania's mineral-oil products and surplus grain achieved increasing importance for Germany's war economy. However, Bucharest successfully resisted any excessively one-sided economic deals and limited oil deliveries to Germany, effected as clearing transactions, to a quarter of her total trade. Any quantities ordered in excess of that quota could not be exchanged against industrial manufactures but had to be paid for in hard currency.

However, that economic setback was offset by the political success achieved by German diplomacy with the aid of Romania's right-wing parties. In August 1936 King Carol II dismissed his pro-French foreign minister Titulescu, who had intended to safeguard Romania's territorial integrity not only by inclining towards France but also by good relations with the Soviet Union.¹¹ The parliamentary elections at the end of 1937 failed for the first time to ensure a majority for the government party. It gained only 38 per cent of the vote, whereas the right-wing parties scored a major success. The Iron Guard alone received nearly 16 per cent. In February 1938 King Carol exploited the

unstable domestic political situation by staging a *coup d'état*. He dissolved parliament and the political parties, and adopted an authoritarian form of government. To stabilize his dictatorship he not only fought ruthlessly against the Iron Guard but also created a united party, the 'National Regeneration Front'. In his foreign policy, in order to preserve Romania's territory against the revisionist aspirations of her neighbours, Carol performed a balancing act between the Reich and the Western powers.

After the occupation of Austria, Germany launched a renewed economic offensive towards south-east Europe, one which has to be viewed against the background of the German strategy emerging after 1937—one involving conflict with Britain should that be necessary. At the beginning of April 1938 Göring called for the 'economic catchment' of Romania, Hungary, Yugoslavia, and Bulgaria.¹² Whereas Budapest, Belgrade, and Sofia became largely dependent on the German market, Bucharest succeeded in resisting German pressure because of the greater diversity of its trade and because of Germany's lack of hard currency. It was only the next series of power-shifts in the European scene, accomplished by Hitler in 1938–9, as well as British and French economic appeasement, that helped the German economic offensive to succeed also in Romania. On 23 March 1939 a German–Romanian economic agreement was signed, with provisions amounting to Romania's integration within a German-controlled greater economic sphere.¹³ Hitler's 'Prague coup', however, resulted not only in the Anglo–French guarantee to Romania, but also in supportive economic activities which neutralized the German–Romanian agreement.¹⁴ The economic and political engagement of the Western powers denied Germany realization of her aspirations towards a monopoly position in Romania's oil industry. As a solution, in April 1939 the economic and armament department of the OKW proposed: 'The only real guarantee for controlling the Romanian oil resources at present is a military solution. Its application should aim at the preservation of the Romanian oil industry's operational capacity.'¹⁵ However, the private interests of Anglo–French capital, which had direct control of 65 per cent of the shares of the major mineral-oil companies in Romania, did not coincide with the Western powers' strategic aims until after the outbreak of the war. In mid-October 1939 the War Cabinet in London set up the 'Hankey committee' in order to prevent Romanian oil from reaching Germany.¹⁶ The Romanian companies supported the boycott policy organized by Lord Hankey by greatly raising prices, by arranging for parent companies to buy up the production of daughter companies, and by an almost watertight embargo against German importers. That policy, however, could work successfully only so long as the Romanian government did not

intervene in the economy by control measures—and that, in turn, depended on its own political interests.

The turn-about in Romanian policy was triggered by the alliance between Hitler and Stalin, by the resulting fourth partition of Poland, and by the attitude of the Western powers.¹⁷ Carol's foreign-policy tightrope act lost its safety-net as a result of Britain's refusal to extend its guarantee to the contingency of Soviet aggression against Bessarabia. The result was a state of suspension, reflected both in Romania's declaration of neutrality after the German attack against Poland and in her non-recognition of the alliance following the Red Army's advance into Polish territory. In the opinion of Armand Calinescu, the Romanian premier, the German danger was then receding while the Soviet threat was moving to the foreground. Only a few days after discussing with the British and French ministers a plan for the destruction of the Romanian oilfields in the event of a German attempt to seize them,¹⁸ Calinescu on 16 September 1939 proposed to Wilhelm Fabricius, the German minister, an exchange of large quantities of Polish weapons captured by the Germans against long-term deliveries of oil and grain. This barter deal, the political significance of which the Romanian government well realized, was to remain outside the general trade agreements.¹⁹ It offered Germany the opportunity of receiving additional quantities of urgently needed Romanian oil without further overdrawing the clearing account and without having to pay in hard currency. A secret German-Romanian protocol signed on 29 September laid down the directives for the delivery of captured Polish material to a value of RM100m. in exchange for oil and grain.²⁰ In order to improve the equipment of the Romanian army, Bucharest was above all interested in machine-guns, anti-tank guns, and artillery pieces. The Romanian government obliged Berlin by making a credit of RM40m. available in advance for German purchases of oil. However, owing to domestic, economic, and foreign obstacles, this highly political oil-for-arms deal was deferred until the end of May 1940.

Romania's abandonment of her neutral line was jeopardized domestically by the fact that on 21 September 1939 Premier Calinescu was shot dead by members of the Iron Guard who had slipped in from Germany. The German minister Fabricius's comment on the assassination was: 'Whenever the Romanians in government move closer to us the Iron Guard steps in between, it is as if we were doomed.'²¹ On the one hand, Carol's regime reacted to the

¹⁷ See Förster, 'Rumäniens Weg', and from the Romanian side Savu, 'Defensive War', 136 ff. Romania in Sept. 1939 mobilized 31 infantry divisions, 3 cavalry divisions, 4 mountain brigades, and 1 fortress brigade.

assassination with Draconian measures. The arrested assassins and more than seventy detained members of the Legion were executed by firing-squad and their bodies put on public display. On the other hand, the king had the German minister assured that he would continue his policy towards Germany and, in particular, implement the important oil-for-arms deal. Germany should 'show even greater interest in Romania than in the past and, if necessary, use its influence on Russia'.²²

Carol's openly declared foreign-policy calculations, which were further nourished by Soviet remarks on the unclarified status of Bessarabia, had been influenced also by Britain's attitude. Britain, in whom Carol II and many of his ministers had originally placed their hopes, not only declined to extend its guarantee to cover Soviet aggression, but was at the same time reluctant, in view of different strategic priorities as well as her own requirements, to supply armaments to Romania.²³ In his hope of German political assistance against the Soviet Union Carol went out of his way to meet Germany's economic requests. In December 1939 his government guaranteed a monthly delivery of 130,000 t. of crude oil—the quantity believed to be necessary by the Reich ministry of economic affairs—devalued the Romanian leu against the Reichsmark in order to counteract the prices driven up by the oil concerns, and employed control measures to intervene in the market. In mid-January 1940 it set up a 'commissariat-general for petroleum' in order to counter the obstructive business policy practised by the mineral-oil companies *vis-à-vis* the German importers.²⁴ At the end of February the new German negotiator, Hermann Theo Neubacher, accomplished an arms-oil price ratio which was exceedingly favourable to Germany, and on 6 March 1940 a provisional agreement on the oil-for-arms deal was signed.²⁵ This envisaged the delivery of 360 37-mm. anti-tank guns, 10 20-mm. anti-aircraft guns, 80 75-mm. artillery pieces, and optical equipment of Polish or Czech origin in exchange for 200,000 t. of crude oil during March and April 1940.

The official conclusion of a definitive oil-for-arms agreement was delayed not by any unsettled financial details, but by the Romanian king's political calculations. Carol II was reluctant to abandon his policy of neutrality too readily, or to become dependent on Germany. When, towards the end of March, the Soviet Union publicly confirmed its claim to Bessarabia, Romanian fears increased. Because of Britain's refusal of assistance the Romanian regime found itself in the position of having to choose between Hitler and Stalin. With territorial claims by the Soviet Union, Hungary, and Bulgaria raising the possibility of conflict on three fronts, Carol—against the opposition

of some of his ministers—decided to align himself with National Socialist Germany. In consequence, the oil-for-arms agreement was eventually signed in Bucharest on 27 May 1940.²⁶ Its political and military importance was rated so highly by the king that the economic consequences were readily accepted. Carol believed that his economic and domestic concessions with regard to the Iron Guard would earn him Hitler's support for his policy of preserving 'throne and frontiers'.²⁷ He assumed that, for economic reasons, Hitler would also be interested in Romania's political stability and territorial integrity, and would keep the Soviet Union, Hungary, and Bulgaria in check. As for his obvious turn towards the camp of the Axis powers, Carol tried to conceal this by concluding an economic agreement with Britain as late as 6 June 1940. In Berlin this was seen as evidence of Romania's continuing 'see-saw politics'.

The reasoning behind Carol's oil-for-arms agreement proved an illusion when Stalin, after the surprisingly swift collapse of France, proceeded to take possession of the forefield which Hitler had assigned to him in the secret protocol of summer 1939. In addition to the three Baltic States, Bessarabia and the whole of the Bukowina were to be incorporated in the Soviet Union. The effects of this extension of the Soviet empire upon Finland and the Balkan States were part of the plan. Having harmonized its territorial demands on Romania in negotiations in Berlin and having recognized Germany's economic interests, Moscow transmitted an ultimatum to Bucharest on 26 June 1940.²⁸ This demanded, within a period of 24 hours, the cession of Bessarabia, the northern Bukowina, and the town of Herța in the province of Moldavia. While ordering the mobilization of his army and displaying his readiness to fight, Carol simultaneously turned to Germany and Italy for help. But both Axis powers urgently advised him to yield. Hitler and Mussolini feared that in the event of a Soviet-Romanian war the Red Army might penetrate beyond the Pruth and occupy the oil region around Ploiești. Nor could the use of force by Hungary or Bulgaria be ruled out.

With no foreign support Carol II and his regime had no choice but to swallow this first 'pill of cessions'.²⁹ On 28 June the Red Army crossed the frontiers and within four days occupied the ceded territories. The order to evacuate Bessarabia, the northern Bukowina, and Herța without a fight caught the Romanian army and administration by surprise. The sudden abandon-

²⁶ *DGFP* D ix, No. 338. The direct exchange of oil for war material ended in Oct. 1940. After that date the purchase of mineral oil was again conducted by way of clearing, which led to a big increase in the German debt. In Oct. 1941 this amounted to RM270m. The devaluation of the leu in Dec. 1939 and the concession of pre-war prices resulted in a gain for Germany of RM80m.—without taking into account the fact that weapons captured in Poland and Czechoslovakia entered into the deal.

²⁷ This was how the German military attaché in Bucharest, Col. Carl Wahle, formulated it in his report on the military and war-economy situation in Romania, No. 137/40, 5 Feb. 1940, BA-MA W/IC 4.58.

²⁸ See Brügel, 'Das sowjetische Ultimatum'.

²⁹ Semi-official letter of the German military attaché, Col. Wahle, to Lt.-Gen. von Tippelskirch, 28 July 1940, BA-MA III H 1001/7.

ment of the doctrine that Romania's frontiers had to be defended so long as a Romanian soldier held a weapon in his hand resulted in profound demoralization of the Romanian army and in sharp criticism of its supreme command.

2. THE VIENNA ARBITRATION AWARD OF AUGUST 1940 AND THE DISPATCH OF A GERMAN MILITARY MISSION

The loss of Bessarabia, Herța, and the northern Bukowina confirmed Romania's precarious position. As no help was to be expected from Britain, Carol was feverishly trying to gain German support against the Hungarian and Bulgarian revisionist claims which were now bound to be raised. He saw 'his country's only salvation in a very close alignment with Germany', with which he was willing to co-operate closely in all fields.³⁰ As a token of her 'new policy', on 1 July 1940 Romania renounced the now worthless Anglo-French guarantee of her frontiers and on 11 July left the League of Nations. Carol, moreover, formed a government of respected pro-German ministers, which included the now rehabilitated commander of the Iron Guard, Horia Sima, and two further Legion members, and initiated the process of depriving Jews of their rights. But despite the proposition that Romania might function as Germany's right wing against the Soviet Union and a request for a German military mission,³¹ Hitler insisted that Bucharest must first come to terms with its neighbours before a closer German-Romanian co-operation could be considered.³² Simultaneously he advised Hungary and Bulgaria to realize their territorial demands through direct negotiations with Romania.

Whereas agreement in principle was soon reached between Bulgaria and Romania on the cession of the southern Dobrudja to Bulgaria,³³ Romanian-Hungarian negotiations got bogged down. When both sides suggested arbitration by the Axis, Hitler assumed the role of arbitrator according to his own judgement. The conflicting national ambitions of Hungary and Romania, as well as the structure of their governmental systems with a basic anti-Communist attitude, made it easy for him, with Italian support, to impose an arbitration award on the two countries.³⁴

This was signed by the foreign ministers of Germany, Italy, Hungary, and Romania in Vienna on 30 August 1940.³⁵ Its aim was to achieve the permanent pacification of the Balkans and to prevent both a British extension of the war to that region and Soviet intervention.

Romania undertook to cede northern Transylvania and the Szekler area to

³⁰ German embassy Bucharest, telegram No. 1056, 30 June 1940, *DGFP D x*, No. 68.

³¹ Semi-official letter of the German military attaché, Col. Wahle, to Lt.-Gen. von Tippelskirch, 14 July 1940, BA-MA III H 1001/7, and *DGFP D x*, No. 161 (13 July 1940). Wahle did not think a mere German military mission was much use: 'Just as in the days of the emperor Trajan, when a Roman legion was stationed on the lower Danube, so the future protection of this important colony will have to be taken under our own management.'

³² Letter from Hitler to King Carol II, 15 July 1940, *DGFP D x*, No. 171.

³³ See Hoppe, *Bulgarien*, 87 ff. The treaty of Craiova was signed on 7 Sept. Bulgaria had 7,695 sq. km. with 319,551 inhabitants returned to her (p. 134).

³⁵ *DGFP D x*, Nos. 408-13.

Hungary. Although Budapest in consequence regained an area of 43,500 square kilometres with 2.5 million inhabitants—over a million of whom were Romanians—this was less than the minimal solution of 50,000 square kilometres specified by the Hungarian side in the autumn of 1939.³⁶ As a price for that second territorial amputation Romania received a German-Italian guarantee of the remainder of her sovereign territory, clearly designed to prevent any further Soviet ambitions. The Russians must realize, Hitler declared at the annual conference of military attachés on 31 August, 'that Germany attaches vital importance to Romania [and] will shrink from nothing in the protection of German interests'.³⁷ Romania was inviolable.

The German strategy of confronting the Kremlin in south-east Europe—just as in Finland—was based on Hitler's decision of 31 July 1940 to smash the Soviet Union in the spring of 1941. The risk that Stalin in August 1940 might take advantage of the threat of military conflict between Hungary and Romania by pushing across the Pruth towards Ploiești was met by Hitler with the creation of a counter-attack reserve in the Vienna region. The XXXX Army Corps (2nd and 9th Armoured Divisions, 13th Infantry Division (motorized), SS-Leibstandarte Adolf Hitler, and the Grossdeutschland Infantry Regiment) was to be held in readiness to secure the Romanian oilfields by occupation.³⁸ The general commanding the corps was to be advised by a 'war-economy staff for Romania' on the utilization of the country 'for supplying Germany in the area of mineral oil and foodstuffs, as well as for harnessing Romania's economy to the requirements of the German forces employed in Romania'.³⁹ The XXXX Corps's state of readiness to move off was not countermanded until 19 September, when the situation in Romania had clarified in favour of Germany. A parallel to the urgent military measures for the protection of Romania's oil may be seen in the fact that Hitler ordered 'a deployment for all eventualities' to be prepared in northern Norway for the protection of the nickel-ore region near Petsamo.⁴⁰

The second Vienna award failed to eliminate Hungarian-Romanian rivalry. Instead a paradoxical situation arose compared with the period between the two wars in that Hungary was endeavouring, by complying with German interests, to preserve at least what she had gained, while Romania was pursuing a revisionist policy, recognizing the Vienna award as no more than a provisional decision. This conflict of interests greatly contributed to the fact that both countries participated in Hitler's war against the Soviet Union, while

³⁸ BA-MA XXXX. A.K., 76043/4 and 6. Maj.-Gen. von Tippelskirch had suggested an occupation of the oilfields as early as the beginning of Dec. 1939 because German mineral-oil supplies were then being interfered with by sabotage (minute of 6 Dec. 1939, BA-MA RH 2/v. 1478).

³⁹ OKW/WiRüAmt/Wi III No. 1846/40, 12 Sept. 1940, BA-MA Wi/IC 4.64. Gen. Thomas was instructed by Keitel at the end of Apr. 1940 to make preparations for 'the Balkan business in terms of war economy' (*ibid.* RW 19/185).

⁴⁰ See sect. I.v.1 at n. 6 (Ueberschär).

along the still ill-defined Hungarian–Romanian frontier repeated armed clashes occurred which had to be settled by German–Italian commissions.

The transfer of major parts of the country to Hungary unleashed a wave of indignation in Romania, directed predominantly against the king and culminating in an attempted coup by the Iron Guard. Both Britain and Germany tried to take advantage of the domestic crisis. While London championed Iuliu Maniu, the leader of the National Peasant Party, Berlin gave its support to General Ion Antonescu, who had fallen into disgrace with Carol. In order to save his regime and to implement the award recognized also by the Iron Guard, the king appointed Antonescu premier with extraordinary powers. The new 'leader of the Romanian state' complied with the Iron Guard's request for Carol's abdication and, with German backing, compelled him to leave the country. On 6 September Antonescu took his oath of allegiance to Michael I, Carol's son. With a realistic assessment of the strength of the Iron Guard after its cruel persecution under Carol, the German leadership had avoided supporting a revolutionary development. Antonescu was regarded as a suitable person to meet Germany's interests. On 7 September Antonescu assured Colonel Alfred Gerstenberg, the German air attaché and deputy military attaché, that he was determined to co-operate with Germany 'one hundred per cent', to restructure the army and reduce its size, and to shift the focus of defence towards the Soviet Union. He renewed the request for the dispatch of a German military mission.⁴¹ On 11 September 1940 Hitler concurred.

Along with the army and the administration, Antonescu based his regime predominantly on the Legion movement, with which he himself had long sympathized and which, following its recognition as the 'only political force' in Romania, recorded a massive increase in membership. On 14 September 1940 King Michael I signed a decree which proclaimed Romania a 'national Legion state'.⁴² Antonescu became leader of the state and chief of the Legion regime; he nominated Horia Sima, the commander of the Legion movement, to the post of vice-premier. The task of the Legion was to be the 'moral and material elevation of the nation'.⁴³ However, the alliance between the conservative-authoritarian Antonescu and the revolutionary terrorist Sima soon led to conflicts, as the Legion was not content with sharing power but was usurping governmental responsibilities for itself.

In mid-September Lieutenant-General von Toppelskirch, deputy chief of staff (intelligence) in the Army General Staff, flew to Bucharest in order to initiate military collaboration between Germany and Romania, as requested by General Antonescu. He was to establish 'an estimate of instruction teams that would be required and an estimate of the officers required for the training and organization of the new army, and for schools of all descriptions'.⁴⁴

⁴¹ OKH/GenStdH/Att.Abt. No. 3290/40, 8 Sept. 1940, BA-MA H 27/9.

⁴² Fătu and Spălațelu, *Eisene Garde*, 247. ⁴³ Nagy-Talavera, *Green Shirts*, 310–11.

⁴⁴ Toppelskirch's report on his discussions in Bucharest, 15–17 Sept. 1940, BA-MA H 27/9, and DGFP D xi, No. 75.

However, behind Antonescu's request for a German military mission there was more than the hope of assistance with personnel and material in the development of a numerically reduced but now truly useful Romanian army. He was hoping for a military alliance with Germany and wished to have German troops in the country, as he considered a Soviet attack possible at any moment. On the strength of Tippelskirch's report and the detailed Romanian proposals concerning the purpose, composition, and function of a German military mission, Hitler decided that this should comprise a mission each of the army and of the Luftwaffe, as well as a reinforced division—the 13th Motorized Infantry Division—as an instructional unit. On 20 September 1940 the OKW chief of staff issued a directive defining the 'real tasks' of the military mission:

- (a) to protect the oilfields from seizure by a third power and from destruction;
- (b) to enable the Romanian army to carry out definite tasks in accordance with an effective plan developed in favour of German interests;
- (c) in case a war with Soviet Russia is forced upon us, to prepare for the commitment of German and Romanian forces from the direction of Romania.⁴⁵

Thus two aspirations of the German leadership, which, because of the confused political situation in Romania, had been pursued separately ever since the beginning of July 1940, were now linked together—safeguarding the Romanian petroleum region and tying Romania into the war against the Soviet Union.

Although at his conference with the commander-in-chief of the army on 21 July 1940 Hitler had stressed the need to protect the Romanian oil region, he had not then considered an attack by German troops striking out of Romania or the participation of Romanian units in a war against the Soviet Union.⁴⁶ By contrast, Major-General Marcks in his 'draft operations plan East' of 5 August 1940 believed that an attack against Soviet troops in the Ukraine from Romanian territory should not be dispensed with merely because 'political reasons might prevent any deployment there before the beginning of the war'.⁴⁷ In the event of a German-Soviet war Marcks expected not only Romania's participation in the conquest of Bessarabia, but demanded that this country effect 'the occupation of Odessa and the Crimea with its important naval bases'. That requirement greatly exceeded Romania's military potential. Lieutenant-Colonel (General Staff) von Loßberg in his 'operational study East' of 15 September 1940 had regarded the instructional troops of the German military mission 'as pre-dispatched personnel of the German southern wing', though they were also intended to diminish the danger of a Soviet 'attempt to seize the

⁴⁵ These instructions were to be kept secret both from the Romanians and from the German forces: *DGFP* D xi, No. 84. See also *ObdH/GenStdH/Org.Abt. II* No. 352/40, 24 Sept. 1940, BA-MA RH 27-13/2.

⁴⁷ 'Operationsentwurf Ost', 118. See sect. I.v.1(d) after n. 99 (Klink).

Romanian oil region', which Loßberg regarded as probable.⁴⁸ Lieutenant-Colonel (General Staff) Kinzel, head of the 'foreign armies East' department, however, did not believe the Soviet command capable of such an operation. A thrust into Romania, designed to destroy the oilfields, would, if successful, be most awkward for the German conduct of the war because it would then have to rely on stockpiles of mineral oil. 'As, however, the Russians in all probability will not start a war, and we therefore have the preventive capability, such a bold Russian decision need not be expected.'⁴⁹

In addition to the army and air-force military missions, a military-economics mission was dispatched, even though Romania had not requested it and was therefore surprised by its arrival. Its tasks were identical with those assigned, in the event of the country's occupation, to the 'Military economics staff for Romania': development and utilization for the German war effort of Romania's economic potential.

On 12 October 1940 the advance parties of the German army and air-force missions arrived in Bucharest with their commanding officers, General of Cavalry Erik Hansen und Lieutenant-General Wilhelm Speidel, together with officers of the economic mission.⁵⁰ By mid-November the transfer of the instructional unit R I—the reinforced 13th Motorized Infantry Division under Major-General Friedrich-Wilhelm von Rothkirch und Panthen—was completed. The Luftwaffe units—two fighter squadrons, a reconnaissance squadron, and two anti-aircraft batteries—had arrived in Romania earlier. By the end of 1940 the instructional troops had been reinforced by the 16th Armoured Division under Major-General Hans Hube (instructional unit R II) and by further Luftwaffe units.

In line with the 'real tasks' of the German Wehrmacht in Romania, the general training and equipment of the Romanian army—which were the Romanian general staff's principal interest—had the lowest priority among German objectives. Precedence was given to preparatory work for the deployment of German troops to operate against the Soviet Union from Romania, involving preferentially trained Romanian 'model divisions', and to the protection of Romanian petroleum (oil wells, refineries, storage tanks, transshipment locations) by Luftwaffe units and by the 'Brandenburg' instructional regiment of the Abwehr (military intelligence). The Romanian air force was to be trained for that purpose and, 'as far as possible, for later combined operations

⁵⁰ The army and Luftwaffe commanding officers sent to Romania were known from 10 Oct. onward—for political and camouflage reasons—as 'Commander of the German Army/Air Force Mission in Romania'. The senior officer among them (in 1940 this was Cavalry Gen. Hansen) was responsible for all issues concerning both services. In that capacity he bore the designation 'Chief of the German Wehrmacht Mission in Romania'. Under his command came also a number of lesser Wehrmacht establishments for transport, signals, and intelligence tasks, as well as the war-economy mission.

with Romanian army forces'.⁵¹ The catalogue of tasks of the German naval mission, sent to Romania only about mid-February 1941 under Vice-Admiral Friedrich-Wilhelm Fleischer, was likewise divided into 'ostensible tasks' and 'real tasks'. Outwardly it was to advise the Romanian navy in training its units and in coastal defence. But its real task was 'to ensure unified defence of the Romanian-Bulgarian Black Sea coast against attacks by a third power [i.e. the Soviet Union] from the sea' during impending operations against Greece (Operation Marita).⁵² Beyond that, 'offensive tasks in the Black Sea' were envisaged, for which the Romanian units were to be prepared 'within the framework of the limited possibilities available'.⁵³ For reasons of prestige Italy too sent a small number of naval and Alpini officers to Romania as instructors. They had been requested by Antonescu at the Italian government's suggestion.⁵⁴ After all, the second Vienna award and the guarantee of Romania's new frontiers had been jointly underwritten by both Axis powers.

The transfer of German troops to Romania created a variety of financial and supply problems. Antonescu had promised that his country would bear the cost of the military mission and the instructional units. The German leadership agreed to his request that he be allowed to pay a lump sum, as it did not wish to jeopardize Antonescu's domestic standing or let the German troops become the object of political squabbles within the country.⁵⁵ It therefore accepted a monthly contribution of 100m. lei (approximately RM2m.), even though the budgeted amount was nearly four times that sum.⁵⁶ For financial reasons the Romanian leadership declined to make a contribution towards the costs of instructional unit R II.⁵⁷ The maintenance costs and the purchases of the Wehrmacht mission led to price increases, shortages, and growing inflation in Romania. This resulted in a decline of the Romanian currency's purchasing power and did not exactly make the German troops popular with the public. Directives and orders of the Wehrmacht mission urging restraint in official and private purchases failed to achieve their purpose.

3. MILITARY ASPECTS OF ROMANIA'S INCLUSION IN THE BARBAROSSA PLAN

On 23 November 1940 Romania joined the Tripartite Pact and fully integrated herself in Hitler's political strategy against the Soviet Union. On that occasion Antonescu assured Hitler and Ribbentrop of his readiness 'with weapon in

hand, to fight alongside the Axis powers for the victory of civilization'. Standing behind the regime of Carol II had been the 'dark forces of Bolshevism and Jewry'. He, by contrast, wished to contribute to the victory of the Axis and not merely join the Tripartite Pact.⁵⁸ This clearly pro-German avowal was bracketed by Antonescu with an equally clear demand for the revision, in Romania's favour, of the second Vienna award once the war was over. The Romanian leader also emphasized to Keitel the importance of his country as a base for an offensive against the Soviet Union and expressed the conviction that 'with two motorized divisions' he 'could, if necessary, break through the Russian front and advance in the direction of Kiev'.⁵⁹ In his conference with the Wehrmacht leaders on 5 December 1940 Hitler therefore proceeded from the assumption that Romania—like Finland—would participate in the war against the Soviet Union, as its future was linked to Germany's victory.⁶⁰

Judging by Antonescu's programmatic statements, Romania's participation was thus no longer a political problem but merely a question of the usefulness of the Romanian army. Hitler's political calculations found themselves under threat from the critical exacerbation of Romanian internal politics after the end of November 1940. The reason was that Horia Sima and the Iron Guard were not satisfied with the sharing of power or with Romania's transformation to date. By their political radicalism and their selective terrorism against hated representatives of the old system, which did not stop even at the army, they had undermined Antonescu's supreme authority in Romania. Since support for the Iron Guard by members of the NSDAP's foreign organization and the SS or SD had become obvious, the army command advised Antonescu 'to shift the focus of his leaning upon Germany to the chief of the Wehrmacht mission'.⁶¹ Although the German commanding officers in Romania had been instructed to keep out of domestic politics, this did not rule out personal sympathies for an Iron Guard Romania. Generals Hansen and Speidel, therefore, did not conceal from their officers that they not only regarded a settlement of the differences between the army and the Guard as useful for political reasons, but also supported it on ideological grounds.

At the beginning of January 1941 Antonescu began his 'flight forward'. He requested permission to visit Hitler in order to discuss with him in person 'questions of defence policy and defence preparedness', as well as of Romanian domestic politics. The Romanian leader wanted to make sure of Hitler's support in his struggle for power in Romania. In a memorandum Antonescu emphasized his readiness for participation in offensive action against the Soviet Union. However, he made that promise conditional on his being recognized in future as the 'sole authority' for Romania's foreign and domestic

⁶¹ Semi-official letter from Col. Emil Just, German military attaché in Bucharest, to Lt.-Gen. von Tippelskirch, 30 Nov. 1940, BA-MA III H 1001/7.

policy. That was an indirect criticism of the multi-track policy pursued by National Socialist Germany towards national-Legionnaire Romania. The Romanian leader's 'soldier-like' procedure was successful. On 14 January 1941 Hitler assured him that he 'was the only man capable of guiding the destiny of Romania'.⁶² Hi, However, Hitler advised him to assume at the same time the leadership of the Iron Guard, as it was impossible to govern against it. During the preparatory phase of Barbarossa the only consideration that mattered to the German leadership was the smooth functioning of co-operation in all military and economic fields. Any shared ideology between the NSDAP and the Iron Guard was of secondary importance.

German calculations, however, were threatened when from 20 to 24 January there took place a rebellion of the Iron Guard against Antonescu's rule. Admittedly, his liquidation had long been planned by members of the NSDAP's foreign organization and by the SS or the SD. The precipitate revolt of the Iron Guard was triggered when Antonescu used the assassination of a German officer—probably by a British secret-service agent—as a pretext for a strike against the Guard. Hitler, referring to his own measures against the SA leaders on 30 June 1934, advised him to act ruthlessly. On 21 January 1941 the German troops had received clear orders to 'come out unambiguously in favour of General Antonescu and his leadership in official and unofficial statements' and to advise the Iron Guard to come to terms with him.⁶³ Thus the Guard's hopes that the Wehrmacht mission would intervene on its side were shattered. With the help of the army Antonescu quashed the revolt. The fact that German quarters enabled Horia Sima and many of his followers to escape to Germany, and subsequent interventions in favour of the 'sound kernel of the Legion' as guarantor of Romania's loyalty to the alliance, reveal the continued multi-track character of German policy *vis-à-vis* Romania. Horia Sima and his followers were detained in camps in the Reich, 'as a kind of reserve in case of revolution'.⁶⁴ Antonescu, whose position after the elimination of the Iron Guard was now unassailable, established a military dictatorship in Romania. In mid-February 1941 he proceeded to abolish the 'national-Legionnaire state' officially and pursued Romania's internal consolidation without the remnants of the compromised Legion movement. In doing so he did not dispense with the 'decorum of a referendum',⁶⁵ from which, however, women and Jews were excluded. The plebiscite on his policy of unity and tranquillity, discipline and order, at the beginning of March 1941 produced the expected result of almost a hundred per cent approval.

From the beginning of December 1940 Romania's participation in the war against the Soviet Union was regarded as a certainty by the German leadership, and in two respects: as a deployment base for a German army and as a military ally. Directive No. 21 of 18 December 1940 therefore defined the task of the Romanian army as 'to support the attack of the German southern flank,

⁶² DGFP D xi, No. 652.

⁶³ BA-MA RH 31-I/v. 26.

⁶⁴ Rhode, 'Südosteuropäische Staaten', 1155.

⁶⁵ Ibid.

at least at the outset, with its best troops, to hold down the enemy where German forces are not engaged, and to provide auxiliary services in the rear areas'.⁶⁶

The operations department met that objective by earmarking Romanian units for safeguarding the rearward army areas in the sector of Army Group South.⁶⁷ The Army High Command, on the other hand, was in conflict with Directive No. 21 in that, in its deployment order for the offensive of the German southern wing, it also envisaged an offensive thrust by the Twelfth Army out of Romania. What Halder had in mind was the capture of Odessa by way of a coup. Army Group South thereupon demanded the creation of three Romanian task forces of altogether 12–16 infantry divisions, the entire cavalry, the motorized brigade, and the appropriate army troops. In addition, as many units as possible were thought desirable for occupation and security tasks.⁶⁸

In mid-February the chief of staff of the army mission, Colonel (General Staff) Arthur Hauffe, was briefed on the German intentions by the operations department of the Army General Staff and confronted with the military and political requests of Army High Command and of Army Group South:

(a) *Active participation of Romania* under German supreme command by the participation of core divisions within the framework of the attacking forces (about 3 divisions), by the participation of further forces for pinning-down tasks (about 3 divisions), by the provision of occupation forces as the operation progresses (about 4 divisions), by undertaking coastal defence and cover along the *Yugoslav* frontier (about 5 divisions). About 3 divisions would be required as a reserve within the country, bringing the total requirement of Romanian forces to about 18 divisions.

...

(c) Establishment of peaceful conditions inside Romania through an arrangement between Antonescu and the Legion and the enlistment of its valuable elements in the state; reorganization measures within the army to produce the necessary foundation for the creation of a useful corps of leaders, of morale and discipline, as required for modern conditions; release of all dispensable forces from the army back into the economy, especially into agriculture, with the objective of raising agricultural production as early as 1941 to the level corresponding to Romania's capability.⁶⁹

Unrealistic military demands made by the operations department, such as the proposed establishment of ethnic German and Legionnaire units, or 'purging the army of Freemason, Jewish, and pro-British elements', were successfully opposed by the army mission. Both it and the instructional staff R I had a very low opinion of the combat efficiency of the Romanian army.

⁶⁹ OKH/GenStdH/Op.Abt. (I), 15 Feb. 1941, Besprechungspunkte für Oberst Hauffe [Points for discussion with Col. Hauffe], BA-MA RH 31-I/v. 40; AOK 12, Ia, No. 0143, 28 Feb. 1941, ibid.

Although there was a perceptible desire on the Romanian side to acquire German 'experience' and utilize it in its training programmes, the fact was that only those units lucky enough 'to be commanded by officers not corrupted by regulations (adapted to French military doctrine) would fully prove their mettle in combat'.⁷⁰ The three 'core division' (5th, 6th, and 13th Infantry Divisions) of the first echelon would presumably be fit for use in 'medium-type defensive tasks', and could perhaps even follow the German formations as a second echelon in order to perform 'easy offensive tasks as "nettoyeurs"'.⁷¹ On no account could they be considered for independent offensive tasks. The rest of the first echelon was fit only for security and guard duties. Some of the mountain and cavalry brigades might perhaps be suitable for easy duties. With regard to the overall command and to confidentiality, General Hansen also drew the German leadership's attention to the peculiarities of the German-Romanian alliance.⁷²

Until then, only purely defensive measures in the event of a Soviet attack on the province of Moldavia had been discussed with Antonescu. Complete secrecy about the intended participation of Romanian formations in the German attack against the Soviet Union was considered possible by the chief of the army mission only until about 20 March. He therefore thought it necessary to brief 'the leader of the state alone' without delay. In this connection General Hansen also wished to clarify the question of subordination status 'in order to create from the outset a reasonably sound basis for this difficult coalition war'. Hansen's proposal was supported a few days later by the request of General Joanitiu, the chief of the Romanian general staff, who wished to have defined 'anything that was necessary for joint coalition-type action by the German instructional troops and the Romanian units, especially in Moldavia'.⁷³ However, the chief of the operation department in the Army General Staff, Colonel (General Staff) Adolf Heusinger, instructed the army mission not to make any contact with Antonescu which would exceed the past framework. 'On no account must he be told anything that would allow of any kind of conclusions about our overall intentions.'⁷⁴

On 17 March Hitler, by way of obvious criticism of the Army High Command's operations plan, decided to concentrate the main effort of Army Group South at Lublin and to dispense with any 'attack designed to be decisive or the employment of an armoured division' out of Romania.⁷⁵ In-

stead, a defensive front of German and Romanian forces was to be established along the Pruth, so as, on the one hand, to prevent a penetration by Soviet formations and, on the other, to pin them down in Bessarabia. Only as the offensive of Army Group South progressed towards Kiev were the German-Romanian forces, by a follow-up push, to prevent an orderly retreat of the Red Army across the Dniester. Hitler made it clear to Halder and Heusinger that it was a fundamental mistake to attack everywhere. The Pruth and the Dniester were rivers at which any attack would get stuck. An operation must not count on formations which lacked offensive strength. Hitler thus fully accepted Hansen's assessment. On 27 March 1941 Field Marshal von Brauchitsch, the commander-in-chief of the army, bluntly told the commanding officers of the army groups, armies, and armoured groups that the Romanian army was useless.⁷⁶

In the absence of Twelfth Army HQ, still tied up with Operation Marita, the command of the German-Romanian forces in Romania was entrusted to Eleventh Army HQ under Colonel-General Eugen Ritter von Schobert.

As it became progressively more difficult to conceal the German deployment against the Soviet Union, and as Hitler therefore expected Soviet preventive measures, especially against the regions of Petsamo and Ploiesti, the Luftwaffe mission in Romania was repeatedly instructed to ensure at all costs the protection of the Romanian oil region, described as 'vital to the German war effort'.⁷⁷ To that end not only were the German air-force units reinforced, but a German infantry division (originally the 22nd, subsequently the 72nd) was transferred to the Ploiesti region in addition to a Romanian division. Locations listed as air-defence zones included not only the centre of oil extraction and refining near Ploiesti—here was the main effort of the anti-aircraft artillery and of III Wing of 52 Fighter Group—but also the transshipment and storage ports of Constanta and Giurgiu, as well as the railway bridge near Cernovada, where the oil pipeline also crossed the Danube.

Subordinate to the Luftwaffe mission, which came tactically under the chief of the Wehrmacht mission, were the commander of fighter aircraft, an AA divisional staff, several AA regiments and additional AA batteries, special fire-fighting units, Luftwaffe construction troops, and signal units, approximately 50,000 men. By mid-June 1941 some 60 fighters, and 348 20-mm. AA guns, 45 37-mm. AA guns, and 144 88-mm. AA guns were employed for the protection of Germany's mineral-oil supplies in Romania.⁷⁸ In addition, there were Romanian fighter and anti-aircraft units. On 18 June Lieutenant-General Speidel, the commander of the Luftwaffe mission, was optimistic that 'the superiority of our men and the quality of our weapons' would decide that campaign as well. His parting wish to the AA gunners and the fighters was

⁷⁸ DLM/Abt. Ia No. 1092/41, 14 June 1941, BA-MA RL 9/53; DLM/Abt. Ia (Op 1) No. 887/41, 20 June 1941, BA-MA RL 9/54.

'Good hunting!' Exceeding the strict combat tasks of the Luftwaffe mission, Speidel also drew the attention of his officers to the ideological character of the eastern campaign. Göring, he said, had given unambiguous orders, concerning Russians taken prisoner, 'that every Bolshevik official [*Hoheitsträger*]' was 'to be instantly shot without any judicial proceedings'. Every officer was entitled to do this.⁷⁹

The German naval mission reported before the opening of Barbarossa that whereas the coastal defences were ready for action, the employment of Romanian naval units was not to be counted on. The reasons given by Vice-Admiral Fleischer were a lack of fighting spirit on the part of the Romanian navy, especially its officers, as well as its extremely low level of training. For the defence of Constanta German heavy naval gunnery units had been deployed and preparations made for the laying of mine-barriers.⁸⁰

The army's deployment preparations in Romania began towards the end of March 1941. The two armoured divisions (the 13th and the 16th), until then used as instructional units, were pulled out and seven infantry divisions (the 22nd, 50th, 72nd, 76th, 170th, 198th, and 239th) brought in instead. These measures, as well as the arrival and establishment of Eleventh Army HQ (AOK 11) and of XI, XXX, and LIV Corps HQs, were to be 'strictly disguised from the Romanians as nothing more than a precautionary measure to meet a possible Russian attack'.⁸¹ For that reason also the training of the Romanian formations earmarked for action was to be continued as long as possible. This order from OKH was thought by Hansen to be naïve. His marginal gloss was: 'Surely this will make the Romanians *laugh*. They are not *that* gullible.'

A few days earlier, Antonescu had sounded out Manfred Freiherr von Killinger, the German minister, about German intentions towards the Soviet Union. He had judged the chances of a German attack to be very favourable 'as long as the support of England by the United States of America was not yet effective'. Such an operation, which, according to Antonescu, offered the advantage of the 'elimination of the Slavic danger . . . and opening up of the routes to the oilfields', could be successfully accomplished within a month. Killinger, in accordance with his instructions, had been non-committal.⁸² The next steps of the German military leadership in Romania *vis-à-vis* the Romanian authorities were discussed in Bucharest in mid-May, four weeks after a working staff of Eleventh Army HQ had been secretly installed in the army mission.⁸³ Colonel (General Staff) Hauffe and Lieutenant-Colonel (General Staff) Theodor Busse, the first general-staff officer of the army command, agreed on performing the German-Romanian deployment preparations in a

three-stage pattern, staggered in terms of time and character. The order for the Barbarossa deployment was to go only to the German corps HQs and to the army mission; an operations directive for the Romanian army concerning the defence of Moldavia and a possible follow-up in the event of an evading movement by the Red Army was to be passed on to the Romanian general staff, and only much later was an army order for the preparation of the attack to go also to the Romanians. On 24 May the commander-in-chief of Eleventh Army, Colonel-General Ritter von Schobert, assumed the protection of the entire Romanian state territory as 'commander-in-chief of German troops in Romania'. The heads of the Wehrmacht and armament missions were placed under his command. As for his report to the Romanian head of state, he had clear instructions from Hitler to explain the deployment of the German army formations as preventive measures against a surprise attack by the Red Army and to be evasive with regard to Antonescu's questions on 'whether Germany expected a war against the Soviet Union or whether Germany, if necessary, would attack Russia'.⁸⁴ The game of hide-and-seek with the Romanians therefore continued. On 26 May 1941 the head of the army mission informed the chief of the Romanian general staff of Germany's wish that the formations in the province of Moldavia should be brought up to combat strength, that the defensive line should be manned by 10 June 1941, and that reserves should be moved up. General Hansen had been instructed to avoid the word 'mobilization'.⁸⁵ There had been a German suggestion as early as 3 April 1941 that the formations be brought up to two-thirds of their combat strength and that they should 'slowly creep into' their positions.

On 28 May 1941 the German formations received the 'Order for the preparation of the Barbarossa deployment', the first step in the preparations for the German-Romanian operational deployment. This order, which also laid down the tasks of the Romanian forces, was still to be kept secret from the Romanians.⁸⁶ General Hansen, the commander-in-chief designate of LIV Army Corps, in a note to Major-General Hauffe, designated his successor as head of the army mission, criticized such treatment of the Romanians. The Romanian general staff, he believed, could not be expected to observe directives from Eleventh Army without prior agreement on a coalition war. While the German troops were now beginning to prepare for an attack across the upper Pruth in the general direction of Vinnitsa (Operation Munich), the German high command on 9 June 1941 issued to the Romanian general staff no more than the general 'Directives for safeguarding and defending Romania's frontiers against Russia'.⁸⁷ In this context the German troops would form the mobile striking force of the defence, 'in order to render it active and, if

necessary, to attack the enemy with a swift blow and to destroy him'. These directives resembled the then largely outdated instructions to Eleventh Army of 28 May 1941.

German-Romanian co-operation against the Soviet Union in the military-political and operational spheres was eventually defined in a personal conversation between Hitler and Antonescu on 12 June 1941, without, however, any formal military alliance or agreement on common war aims. Whereas Hitler expected Romania to facilitate the prosecution of his war, Antonescu had come to Munich to place Romania's total military, political, and social forces at Hitler's disposal for the repulsion of the 'Slavic menace'. He was ready to join the conflict from the very first day, declaring that 'Romania would never forgive him [Antonescu] for letting the Romanian army remain inactive while the German forces in Romania were marching against the Russians'. Although Hitler had expressly refused to ask Antonescu for support for Operation Barbarossa, he accepted the Romanian offer with the assurance of 'indemnities' which would have 'no territorial limitations'.⁸⁸ On the question of the supreme command of the German-Romanian troops, Hitler explained:

An operation extending from the Arctic Ocean to the Black Sea requires unified central control. This is quite naturally in our hands. We must avoid the mistakes of past coalition wars. Every ally shares in the total glory. But I should like you, General Antonescu, to emerge fully, before your nation and before history, as the victorious leader of your armed forces in this historic struggle.⁸⁹

That was why Hitler proposed that the German requirements concerning the Romanian armed forces be personally communicated to Antonescu. Eleventh Army HQ, as his working staff, was then to reformulate them into military orders and issue them over his signature. Antonescu happily agreed to that procedure and to the nominal supreme command over the German-Romanian forces in Romania. He had thus been personally briefed on Germany's actual intentions; not so, as yet, his general staff, the army commanders-in-chief, or the officer commanding the troops earmarked for the operation. In his new capacity of 'commander-in-chief of the army front Romania', Antonescu on 20 June 1941 at last issued the order which briefed the Romanian general staff beyond the defensive task on the concept of 'follow-up' and Operation Munich, i.e. on the attack across the Pruth.⁹⁰ An end had to be put, the order argued, to the intolerable threat to Europe represented by the Soviet Union's long-term preparations for attack. The Romanian armed forces would enter the conflict shoulder to shoulder with their German allies 'to redress the wrongs inflicted on us'. Antonescu charged Eleventh Army HQ with the processing of all instructions concerning the common conduct of the

war. Orders of a fundamental nature concerning Romanian units not subordinated to Eleventh Army required Antonescu's signature or approval. On 22 June 1941 the new head of the army mission, Major-General Hauffe, assumed the duties of liaison officer between Eleventh Army and the Romanian army command. He thereby became, in his own estimation, the tactical and strategic adviser of Antonescu and the Romanian general staff 'on all questions of the Romanian and the joint conduct of the war'.⁹¹ The other Romanian command authorities had 'German liaison officers' sent to them, whose duty it was to advise the Romanian commanders on leadership and training, to transmit orders from German command authorities, to supervise the execution of such orders, and to inform the German authorities on the situation.⁹²

The Romanian army, which since mid-November 1940 had been drilled by the army mission for an offensively conducted 'forward defence' against a Soviet attack, was faced suddenly, on 20 June, with tasks which it was unable to cope with to the same extent as the German army. As recently as towards the end of May, Hansen, in his capacity of head of the Wehrmacht mission, had described the Romanian army as useless for 'difficult offensive actions'.⁹³ The only units which could be considered for 'easy attacks'—'alongside German forces and advised by German officers in their direction and verified in execution'—were the 5th, 6th, and 13th Infantry Divisions (the former 'core divisions'), the Frontier and Guards Divisions, the three cavalry brigades, three mountain brigades, and the motorized division (roughly a reinforced tank regiment). Because of the difficult supply situation and the non-motorized supply troops, these formations would be able to advance only as far as the Dniester. Their equipment with anti-tank and anti-aircraft guns was inadequate. It was impossible to apply 'the yardstick of German leadership and performance' to the Romanian command or its troops. Of the senior Romanian officers, apart from Antonescu, only Generals Iosif Iacobici, A. Joațiu, Nicolae Tataranu, Nikolae Ciuperca, and A. Racovița were judged to be good; Petre Dumitrescu was considered insignificant and Eugen Vartejeanu anti-German. Although the divisional and brigade commanders were, generally speaking, up to their jobs, they almost invariably lacked the will to implement the intentions of the higher command. The reason for that state of affairs, according to General Hansen, was not only the prolonged vacillation of the political leadership but also the 'racial foundations'. These, he suggested, resembled those of the Italian army. The men's resistance to rumours and moods of panic was not very strong. Although the officers were well schooled in military theory, they often lacked, 'on racial grounds, hardness and depth', the will to hold out to the end. There

was virtually nothing like a corps of non-commissioned officers. The rank and file were undemanding, tough, and persistent. 'Under good leaders' they would acquit themselves well, especially in the defence of their country. The reconquest of Bessarabia, along with that of Transylvania, was a widely desired war aim.

In almost identical appeals to the unprepared Romanian nation and the troops, on 22 June 1941 Antonescu proclaimed the 'holy war' for the reconquest of the rights inherited from their fathers, and also against the greatest 'enemy of the world, Bolshevism'. Two days later came the official declaration of war against the Soviet Union.⁹⁴ Combat operations were at first confined to raiding-patrol forays, artillery duels, and air raids. On 25 June 1941 the Eleventh Army issued the 'Order for the execution of Operation Munich'.⁹⁵ The two Romanian armies (Third and Fourth) and the German corps (IX, XXX, and LIV) were to execute their deployment in such a way that the attack could be launched on 2 July. While the Romanian Fourth Army, with eight infantry divisions and one cavalry brigade, in accordance with Antonescu's orders, was initially to defend the Danube delta and part of the Pruth front, the Romanian Third Army, with six infantry divisions, three mountain and three cavalry brigades, and the only armoured brigade, were placed under the German Eleventh Army.⁹⁶ This was intended to attack in the general direction of Vinnitsa. On 1 July 1941, in an emphatic letter to Hitler, Antonescu once more confirmed the tasks of the Romanian army. He expressed his conviction that 'final victory' was to be expected very shortly, as the Red Army could already be regarded as smashed.⁹⁷

Thus, from 22 June 1941 onwards Romania, without any formal alliance, participated in Hitler's war against the Soviet Union. While the reconquest of Bessarabia and the northern Bukowina was an aspiration shared by the whole nation, Antonescu was out for more. After the victory over the Soviet Union he expected, in view of Romania's massive contribution to the war, a revision in Romania's favour of the second Vienna award and of the treaty of Craiova. Moreover, immediately after Yugoslavia's occupation Antonescu had given notice of his claims to the rest of the Banat. Common ideological attitudes between authoritarian Romania and National Socialist Germany were to be found not only in the struggle against the 'Slav danger' and Bolshevism, but also in an underlying anti-Semitism. The 'holy war' proclaimed by Antonescu should not therefore be simply equated with the German propaganda slogan of 'Europe's crusade against Bolshevism'. Both motivations, the revisionist and the ideological, were contained in Antonescu's formula of the 'holy war'.

4. THE POSITION OF HUNGARY AND SLOVAKIA IN THE PREPARATORY PHASE OF BARBAROSSA

Unlike Romania and Finland, Hungary and Slovakia in 1940–I were playing a subordinate role in German strategy. Although both these countries were included in military planning as deployment or transit areas, the political leadership made no attempts, prior to 22 June 1941, to win Hungary or Slovakia as allies in the war against the Soviet Union. For one thing, Hitler did not wish to conduct a coalition war—like the First World War—and for another he expected that both Budapest and Bratislava would, in exchange for appropriate political assurances, agree to whatever German demands were necessary concerning Barbarossa. After 22 June 1941, however, Hitler was ready to accept 'with enthusiasm' offers from other states to take part in Barbarossa.⁹⁸ Their participation, as well as that of volunteers, made it easy now for National Socialist propaganda to present its war of conquest and annihilation against the Soviet Union as a 'European crusade against Bolshevism'. An understanding of the historical and domestic- and foreign-policy motivations for the Hungarian and Slovak declarations of war (on 27 and 23 June 1941) requires a short review of the history of the two countries.

(a) Hungary

Hungary was one of the losers of the First World War.⁹⁹ Under the treaty of Trianon the kingdom of Hungary under its regent Miklós Horthy von Nagybánya had to cede large territories to Czechoslovakia (Slovakia and Ruthenia), to Yugoslavia (Croatia, Slovenia, Bácska and Baranya, and the western part of the Banat), and to Romania (Transylvania with the Székler territory and the eastern part of the Banat). Its area and population shrank from 282,000 square kilometres (without Croatia) and 18 million inhabitants to 93,000 square kilometres and 7.6 million. Three million Hungarians were now living outside Hungary, half of them in the immediately adjoining areas. Yet even this truncated Hungary remained a multinational state, with only 89.5 per cent of the population claiming Magyar as their language. The largest non-Hungarian ethnic group was the Germans, whose numbers in the course of the revisionist policy had grown to 800,000 by 1941. In its structure Hungary was an agrarian country. In 1930 some 52 per cent of the population were still living by agriculture; the figure in 1940 was approximately 50 per cent.¹⁰⁰ Despite an established parliamentary and pluralist party system, a feudal order continued to exist in Hungary. The 'Uniform Party' under Count István Bethlen succeeded in preventing a fundamental land reform in the twenties.

⁹⁸ KTB OKW I. 409 (24 June 1941).

⁹⁹ On the history of Hungary after the First World War see Silagi, 'Ungarn'; Juhász, *Hungarian Foreign Policy*; Hoensch, *Geschichte Ungarns*; Riemenschneider, *Wirtschaftspolitik gegenüber Ungarn*; Gosztony, 'Ungarns militärische Rolle', pt. 1. The author is indebted to Dr Josef Borus of the Hungarian Academy of Sciences, Budapest, for a wealth of verbal and written information.

¹⁰⁰ See Gunst, 'Politisches System', 406.

By 1935, therefore, 1,070 big estates (0.1 per cent of the total number of holdings) still accounted for over 30 per cent of the land. The Uniform Party was controlled by the upper stratum. From 1939 it called itself the 'Movement of Hungarian Life' and after the elections of May 1939 it supplied 70 per cent of all members of parliament. The second strongest political force in Hungary was the Fascist Arrow Cross Party under Ferenc Szálasi; this supported an unconditionally pro-German policy. With massive German support it achieved 20 per cent of all members of parliament in 1939.¹⁰¹

Hungarian foreign-policy was characterized by a passionate effort to achieve a revision of the peace treaty of Trianon. Against these revisionist aspirations Yugoslavia, Romania, and Czechoslovakia concluded a military alliance, the Little Entente. The fundamentally antagonistic foreign-policy interests of Hungary and Romania, which, along with a marked growth of extreme right-wing movements in both countries, facilitated National Socialist foreign-policy in south-east Europe, merely reflected the 'fundamental European split between the forces of revisionism and the defenders of the status quo, after 1920'.¹⁰² Born out of counter-revolution against Béla Kun's Communist republic of councils, the Horthy regime strove to preserve the existing social order; it was characterized by a militant anti-communism. In August 1936 Horthy, in line with Hitler's propaganda war against Bolshevism, declared that there was no salvation for mankind 'so long as the Soviet remained alive'.¹⁰³ Hostility to Bolshevism was the main ideology shared between National Socialist Germany and semi-feudal Hungary.

Premier Gyula Gömbös, the first European head of government to be received by Hitler, had been striving since 1933 for specific political collaboration between Germany and Hungary with the aim of achieving a revision of the First World War peace treaties. He supported his offer by referring to common ideological attitudes and to the German-Hungarian 'common destiny'. Although Hitler was prepared, by secretly granting Budapest preferential status, to facilitate the export of Hungarian agricultural produce to Germany—concessions he denied to Romania because of her close ties with France—he declined in January 1934 to conclude a consultative agreement with Hungary. Although she would give moral support to Hungary's revisionist aspirations, Germany would have to reserve to herself the right of differentiated bilateral relations with the individual members of the Little Entente, as German interest demanded. Hitler had no intention of pulling 'the chestnuts out of the fire' for Hungary.¹⁰⁴ This political slogan, however, did not prevent Colonel-General Beck, the chief of the Army General Staff, from trying, in the summer of 1935, to win over Hungary's military leaders for joint action with

¹⁰¹ See Szöllösi-Janze, *Pfeilkreuzlerbewegung*.

¹⁰³ Quoted according to *ibid.* 83.

¹⁰⁴ The German motto in Nov. 1938 was 'to keep both irons in the fire and to shape matters in the German interest according to the way the situation develops': *DGFP* D v, No. 254, Ribbentrop's note.

Germany against Czechoslovakia. Beck succeeded in laying the foundations of German-Hungarian 'secret military diplomacy'.¹⁰⁵ The influence which German hegemony exercised on Budapest and Bucharest increased in line with the extent to which Hitler transformed the political scene of Europe. The occupation of Austria, the Munich agreement, the virtual disintegration of the Little Entente, and the economic appeasement of the Western powers *vis-à-vis* Germany caused the Hungarian-Romanian conflict to enter a new phase. The German attitude of allowing Hungary neither priority nor a free hand in achieving her territorial ambitions resulted in Budapest's readiness to make domestic- and foreign-policy concessions to German wishes. After Premier Kálmán Darányi had issued in the spring of 1938 the first anti-Jewish law and banned over four hundred liberal and left-wing periodicals, as well as a dozen dailies,¹⁰⁶ his successor Béla Imrédy, in the autumn of that year, by accepting the first Vienna award of 2 November 1938, recognized Germany's and Italy's hegemony in Europe.¹⁰⁷ He not only did so as a matter of principle, but also contented himself with the acquisition of parts of southern Slovakia (12,400 square kilometres) inhabited by a large number (1.1 million) of Slovaks. Not until March 1939 was Hungary permitted to occupy Ruthenia (the Carpatho-Ukraine). Having officially joined the anti-Comintern pact on 24 February 1939, she left the League of Nations in mid-April. Hungary thus placed herself demonstratively on the side of the Axis at a time when the Western powers, by their guarantees to Poland, Romania, and Greece, were clearly endeavouring to oppose German expansion. In May 1939 the second anti-Jewish law was passed by parliament.

However, the foreign-policy of Count Pál Teleki's government after February 1939 was not one-sidedly aligned with Germany.¹⁰⁸ On the one hand it tried, with Mussolini's support, to balance the growing German pressure by emphasizing the Italian-Hungarian community of interests and, by its declaration of armed neutrality in the event of a German-Polish war, to prevent a break with the Western powers, while on the other Teleki, who himself came from Transylvania, hoped to use the European crisis to assert Hungary's revisionist aspirations *vis-à-vis* Romania. Military preparations for the occupation of Transylvania began in May 1939, deployment along the frontier on 23 August. Romania's offer of a non-aggression treaty was rejected. Teleki, admittedly, did not anticipate a great-power conflict over Poland, but expected another conference like that in Munich in 1938. At such a conference he would raise the Transylvanian problem.¹⁰⁹ If, however, Hungarian territorial demands were not to be satisfied in that way, then, as Teleki wrote to Mussolini on 2 September 1939, he was compelled to state that the Hungarian government would continue its military preparations 'quietly but resolutely' in

order 'to put an end now and for a long time to the Romanian-Hungarian territorial question'.¹¹⁰ Teleki's 'intransigent revisionist policy',¹¹¹ however, was blocked for the time being by the Western powers' declaration of war against Germany—a Hungarian attack on Romania might have meant implementation of the British-French guarantees of 13 April—and by German pressure.¹¹²

If Romania was regarded by Hungary as 'enemy number one', then Slovakia was number two. Hungary took the view that 'discontinuation of German support' would mean 'the end of Slovakia'. In his conversation with Admiral Canaris on 6 July 1939, Colonel István Ujszászy, chief of intelligence in the Hungarian general staff, stated that the British military attaché had promised Hungary the cession of Slovakia in the event of her siding with the Western powers. However, as Ujszászy emphasized Hungarian neutrality in a German-Polish conflict, Canaris regarded the outcome of the conversation as negative: 'Germany is to pull the chestnuts out of the fire for Hungary, while Hungary continues her two-sided policy.'¹¹³

After the outbreak of the European war Hungarian policy, while maintaining its independence and avoiding an open rupture with the Western powers, was aimed at achieving its revisionist objectives through close alignment with the Axis. A situation that could be made use of in the spirit of *sacro egoismo* arose in the winter and spring at the start of 1940. The German military leadership feared a landing by the Western powers in the Salonika area, aiming at Romania, and was considering a preventive occupation of the Romanian oilfields in order to safeguard its vital mineral-oil supplies. For that purpose the German general staff approached the Hungarian general staff at the beginning of 1940.¹¹⁴ In mid-January, therefore, Lieutenant-General von Tippelskirch, deputy chief of staff (intelligence), suggested to his Hungarian opposite number, Colonel Ujszászy, that in the event of a major conflict it would be entirely in the German interest if Hungary, with German support, were to attack Romania. This cautious offer of joint action, by means of which the right of transit for German troops was to be gained, met with enormous interest in Hungary. After all, Ujszászy had proposed such 'joint action by Germany and Hungary in the settlement of the minorities issue in Romania' to Admiral Canaris at the beginning of July 1939. By way of justification Ujszászy had argued that Romania was part of 'Germany's living-space' and was Hungary's principal enemy. As Romania could be confidently expected to join the Western powers if war broke out, she had to be considered a common

enemy. At the beginning of 1940, therefore, Hungary had a fresh chance of regaining Transylvania. While the Germans were preparing for a contingency, the Hungarians were pressing for an early operation, which they would put off only if Romania succeeded in defending her territory against Soviet and Bulgarian claims.¹¹⁵ When at the end of March 1940 the Soviet Union confirmed its claim to Bessarabia, the Hungarian command ordered the mobilization of two army corps¹¹⁶ and made contact with the German general staff. At Hungary's request the German-Hungarian operation was to be under the supreme command of Horthy, who would appear in Transylvania as the liberator of the Hungarians from the Romanian yoke. At the beginning of April 1940 Budapest informed Berlin that it would permit German troops to cross Hungary to Romania. In September 1939 the same government had refused the use of Hungarian territory to the German command to facilitate its operations against Poland. Hungary now suggested that official general-staff consultations be held and that Italy be informed.

Once more, however, Hungarian and German interests in the Balkans were not identical. Hungarian urgings for a tripartite consultation with Germany and Italy about the Transylvanian problem, with emphasis on Hungary's sacrifices so far, met with rejection on Germany's part a few days before the beginning of the war in the west. Germany feared intervention by the Soviet Union and wanted tranquillity in the Balkans in order to use that region as an 'important source of supplies' for the German war effort.¹¹⁷ The German-Romanian oil-for-arms treaty was about to be signed, provisional agreement having already been reached. Hitler did not rule out the possibility that Britain was behind Hungary's urgings. 'It would serve Britain's interest very well to have the oilfields [in Romania] blazing, and it would not matter who put the match to them. We vitally need the oil deliveries from the Romanian wells, at least until next spring. After that we should be freer.'¹¹⁸ After agreement with Mussolini, to whom Hitler wished to concede the 'main say' in south-east Europe, the Hungarian government was given to understand that in the event of unilateral action against Romania she could not count on Axis aid. Halder noted in his diary: 'If Hungary does not fall in line, she will be turned into a protectorate.'¹¹⁹ The great-power status which Germany had meanwhile attained and the relative ratio of strength implied the availability to her of the lesser countries of south-east Europe.

¹¹⁵ Tippelskirch, minute of 25 Jan. 1940, BA-MA RH 2/v. 1478.

¹¹⁶ *Ibid.*, minute of 8 Apr. 1940. Col. Újszászy had told the German air attaché as early as the middle of Oct. 1939 that, in the event of the Soviet Union's taking possession of Bessarabia, Hungary would proceed to attack Transylvania (OKW/Ausl. No. 12136/39, BA-MA RW 4/v. 334).

¹¹⁷ OKW/WFA/Abt. L No. 22004/40, 6 Jan. 1940, DGFP D viii, No. 514.

¹¹⁸ Halder, *Diaries*, 330 (24 Apr. 1940).

¹¹⁹ *Ibid.* 426 (26 May 1940). See also Tippelskirch, minute of 26 May 1940, BA-MA RH 2/v. 1478. The Hungarians objected to that kind of treatment, arguing that they had been egged on by Germany to take military measures against Romania. The 'secret military diplomacy' initiated by Beck and continued by Halder had developed a momentum of its own, which was now running counter to German interests.

Hitler rejected the idea of any official general-staff conferences between Germany, Italy, and Hungary about common action against Romania. He merely agreed to contacts 'of the most cautious kind' concerning railway matters with Colonel-General Henrik Werth, chief of the Hungarian general staff, regarded as pro-German. On the one hand, Hitler was anxious to keep the Balkans quiet, viewing the contemplated occupation of the Romanian oilfields as a defensive move in the event of a Soviet or Anglo-French action.¹²⁰ On the other, he considered the Hungarians 'unreliable' and referred to them and the British as 'one heart and one soul'.¹²¹ Britain too warned Hungary in June 1940 against enabling Germany to attack Romania from her territory, as Romania held a British guarantee. This diplomatic initiative in Romania's favour offended the Hungarians. With a clear allusion to the Hungarians' different basic attitude towards Poland and Romania, Premier Count Teleki pointed out that there was not a single Hungarian 'who would defend Romania, no matter against whom, with his life'.¹²²

The Hungarian-Romanian conflict entered a new phase in the summer of 1940. Hitler's victory over France and Stalin's annexation of the Baltic States and of Bessarabia and the northern Bukowina started a race to Berlin between Bucharest and Budapest. While Carol II was trying to save Romania from a renewed territorial amputation by foreign, domestic, and economic concessions, Hungary's foreign minister, Count István Csáky, emphasized Hungary's title to Transylvania. To achieve that foreign-policy objective, the Hungarian leadership complied with the German economic demands to the limit of the country's capabilities.¹²³ On 27 June the Hungarian council of ministers declared that Hungary would not this time tolerate any discrimination. If the Romanian government was meeting the Soviet demands, it had to be compelled to meet Hungary's territorial demands as well.¹²⁴ That political resolution triggered preparatory military measures along the frontier with Romania. Berlin and Rome were informed, with foreign minister Count Csáky emphasizing that his government would find itself in a difficult position if, on the advice of the Axis powers, it were to continue to practise restraint. Hungary would prefer to reconquer Transylvania in battle. The army was urging that course. It would not tolerate 'another demobilization without prior political victories'.¹²⁵ Ribbentrop thereupon promised Hungary a German-Italian examination of 'revisions in the Balkans'. The precondition, however, was that the Hungarian government would follow Germany's advice and not resort to a 'violent solution' of its territorial claims.¹²⁶ The German leadership

feared that the Soviet Union might use a Hungarian-Romanian conflict to act against Romania in order to cut off Germany's oil imports. Towards the end of August 1940 Germany and Italy imposed an arbitration award on Hungary and Romania, which made Hungary appear as the victor but failed to eliminate Romanian-Hungarian antagonism. Hungary regained less than the 50,000 square kilometres laid down as early as autumn 1939 as the minimal solution, in fact a mere 43,492 square kilometres, although she had originally demanded the whole of Transylvania (78,000 square kilometres) and only reluctantly accepted the award.¹²⁷

Simultaneously with the territorial rearrangement Hungary and Romania had to sign protocols which favoured the German ethnic groups in both countries. They were declared by decree to represent corporations under public law, enjoying autonomous rights. This legal position enabled the 'ethnic German mediation office' of the SS, working through the ethnic organizations in Hungary, to establish National Socialist forms of political life among the Germans there; in this they benefited from the earlier Magyarization efforts of the Hungarian government. Even the pro-German leader of the Fascist Arrow Cross movement, Szálasi, described the ethnic-group agreement as a violation of Hungarian sovereignty,¹²⁸ which was later similarly disregarded when the SS reserve office was recruiting ethnic Germans for the Waffen-SS.¹²⁹ Outwardly Horthy, in a letter to Hitler, displayed satisfaction at the solution of the Transylvanian problem reached in Vienna. When that letter was presented by the Hungarian minister, Döme Sztójay, Hitler made it clear that Hungary must really now be interested in a 'clear victory of the Axis powers', as in the event of a defeat by Germany and Italy the revisions achieved would certainly become null and void.¹³⁰ In his report on his conversation with Hitler, Sztójay outlined a 'programme' which would truly express Hungary's gratitude for the award, and offered proposals for a closer alignment with Germany in foreign and domestic policy. Military relations too were to be deepened 'as far as possible by complete sincerity and co-operation'. Good behaviour towards Germany would be a guarantee of further revisions after the end of the war.¹³¹ The Teleki government readily accepted German political and ideological suggestions. It released Szálasi from prison, permitted the transit of the German military mission and instructional troops through Hungary, enacted the third anti-Jewish laws (after 1938 and 1939), and on 10 October 1940 signed an economic agreement which met Germany's requests.¹³² Very soon it also showed its willingness to join the Tripartite Pact, thereby demonstrating that it was prepared to recognize German-Italian hegemony in Europe, as this had enabled it to see the major part of its revisionist hopes fulfilled. But Hitler at first rejected the Hungarian offer. Only

after the failure of the discussions with Molotov on 12 and 13 November 1940, when the Tripartite Pact was to be refashioned into a regional European treaty system exclusively serving German interests and directed against the Soviet Union, did he allow the south-east European countries to join. Hungary acceded to the pact on 20 November 1940 and thereby definitively fitted herself into Hitler's political strategy. Although Hungary was pressing territorial claims against Yugoslavia as well (the Mur region, the Baranya triangle, Bácska, and the eastern Banat), the two countries concluded a friendship treaty ('treaty of perpetual peace') on 12 December 1940, which Hungary ratified on 27 February 1941. Behind it was the intention, approved by Hitler, to seek a solution by peaceful means. On 25 March 1941, after prolonged hesitation and German pressure, Yugoslavia joined the Tripartite Pact. However, Berlin's euphoria over this political success lasted barely 48 hours. On 27 March 1941 the Cvetkovic government was overthrown by a coup of Serbian officers. 'Tranquillity' in the Balkans, in German eyes, was gone again and the southern flank of the eastern operation now under preparation was threatened. Hitler immediately reacted with the decision to 'make all preparations for smashing Yugoslavia militarily and as a state'. On that same evening, 27 March, Hitler signed Directive No. 25, drafted by the Wehrmacht staff. Even earlier he had tried, through the Hungarian minister Sztójay, to reawaken Hungary's territorial claims, in order to achieve her permission not only for the necessary deployment of German forces in Hungary but also for a military participation of Hungarian formations in his campaign against Yugoslavia.¹³³ To safeguard German interests in Hungary during the Balkan campaign Major-General Kurt Himer was dispatched to Budapest as 'German general with the high command of the Royal Hungarian army'.

Hopes of a further revision of the treaty of Trianon with German support and of understanding on the part of the Western powers for such a policy helped the Hungarian leadership quickly to overcome any scruples about its treachery *vis-à-vis* Belgrade. With her Third Army (approximately 146,000 men) Hungary participated in the military and political 'smashing' of Yugoslavia. Hungarian losses in that 'campaign' amounted to only 65 killed. At the same time the Hungarian troops perpetrated atrocities in the newly occupied territories, whose victims were predominantly Serbians, Jews, and also Germans.¹³⁴ Hungary reacquired Bácska, the Mur territory, and the Baranya triangle, in all 11,475 square kilometres with one million inhabitants. An entry of Hungarian troops into the eastern Banat was described by Berlin, after an intervention by Antonescu, as 'undesirable'.¹³⁵ In consequence, Hungary had nearly doubled her territory, compared with her 1920 frontiers, both in area

and in population: to 172,204 square kilometres with 14.6 million inhabitants. The percentage of ethnic minorities, however, had increased to 25 per cent. In the army it amounted to 20 per cent.

Premier Count Teleki was the only person at the time who realized that the Hungarian leadership was indulging in an illusion if it believed it could utilize the expansion of Hitlerite Germany for its own revisionist aspirations and simultaneously retain the support of the Western powers. On 3 April 1941 he shot himself. On 6 April 1941 Britain broke off diplomatic relations with Hungary. The rupture with London was accepted by Horthy and by the new premier, László von Bárdossy, as the price of Hungary's even closer association with Germany, although they had agreed with Teleki that their principal task was 'to preserve Hungary's military, material, and national strength until the end of the war. . . . The outcome of the war is doubtful. . . . The country, our youth, our army must be risked solely for ourselves and for no one else.'¹³⁶

What was the Hungarian army, the Honvéd, like? In the treaty of Trianon Hungary had been allowed a regular army of 35,000 men. Despite supervision by the Inter-Allied Military Commission (until 1927) and the Little Entente, Hungary succeeded in secretly increasing her peacetime army and in introducing general conscription (1932). By the time the Entente states, in the Bled agreement of the summer of 1938, granted Hungary complete equality in armaments, the Hungarian army comprised 85,252 men. Hungary was now openly stepping up her effort to make good her deficiency in armaments compared with her declared enemy Romania. 'Attainment of the qualitative and, if possible, quantitative level of the Romanian army was defined as the supreme aim of military policy.'¹³⁷ Because of her inadequate productive capacity Hungary depended on armament purchases from abroad. Thus nearly a third of the 1939-40 national budget was allocated to the Hungarian army.¹³⁸ At the beginning of April 1940 part 1 of the 'Huba' war regulation came into force: this envisaged the establishment of 25 light infantry divisions of 2 infantry regiments each, 1 cavalry division, 2 armoured divisions, 2 mountain brigades, 1 frontier brigade, 1 river brigade, and 2 air groups with 28 tactical and 10 reconnaissance squadrons by the end of 1943. The newly gained territories were immediately taken into account in the realization of this army reform, even though the various mobilizations had interfered with the smooth development and entailed considerable costs. The VIII Army Corps was stationed at Kassa (Kosice) and the IX Corps at Kolozsvár (Cluj). The three army HQs and nine corps HQs were increased by the addition of 1 Mobile Corps HQ.

The second phase of the army reform came into effect at the beginning of March 1941. It envisaged that the army would have a peacetime establishment

of 13,574 officers and 174,241 NCOs and other ranks, but this was not in fact achieved. Its wartime strength was to be 24,000 officers and 600,000 other ranks.¹³⁹ Hungary's financial constraints, caused by her territorial expansion, and her chronic lack of raw materials rendered cut-backs in the armament programme inescapable. These economies had a particularly detrimental effect on the equipment and armament of the numerically enlarged army. The creation of new units, which was pursued nevertheless, was designed predominantly, by means of existing and trained personnel, to establish the foundations of the Hungarian army's further development into an effective instrument of war. Thus, the Hungarian army was equipped in breadth rather than in depth. Especially inadequate were the air force and anti-aircraft defence, as well as armour and anti-tank defence. Precipitate development and ambitious political aims had prevented a steady build-up of reserves of personnel and material. Ninety per cent of the fighting forces consisted of non-motorized infantry with horse-drawn artillery and horse-drawn supply troops. In spite of its shortcomings, the Mobile Corps with its two motorized infantry brigades and one cavalry brigade was the most modern operational formation of the Hungarian army.¹⁴⁰

The Hungarian army command endeavoured to compensate for its shortages in equipment and weaponry, and its consequent inferiority to neighbouring armies, by intensive ideological indoctrination. Its ideal was to turn Hungary into 'a modern Sparta or a Hungarian Prussia'.¹⁴¹ The whole nation was to be fashioned into a single great army. Time and again propaganda glorified the 'eternal military virtues' and praised the Hungarian as 'the best soldier in the world'. The army as an instrument of national interests, i.e. of revisionist policy *vis-à-vis* its neighbours, was invested with the claim that it stood above class and was non-political. This slogan was to ensure the army's absolute reliability in the hands of the political leadership. Although prior to 1941 the Soviet Union did not represent a specific military target, anti-Communist ideology was, along with education in a warlike and chauvinist spirit, the basis of propaganda work in the army. The ideals of revisionism and anti-Communism also affected the personal composition and replenishment of the officer corps.

In Hitler's plans for a war against the Soviet Union Hungary played an even more subordinate role than she did in those of the German military leadership. Although in Marck's and Loßberg's draft operations plans for Barbarossa Hungary had been earmarked as a transit territory, Hitler on 5 December 1940 rejected any participation by Hungary.¹⁴² That was why in Directive No. 21 she was not mentioned. By contrast, the operations department of the Army

¹⁴² Halder, *Diaries*, 723 (5 Dec. 1940).

General Staff in its plans provided for Hungarian formations as security forces in the rear areas of Army Group South.¹⁴³ In the plans of the Army High Command, however, Hungary also played a part as a deployment area. In its 'deployment directive for Barbarossa' it envisaged the attack of an army corps of Seventeenth Army across the Carpathians. That was the reason why Halder on 3 February, at Hitler's conference with the top commanders of the Wehrmacht, again raised the subject of Hungary. 'If she does not take part in the operation itself, she must at least agree to troop detrainment on her territory; Romania was to be declared to be the objective of those troops, and only at the last moment would they wheel towards the Russian frontier.'¹⁴⁴ Hitler did not agree to this proposal; he believed that, 'against appropriate political assurances', Hungary would consent 'to all German demands'. The necessary arrangements, however, were to be made only at the last minute, as Hitler suspected that the British were being kept informed by Hungarian quarters. As Army Group South had not been informed of Hitler's attitude, it requested a few days later that Hungarian forces be moved forward in the wake of XXXXII Army Corps 'as early as possible' in order to clear the rear area of Seventeenth Army of Soviet troops and occupy it.¹⁴⁵ Halder was therefore obliged to rein in the army group. Because of the need to conceal German intentions from Hungary as long as possible, he explained, any employment of 'Hungarian forces will be possible—if at all—only after or at the launch of the operation'.¹⁴⁶ On no account must Hungarian troops come into contact with Romanian ones. In line with Hitler's intentions, the amended Directive No. 21 of 22 March 1941 did not view Hungary as an ally in the preparatory phase of Barbarossa. When army-group and army commanders reported to Hitler on 30 March, Field Marshal von Rundstedt, commander-in-chief of Army Group South, once more, entirely in line with Halder's thinking, called for a Hungarian operation across the Carpathians, as well as for an offensive thrust out of Romania¹⁴⁷—but in vain.

During the campaign against Yugoslavia, when the Hungarian political leadership feared Soviet intervention, the Hungarian general staff regarded the Soviet measures along the Hungarian eastern frontier as defensive. That assessment by the chief of the Hungarian general staff, Colonel-General Werth, was endorsed by the high command of the German army.¹⁴⁸ Horthy was most anxious that the Hungarian army should not lose 'too much blood'

in its operation against Yugoslavia, 'as Hungary also has frontiers with Romania and Russia'.¹⁴⁹ The German military attaché in Budapest, Colonel Günther Krappe, after a conversation with Horthy's adjutant, confidently assumed that Horthy had offered 'once more his help in the Russian question', as he had also to Raeder.¹⁵⁰ Despite this and other attempts by Horthy to be made privy to German intentions *vis-à-vis* the Soviet Union, Hitler maintained his negative attitude to Hungary. He continued to believe that, while she was ready to take defensive measures against the Soviet Union, she would not permit a launching of German forces from her territory. In accordance with his instructions the 'German general with the high command of the Royal Hungarian armed forces', Major-General Himer, did not sound the Hungarians on the chances of Hungarian participation in Barbarossa until the end of May 1941. Himer in his conversation with Werth stressed the need for the Hungarian armed forces to be prepared in time for the event 'that the eastern issues would be decided by war'.¹⁵¹ The Hungarian chief of staff reacted positively and promised to examine the possibility of shortening the Hungarian mobilization period of twenty days. Nothing occurred beyond that sounding, because Hitler forbade Hungary to be officially informed in detail on Germany's intentions before mid-June 1941. For that reason Halder, at his conference with the commanders of the army groups, armies, and armoured groups at Zossen, was able to announce only that participation by Hungarian troops was 'not yet clear'. However, if only by her security measures, Hungary was already tying down Soviet forces. If she were to take an active part in Barbarossa, at least one German division would have to be inserted between Romanians and Hungarians.¹⁵² Within the Hungarian leadership, however, arguments were proceeding about Hungary's attitude even before the date authorized by Hitler for Hungary's notification of the impending German-Soviet conflict.

As early as 6 May Colonel-General Werth had urged Premier Bárdossy in a memorandum to conclude a political agreement with Germany covering the event of German-Hungarian military co-operation. That proposal had been dismissed by Bárdossy with the argument that Germany would not be prepared to conclude such an agreement 'on a reciprocal basis'. On 31 May, following Himer's soundings, Werth requested at least authority 'to make contact on the military plane with the competent German military leaders', but Bárdossy did not react.¹⁵³ On 5 June 1941 Colonel Ujszászy informed the head of the political department in the Hungarian foreign ministry, János

Vörnle, that a start was being made on the reconnaissance of objects on Soviet territory which would have to be destroyed in the event of a conflict. When Vörnle demurred, Ujszászy remarked that Defence Minister Károly Bartha had given him 'full powers to take whatever measures he considered necessary'. He was merely informing Vörnle of the fact.¹⁵⁴ On 7 June 1941 the Hungarian minister in Berlin urged Bárdossy to offer Hitler as soon as possible 'our firm military participation in a possible operation against the Soviet Union'. Sztójay accompanied his suggestion with the observation that a swift victory by the German army was beyond doubt and that the Hungarian offer was sure to make 'a lasting and favourable impression' on Hitler.¹⁵⁵ In a further memorandum, dated 14 June 1941, Werth again proposed that a formal offer be submitted to Germany of voluntary participation in the war against the Soviet Union; he urged speedy action as the war might break out within ten days. Simultaneously he pointed to Romanian military measures already taken. Werth was firmly convinced that Hungary would have to play an active part in that war, because

(1) this is required for the safeguarding of the territorial integrity of the country and the protection of our social and economic order; (2) a weakening of our Russian neighbour and his removal from our frontiers are of prime national interest for our future; (3) our Christian and nationally based ideology and our fundamental opposition to Bolshevism in the past and present make it our duty; (4) politically we have definitively placed ourselves on the side of the Axis powers; (5) our further territorial enlargement also depends on it.¹⁵⁶

This was a list of all the motivations which ultimately led Hungary to participate in Operation Barbarossa. Nevertheless, the ministerial council, meeting on the following day, rejected the idea of voluntary participation in order to save the army for future territorial revisions. Bárdossy informed the chief of the general staff that if Germany 'at a later date considers our co-operation necessary and addresses an explicit invitation to us, we shall readily comply with it'.¹⁵⁷ On 15 June 1941, however, Ribbentrop had Bárdossy informed, not officially but in confidence, that by the beginning of July Hitler 'would be compelled to clarify German-Russian relations' and suggested that Hungary take measures to safeguard her frontiers.¹⁵⁸ Just then the study of the Hungarian general staff 'for offensive defence on the Russian front' had been completed and its details passed on by Himer to the operations department of the German general staff. On 19 June 1941 Halder, on a return flight from Bucharest, met Werth at Mátyásföld for a private conversation. According to Werth's notes for the premier, Halder, while putting the Hungarian chief of staff in the picture, made no demand for participation. If certain military measures—beyond securing the Carpathian line—were to become necessary, Halder would 'specifically request them' from Colonel-General Werth

through Himer.¹⁵⁹ On 22 June Horthy was officially informed of the German attack in a letter from Hitler, with Ribbentrop simultaneously informing the Hungarian minister. 'As an old crusader against Bolshevism' Horthy was enthusiastic about Hitler's decision for war. 'For twenty-two years he had longed to see this day and now he was happy. Even after centuries mankind would thank the Führer for this deed. 180 million Russians would now be liberated from the yoke imposed on them by two million Bolsheviks.'¹⁶⁰ The Hungarian minister in Berlin, Sztójay, similarly expressed to Ribbentrop Hungary's sympathy for the German decision. Not only his country, 'but the whole of Europe and the world', would be grateful to Hitler when he had defeated Bolshevism.¹⁶¹

As Hitler had not invited Hungary to participate in the war against the Soviet Union, but had merely thanked her for intensified frontier security along the Carpathians, thereby tying down Soviet forces, Horthy regarded a declaration of war by Hungary on the Soviet Union as unnecessary. The ministerial council, however, decided on 23 June 1941 to break off diplomatic relations with the USSR. At almost the same hour Molotov, the Soviet foreign minister, informed József Kristóffy, the Hungarian minister in Moscow, that the Soviet government had no claims or aggressive intentions against Hungary. His government would have to know soon 'whether Hungary wished to participate in the war or adopt a neutral attitude'.¹⁶² This Soviet request for clarity on Hungary's position in the German-Soviet war was accompanied by a clear hint that Moscow showed understanding for Hungary's continuing revisionist aspirations with regard to Romania. The telegram from Kristóffy arrived in Budapest on 24 June, but Premier Bárdossy informed neither the regent nor the ministerial council of it.¹⁶³

It was only on the previous day, 22 June, that the head of the operations department in the Hungarian general staff, Major-General Dezső László—who like Colonel-General Werth was waiting for Halder's invitation to 'join in'—had been informed of Jodl's view: 'Any Hungarian help will always be accepted. We do not want to make any demands, but anything offered voluntarily will be gratefully accepted. There is no question whatever of our not desiring a participation by Hungary.'¹⁶⁴ *Vis-à-vis* Himer, Halder had amplified Jodl's remark to the effect that it was now important 'for the Hungarian military quarters to set the political ones in motion, so that they themselves should come out with an offer. . . . No demands had been made because they have to be paid for, but any support, especially by mobile troops, would be gratefully accepted. But on no account must German rail transports

be disrupted.¹⁶⁵ In a conversation with Werth Himer thereupon once more explained the German leadership's position. Werth for his part had pointed out that unless Hitler invited Hungary to participate in the struggle 'the politicians' would 'hardly go along with it'. At his suggestion an enquiry had been made ten days earlier through political channels concerning Hungary's participation, 'but it seemed' that the Führer did not wish Hungary to take part'. Major-General Himer had countered that the military was now speaking. It was not too late for Hungary to participate in the 'crusade against Bolshevism'. Himer's assessment of Werth's hesitation and of his waiting for Horthy's decision on the evening of 23 June was that the Hungarian chief of staff was 'not up to the greatness of the moment'.¹⁶⁶

Werth informed Defence Minister Bartha and Premier Bárdossy of his conversation with Himer. The premier was annoyed that such an important political decision had been presented to the Hungarian leadership through military channels. To the German minister, Bárdossy emphasized Hungary's interest in not fragmenting her military forces, given the hostility of her Romanian and Slovak neighbours; 'if, however, the German side wished for Hungarian participation in the war against the Soviet Union, then he would pass this on to Horthy'.¹⁶⁷ Even before the desired political invitation had been issued from Berlin, the Hungarian ministerial council decided on the morning of 26 June to mobilize the Mobile Corps and the air-force and anti-aircraft formations.¹⁶⁸ At noon the same day unidentified aircraft bombed Kassa, and Soviet machines—no doubt on a reconnaissance flight—fired cannon at an express near Ráho. Even before the official investigation of the air raid on Kassa had begun, the ministerial council was convened once more in the afternoon of 26 June 1941. Bárdossy announced that, following a report of the defence minister and the chief of the general staff, Horthy had ordered 'reprisal measures' and Hungary's entry into the war against the Soviet Union.¹⁶⁹ Hungary's political and military leaders were convinced that the Soviet Union was behind those air attacks and regarded them as a *casus belli*, even though Moscow issued a denial that same day. On 27 June 1941 the Hungarian air force made 'reprisal raids' on Soviet targets in the Stanislav and Kolomyja area. The regent's decision to make Hungary participate in the war against the Soviet Union was communicated not only to Berlin,¹⁷⁰ but on 27 June also to the Hungarian parliament. As a reason Premier Bárdossy gave the Soviet attack, which violated international law.¹⁷¹ The Hungarian minister in Berlin, Sztójay, did not regard this rather passive reaction as sufficient to preclude the possibility of preferential treatment for Romania and Slovakia in

the 'reorganization of Europe', and therefore once more suggested that Hungary should offer Germany an 'active participation in the war in a broader form'. This might considerably alter the 'Hungarian-German balance sheet' in Hungary's favour.¹⁷²

Although the question of who ordered the attack on Kassa, and why, still remains unanswered,¹⁷³ it is a fact that the Soviet Union could have had no interest in seeing Hungary join the war. Those air attacks were not the reason for Hungary's declaration of war against the Soviet Union, but they were certainly used as a pretext for Hungary's decision and for its propagandist embellishment. The reasons for the dispatch of Hungarian troops to the eastern front are to be found in Hungary's history since 1919, in the anti-Communist attitude of her leadership, in her intransigent revisionism even after the two Vienna awards, and in the fear that a policy of neutrality might put her at a disadvantage against Romania and Slovakia after the expected swift victory over the Soviet Union, and that Hungary would not have a seat at the table of the victors. Germany had a twofold interest in Hungary's participation in the war against the Soviet Union. On the one hand it strengthened the slogan of 'Europe's crusade against Bolshevism' and on the other it relieved the flanks of Seventeenth Army and Eleventh Army during the initial phase. The Hungarian minister in Berlin, Sztójay, very accurately assessed the German motives at the end of June 1941:

My judgement of the situation is that the Germans do not really need any substantial military support. To protect their northern and southern wings, and their nickel and oil, they have enlisted the Finns and the Romanians. The latter are being coaxed by them, as hitherto, by territorial revisions. Towards other states they are not anxious to enter into obligations, because they like to keep a free hand for themselves; on the other hand, from the propaganda point of view, they find it desirable to have as many countries as possible participate actively in the crusade against Bolshevism. Those who fail to participate will feel it on their own skins some day.¹⁷⁴

To prevent the Romanians, the Slovaks, and the Croats, who had all entered the war against the Soviet Union before Hungary, from intriguing against Hungary in Berlin, Sztójay suggested to his government that an intensified active participation in Barbarossa be proposed to Germany, so that Hungary's participation should not seem to be merely a passive reaction to a Soviet air attack.

(b) Slovakia

Slovakia was the smallest ally and had been a 'sovereign' state only since mid-March 1939. It comprised a territory of 38,000 square kilometres of predominantly agricultural character and approximately 2.6 million inhabitants, 90 per cent of them of Slovak nationality. Agriculture and forestry occupied 56 per

cent of the population. Slovakia, as the first satellite state of the Third Reich, was to become 'Germany's visiting-card' for the future new order in Europe.¹⁷⁵ In spite of its limited sovereignty, the new Slovak state was recognized by a total of twenty-seven countries. As a result of the imposed treaty of 18 March 1939, the 'confidential economic protocol' of 23 March 1939, and the 'defence-economy treaty' of January 1940, Slovakia was not only placed under German 'protection', its foreign and military policy greatly limited, with a 'protective zone' conceded to the Wehrmacht in the western part of the state territory, but her economy had been brought in line with German requirements. At the beginning of January 1940 the head of the German army mission, Lieutenant-General Paul Otto, reported to Berlin that the Slovaks were displaying an 'attitude of wanting to be needed' and that their 'employment' for German interests would be possible.¹⁷⁶ Hungary's appetite for further annexations, persisting in spite of a German guarantee and territorial acquisitions already achieved, gave rise to a Slovak national awareness that was continually nourished by the bad treatment the Slovak minority (numbering 600,000) was subjected to in Hungary. At least 70 per cent of the Slovaks had a positive attitude to their state, and 80 per cent were Roman Catholics. The close alliance between the Slovak People's Party, the extreme right-wing Hlinka Guard, and the Catholic clergy resulted in an authoritarian governmental and social system which may be labelled 'clerical Fascism'.¹⁷⁷ Until the middle of 1940 Slovakia remained relatively independent in its domestic policy. After the German victory over France, however, the Slovak leadership was made to understand that Slovakia was situated within the German living-space and that it was Germany's wishes alone that mattered. The Salzburg talks, the dismissal of Ferdinand Ďurčanský, minister of interior and foreign affairs, and the appointment of Killinger as the German minister in Bratislava at the end of July 1940 put an end to Slovakia's relatively independent policy in favour of a more pronounced domestic alignment with Germany.¹⁷⁸ German advisers on police, Jewish, and propaganda affairs and for the organization of the Hlinka Guard were sent to Bratislava. On 28 July 1940 State President Josef Tiso remarked to Hitler that Slovakia was feeling 'happy under the fatherly care of the Führer' and wished to make its modest contribution to the building of a new Europe.¹⁷⁹ Killinger saw his task as 'so guiding Slovakia that in the war it will be 100 per cent at our disposal economically, and ensuring that it is steered politically in a manner that will exclude the least doubt that it might not toe the line in the war'.¹⁸⁰ On 23 November 1940 Slovakia joined the Tripartite Pact. As in Romania, the Guard was initially impatient to achieve unrestricted power by revolutionary means; in the winter

of 1940–1 it was ready—presumably with the backing of members of the German legation and the corps of advisers—to stage a coup against President Tiso. The plan, however, was betrayed by army circles. Hitler meanwhile, just as he did in Romania a few days later, subordinated the ideological aims of National Socialism to the political and economic objectives of the Reich. The new minister in Bratislava, Ludin, assured Tiso that he enjoyed Hitler's confidence and sympathies. Thus the programme of a 'Guardist Slovakia', designed by Premier Vojtech Tuka, had failed.¹⁸¹

The establishment of a Slovak national army from the remnants of the Czechoslovak forces was the achievement of the commander-in-chief and defence minister, General Ferdinand Čatloš.¹⁸² The first task was the creation of cadres. Former regiments became battalions, former battalions became companies, and core units were formed with active soldiers of Slovak nationality, replenished with reservists and conscripts. Introduction of the German recruitment and replacement system and the German mobilization procedure was planned for 1 April 1942. In the spring of 1939 Čatloš had only 320 active Slovak officers at his disposal. By drawing on reserve officers and by reactivating retired officers it proved possible to meet the planned requirement of 1,300 officers for the establishment of a peacetime army of two infantry divisions and army troops (approximately 28,000 men). The contractually agreed rearming and refurbishing with German equipment were not to take place until after the war. The year 1940–1 had been earmarked as 'minor training year'. The Slovak army command was advised in its work by a German military mission. Neither it nor the German officers had expected the Slovak army to be used so soon.

Unlike Hitler, who did not wish to see the Slovaks participating in Barbarossa—at least not before victory had been achieved over the Red Army, because he feared fraternization among fellow Slavs¹⁸³—the operations department of the Army General Staff included Slovak units at an early stage in its plans for securing the rear areas in the sector of Army Group South.¹⁸⁴ The army group, having received the Army High Command's 'deployment order for Barbarossa', considered it desirable to move the two Slovak infantry divisions forward, within the framework of Seventeenth Army, to the Sambor and Drogobych area in order to secure the local oilfields.¹⁸⁵ The Army High Command did not meet this request by the army group, because Slovak mobilization, in view of the transport situation, could not begin until the German formations were ready to move off. Slovak forces, the Army High Command suggested, would therefore probably have to be employed only for

occupation and security tasks.¹⁸⁶ Slovakia, on the other hand, was included in the plans as a deployment area.¹⁸⁷ On 23 April 1941, therefore, Berlin requested Slovak agreement to the detrainment of three divisions, which would move into occupied Poland. That troop movement was described as a 'purely defensive measure'.¹⁸⁸ The German deployment, however, did not fail to impress the Slovak army command. On 2 May, through Major Becker, the German military attaché, General Čatloš offered Slovak troops in the event of a war against the Soviet Union with Hungarian participation.¹⁸⁹ The Army High Command no doubt replied evasively, because on 6 June 1941 the head of the operations department, Colonel (General Staff) Heusinger, enquired of the Wehrmacht operations staff when it would be possible to discuss Barbarossa with the Slovaks, who were 'anxious to join in'.¹⁹⁰ On 19 June 1941 Halder, *en route* from Budapest, had an incognito meeting with General of Infantry Otto and Lieutenant-Colonel Becker in Bratislava. At Hitler's request the employment was discussed of the two Slovak divisions which had already been included in the army group's plans for the impending campaign. The chief of the German army mission in Slovakia expressed the opinion 'that it may well be possible to employ the Slovak peacetime army raised to a war footing on a quiet front or for security and cover tasks, but that it would not be capable of *dealing with serious battle assignments or with long marches*'.¹⁹¹ Otto informed the German minister Ludin about his conversation with Halder. Ludin on 21 June enquired from State President Tiso and Premier Tuka, in 'an entirely non-committal way', whether Slovakia would participate in a possible operation against the Soviet Union. 'Both gentlemen answered unequivocally in the affirmative'.¹⁹² The next morning, on 22 June 1941, the Slovak minister in Berlin, Maruš Černák, informed State Secretary von Weizsäcker of his government's readiness for military co-operation with Germany and for breaking off diplomatic relations with the Soviet Union. Ribbentrop thereupon instructed Ludin to inform Tuka that Berlin consented to the immediate rupture of diplomatic relations between Slovakia and the Soviet Union, and to the participation of Slovak troops: 'The decisions of the Slovak government on both points are being greatly welcomed by us'.¹⁹³ Anti-Bolshevism was the principal common ideological feature between clerical-Fascist Slovakia and National Socialist Germany. On 23 June 1941 Defence

Minister Čatloš issued an order of the day which, while emphasizing the defence of Europe against the 'mortal danger' of Bolshevism, made it clear that the Slovak army was not fighting 'against the great Russian people or against Slavdom'.¹⁹⁴ That was a clear concession to the pan-Slav sentiments of the Slovak people. President Tiso, a Catholic priest, gave his blessing to the Slovak troops employed on the eastern front from 24 June. The papal nuncio in Bratislava commented on Slovakia's participation in the 'crusade against Bolshevism' with the words: 'I am happy to be able to report to the Holy Father only the best from the exemplary Slovak state, which is steadily implementing its Christian national programme expressed in the slogan "For God and the nation"'.¹⁹⁵

Operation Barbarossa had not been planned as a coalition war by the German side. The early enlistment of Romania as an ally—along with Finland—did indeed reflect Berlin's strategic interests, but Bucharest was never regarded as an equal partner in the alliance, let alone Budapest or Bratislava. There were no clearly defined or jointly agreed political or military war aims. Although, on Hitler's decision, the south-east European allies were allowed a share in the 'total glory', they had no say in the conduct of the war. Nevertheless, the 'military-action community' against the Soviet Union after 22 June 1941 was in line with the political interests and ideological beliefs of the Romanian, Hungarian, and Slovak state leaderships.

Romania, Hungary, and Slovakia did not participate in Operation Barbarossa because they mistook Hitler's war in the east as a significant crusade against Bolshevism. That was only a welcome side-effect of their military efforts. Germany's mutually hostile allies dispatched their troops to the eastern front and made economic sacrifices because Hitler's enforced new order in Europe and the Balkans had either favoured or severely disadvantaged them. Antonescu believed that by participating in the eastern campaign he might achieve a revision of the second Vienna award of the summer of 1940. Hungary's 'armed assistance' was intended as a gesture of gratitude for her territorial gains since 1938 and as a counterpoise to the massive Romanian contribution. Slovakia's contribution to the German-Soviet war was largely designed to ensure Berlin's support against further territorial demands by Hungary and to build up an effective army. The behaviour of the south-east European allies demonstrated 'that the eagerness to collaborate shown by those who have lost and would like to regain is greater than the zeal of those who already possess'.¹⁹⁶ The correctness of that thesis was again demonstrated in 1941-2. The profound internal conflicts between Romania, Hungary, and Slovakia were barely pasted over by the propaganda effort regarding the alleged 'European crusade against Bolshevism'.

VI. The Involvement of Scandinavia in the Plans for Barbarossa

GERD R. UEBERSCHÄR

I. FINLAND'S PLACE IN HITLER'S CALCULATIONS AT THE TIME OF THE RESUMPTION OF HIS 'EASTERN PROGRAMME' IN THE SUMMER OF 1940

SCANDINAVIA and northern Europe—like south-east Europe and the Balkans—were gaining greater importance both because of the increasingly emerging differences between Hitler and Stalin and also in German strategy and politics regarding the war against the Soviet Union. Thus, from the summer of 1940 onwards the German government devoted special attention not only to political events in the Balkans but also to foreign-policy, trade, and military developments in Finland and Sweden.

Hitler's decision of 31 July 1940 to initiate military preparations for a war against the Soviet Union, and the resulting reflections concerning a possible participation by Finland in that war, led to a dramatic change in German-Finnish relations and contacts. Even those early formulations of Hitler's military plans in the east raised the question of the extent to which Finland might be induced to participate in some form or other as a potential flank cover in that campaign—the more so as Hitler already regarded Finland as one of the states to be enlarged by conquered regions of the USSR.¹ In this connection Hitler could count on existing political tensions between Finland and the USSR, especially as the Soviet Union by its military attack on Finland in the Winter War of 1939–40 had only partially achieved its political and territorial security objectives. Although by the Moscow peace treaty of 13 March 1940 the Soviet Union imposed on Finland extensive cessions of territory, the Finnish government did not regard the new Finno-Soviet frontier

¹ On Hitler's thinking and concept of an enlarged Finland 'up to the White Sea' see Halder, *Diaries*, 517 ff. (22 July 1940), 534 (31 July 1940). On the German-Finnish *rapprochement* see Ueberschär, *Hitler und Finnland*, esp. 166 ff., and Andreen, *Finnland i Brännpunkten*, esp. 167 ff.; on Hitler's decision to go to war with the USSR see also *Unternehmen Barbarossa*, and Benz, *Rußlandfeldzug*. On the more recent scholarly discussion of Hitler's decision see Zitelmann, 'Zur Begründung des "Lebensraum"-Motivs'; Ueberschär, 'Pakt mit dem Satan'; Pietrow-Ennker, 'Deutschland im Juni 1941'. Also Wette, 'Wiederbelebung des Antibolschewismus'; Ueberschär, 'Historikerstreit' und 'Präventivkriegsthese'; id., 'Zur Wiederbelebung der "Präventivkriegsthese"'; Benz, 'Präventiver Völkermord?'. Unsightly assertions to the effect that those historians who do not accept the thesis of a pre-emptive war were yielding to political fashion by following Stalinist versions of history, and that they would suffer a 'Cannae' in 'scholarly, moral, and political respects', are no more than polemics; as expressions of an outsider position they speak for themselves (see Topitsch, *Stalins Krieg*, 1990 edn.).

as definitive. Helsinki's foreign-policy ideas therefore contained a considerable measure of revisionist motives. This was true in particular of the new multi-party government formed in Finland after the conclusion of the peace treaty, even though it did not include the right-wing radical nationalist Patriotic People's Movement. Even under the multi-party government of Premier Risto Ryti, formed during the Winter War in November 1939, there had been a gradual concentration of power within Finland's existing parliamentary system. This process continued after the conclusion of the Winter War under the renewed government of Premier Ryti. The influence of the commander-in-chief of the Finnish armed forces, Field Marshal von Mannerheim, was further enhanced by the appointment of his friend, Major-General Rudolf Walden, to the post of defence minister. The former foreign minister and chairman of the Finnish Social Democrats, Väinö Tanner, remained in the government as minister of national supplies. The bank director Professor Rolf Witting, known for his pro-German sympathies, became foreign minister. Soon after taking office he endeavoured to establish good relations with the German minister in Helsinki, Wipert von Blücher, by informing him comprehensively about the various steps of Finnish foreign policy. While the formation of a coalition government with a large majority in parliament promoted a sense of national unity and an awareness of the country's difficult foreign-policy position after the lost war against the Soviet Union, it also favoured an increasingly perceptible undermining of parliamentary structures. Political decision-making was concentrated in a so-called 'inner circle', consisting of Premier Ryti, Foreign Minister Witting, Defence Minister Walden, and Commander-in-Chief Marshal Mannerheim, with the occasional inclusion of Supply Minister Tanner as chairman of the strongest party. Public discussion of foreign-policy issues—either in parliament or in its foreign-policy committee—was considered inopportune by the government in view of the widespread revisionist ideas about the territories lost to the Soviet Union, and discussion in the press was prevented by the press control which was maintained after the Winter War. With the wartime laws and mobilization measures continuing in force, important decisions were increasingly being taken in secret by the inner cabinet and, as a rule, without parliamentary participation.

After the spring of 1940 the main line of the Ryti government's foreign policy was aimed at utilizing a possible deterioration of German-Soviet relations in order to achieve, with German help, a revision of the territorial terms of the Moscow peace treaty. It thus hoped to regain the ceded regions of Karelia, near Salla, and in the Rybachi peninsula, as well as the base of Hanko handed over to Moscow. Moreover, hopes of also conquering eastern Karelia, White Sea Karelia as far as Lake Onega and the Svir, and the Kola peninsula were not entirely abandoned. Ideas of attachment or association with Sweden in the form of a treaty of union or by way of creating a Scandinavian neutral zone were not, at that time, a deliberately pursued alternative to an orientation and alignment towards Germany. Union with Sweden, moreover, would have

presupposed renunciation of revisionist claims against the Soviet Union; it would inevitably have institutionalized Stockholm as the place where political decisions were made, and it would have shifted emphasis to Swedish industrial interests. The Finnish government therefore, soon after the conclusion of the Winter War, staked its hopes on the potential results of a pro-German policy.

In view of Germany's reluctance, during the Winter War, to champion Finland's interests in Moscow, the Finnish government took a certain risk in the spring of 1940 when it placed its hopes in a change of German-Soviet relations in order to make its revisionist and in part revanchist endeavours—e.g. the creation of a Greater Finland—prevail. To begin with, the Finnish government could not be certain that the Reich government would welcome or meet Helsinki's undisguised request for protection and for inclusion in Germany's sphere of interests. On the other hand, it was equally uncertain whether the Soviet Union would not regard the Moscow peace treaty merely as a stage in the eventual attainment of more far-reaching political aims, all the way to a possible occupation of the whole of Finland. Thus in the spring and early summer of 1940 Helsinki found itself under further pressure from Moscow. Several times the Soviet Union made claims which exceeded Finland's contractual obligations under the peace treaty, making it clear that Moscow continued to view Finland as forming part of the Soviet sphere of interests. Finnish efforts to arouse German interest in the country's precarious situation, so as to provide a German counterweight to Moscow's position of strength, initially remained unsuccessful.

As late as 20 May 1940 Hitler—in contrast to the efforts and ideas of the diplomats in the German foreign ministry and of the German firms which were interested in an intensification of German-Finnish trade—maintained his coolly detached, basically anti-Finnish, attitude. In line with his pro-Soviet stand during the Finno-Soviet Winter War he prohibited the resumption of German arms deliveries to Helsinki.² Even the Finnish government's readiness, after the German victory over France, to take note of the new power constellation in Europe and to meet German economic wishes, as well as to align its foreign policy alongside Berlin's, failed to produce any change in Hitler's reserve until August 1940. *Rapprochement* between Germany and Finland was not triggered until Hitler's return to his 'programme's' military solution in the east and the resulting strategic considerations concerning the involvement of Scandinavia.

Within the framework of preparations for the intended war against the Soviet Union Finland was now gaining special importance. A large number of intelligence reports received after mid-July 1940 strengthened the belief, in Hitler's mind as well as within the Wehrmacht High Command, that the Soviet leadership was planning a strike against Finland similar to that which it

² DGFP D ix, No. 293, pp. 402–3. Further references in Ueberschär, *Hitler und Finnland*, 178 ff., 191 ff. On Hitler's pro-Soviet attitude during the Winter War, when he banned any kind of assistance to Helsinki, see *ibid.* 84 ff., 108 ff., 129–30, 134 ff.

had recently made against the Baltic region, when it incorporated Estonia, Latvia, and Lithuania. On the strength of an assessment of the Finnish army produced by the general staff—which did not judge Finland's military position favourably, predicting the early collapse of the country, albeit after fierce initial resistance, in the event of Soviet military action³—Hitler at the beginning of August sanctioned the resumption of German arms deliveries to Finland and instructed the foreign ministry to initiate 'indirect and inconspicuous encouragement and support of the Finns (e.g. through Sweden)'.⁴

In order to check an impending occupation of northern Finland in the event of military action by the Soviet Union, Hitler ordered the German forces in northern Norway to be reinforced. One of the main reasons was the great importance attached to the north Finnish Petsamo area; under a recent German-Finnish agreement 60 per cent of Finland's nickel-ore production was to be consigned to Germany.⁵ Hitler gave instructions for a force to be concentrated which, in the event of a Soviet attack, could occupy northern Finland and the Petsamo region, preventing any further Soviet move towards the Baltic or Scandinavia and safeguarding German economic interests in the nickel-ore mines at Petsamo-Kolosjoki. Colonel-General Nikolas von Falkenhorst, the Wehrmacht commander in Norway, was ordered to move the 'Mountain Corps Norway' and a new SS brigade into the Kirkenes area (in Finnmark province). The Luftwaffe and the navy were likewise instructed to set up new territorial commands and security forces at the North Cape in order to safeguard 'German interests in the *entire* Scandinavian region'.⁶ It was obvious that these measures could only be 'interpreted as directed against Russia'.⁷ After Hitler had personally ordered these extensive troop movements and regroupings of forces in Norway, Group XXI—later to be designated Army Command Norway—was instructed to work out an operations plan for the speedy occupation of the Petsamo region and its securing 'against the east'; this operation was explained by the Wehrmacht operations staff as 'merely part of a greater movement'.⁸ Mountain Troop General Eduard Dietl was charged with its preparation and execution. The order for Operation Renntier (Reindeer) was issued on 7 September 1940. Anticipating future political developments, the order already envisaged participation by the Finn-

ish army; it may therefore be seen as a precursor of Operation Silberfuchs (Silver Fox), the German-Finnish move from northern Finland the following year, at the time of the German attack on the Soviet Union. Even that early stage of operational planning revealed a problem which was to recur later: the forces available were inadequate for a military enterprise in northern Scandinavia and Finland. For the execution of the operation only the reinforced 2nd Mountain Division was initially envisaged. The poor infrastructure prevented participation by 3rd Mountain Division, stationed in the Narvik area, so long as the political situation ruled out a deployment across Swedish territory. Nor was it possible to calculate the scale of potential Finnish participation. Attempts were therefore made, through local contacts with Finnish frontier troops, to gain more precise and detailed information on the district and port of Petsamo.⁹ Field Marshal von Brauchitsch, the army commander-in-chief, and Colonel-General Halder, his chief of the general staff, admittedly criticized such projects as 'pipedreams'.¹⁰

The close connection between Germany's about-face in her Finnish policy and Hitler's return to his programmatic objective of the conquest of living-space in the east by a war against the Soviet Union was revealed also on the occasion of a reception for the field marshals newly promoted after the western campaign and the conversations which followed it at the Reich chancellery on 14 August 1940. It was then that Hitler explained his thinking on possible developments in the east. According to the extant notes of participants, Hitler stressed his concern about exclusive Soviet domination in the eastern Baltic; this was obstructing German interests there by rendering 'a German attack on Russia more difficult'. He also pointed out that, 'because of the balance of power in the Baltic', he would be 'forced to intervene' in the event of a Soviet attack on Finland.¹¹ Hitler therefore decided to go beyond indirect support for Helsinki; he gave orders for speedy and extensive supplies of arms and other war material to be sent to Finland.¹²

Contact with Finland was made, on Göring's instructions, by his confidant, Lieutenant-Colonel Joseph Veltjens, as special representative of the German government; neither a Finnish trade delegation in Berlin at that time, nor Ribbentrop and his foreign ministry, were being involved. Veltjens's mission may be seen as one of the most important stages along the road of involving Finland in the war; it would be mistaken, however, to view it as the 'beginning of a military conspiracy' or of 'broad military collaboration between Germany

and Finland', or indeed to assume that Berlin had been compelled to invent 'alleged aggressive intentions on the part of the USSR against Finland' in order to ensure success for Veltjens's mission.¹³ The assumption in Helsinki and Berlin that the Baltic Sea and Finland were the objective of a further military advance by the Soviet Union was virtually inescapable in view of the large-scale exercises of the Red Banner Baltic Fleet then in progress. In Finland, during his conversations on 18 and 19 August 1940 with Field Marshal Mannerheim, Premier Ryti, and ministers Witting and Walden, Veltjens obtained as collateral for the promised German arms deliveries Helsinki's consent to the transit of German troops from the Baltic ports through Finland to Norway, and to regular supply transports across Finnish territory to the German units stationed in northern Norway.

After that 'decisive turn' in German-Finnish relations and the 'change in the Führer's mood *vis-à-vis* Finland' there were now no obstacles to an 'all-round satisfactory' fulfilment of Finnish requests for arms on a massive scale.¹⁴ Before the month was out the newly established collaboration, following military talks in Berlin, produced the first specific agreements. Finland made some 50,000 t. of shipping capacity available for German supply transports. Supplies were to go through the Finnish ports of Turku, Vaasa, Oulu, and Tornio, thence by rail to Rovaniemi, and by the Arctic Ocean route to Petsamo.

In conversation with German military attachés following their annual conference in Berlin, Hitler expressed the view that his direct and now overt material support for Finland would produce an effect on Moscow: it would prevent Stalin from taking military action against Finland.¹⁵ The first anti-aircraft units started moving through Finland to northern Norway on Göring's orders at the beginning of September. The German-Finnish transit agreement signed on 12 September 1940 already authorized the stationing of German troops for the protection of supply-centres and troop quarters in Vaasa, Oulu, Rovaniemi, and Ivalo along the transit route.¹⁶

Another indication of Germany's new interests north of the Arctic Circle—interests no longer in conformity with Moscow's—was the abandonment, at the same time, of 'Base North', the base on the Soviet Arctic Ocean coast, placed until then at the German navy's disposal by the Soviet Union. This naval base, of course, had lost much of its operational and strategic import-

¹³ For such assertions see *Geschichte des zweiten Weltkrieges*, ii. 307; Vainu, 'Einbeziehung Finnlands', 59–60. ance after the capture of the Norwegian and French ports. The German naval base, situated west of Murmansk, had held some promise of future German-Soviet collaboration in the area of naval warfare, as well as a blockade-proof ice-free starting-point for long-range German naval warfare in the Atlantic or for naval communications with Japan across the Arctic Ocean north of the USSR. All that was now abandoned.

The change in Hitler's attitude was not primarily due to economic motivations or to diplomatic proposals by the foreign ministry and the German legation in Helsinki. No doubt there had been some initial attempts after the Winter War to bring about a German-Finnish *rapprochement* in the war-economy and commercial areas—but the swift and decisive turn-about in favour of Helsinki was triggered only when Hitler had reverted to his strategic concept, to the conquest of living-space in the east by means of a war against the Soviet Union. The starting-point for Hitler's foreign-policy and strategic decisions with regard to Scandinavia and Finland after the summer of 1940 was his decision to commence preparations for his primarily ideological war. The beginnings of gradually intensifying German-Finnish co-operation in the political, economic, and military spheres were therefore directly linked to Hitler's resumption of his anti-Soviet basic position in the summer of 1940. This new Finnish policy was, so to speak, embedded in Hitler's concept of struggle for living-space in the east, it was 'determined in substance' by his decision to prepare for war in the east, by the 'central goal of his racial and political reflections'.¹⁷ Once he had decided on a military solution in the east, Hitler viewed Finland in terms of northern flank cover for that campaign; the Soviet threat to northern Finland and the Petsamo region thus acquired new significance. Although he did not believe that Finland's participation would be decisive for the outcome of the campaign, he thought that its non-participation as a littoral state on the Baltic would substantially weaken his own starting-position in the war against Moscow. The point about Finland's participation—this was realized at an early stage—was to win its territory as a basis for deployment, supplies, and operations for the war against the Soviet Union. Germany's Finnish policy can thus be seen as an illustration of the increasing importance, owing to Hitler's decisions, of military and strategic considerations in German foreign policy and of the progressive loss of ground by the foreign ministry under Ribbentrop during the Second World War.

During the summer of 1940 several institutions prepared studies and plans for a 'new order in Europe' within the framework of a European large-scale economic sphere under German hegemony; all these were based on German interests and special rights in Finland and demanded that country's economic orientation towards Germany.¹⁸ Whether Hitler, as early as the beginning of

September, envisaged Finland's inclusion in his concept of a future Scandinavia as a 'North Germanic union, in which the individual members have a certain sovereignty', while 'they should be both politically and economically closely connected with Germany', must remain an open question, even though Hitler's subsequent plans could support such a supposition.¹⁹ The further development of Finland's position as an interface in the conflict of interests between Moscow and Berlin, with all the consequences resulting from that position, was predetermined the moment Hitler proclaimed his political interests in Romania as his southern and in Finland as his northern flank, deliberately ruling out any retreat from these interests.²⁰ In both cases he claimed spheres of interest for Germany which only recently, in the German-Soviet agreements, he had renounced or been indifferent to. Hitler's instruction for Operation Renntier and his intention, if necessary, to push into northern Finland were matched, as a southern parallel, by his decision in early September to dispatch a military mission and German instructional troops to Romania to safeguard the oilfields there against seizure by a third party.²¹

2. FINLAND AS A POLITICAL AND ECONOMIC SPHERE OF INTEREST BETWEEN STALIN AND HITLER

Once it was clear that a 'lightning campaign' against the Soviet Union in the autumn of 1940 was no longer possible and that Hitler did not intend to realize his military 'eastern solution' until the spring of 1941, Foreign Minister von Ribbentrop succeeded in moving his concept of a European bloc against Britain into the focus of Berlin's diplomatic activity for a short time. It is possible that Germany's then still ambivalent policy *vis-à-vis* Finland in September-October 1940 should be viewed in that connection. While Ribbentrop's policy of a continental bloc 'culminated' at the end of September with the conclusion of the Tripartite Pact,²² the foreign ministry approached the further development of German-Finnish relations only with great caution. During the Finno-Soviet negotiations on the demilitarization of the Åland Islands and on the concession to the Soviet Union of special control rights over the archipelago, Berlin maintained its disinterested attitude proclaimed in July. Despite the German-Finnish *rapprochement* initiated by Veltjens's visit, Berlin was not prepared to claim any political or military interest for itself in the Åland Islands or to enter into an agreement, offered by Helsinki, that would make it appear as a counterweight to Moscow's special status in the islands. In consequence, on 11 October 1940 Helsinki was compelled to grant the Soviet Union supervisory and control rights over the demilitarization of the archipelago. Hitler also declined to inform the Soviet Union on the exact

commencement or the scale of German troop transports through Finland, which would have revealed his reaching-out into the Soviet sphere of interests. He also left it to the Finnish government to notify Moscow of the agreement subsequently concluded on 22 September 1940 between Berlin and Helsinki concerning military transports. On 6 September 1940 the Finnish government had also granted the Soviet Union the right to transport troops to its leased area of Hanko. At Helsinki's request, therefore, a retrospective exchange of notes took place between the German and Finnish governments to provide a formal agreement and a political basis for the German troop movements.²³ No matter how much Ribbentrop tried to present the German-Finnish agreement as transportation arrangements 'of no political significance', and directed solely against Britain, Molotov showed his displeasure at not having been notified by Berlin and made it clear that the Soviet government continued to regard Finland as a firm component of its own sphere of interest.

The presence of German troops in Finland—roughly 1,800–2,000 men were stationed as staging and security personnel along the transit route in northern Finland, where during September and October they had to organize the transport of some 5,000 Luftwaffe personnel²⁴—was in line with the Finnish government's intention, ever since the unfavourable conclusion of the Winter War, of gaining Germany's understanding for Finnish concerns and fears. The conclusion of the military and political agreements with the Third Reich on 12 and 22 September was therefore regarded by Helsinki as the beginning of a new German policy of interest in the Baltic region and Scandinavia, one that demonstratively included Finland. Finland's population and government welcomed the movement of German troops through the country as a clear token of protection against possible Soviet ambitions. The Finnish general staff co-operated closely with the German authorities in the technical organization of the troop movements. On 1 October the so-called 'Veltjens agreement' was concluded in Helsinki as the basis of the extensive arms deliveries to Finland, which had in fact been in progress ever since Hitler issued his instruction. As a kind of collateral for the German arms consignments Berlin received a blanket 'first option on all concessions of interest to the Greater German Reich in Finland'.²⁵ Finland hoped that this would provide German 'rear cover' for its continuing negotiations with the Soviet government concerning concessions to the nickel-ore mines at Kolosjoki (near Petsamo).

Control of these mines at Petsamo in northern Finland, the concession to which had been granted to a British-Canadian concern in 1934 on a long-term basis, had become an issue of crucial importance to the German war effort when, at the outbreak of war, the loss of overseas deliveries of nickel and

molybdenum, metals important for alloyed steel, had caused a considerable gap in supplies.²⁶ Agreement on major Finnish deliveries of copper, molybdenum, pyrites, and nickel had therefore been the principal objective of German-Finnish trade negotiations in the spring of 1940. Studies by mining experts of IG-Farbenindustrie AG convinced the Reich ministry of economic affairs that the deliveries of 60 per cent of the total output, agreed in the German-Finnish trade and delivery contracts of 29 June and 23 July 1940, would entirely cover the current German demand for nickel. The nickel-ore deliveries from Petsamo, along with Finnish timber products, were therefore of outstanding importance in German-Finnish trade.

Moscow too had staked a claim to nickel supplies. Helsinki had therefore agreed to supply 40 per cent of the total output to the Soviet Union. At the end of August, however, Molotov made it clear to Juho K. Paasikivi, the Finnish minister in Moscow, that what mattered to the Soviet Union was not merely participation in the ore production, but long-term concessionary rights and, above all, its political interests in the frontier region which, at the end of the Winter War, it had returned to Finland out of consideration for Britain. During the negotiations with the Soviet Union, which dragged on throughout the autumn and winter and into the spring of 1941, Paasikivi continually feared that Moscow might resort to military action to enforce its demands. Helsinki therefore wished to bring up openly the first-option rights granted to the German government, to act as an obstacle to Soviet demands.

However, so long as Ribbentrop was still hoping that the Soviet Union might participate in his concept of a continental bloc, Berlin had to operate cautiously with regard to the Soviet claims. Ribbentrop was anxious to avoid 'the Petsamo question becoming a controversial point with the Russians at the present moment'.²⁷ Any official support for Helsinki that would have seemed to question the assignment of Finland to the Soviet sphere of interest, representing a breach of existing German-Soviet agreements, had to be avoided for the time being—in fact, until the intended 'delimitation of their interests for the ages' had been agreed with Moscow.²⁸ For the Finnish government, Berlin's cautious tactical attitude was not enough. It repeatedly, though unsuccessfully, urged Berlin to claim Finland as a German area of interest *vis-à-vis* Moscow. Marshal Mannerheim also warned Colonel Horst Rössing, the German military attaché in Helsinki, more than once of the military risks which might arise from a transfer of the Petsamo concession to the USSR: this could lead to supplies for the German forces in northern Norway coming under Soviet control.²⁹ Yet Berlin did not communicate to the Soviet Union

²⁶ On the importance of the nickel-ore deposits of Petsamo-Kolosjoki and on the negotiations about concessions and delivery quotas see Krosby, *Petsamo Dispute*, *passim*, and Ueberschär, *Hitler und Finnland*, 166–79, 186–96, 234–8, 253–66, also *Blauweißbuch*, vol. II.

²⁹ Telegram No. 725, Blücher to foreign ministry, 19 Nov. 1940, PA, Dt.Ges. Helsinki, Erlasse 501–813; also Greiner, *Oberste Wehrmachtführung*, 363 (8 Feb. 1941); *KTB OKW* I. 325 (14 Feb. 1941).

any claim of its own to the concession. However, even without such an openly stated claim to concessionary rights, Hitler's attitude in fact proved to be a guarantee to Finland against the Soviet claims to the Petsamo region. At the beginning of 1941 Hitler told Mussolini and his foreign minister Count Galeazzo Ciano that the reason for Germany's attitude in favour of Helsinki was 'Finland's great importance to Germany because of its nickel deposits', without, however, disclosing to his Italian interlocutors Finland's strategic importance within the (by then commenced) preparations for the intended campaign in the east.³⁰ The Wehrmacht High Command also made repeated representations to the foreign ministry in order to emphasize its interest in the Soviet Union's exclusion from the Petsamo region.³¹

Nickel-ore deliveries to Germany started even before the end of the year. An additional delivery contract, signed between IG-Farbenindustrie AG and Petsamo-Nikkeli-OY on 19 February 1941, was to ensure the regular arrival of ore from Finland over the next few years. Helsinki showed some skill in keeping both the British and the German governments in play as future customers and in using the rights and interests of both states in its talks with Moscow as an obstacle to any Finno-Soviet arrangements on the issue of ownership. Moreover, by means of delaying tactics and agreed procedures Helsinki and Berlin succeeded in protracting negotiations opened in Moscow on the establishment of a joint Finno-Soviet concessionary company until the summer of 1941, with the result that Moscow's ideas about the alignment of Finland's economy and about direct acquisition of the Petsamo nickel-ore mines were prevented from being implemented before the onset of Operation Barbarossa.

As the finalization of Germany's Finnish policy depended on the development of German-Soviet relations, Molotov's talks in Berlin in November 1940 were of vital importance to the future of German-Finnish relations. Although the Finnish government could not know that its country also possessed considerable military significance for Hitler as a future partner in his eastern plans, the degree of existing collaboration at the diplomatic level, between the two sides' military authorities, on the issue of troop transits, and in the economic co-operation between IG-Farben and Petsamo-Nikkeli clearly suggested that German-Finnish relations had undergone an 'unprecedented improvement'.³² Even before his talks with Molotov, Ribbentrop had made it clear that Hitler would not surrender his military and economic interests in Finland to Moscow.³³ Prior to Molotov's arrival in Germany the Finnish government reminded Berlin of the advantages of German-Finnish co-operation; Helsinki was anxious to prevent any new German-Soviet settlement of interests at Finland's expense. Blücher, the German minister, and the foreign office in Berlin took up the idea of a further development of German-Finnish

relations. They endeavoured to define the protection of Finland against possible claims and demands by Molotov as a desirable function (that of guarantor) and task of Germany's Finnish policy even before the Soviet foreign commissar arrived in Berlin.

During Molotov's talks with Hitler and Ribbentrop in Berlin on 12 and 13 November 1940 one of the most contentious issues was the question whether, in conformity with existing German-Soviet agreements, Finland was to be viewed 'definitively as an inviolable part of the Soviet sphere of interest' and whether Hitler would be prepared to tolerate further diplomatic or even warlike action by Stalin, thereby accepting that country's incorporation into the Soviet sphere of power.³⁴ Molotov, who was accurately informed on Germany's economic interest, the involvement of German firms in the Petsamo nickel-mines, the extensive German arms deliveries to Helsinki, and the presence of German troops in Finland, discovered that Hitler was not prepared to set aside his own interests. Any new military conflict in the Baltic for the sake of enforcing Soviet interests against Finland would, Hitler declared, place a serious strain on German-Soviet relations.³⁵ He emphasized repeatedly that he did not wish to see a new Soviet-Finnish war because he would regard any Soviet action against Finland as a threat to the status quo in the Baltic region. Hitler therefore refused to give Stalin a free hand *vis-à-vis* Helsinki. Ribbentrop's hope of a settlement of interests 'on a scale of centuries' also proved a fiasco, as Molotov did not content himself with the allocation of areas of interest from Britain's future 'bankrupt assets' but instead pointed to Soviet 'short- and long-term objectives' in Finland, the Baltic region, and the Balkans.³⁶

The Molotov talks in Berlin revealed the incompatibility of German and Soviet interests in the Baltic and Finland. Now the stationing of German troops in Finland proved a useful means of preventing Soviet military action against Finland and hence the enforcement of Moscow's interests. State Secretary von Weizsäcker had the impression that Hitler would now regard any further action by the Soviet Union as a *casus belli*.³⁷ On 25 November 1940 a catalogue of Stalin's demands in the event of the Soviet Union's accession to a 'Quadrupartite Pact'—offered during the Molotov talks—made it clear that without a settlement of the German-Soviet clash of interests in Finland in Moscow's favour the Soviet Union could not be incorporated in Ribbentrop's continental bloc.³⁸ Heading the list of proposals was the demand for the

³⁴ On the Molotov visit see sect. I.1.5 at n. 164 (Förster); Hillgruber, *Strategie*, 304 ff.; Fabry, *Hitler-Stalin-Pakt*, 349 ff.; Bereshkow, *Diplomatische Mission*, 25-39; Schmidt, *Statistik*, 514 ff.; *DGFP* D xi, Nos. 325-9, pp. 533-70. immediate withdrawal of German troops from Finland and the country's reassignment to the Soviet sphere of interest. Hitler left these proposals unanswered, especially as on 4 and 12 November he had given instructions that 'all preparations for which verbal orders have already been given' for the intended military solution in the east were to be continued.³⁹ Hitler, moreover, is reported to have subsequently remarked that he had not expected anything of Molotov's visit anyway; instead his statements had made it clear that the USSR was pushing towards central Europe and that the Balkans and Finland represented 'dangerous flanks'.⁴⁰ The Finnish government was soon informed by von Blücher and by Lieutenant-Colonel Veltjens—who had returned to Finland towards the end of November on a special mission for Göring—that Hitler had not yielded to the Soviet demands but had held on to his own interests in Finland. At the same time Veltjens was able to receive new Finnish requests for arms deliveries. Eventually, on 22 November, after several days of German-Finnish military talks, a further 'Agreement between the German Wehrmacht and the Finnish General Staff' was concluded concerning the transit of extensive and continuous two-way traffic between northern Norway and Finland, consisting of servicemen taking and returning from leave.⁴¹ The agreement contained no time-limit; it envisaged the further development of the German supply organization in northern Finland, with Turku (Åbo) and Rovaniemi as major Wehrmacht control centres. The headquarters of the Wehrmacht commander in Norway, responsible for transit matters, reported that contacts with the Finnish military authorities were marked by a spirit of friendship and trusting co-operation, and that Helsinki was invariably displaying sympathy for German requests. In view of its strained relations with Moscow, it was in Finland's interest also to win Germany as a military guarantor of northern Finland—so far garrisoned only by insignificant Finnish forces—and to emphasize this situation by an increased presence of German troops.

The insecure and unstable basis of Finnish policy emerged clearly when, in late November and early December, both Moscow and Berlin were exerting their influence on the election of Premier Ryti as Finland's new president. Moreover, Moscow and Berlin both adopted a critical attitude to Finno-Swedish plans for a joint defence treaty between the two Scandinavian countries and actually foiled the realization of such an alliance.⁴² The new all-party government under Premier Jukka W. Rangell for the first time included the

⁴⁰ See Engel, *Heeresadjutant bei Hitler*, 91–2 (15 Nov. and 18 Dec. 1940).

⁴¹ Text of the agreement in BA-MA, 20. Armee, 12564/1; also Ueberschär, *Hitler und Finnland*, 245 ff.

⁴² On Moscow's and Berlin's influence on the candidates for the election of a successor to President Kyösti Kallio and on Swedish-Finnish alliance plans see Ueberschär, *Hitler und Finnland*, 248 ff., with a list of sources. According to Andreen, *Finnland i Brännpunkten*, 143, the British government also tried to exert pressure on the choice of a president.

Isänmaallinen Kansan Liike (IKL: Patriotic People's Movement), which had to be regarded as belonging to the Fascist camp. The fact that even the Finnish Social Democrats consented to such a widening of the government's basis for the sake of national unity may be seen as evidence of the country's precarious foreign-policy position, but equally as a special gesture towards the National Socialist regime in Germany.⁴³ After all, co-operation with Germany remained the foreign-policy line under Premier Rangell. There is no doubt that this shift to the right in the government's political position, as a result of the inclusion of the IKL, represented a clear demonstration of its sympathies for the Third Reich. Berlin's powerful military and political status after victory over France, along with a continuing threat from the east, gave an appreciable boost to extreme nationalist tendencies as well as to champions of a revanchist policy and of reorientation towards Germany. At the same time there emerged a readiness for a change of the parliamentary system in the direction of authoritarian government. There was increasing understanding for National Socialist Germany's struggle against Britain. In the autumn of 1940 new nationalist and right-wing radical movements for a 'free' and 'awakening' Finland were being founded, as well as a National Socialist Workers' Movement; none of these, however, grew into mass movements. By the spring of 1941 the democratic parliamentary institutions had been largely excluded from political decision-making. The 'inner circle' which determined policy had been further strengthened in its powers and functions by Ryti's election as president. It was within that circle that all the most important foreign-policy questions were decided, and these decisions conformed with the pro-Berlin course adopted by Finland—especially as enquiries and contacts in Berlin were making a German-Soviet conflict appear an entirely realistic possibility. Unofficial Finnish suggestions that Sweden and Finland might both join the Tripartite Pact should be seen as part of Helsinki's ceaseless endeavours to obtain a firm commitment and demonstrative support from Berlin against Moscow.

After the beginning of 1941 Finland's economic importance to Germany also rapidly increased. The extensive deliveries of nickel and copper ore following the start of production in the Petsamo mines in December 1940 made it clear that Finland had become an indispensable trade partner for the German war economy's requirements of raw materials. The war-economy and armaments department of the Wehrmacht High Command described the nickel-ore deposits of Petsamo as 'the only significant deposits in the central European large-scale sphere' outside the Soviet Union.⁴⁴ On the other hand, the deteriorating food situation in Finland after the summer of 1940 led to increased dependence on Germany, which was helping out with grain deliver-

ies. In June 1941 Britain, because of growing German influence in Finland, refused to renew the 'navicert' system which authorized overseas merchant shipping to pass through the naval war-zone of Petsamo.⁴⁵ This increased Finland's dependence on German grain supplies; Keitel and Jodl persuaded Hitler to have these increased 'for military reasons'.⁴⁶ The German-Finnish trade agreement, renewed on 31 December 1940, and a supplementary agreement signed on 7 March 1941 made the Finnish economy even more dependent on Germany. Germany's share in Finland's foreign trade in 1941 amounted to roughly 55 per cent for both exports and imports, although Finnish exports in terms of value lagged far behind imports.⁴⁷ New German deliveries of war material, in response to Finnish requests, were agreed during the first half of 1941, following talks between General Thomas, head of the war-economy and armaments department, and General Leonhard Grandell, head of the war-economy department in the Finnish ministry of defence. On several occasions either Hitler or Göring received a personal request to decide on the extent and range of military equipment and economic aid—primarily motor-fuel, heavy howitzers, machine-guns, and ammunition.⁴⁸

The state planning committees set up on the German model and a state-of-emergency law enacted in May 1941 resulted in a restructuring of the Finnish economic system and enabled industry to adjust speedily to the requirement of a war economy. Simultaneously, the process of centralization and the weakening of democratic institutions continued at an accelerated pace with a concentration of governmental powers and a massive bypassing of the Finnish parliament. In May and June 1941, when German-Finnish military talks opened, parliament was faced with a *fait accompli*. Despite intensified armaments production, the Finnish economy at the start of Operation Barbarossa was largely dependent on German supplies, in respect of both foodstuffs and armaments. Nevertheless, the war-economy and armaments department of the Wehrmacht High Command believed Finland to be a combat-ready flank partner for the impending war, and one capable of withstanding a certain amount of strain.⁴⁹

3. MILITARY ASPECTS OF FINLAND'S INCLUSION IN THE PLANS FOR BARBAROSSA

Once Hitler had decided in the summer of 1940 to go to war against the Soviet Union, even the first operational ideas and plans of the high commands assumed as a matter of principle—though often still vaguely—that Finland

would participate in it. This general assumption on the part of the senior officers and staffs charged with the studies of operations against the Soviet Union stemmed basically from the good German-Finnish relations which had existed from the time of the First World War until 1939, and on earlier military co-operation in the attainment of Finnish independence. Since then, and more particularly after the Finno-Soviet Winter War, it was natural for the German military leaders to include Finland, as a fundamental adversary of the Soviet Union, in their operational planning.

The 'Operations Draft East', prepared by Major-General Marcks on instructions from the chief of the Army General Staff at the beginning of August 1940, provided for Finland's participation and for a Finnish move against the Murmansk railway 'at a later phase of the war'.⁵⁰ The 'Operations Study by the Head of the Land Forces Group (Loßberg Study)', produced in mid-September by the operations staff of the Wehrmacht High Command, accurately envisaged an advance by German formations within the framework 'of Group XXI to be employed by Finland' and co-operation 'with the probably allied Finnish army'.⁵¹ Indeed, as this study proposed a point of main effort in the northern part of the overall front line, exceptional importance attached to an attack by an outer wing, with a thrust towards Murmansk and a joint advance on Leningrad. It is also significant that the 'Reflection on Russia' of 28 July 1940, produced by the naval operations staff, used the slogan of the 'liberation of Finland' as the political objective of military action against the USSR,⁵² even though the Naval High Command was otherwise viewing a war against the Soviet Union with a great deal of scepticism. However, the slogan was thought to be an effective propaganda formula in case Hitler intended 'to settle things in the east'. The naval operations staff was likewise convinced that Finland would have to be involved in such a campaign against the Soviet Union.

During the autumn of 1940 Army HQ Norway continued preparations for Operation Renntier.⁵³ Information was received from the Finnish general staff on the infrastructure and operational facilities in northern Finland. Colonel Rössing, the military attaché in Helsinki, was repeatedly enlisted to discover the disposition and defensive intentions of the Finnish forces. There was not, however, at that time any co-operation between the general staffs or appropriate agreements between Berlin and Helsinki for joint military action against the Soviet Union, although—on the basis of outdated statements during the Nuremberg trials which have since been corrected—this is still occasionally

asserted.⁵⁴ During the reciprocal courtesy calls between the commanders of the respective frontier regions in Finnmark (in Norway) and in Lapland (in Finland), Mountain Troop General Eduard Died of the 'Mountain Corps Norway' and Major-General Hjalmar Siilasvuo, strategic and political discussions were expressly excluded.⁵⁵ Significantly, there was no prior discussion of the uneven distribution carried out by the Finnish high command or the strong concentration of Finnish forces in the south of the country, with the result that Army HQ Norway was viewing the resulting military vacuum with great concern, considering the Petsamo region to be inadequately protected.⁵⁶ There was no direct contact between the two general staffs on the possibility of an early insertion of German units into northern Finland. Even up to January and February 1941 Blücher and Rössing were reporting that, in the event of war with the Soviet Union, Finland intended to evacuate the Petsamo region, with the weak covering forces there offering delaying resistance, and that the entire Petsamo region, including the ore-mines, was not included in the Finnish defence system. The military attaché did not believe that German ideas of a substantial military strengthening of northern Finland would be feasible without the acceptance of contractual obligations by Germany in Finland's favour. However, so long as Hitler was not prepared to enter into such obligations, the military vacuum could be filled only by German preparatory measures.⁵⁷

German-Finnish military contacts in the autumn and winter of 1940-1 were not, however, solely concerned with issues of troop transits or German deliveries of weapons and war material.⁵⁸ This was shown during Major-General Paavo Talvela's visit to Berlin in November and December 1940. In August and September, as the officer responsible for the Petsamo traffic, he had headed the discussions on transit traffic and German armaments aid. In his conversations with Göring, Halder, and Vice-Admiral Schniewind, chief of staff of the naval operations staff,⁵⁹ he had been instructed by Marshal Mannerheim, for whom he acted as liaison officer with the German military

authorities and Göring—between one military man and another, as it were—to sound out the possibility of a change in German-Soviet relations. His task was to obtain definitive information on Germany's position *vis-à-vis* Finland after the Molotov visit and, at the same time, to allow it to be understood that, in the event of the adoption of an anti-Soviet policy by Berlin, Finland would side with Germany. During his conversations in the Army General Staff Talvela learnt of possible military 'eastern intentions' against the Soviet Union. In this context Colonel-General Halder enquired about the time Finland would require for bringing about an 'inconspicuous readiness for attack towards the south-east' in the direction of Leningrad. General Talvela, however, was unable to give any detailed information or to conclude any firm agreements, even though he proposed to Göring 'joint preparations by the two general staffs' for 'joint tasks in the future'.⁶⁰ Whether these talks with Halder and Göring are to be seen as indirectly connected with the German plans for Barbarossa⁶¹ must remain an open question. There is no evidence that Talvela, as the representative of the Finnish general staff, so to speak, or as Mannerheim's envoy, exerted any direct influence on the planning of what later became Operation Barbarossa or that he collaborated in the operational drafts submitted to Hitler on 5 December 1940 at a 'Führer conference'. At that conference Hitler reiterated that he was counting on the participation of other states in the war against the Soviet Union. Thus Finland and Romania would participate, if only because their future existence as states was linked to a German victory.⁶² Both these states were to be enlarged territorially after the campaign.

Although no negotiations had been opened with the general staffs of the countries earmarked for participation, these countries, in line with Hitler's instructions, were being included in future operations or German moves planned across their territories. Hitler thus envisaged a German operation on the northern flank, with 'objective: Arctic Ocean', using three divisions, whose deployment and concentration were to be accomplished by rail transport through Sweden. Halder's conversations in mid-December with Colonel-General von Falkenhorst and Colonel Buschenhagen from Army HQ Norway already assumed an attack by four divisions under the command of General Dietl, striking from Norway across Finland. Timely concentration of such major forces at the North Cape would be possible only if three divisions were transported by rail from Norway through Sweden. The continuing need to defend and safeguard Norway against British landings, however, compelled Army HQ Norway for the time being to withhold elements of the divisions earmarked for the attack and to supply their place by enlisting the motorized

SS brigade from central Norway; the transfer of this unit to the frontier region of Kirkenes—northern Norway had been planned in any case.⁶³

Hitler's Directive No. 21 for 'Case Barbarossa', issued shortly afterwards, took up Halder's and Buschenhagen's ideas of 14 December 1940 of employing a northern and a central force in Finland, thus assigning to Army HQ Norway two operations which would represent the most northerly attack on the Soviet Union; these would be launched across Finnish territory. Hitler's 'substantial amendment' of the earlier operations plan, which now gave priority to the occupation of Leningrad over the seizure of Moscow, thereby shifting the main effort of strategic intentions to the northern sector of the front, lent increasing importance to the use of Finnish territory by German troops and hence to co-operation with the Finnish army on the northern wing.⁶⁴

According to the directive, the principal task of Army HQ Norway—previously designated Group XXI—even during the war in the east would be the protection and defence of Norway, as well as the safeguarding of the Petsamo region, together with the Arctic Ocean route, once the region was occupied. A thrust towards the Murmansk railway was envisaged jointly with Finnish units. A further operation by two or three divisions from the area around Rovaniemi was, for the time being, made contingent on Sweden's readiness to permit the necessary rail transport. Without prior agreement with Helsinki, Hitler's directive assigned to the Finnish army the task of covering the deployment of Army HQ Norway, of conducting joint operations with it, and, in harmonization with the advance of the German Army Group North, 'the tying down of the strongest possible Russian forces by an attack west, or on both sides, of Lake Ladoga, and of capturing Hanko'. The question of a unified command over German and Finnish troops had not yet been clarified. The Wehrmacht High Command would be responsible for timetables and appropriate joint chains of command. As the directive proceeded from the assumption of rapid success, the actual capture of the city of Murmansk as an important supply-port for the Soviet war economy was, significantly, disregarded. Only later did the city and port of Murmansk move to the foreground of operational considerations; this was in connection with the demands of the navy.⁶⁵

While, at the turn of 1940–1, Hitler's political and military decisions were based on his definitive determination to seek a military solution in the east, tension between Helsinki and Moscow increased as the Soviet government

⁶⁴ See *KTB OKW* I. 233 (17 Dec. 1940). On the directive see *Hitler's Directives*, 49 ff., also on subsequent details of the directive.

⁶⁵ In its 'Lagebetrachtung für einen Ostfeldzug gegen Rußland (Fall "Barbarossa")' [Situation assessment for an eastern campaign against Russia (Case Barbarossa)], 30 Jan. 1941 (Salewski, *Seekriegsleitung*, iii. 145–67), the naval operations staff regretted that 'an operation against this area [Murmansk] from the land side is not at present intended'.

was pressing for an agreement on the Petsamo mines in line with its own wishes. German-Soviet relations, on the other hand, appeared to be outwardly consolidated after the conclusion of a new economic agreement on 19 January 1941. At the 'Führer conference' on 9 January Hitler again made it clear that he rejected new Soviet demands on Finland and that he was ultimately 'persevering unassailably with his programme' of 'smashing' and 'shattering' the Soviet Union.⁶⁶ The Foreign Armies East Department of the Army General Staff, in its estimate of the situation in mid-January 1941, observed that substantial parts of the Red Army would be tied down on the Finnish frontier because Finland 'might well exploit the situation for the recovery of its lost territories'.⁶⁷ The Army High Command in addition examined the idea of a joint German-Finnish offensive in the Lake Ladoga-Lake Onega area; in conjunction with the elimination of Hanko this was proposed as a kind of southern companion piece to the planned German attack in the Petsamo-Murmansk area.⁶⁸

In order to discuss the problems arising from plans for joint operations against the Soviet Union, Lieutenant-General Erik Heinrichs, chief of the Finnish general staff, was invited to Berlin on 30 January 1941 to report on the Finno-Soviet Winter War of 1939-40.⁶⁹ As Hitler had already ruled in Directive No. 21 that all preparations and preliminary work for Barbarossa had to proceed under the guise of 'precautionary measures', the talks with the Finnish general had to be represented as non-committal discussions of potential defence measures in the event of a Soviet attack. From Halder's exposé, however, Heinrichs was able to assume that Hitler was considering war with the Soviet Union and, in this connection, was expecting Finland to participate. Heinrichs assured Halder that within nine days of general mobilization Finland could be ready for battle along the Soviet frontier. Specifically, operational plans were discussed for two Finnish thrusts along both sides of Lake Ladoga. It seems doubtful that Heinrichs would have made a firm commitment to a joint German-Finnish attack on Leningrad, the more so as, for reasons of secrecy, the outbreak of a German-Soviet war was still being presented as a hypothetical case. There were no agreements in writing. Nevertheless, the chief of the Finnish general staff was said to have shown a generally co-operative and open-minded attitude to the German plans, leading Hitler to believe 'in a good comradeship-in-arms'.⁷⁰

Accordingly, Finland's active participation in the war against the Soviet Union was spelt out in detail in the first version of the Army High Command's 'Deployment Directive Barbarossa'. The Finnish army was assigned the tasks of covering the German deployment in northern Finland, eliminating the Soviet naval base of Hanko, and attacking along both sides of Lake Ladoga.⁷¹ In his report of the deployment directive at the 'Führer conference' on 3 February 1941, Colonel-General Halder additionally pointed out that, according to information from General Heinrichs, one could expect an intensified Finnish deployment in the south of the country, as well as operations against Hanko (with 2 divisions) and in the direction of Leningrad (with 5 divisions) and of Lake Onega (with 3 divisions).⁷² Halder emphasized that for these actions the Finns would need strong German support. For Army HQ Norway the most important task would be to secure Norway against potential Allied landing attempts. In addition, in the view of the Army High Command, Army HQ Norway should carry out the occupation of the Petsamo region prior to Finland's entry into the war, and after Finland's entry mount a forceful attack from Rovaniemi towards Kandalaksha, with a view to cutting off the Murmansk region from the south and annihilating the Soviet forces there, or else attack Murmansk and the Murmansk railway directly from Petsamo. The final decision between these variants was left open until an answer was obtained to the crucial question of whether Sweden would permit use of her railways for German troop transports in transit from Norway.

Once the detailed proposals and dispositions had been made for the states earmarked for participation in the attack on the Soviet Union, the problem of co-ordination with the general staffs of Germany's new 'allies' became a priority for the Army High Command. On 3 February 1941, however, Hitler ruled that 'no approaches must be made to Finland, Sweden, Hungary, or Slovakia... regarding their participation or indirect help until such time as the German measures can no longer be camouflaged'; the 'deployment in the east' was to be understood 'as long as possible as a grand deception' to cover a presumed imminent landing in England.⁷³ Similarly, the Wehrmacht High Command in the middle of February once again postponed contacts with those states to a later date and reserved to itself the initiation of such contacts.⁷⁴

The preliminary studies ordered by the Army High Command for the proposed operation in the far north soon revealed that the intentions of Army HQ Norway exceeded the narrow scope of limited flank cover; Army HQ Norway was hoping, with the aid of considerable reinforcements, to achieve a breakthrough towards the White Sea. From there it intended to perform two far-ranging envelopment operations in order to annihilate the Soviet forma-

⁷¹ Original version of 'Aufmarschanweisung Barbarossa', OKH/GenStdH/Op.Abt. (I) No. 050/41, g.Kdos., 31 Jan. 1941, as well as draft of 22 Jan. 1941, BA-MA RH 2/v. 1328 and H 28/25.

⁷⁴ OKW/WFSu/Abt. L (I Op) No. 44141/41 g.Kdos. Chfs., 15 Feb. 1941, BA-MA RW 4/v. 513; see also KTB OKW i. 326-7 (15 Feb. 1941).

tions in the Kola peninsula in the north and near Lake Onega in the south (see Map I.vi.1). As there had still been no talks with the Finnish general staff, 'Operational Study Silberfuchs' (Silver Fox) was produced on 27 January 1941 without Finnish participation.⁷⁵ For these plans Army HQ Norway regarded 'at least passive participation by Sweden', whose territory must be unconditionally available for deployment and provisioning, as well as 'active participation by Finland', whose army must act offensively in accordance with German directives, as fundamental requirements of the attack. Unless the former prerequisite was met, 'any operation by major forces from northern Norway [would be] impossible'.

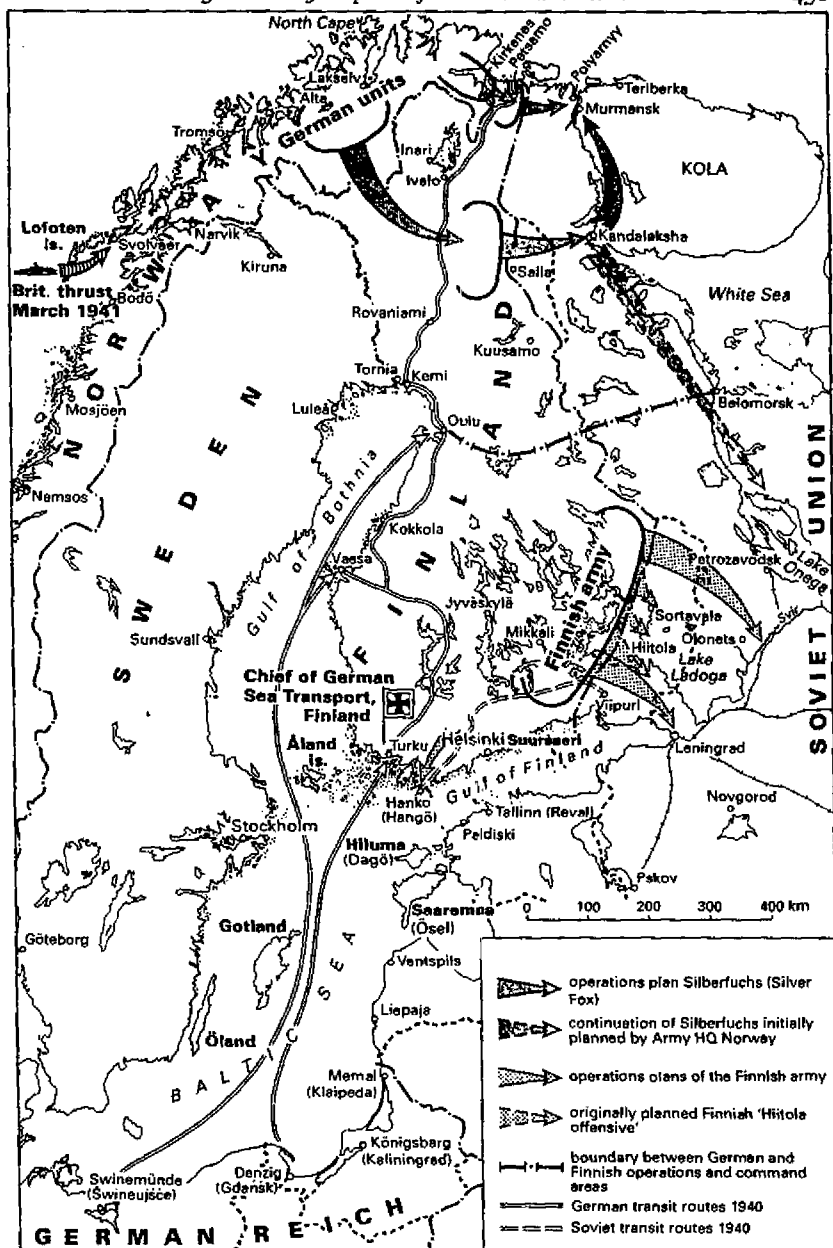

Despite a Soviet superiority in ground forces, the unknown strength and combat effectiveness of Soviet naval and air forces, and the difficulties of the terrain and provisioning of German and Finnish troops, the execution of these large-scale operations was thought to be feasible. However, when Army HQ Norway discovered that it could not count on generous reinforcements, so that only some of the divisions stationed in Norway would be available for the operation,⁷⁶ and when the Army High Command also suggested a critical re-examination of the operational plan, the objective of Silberfuchs was limited to attacks towards the Murmansk railway and Murmansk itself. For each of these two actions 1½ divisions were earmarked, with OKH approval, including the SS Brigade to be set up in northern Norway.⁷⁷ Any co-ordinated action or joint attack with the Finnish army in the Lake Ladoga, Lake Onega, or White Sea area was now outside the plans of Army HQ Norway.

The visit in mid-February of Lieutenant-General von Seidel, the Luftwaffe quartermaster-general, was not so much concerned with operational or political matters as with the enlargement of existing German transit centres into future supply-depots, in much the same way as 'Supply Staff Rovaniemi' had recently been enhanced under German command. At the same time, the information and inspection trip by Colonel Buschenhagen, chief of staff of Army HQ Norway, to Helsinki and northern Finland towards the end of February 1941 showed that for the time being no solid harmonization between the two general staffs on their operational intentions was possible. Talks with Marshal Mannerheim, General Heinrichs, and Aksel F. Airo, the Finnish army's quartermaster-general, were still non-committal, the more so as Buschenhagen had to keep to Hitler's instruction demanding deception and secrecy about the German plans. This was also in line with the intentions of Mannerheim and the Finnish government, who were not prepared to adopt

MAP I.VI.1. German-Finnish Operations Plan (1940-1941) for the Attack on the Soviet Union

unilateral measures or embark on a policy that could be interpreted as anti-Soviet so long as Hitler did not give Finland a binding guarantee and openly declare his attitude towards the Soviet Union.⁷⁸ Even so, it was obvious to both sides that Finland was ready for military co-operation with Germany.

The results of the two trips, however, facilitated a further finalization and concretization of the German operational plans in that they revealed the reservations of the Finnish high command about unlimited offensive operations beyond the Lake Ladoga–Lake Onega–White Sea line or beyond the defence of the Petsamo region. It was now obvious that systematic co-operation was urgently needed for the impending deployment and the envisaged operations.

At the beginning of March 1941 a British naval force succeeded in effecting a landing on the Lofoten Islands, in German-occupied northern Norway; a raid on the town of Svolvær and the British–Norwegian co-operation demonstrated in this action clearly revealed the weakness of German coastal defence. In consequence, Scandinavia north of the Arctic Circle found itself even more strongly in the spotlight of the war. Although in the German view the operation had caused no military damage, ‘it was an economic pin-prick, and politically undoubtedly resulted in a loss of [German] prestige’.⁷⁹ The incident gave rise to a fateful decision by Hitler: he ordered the operations plan to be extended. The Army High Command did not succeed in preventing the transfer of further forces to northern Norway or the simultaneous decision that two attacks were to be mounted on northern Russia from northern Finland. To ensure their success Hitler even intended to employ a motorized unit with heavy tanks. Having stressed in earlier directives⁸⁰ the particular threat to the Norwegian coast, and having emphatically demanded a reinforcement of coastal defences at Narvik and on the Arctic coast, he now intervened directly in operational planning for northern Scandinavia. After several conferences with the HQs responsible he ordered the additional transfer of approximately 160 coastal batteries to northern Norway and decided—on this point in agreement with the naval operations staff—that in the event of Barbarossa the capture of Murmansk was an important partial objective in order to eliminate possible enemy landings on the Arctic coast, or at least make them more

⁷⁸ On Buschenhagen’s and Seidel’s trip see *DGFP* D xii, No. 69, pp. 122 ff.; telegram No. 93, Blücher to foreign ministry, 14 Feb. 1941, PA, Büro St.S., Finnland, vol. ii; telegram No. 112, 13 Feb. 1941, No. 116, 14 Feb. 1941, PA Dt.Ges. Helsinki, Drahtberichte 1–200, 1941; *IMT* vii, 311–12; Mannerheim, *Memoirs*, 405; Ueberschär, *Hitler und Finnland*, 281–2; Korhonen, *Barbarossaplanen*, 221 ff.

⁷⁹ For a summary see the diary reports Geb.Korps Norwegen, Ia, BA-MA, XIX. A.K., 23450. In order to offset the German weakness FM Keitel, chief of the Wehrmacht General Staff, demanded ‘most rigorous punishment of the inhabitants of the localities involved’ in cases of any succour for enemy operations, and ‘if necessary the total destruction of the locality’. Reich Commissar Terboven, however, complied only in part, by having ‘the property of the families of persons who had escaped to England burnt down’ (report on the period 15 Nov. 1940–15 Mar. 1941, 24–5, *ibid.*); see also Heß, *Eismeerfront*, 21–4.

⁸⁰ See e.g. OKW/WFSu/Abt. L (O Op) No. 44141/41 g.Kdos. Chfs., 15 Feb. 1941, BA-MA RW 4/v. 513.

difficult. Colonel-General Halder failed to persuade Hitler of the Army High Command's view or to achieve a curtailment of operational objectives for the intended 'Falkenhorst army'. As for the occupation of the conquered territories of northern Russia, Hitler expected no difficulties: Finland would take over that task.⁸¹

Hitler's decisions, following the 'Führer conference', were set out in greater detail in directives to the general commanding the army in Norway: the first, of 26 March 1941, on the defence of Norway,⁸² and the second, of 7 April 1941, on the tasks envisaged in the event of Barbarossa.⁸³ The directives again emphasized that, for the defensive task, the main effort would be in northern Norway, and that Murmansk, as a potential beachhead on the Arctic coast, had to be taken by a thrust through Kandalaksha. As in his 'Guidelines in Special Areas Relating to Directive No. 21 of 13 March 1941', Hitler once more ruled that the decision on contact with the Finnish authorities would not be made until later, and that he reserved for himself the opening of such negotiations.⁸⁴ At the conference at the Reich chancellery on 17 May 1941 the commander-in-chief of the army proposed that power of command in that theatre be left to the Wehrmacht High Command, and Hitler agreed. Field Marshal von Brauchitsch declared on his own initiative 'that he would leave all instructions in that territory to the Wehrmacht High Command, in whose hands direction of activities in Norway had been from the outset'.⁸⁵ This was undoubtedly an expression of the persistent irritation in the Army High Command at having been bypassed on the Norwegian campaign. Another explanation, however, would be the critical and sceptical attitude of Halder and Brauchitsch towards the proposed operations in the Finnish theatre of war. To what extent Halder 'by all appearances' allegedly disapproved of Brauchitsch's step⁸⁶ it is impossible to establish. Finland and the northern wing of the future eastern front thus became an 'OKW theatre of war'. Hitler's intention was to assign regional command over the German and Finnish forces to Marshal Mannerheim. Mannerheim, however, during subsequent discussions declined to accept it, and thus no uniform command structure under supreme OKW control was achieved.⁸⁷

Once planning had reached that stage, the establishment of definite and specific contacts with Helsinki appeared to be the next logical step. In the diplomatic field the Finnish government had been meeting German requests since the beginning of the year: it had lifted existing conditions attaching to

transit traffic, so that Germany, under that cover, was able to conduct a virtually uncontrolled deployment through Finland.⁸⁸ Hitler's observation at that 'Führer conference' on 30 March 1941, when he explained to the prospective commanding generals, field officers, and chiefs of staff his ideas of an ideological war of annihilation against Bolshevism, showed that he was very sceptical about the value of an alliance with the countries earmarked for participation in the campaign, and also about their combat value. He warned against illusions about Germany's 'allies' and described the Finnish army as gallant but 'numerically weak and not yet recovered'.⁸⁹ For these reasons alone it seemed inopportune to confide in those governments too soon. Moreover, the fact that Finland was maintaining diplomatic relations with Germany's enemies made it seem inadvisable to inform Helsinki too soon about the plans for Barbarossa.

The Soviet leadership did not remain unaware of the German troop movements through Finland into northern Norway; these were becoming increasingly frequent and could scarcely be concealed any longer. It was similarly aware of incipient German-Finnish scout patrols and reconnaissance flights over the Finno-Soviet frontier region. Intercepted Soviet communications made it clear that Moscow was carefully monitoring the troop movements and was bound to realize that such a concentration of forces exceeded the relief of servicemen going on leave from northern Norway.⁹⁰ These German measures should have reinforced the warnings passed on to the Soviet leadership by Churchill and the intelligence received from agents,⁹¹ if Stalin—and this is described by Soviet historians as a mistaken assessment of the strategic situation⁹²—had not, in his own arbitrary judgement, arrived at a different conclusion for his own future tactics *vis-à-vis* Berlin. Stalin misjudged the importance of those warnings and interpreted Hitler's measures as a purely diplomatic move in a political game of poker between two great powers, a game still related to Molotov's last visit to Berlin. The German military attaché in Moscow therefore reported that, despite continuing call-ups and alerts by the Red Army, the fundamental line of Soviet foreign policy after

mid-April, following Germany's successful campaign in the Balkans, was one of 'appeasement' *vis-à-vis* Hitler. This was observed also with regard to Scandinavia, where Stalin not only avoided an exacerbation of bilateral relations with Finland, but actually, in his policy *vis-à-vis* Hitler, showed particular respect for German interests in that country. Moscow was anxious 'to avoid any incident'.⁹³ Thus even repeated frontier violations by German reconnaissance flights across the northern Finnish border produced no serious consequences.⁹⁴

4. GERMAN-FINNISH ARRANGEMENTS AND MEASURES FOR FINLAND'S PARTICIPATION IN THE WAR AGAINST THE SOVIET UNION

There was now a regular exchange of information between German and Finnish military quarters at local level. German scouting parties repeatedly visited the Finno-Soviet frontier area; divisional staffs exchanged liaison officers, and as a result of contacts between Colonel Rössing, the German military attaché, and the Finnish general staff the first operational talks were held in Helsinki.⁹⁵ These military arrangements between individual command authorities, however, still lacked a solid foundation in the form of contractually regulated, mutually harmonized, military co-operation between Berlin and Helsinki, with appropriate agreements, accepted as binding by both parties, on future joint action against the Soviet Union. This basic decision was being demanded with increasing urgency by the German service departments charged with the further planning and execution of operations,⁹⁶ whereas Hitler continued to refuse to inform other governments prematurely on Barbarossa, let alone to reveal his proposed date of attack. After mid-April, when Army HQ Norway issued to the corps HQs of its command the relevant instructions for the various offensive operations,⁹⁷ it became indispensable for

political and military talks to be started at top level—the more so as the ever increasing volume of provisions and material arriving in northern Finland, as well as the stockpiling of supplies and the assembly of the formations, demanded close co-operation with Finnish authorities. The Wehrmacht commander (WB) Norway urgently called for such co-operation:

So that we can move beyond the *non-committal* preliminary military talks that have taken place already and arrive at an urgently needed binding military arrangement with Finland, the political prerequisites will first have to be created by a binding treaty with Finland. Moreover, the operational tasks assigned to the Finnish armed forces *overall* need to be precisely formulated. Not until these preconditions are met can genuinely useful negotiations begin within the scope of WB's duties and produce results. Such talks must open early enough for their outcome to be utilized in good time for the conclusion of preparations in northern and central Finland.⁹⁸

Although Hitler had expressly—'for political reasons'—reserved for himself the approval of further talks with Helsinki, Colonel-General von Falkenhausen repeatedly requested an early decision on when he could expect the conclusion of preliminary political matters with Finland, as important preliminary work and preparations could only be put in effect 'once close military co-operation with Finland has been made possible by a binding political treaty'.⁹⁹

After Hitler had once more postponed the negotiations with the Finnish government and the Finnish high command, originally scheduled for the middle of May 1941, the Wehrmacht High Command on 28 April 1941 eventually confirmed that Hitler, having now fixed the date of Barbarossa for 22 June, had at the same time authorized preparations for official talks with the Finns.¹⁰⁰ Hitler's directive of 1 May 1941 definitively laid down the opening of political talks with the states earmarked for participation in the war—whereby Finland was to be notified before Hungary and Romania—as well as of ensuing military consultations between the German army commands and Finnish headquarters.¹⁰¹ However, Hitler's intention, on grounds of security, to discuss participation in Barbarossa by the pro-German states under the guise of defensive measures to cover a presumed impending large-scale Ger-

man operation in the west (Sea Lion) made it clear from the outset that he did not propose to comply with the wishes of the various commands for properly negotiated treaties with the envisaged participants on their functions in Barbarossa. Hitler was not prepared to subject the military and political decisions he had already made to any discussion within the framework of treaty negotiations. It was clear that, from the very start, he was laying claim to conducting 'his' war against the Soviet Union untrammelled by the possible wishes of his allies.

Hitler's conditions for co-operation with his allies emerge also from his directive of 3 April 1941 for the Balkan campaign. That directive made it clear that the military tasks assigned to participating forces derived from his, Hitler's, political war aims, and that he reserved for himself the unified leadership also in matters of military operations.¹⁰² Even before the beginning of Barbarossa, Hitler in a discussion with General Antonescu made it clear that this principle applied also to the war against the Soviet Union: 'An operation ranging from the Arctic Ocean to the Black Sea requires unified central guidance. That, naturally, is in our hands.'¹⁰³ The forthcoming talks with the pro-German states could not therefore be concerned with a carefully harmonized conduct of a coalition war or with consideration of each participant's interests and war aims. Such a procedure was in line with the intentions of the political leadership: there was no question of conceding special interests to the other governments.

Halder and Brauchitsch also criticized the fact that, despite Hitler's directive of 1 May 1941, Army High Command responsibility for the negotiations on the military operations out of northern and south-east Finland continued to be ill-defined, that the Wehrmacht High Command was too anxious to keep the whole of the action in Finland in its own hands, that in consequence the schedule for Barbarossa could not be kept with regard to Finland, and that solution of the 'Finland problem' was not therefore making any headway.¹⁰⁴ Considering the fact that, ever since August 1940, the Army High Command had been viewing the plans for a large-scale offensive mounted from Finland with disapproval and scepticism, and had been anxious to avoid a frittering away of German offensive strength among too many points of main effort, it is hardly surprising that Colonel-General Halder also refused to make additional forces available for supporting a Finnish attack on Hanko or for a surprise strike against the White Sea Canal.¹⁰⁵ There was fierce criticism of the splitting-up of forces called for by the present operations plan and of the failure to form a clear point of main effort for the proposed capture of

Leningrad and for co-operation between Army Group North and the German and Finnish forces operating north of it with a view to staging a far-ranging envelopment of the entire Soviet northern front. It seemed illogical that, on the one hand, major forces were being employed against Murmansk and the Murmansk railway, while on the other General Jodl of the Wehrmacht operations staff should declare that the only attainable objective was 'the safeguarding of the Petsamo region; anything more will be a gift'.¹⁰⁶ Even before the crucial discussions were opened with representatives of the Finnish armed forces, Halder made the highly critical observation that Army High Command utterly rejected any wide-ranging offensive warfare launched from Scandinavia on the northern wing: 'The whole undertaking is an expedition, not an operation. It is a shame to waste the men allocated for this purpose.'¹⁰⁷ This point of view was the more justified as Army High Command's reserves for the proposed eccentric advance on the eastern front were in very short supply; whatever forces were at all available should have been made ready for the decisive operation.

Official political and military contacts between Germany and Finland were inaugurated on 20 May 1941 with a call by Minister Schnurre on President Ryti. As Hitler's personal emissary, Schnurre—whose true reason for making the trip was being kept from the press—was instructed to inform the Finnish government about Molotov's demands in November and about the likelihood of an imminent war with the Soviet Union. He was also to convey an invitation for a military delegation to be sent to Germany with a view to co-ordinating proposed measures. Schnurre confirmed German support for Finland and assured the Finnish president that Hitler would regard a Soviet attack on Finland as a *casus belli*. However, no formal treaty between the two countries, as suggested by the German command authorities, was yet concluded, nor was there any information on, or harmonization of, the two parties' war aims.

Ryti and those members of his cabinet whom he had informed approved the proposal for joint military talks, and negotiations between the German high commands and a Finnish military delegation under the chief of the Finnish general staff, Heinrichs, began on 25 May 1941. In an exchange of views with Keitel, Jodl, Halder, Wehrmacht High Command officers, the high commands of the three services, and Army HQ Norway, the members of the Finnish delegation were briefed in detail on German operational intentions and on the tasks to be assigned to the Finns.¹⁰⁸

The presentation by Wuorinen, *History of Finland*, 367, to the effect that 'the Germans did not mention

These discussions at last, in conjunction with the German troop transits and deployment moves, removed any doubts about an impending armed conflict with the Soviet Union. General Jodl deliberately referred to the participation of other states on the German side as a 'crusade against Bolshevism'. The Finns, however, initially avoided committing themselves or entering into binding agreements, for which in any case they had no full powers. As a result, a number of detailed problems remained unresolved. From the point of view of Army HQ Norway, which depended on appropriate co-operation with the Finns, the talks did not produce a satisfactory outcome.

Divergences in operational intentions emerged especially with regard to Finnish participation or support, as requested by the German side, for operations against Murmansk and Salla-Kandalaksha, and for the attack on Leningrad by means of Finnish thrusts beyond the old Finno-Soviet frontier. Whereas Jodl believed that the Finnish main front in Karelia needed only to hold the frontier defensively, as the Soviet front would 'automatically' collapse with the progressive advance of Army Group North, Halder demanded offensive action by the Finnish army at its front in the south-east.¹⁰⁹ According to the intentions of the Army High Command, co-operation with the main Finnish forces was to take place west or east of Lake Ladoga, according to the progress of operations by the German Army Group North in its attack on Leningrad after the crossing of the Dvina. Lieutenant-General Heinrichs, on the other hand, wished to engage the Finnish attack force only for limited objectives within the framework of the 'Histola offensive', i.e. for the reconquest of former Finnish sovereign territory north-west of Lake Ladoga (see Map I.vi.1).¹¹⁰ An operation east of Lake Ladoga, he believed, could only, for reasons of supplies, be conducted roughly as far as a line from Olonets to Petrozavodsk. The Finnish reservations show that the intended advance across the Svir, in particular, as part of a wide-ranging envelopment operation against Leningrad, did not meet with the agreement of the Finnish high command. This divergence in the operational concept may be seen also as a symptom of the two countries' different war aims, which had not yet been openly discussed, and of Helsinki's resultant hesitant political attitude. It also emerged that the Finnish army would only be able to assume the tasks assigned to it if it was

Operation Barbarossa', can no longer be maintained now that the minutes of the talks have been found. On the minutes of the OKW talks see *DGFPD* xii, No. 554, pp. 879-85, and teletype Col. mobilized in good time. But as Hitler, for security reasons, had been anxious to avoid a premature discovery of the German deployment, in case the Soviets took countermeasures, the Finnish mobilization and hence the beginning of operations in Finland had to be scheduled for dates after the German attack. These postponements ran down along the Finno-Soviet frontier from north to south.

There was, however, agreement on the proposed division of command in northern and southern Finland: in the north the Wehrmacht High Command was in charge through Army HQ Norway, while in the south Marshal Mannerheim was in command also of any non-Finnish contingents assigned to that front. Direct harmonization was to be ensured by a German liaison staff in the Finnish HQ. Significantly, the Finnish military delegation repeatedly pointed out that Finland urgently needed extensive German deliveries of weapons and foodstuffs for the impending war. Operations by naval forces in the Baltic, under the unified command of the German Naval Command North (General Admiral Carls), were to be 'offensive operations', such as the laying of extensive minefields and actions by motor torpedo-boats and U-boats. To make it impossible for Soviet Baltic units to exit from the Baltic, the Finnish navy was to seal them off inside the Gulf of Finland. Harmonization of plans and tactical operations by the two independently operating naval forces was to be ensured by the exchange of liaison staffs. Finnish requests for an early German—or at least joint—occupation of Åland (Ahvenanmaa in Finnish), Hanko, and Suursari, on the other hand, proved unrealizable, the more so as Hitler on 2 June expressly ruled that this was an 'exclusively Finnish affair'.¹¹¹ In the conversations it also emerged that both German and Finnish leaderships were greatly concerned about possible Soviet preventive measures during the continuing German-Finnish deployment. Hitler therefore gave instructions that the defence of northern Norway and the operations for the occupation of the Petsamo region must be instantly executable at short notice and that they were to be triggered immediately by clearly identified Soviet preventive measures.

The second stage of the military negotiations took place between 3 and 5 June 1941, when Colonel Buschenhagen from Army HQ Norway, representing the Wehrmacht High Command, and Colonel Kinzel from the Foreign Armies East Department, representing the Army High Command, along with Colonel Rössing, the military attaché in Helsinki, called on the Finnish general staff to hear their comment and answers to the German proposals. These talks in Helsinki, with the results they produced, have to be viewed as the definitive basis of military co-operation between the two countries. After their conclusion it was clear to the Army High Command that the Finnish government was prepared 'for full participation' and would tackle the tasks assigned

¹¹¹ Teletype B. No. 1 Skl. 1 Op 00803/41 op Chefs. to Group North, 3 June 1941, BA-MA OKM, Case 527/PG 32601, and teletype OKW/WFS/Abt. L (1 Op) No. 44832/41 g.Kdos. Chefs., 2 June 1941, to W.B. Norwegen, BA-MA, 20. Armee, 20844/5.

to it 'with sails set full'.¹¹² Colonel-General Halder expected a far-ranging massive participation of the Finnish army in connection with the German operations against Leningrad. A Finnish government memorandum presented to the German officers, taking up the Wehrmacht High Command wording of a 'crusade against Bolshevism', pointed out that Finland's participation and interest in the impending war against the Soviet Union were 'by no means of purely operational or military-technical character', but that Hitler's intention to have this military confrontation with Bolshevism was being seen 'as a historic token of a great era'. The crucial moment for the struggle against Finland's age-old enemy had arrived.¹¹³

The detailed arrangements envisaged the subordination of Finnish units to German command and their participation in the attack on the Murmansk railway, as well as the handing-over of Finnish airfields to the Luftwaffe. German units were to be employed on the capture of the Soviet military base of Hanko. The line from Oulo to Belomorsk was to divide the German and Finnish operations and command areas in the north and south of the country. Meanwhile the Finnish high command was willing to consider the execution of the main Finnish attack—in line with German wishes—both west and east of Lake Ladoga as far as the Svir. The Finns also agreed to carry out a phased mobilization beginning on 10 June 1941. For domestic and constitutional reasons, however, the Finnish government declined to open hostilities against the Soviet Union on its own initiative. Moscow's measures in response to the German attack would therefore have to be presented as having 'provoked [Finland] into attacking'.¹¹⁴

Despite Finland's readiness for military co-operation, Finnish political reservations about National Socialist hegemony and a new order in Europe also emerged clearly during these negotiations. Helsinki did not enter into any firm commitments which would result in Finland's automatic participation in Hitler's war against the Soviet Union. Lieutenant-General Heinrichs also regretted interference by SS agencies in the Finnish reserve army when, with official sanction from both sides, they were recruiting Finnish volunteers for the Waffen-SS. He also warned 'against any attempt to set up a kind of Quisling government; this would be bound to cut short any further collaboration between Finland and Germany'.¹¹⁵ The persisting problems and conflicts concerning proposed military and political co-operation between the two states were typically revealed by the fact that Berlin did not give Helsinki any

precise information on the planned opening of the war or about German war aims, and that Hitler, even after the military talks, clung to his instruction that the Finns were to be briefed on German operational intentions only to the degree absolutely necessary for successful local co-operation. This situation, on the other hand, made it possible for the Finnish government to claim for itself the right to its own free decision on participation in the war—even though, with numerous German troops stationed in Finland, such a claim was of a purely formal character and ‘in practice [had] long been pre-empted’.¹¹⁶

On 5 June 1941 Hitler approved the ‘Schedule for Barbarossa’ prepared by the Wehrmacht High Command; this also laid down deployment, assembly, and attack dates for the drives against Murmansk and Kandalaksha.¹¹⁷ The amended version of ‘Deployment Directive Barbarossa’ of 8 June 1941¹¹⁸ laid greater emphasis on the offensive task alongside the defensive one of protecting northern Norway. ‘If necessary’, Army HQ Norway had to execute ‘Reindeer’ even before the beginning of operations and, in co-operation with Finnish forces, protect the Petsamo nickel-mines, which were vital to German armaments. Murmansk, the enemy’s important base, was to be encircled (Operation Silberfuchs) and, once additional attacking forces had been brought up, captured. The directive further ruled that Army HQ Norway, which already came under the Wehrmacht High Command as the staff of the ‘Wehrmacht commander Norway’, was also to be ‘directly subordinated to the Wehrmacht High Command’ for the operations envisaged under Barbarossa. In the final version of the deployment directive the plan for two Finnish directions of attack ‘on both sides of Lake Ladoga’ had been abandoned; now, in synchronization with the crossing of the Dvina by Army Group North, only one Finnish attack was laid down ‘in accordance with the demands of the Army High Command with its point of main effort *either east or west of Lake Ladoga*, as far towards the east as possible’ for wide-ranging co-operation across the Svir.

While the talks in Helsinki were still going on, extensive German transports, under the code-name ‘Blue Fox’, were shipped across the Baltic to the northern Finnish ports on the Gulf of Bothnia. For camouflage reasons these were officially described as relief moves within the transit agreements for the troops stationed in northern Norway; in fact they were a transfer of corps troops of Higher Command XXXVI and 169th Infantry Division with roughly 32,000 men by sea from Germany and Norway, as well as of the SS Combat Group North with about 8,000 men by land to northern Finland.¹¹⁹ Special

agreements concerning the by then large number of German troops stationed in Finland were concluded between the Wehrmacht High Command and the Finnish high command on 10 July 1941. These regulated administrative matters and granted the German troops special extraterritorial rights.¹²⁰ After 10 June 1941 the Finnish government reinforced its frontier troops. On 11 June 1941 the 'Command Post Fihland' was set up as a forward German command authority of Army HQ Norway near Rovaniemi. Infantry General Waldemar Erfurth of the Army High Command arrived in Helsinki as the newly appointed 'Commander of Liaison Staff North'. Only then were the Finnish cabinet and parliament informed by President Ryti of impending co-operation with the Third Reich. The arrangements concluded with the German authorities and the mobilization dates agreed with them were now explicitly approved. But before ordering general total mobilization, the Finnish government demanded a binding assurance from Berlin that the intended armed conflict with the Soviet Union would actually materialize. It may be assumed that a Tass report from Moscow on 14 June 1941, discounting all rumours of war, had irritated the Finnish government. On the strength of a personal authorization by Hitler, Colonel Buschenhagen on 16 June confirmed in Helsinki that the outbreak of war could be confidently expected. After this, Helsinki ordered general mobilization.¹²¹

Colonel-General von Falkenhorst was one of the military leaders present at Hitler's great 'Führer conference' on 14 June 1941, when Hitler once more rehearsed the prehistory, reasons, and execution of his war against the Soviet Union, trying to attune his listeners to the imminent opening of the war in the east. On 15 June 1941 the Finnish III Corps and the security group in Petsamo were directly subordinated to Army HQ Norway. Several advance elements of Mountain Corps Norway had already been pushed forward into the Petsamo region. In consequence, the whole of northern Finland was now under the command of Colonel-General von Falkenhorst, while in the south Marshal Mannerheim took over command of roughly 16 divisions with some 200,000 men.¹²² The Finnish supreme commander, moreover, was given command

over the German units promised him on the opening of hostilities, for the attack on the Soviet naval base of Hanko. The Finnish air forces, also under Mannerheim's command, consisted of 307 front-line aircraft, of which 243 were operational (see Diagram I.vi.1).¹²³ Air Fleet 5 under Colonel-General Jergen Stumpf, responsible for German air warfare in Scandinavia, Denmark, and northern Finland, had as its main task the aerial defence and protection of the Norwegian region north of the Arctic Circle, with the forces of the 'Luftwaffe General for Northern Norway', as well as support for operations 'Reindeer' and 'Silver Fox', to be conducted by Army HQ Norway in northern Finland and northern Russia.¹²⁴ In addition it was to fly strategic missions against the port installations of Murmansk and Kandalaksha, the Murmansk railway, and the White Sea Canal. For the discharge of these tasks, some of which had been assigned to the Luftwaffe as requirements of the navy, an 'operational group, special duties' had been set up in mid-June 1941 under the 'Air Leader Kirkenes', Lieutenant-Colonel (General Staff) Andreas Nielsen, as a forward command post of Air Fleet 5 in Kirkenes. By comparison with the Soviet 1st Air Division facing him (its HQ staff in Kandalaksha), with its 5-6 air regiments (about 145 aircraft, of which some 80 were bombers), the 'Operations Staff Nielsen' with its total of 80-90 operational aircraft had rather scant forces available for its extensive list of tasks.¹²⁵

Shortly afterwards Major-General Walter Lorenz and Rear-Admiral Reimar von Bonin were appointed chiefs of specific liaison staffs of the Luftwaffe and

results from *Suomen Sota 1941-1945*, i. 352, where all mobilized fighting forces, territorial, frontier-guard, and other auxiliary troops under the Finnish defence ministry were included in the calculation.

¹²³ Of the 243 operational aircraft 186 were fighters, 26 bombers, and 31 reconnaissance, liaison, and transport machines. According to a report by the German air attaché, in June 1941 the Finnish air force comprised 181 operational aircraft, of which 132 were fighters, 21 bombers, and 28 reconnaissance planes: see telegram No. 444, Blücher to foreign ministry, 16 July 1941, PA, Dt.Ges. Helsinki, Berichte 251-550, 1941. Ploetz, *Kriegsmittel*, 333, reports 222 aircraft; according to *Deutschland im zweiten Weltkrieg*, i. 566, the number was 225.

navy respectively; they ranked equal with General Erfurth's liaison staff, who, strictly speaking, were responsible for the overall co-ordination of German-Finnish operations in the far north. As, in addition, the German military attaché at the Helsinki legation had been charged with various tasks relating to the stationing and employment of German troops in Finland, there was from the outset no clear delineation of responsibilities in the area of co-operation with the Finnish high command—a situation aggravated by the fact that Marshal Mannerheim had dispatched General Harald Oehquist to Germany as his own liaison officer with the Wehrmacht and the Army High Commands.¹²⁶

It was not possible to keep the German deployment movements or the Finnish mobilization measures entirely secret. Just like the US embassy and the Swedish and British governments, so the Soviet leadership was aware of the troop concentrations in Finland. Although Helsinki replied evasively to Soviet enquiries about the reason for the mobilization of Finland's armed forces, Stalin clung to his foreign-policy line.¹²⁷ It was this formally correct behaviour of the Soviet Union that seemed to make it difficult for Marshal Mannerheim to find a suitable *casus belli*. The Finnish intelligence service was unable to discover inside the Soviet Union any major responses or reactions to the German and Finnish preparations for attack. Despite a preliminary alert, there were no identifiable indications that the Soviet armed forces or the troops along the Finnish frontier—which had been reinforced since the summer of 1940—were prepared for an imminent German-Finnish attack. Instead, Moscow's Baltic Fleet withdrew to Leningrad and maintained passive positions, with the result that German mine-laying units, some of which had been stationed in Finnish ports since 18 June, were able without any interference, even before the beginning of the war, to lay the minefields not only for the 'Wartburg' barrages in the Baltic between the island of Saaremaa (Ösel) and the coast at Liepaja but also in the Gulf of Finland. Not until 21 June 1941 was the Red Banner Baltic Fleet put on immediate alert; during the night of 21–2 June German mine-laying vessels in the Gulf of Finland came under fire.¹²⁸ It seems doubtful, therefore, that the Soviet government had identified

¹²⁶ On the establishment of a liaison staff see personal papers of Gen. Erfurth, Tagebuch, i. 14 ff., BA-MA N 257/1; Halder, *Diaries*, 822 (7 Mar. 1941), 939 (27 May 1941), 947–8 (6 June 1941), 960–1 (20 June 1941); OKH/GenStdH/Org.Abt. (II) No. 1450/41 g.Kdos. the full scale of the Finnish mobilization measures or interpreted them correctly in conjunction with other warnings of an attack by Hitler. It certainly became obvious at the Finno-Soviet frontier that the deployment of German and Finnish troops could not be viewed as a reaction to an allegedly impending Soviet coup against Finland. Here too the National Socialist thesis of a pre-emptive strike against an alleged Bolshevik deployment for war was proved not to agree with the facts.

Right up to the beginning of Barbarossa the Finnish government insisted that the Soviet Union should bear the 'odium of aggressor'. It was therefore careful to avoid taking the first step before Hitler, and indeed would not even more simultaneously with the German main attack. It was important to it to create the impression, before its own public and parliament, that it was being dragged into the war by Soviet offensive actions. As a result, a special situation arose in that Finland on 22 June 1941 did not take part in the attack on the Soviet Union, though it made its territory fully available to the German army, navy, and air force, and indeed had already placed its own troops in northern Finland under German command. Thus, on 22 June 1941 the Mountain Corps Norway was able to move into the Petsamo area according to plan and to deploy for its operation against Murmansk. With Helsinki's approval, reconnaissance and offensive missions against Soviet targets in the Murmansk area were flown by the German Air Fleet 5 from Finnish airfields or were carried out by overflying Finnish territory. Finnish units simultaneously occupied the until then demilitarized Åland Islands, and the Finnish government continued its mobilization measures as agreed with Germany.

In spite of these measures, on the day of the German attack against the Soviet Union Helsinki issued a declaration of neutrality.¹²⁹ The value and truthfulness of that 'neutrality' were, however, revealed in Hitler's public 'proclamation to the German people' and his order of the day to the 'soldiers of the eastern front' of 22 June 1941, when he stated that German soldiers 'in alliance with Finnish divisions' were standing along the shores of the Arctic Ocean and in Finland, so as to jointly protect that country.¹³⁰ In order to weaken the impression of being an 'ally on Hitler's side' and to correct the idea that, with the German attack, Finland automatically entered the war against the Soviet Union, the Finnish government instructed its diplomatic representatives to explain that it would remain neutral in this new war as long as possible. President Ryti was gratified to receive Hitler's official message regarding the validity and confirmation of the German-Finnish agreements concluded by the military commands of both countries.¹³¹ There was a variety of tactical reasons for Finland's 'neutrality phase'. But when, despite Hel-

¹³⁰ See Hitler's 'Proclamation to the German People' in Domarus, *Hitler*, ii. 1726ff., and Hitler's order of the day to the 'soldiers of the eastern front', 22 June 1941, BA-MA RH 22/4, published in *Unternehmen Barbarossa*, 319ff.

¹³¹ See Hitler's letter to Ryti; 23 June 1941, published in Ueberschär, *Hitler und Finnland*, 387-8.

sinki's protests, Soviet artillery and air-force units from 22 June onwards repeatedly struck at Finnish cities, coastal shipping, and other military targets, the 'hoped-for offensive action by the Russians' had now taken place and on 25 June 1941 Premier Rangell was able to make a government statement in parliament to the effect that these military actions had compelled Finland to declare war on the Soviet Union.¹³² The Finnish parliament thereupon unanimously passed a declaration to the effect that Finland had been subjected to attack by the Soviet Union and in consequence had begun 'to defend itself with all military means at its disposal'.¹³³

Ever since the summer of 1940 Hitler had counted on Finland's participation in his plans for a war against the Soviet Union. Military co-operation between Berlin and Helsinki had now been achieved, and the Finnish government must have gained a fairly good idea of Hitler's intentions. It could scarcely be in any doubt about the ultimate objective of the planned operations.¹³⁴ The Finnish high command, in consequence, allowed it to be understood, even before the country entered the war, that Finland was ready for the struggle 'without attaching any conditions to its alignment with Germany'.¹³⁵ This was reflected also in Helsinki's willing agreement in the spring of 1941 to the raising of a Finnish volunteer battalion of about 1,200 men for the Waffen-SS.¹³⁶ The bilateral relations developing under the aspect of a German-Finnish *rapprochement* and Finland's enlistment as a military and economic partner against the Soviet Union were unmistakably marked by the political, economic, and military preparations for Barbarossa. Not only were they closely linked with Hitler's axiomatic determination to go to war with the Soviet Union, but they also reflected the absolute dominance of the strategic and military component in German policy *vis-à-vis* Scandinavia and Finland. Co-operation between Germany and Finland was almost exclusively based on military motivations, seeing that Finnish territory was acquiring prime strategic significance in Hitler's war plans. For the German navy's freedom of action, for the Third Reich's foreign trade across the Baltic, and for seaborne supplies for the German advance in the Baltic region it was of vital importance that Finland should be on the German side and that its coast should not serve as a springboard for operations by Germany's opponents.

On the other hand, it is doubtful whether German plans for operations against Murmansk and the Murmansk railway really deserved the importance attached to them by Hitler and the command authorities involved. Hitler

expected the capture of Murmansk to produce decisive effects on the Soviet conduct of the war, whereas the Army General Staff, on the grounds that climatic and geographical conditions would not allow the employment and provisioning of major motorized forces, rejected the employment of several large formations in that 'unimportant secondary theatre of war' on the coast of the Arctic Ocean as a frittering away of its forces. Its view, however, did not prevail. There was unanimous approval of the employment of the Finnish army along Lake Ladoga as a measure in support of the planned attack on Leningrad.

German economic and financial assistance to Finland, had from an early date served the development of the country's armaments industry as well as the enhancement of the infrastructure of northern Finland as a deployment and supply base for the planned attack against northern Russia. The fact that, despite Finnish hopes of a break-up or gradual dissolution of the German-Soviet alliance, there was no formally based alliance between Berlin and Helsinki clearly reveals the divergent political and military war aims of the two 'brothers-in-arms'. Hitler was not interested in a coalition war in which Finland would be an equal partner; this might have diluted the ideological concept of 'his' war against the Soviet Union. There was no jointly developed strategy in the preparatory phase, nor an institutionalized unified command over the two countries' forces, even though mixed units did go into action.¹³⁷

This circumstance enabled the Finnish government, despite its involvement in Hitler's ideological war of annihilation against the Soviet Union, to choose the moment of its own entry into the war and to declare the war itself to be a 'continuation' of the Winter War of 1939-40, separate from the struggle of the great powers. The resulting 'community of military action' between Berlin and Helsinki was based not on sympathy for Hitler or his 'programme' of conquering living-space in the east, or indeed for the National Socialist regime in Germany. It should be viewed instead as an attempt by the Finnish government, at a moment of German supremacy in Europe, not to be left behind by Hitler's new order in Europe, to regain, as a limited objective, the territories ceded to the Soviet Union under the Moscow peace treaty, and, possibly, to win adjacent parts of eastern Karelia by attaching them to their neighbouring province. For Finland the war was no ideological struggle for the physical destruction of a 'Jewish-Bolshevik leading stratum' or for the smashing and extinction of the USSR as a state for the purpose of gaining ownerless colonial territory. Hitler's war in the east was misunderstood in Finland both as a 'normal' power-political process and as a 'crusade' of the European nations from the Arctic Ocean to the Black Sea 'against Stalinist Bolshevism'; it was not seen as a racially motivated war of annihilation. This misreading, as well as a lack of information, prevented the Finnish government from compre-

¹³⁷ On this set of problems see Ueberschär, 'Guerre de coalition', 27 ff.; id., 'Koalitionskriegsführung im Zweiten Weltkrieg', 355 ff.

hending the complete 'otherness', the racial-ideological core, and the programmatic ultimate goal of Hitler's war of conquest and annihilation at an early stage.¹³⁸ In consequence, no attempt was made by Helsinki at the beginning of the 'brotherhood-in-arms' to exert any mitigating or corrective influence on Hitler's 'struggle of two ideologies'. In spite of Finland's special importance as a strategic partner in Germany's operations plans, the Finnish government, because of the military and economic ratio of power, was far too weak to declare its own attitude to Hitler's ideological struggle to any effect. That was why Army HQ North's command post in Rovaniemi passed on Hitler's 'criminal orders' for the war in the east¹³⁹ to the formations and units under its command. Both Hitler's 'Decree on the Practice of War Jurisdiction in the Barbarossa Territory and on Special Measures by the Troops' of 13 May 1941 and his 'Guidelines for the Treatment of Political Commissars' of 6 June 1941, known as the 'commissar order', were passed down and discussed during the final few days before the beginning of the war. As for the treatment of political commissars in the Soviet forces, the relevant instructions and elucidations were, in accordance with orders, passed on only by word of mouth.¹⁴⁰ On 17 June, in addition, the 'Guidelines for the Behaviour of the Forces in Russia', available since the middle of May, were passed on by Army HQ Norway to its subordinate units for notification to the troops.¹⁴¹ Simultaneously an 'Information Leaflet: Warning against Insidious Soviet Warfare', produced by Army HQ Norway itself, was distributed among relevant commands and units.¹⁴²

At a conference at the Berghof on 5 June 1941 Hitler thought it necessary for the Wehrmacht High Command to have that kind of leaflet prepared in order to draw the attention of the German troops to all eventualities of insidious warfare by the Red Army.¹⁴³ From the outset, and without quoting any such experience, the leaflet of Army HQ Norway made the following generalization about the conduct of the war by Soviet troops: 'The Russian . . . [is capable of] any sadistic bestiality.' It continued:

¹⁴³ Report on the conference at the Berghof on 5 June 1941, appendix to No. 165/41 g.Kdos. ObdH, 9 June 1941, BA-MA H 3/1.

In contrast to the chivalrous warfare in Norway, every officer and soldier of the Wehrmacht, in the war against Russia, must be prepared for the most insidious, mendacious, and unchivalrous methods of Soviet warfare. The enemy will use unscrupulously any means of deception, cunning, and propaganda; nor will he shrink from criminal actions.

The instruction leaflet, which bore the signature of Colonel-General von Falkenhorst, referred to the possible 'use of chemical and bacteriological weapons', as well as to 'ambushes and tricks'; the forces were therefore enjoined to 'watch out in particular for priests, commissars, and Jews'.

Although military co-operation was in the interest of both countries, there were, at the beginning of the joint war against the Soviet Union, considerable differences of interest; these had not been ironed out by the numerous visits, military discussions, or agreements. Expecting a quick victory for the German arms and the conclusion of the war by the autumn of 1941, the Finnish government undertook the risk of war on the side of the Third Reich, although the country's economy, in terms of both materials and food supplies, was unprepared for a major or prolonged war. The fact that German supplies certainly provided momentary relief for the Finnish food situation cannot obscure the fact that in a number of important sectors of the war economy and armaments industry Finland could not be an equal partner but would continue to be dependent on German deliveries.¹⁴⁴ In this respect too the thesis of Finland's separate war had its limitations.

5. SWEDEN'S POSITION DURING THE PREPARATORY PHASE OF THE WAR AGAINST THE SOVIET UNION

The importance of neutral Sweden to the Third Reich was for a long time viewed too much in terms of Swedish iron-ore deliveries for the German armaments industry and war economy. Not only later historians, but broad circles of the international press, diplomacy, business, and the war economy of the day almost exclusively assessed German-Swedish relations by Swedish iron-ore exports.¹⁴⁵ Since then, historical research has been increasingly focused on general trade relations between Stockholm and Berlin, and on the political concepts of Sweden's and Finland's long-term inclusion in a German-controlled 'large-scale economic sphere', as well as on Sweden's position during the preparations for and the execution of Operation Barbarossa.¹⁴⁶

¹⁴⁴ See e.g. *DGFP* D xii, No. 250, pp. 433 ff.

¹⁴⁵ On the importance and assessment of Swedish ore deliveries and on the controversy formulated by A. S. Milward, 'Could Sweden Have Stopped the Second World War?', see the data in Fritz, *German Steel*; Milward, *Zweiter Weltkrieg*, 332-5; Wilhelmus, 'Die Bedeutung des schwedischen Eisenerzes'; *Germany and the Second World War*, II, 185-90. On the other side, more extensively, Wittmann, *Schwedens Wirtschaftsbeziehungen*.

¹⁴⁶ See e.g. Carlgren, *Swedish Foreign Policy*; Wittmann, 'Deutsch-schwedische Wirtschaftsbeziehungen'; Björkman, *Sverige inför Operation Barbarossa*; see the contributions by Sten Carlsson, Carl-Axel Wangel, Martin Fritz, Ulf Brandell, Wilhelm Carlgren, Bengt Åkerén, Sven Wäsström, and Åke Thulstrup in the collective volume *Schwedische und schweizerische Neutralität*.

At the outbreak of war in September 1939 Sweden was economically strong and politically united. After the general depression and from the time when the Social Democrat government under Per Albin Hansson came to power in the autumn of 1932, Swedish business and industry had been marked by a continual improvement of performance.¹⁴⁷ By means of a new economic programme, by financial expansion, and by support from the public purse a considerable economic upswing had been inaugurated after 1933. Rationalization and state support had similarly led to an increase in agricultural production, so that Sweden at the beginning of the war was largely self-sufficient in the agricultural sector. The drop in unemployment had strengthened the domestic position of the Social Democrats, who only just failed to win an absolute majority in the parliamentary elections in the autumn of 1936. Under the coalition government formed at that time by Premier Hansson, consisting of Social Democrats and the Peasant League, the policy of reforms was steadily continued. National Socialist groupings and tendencies were of no importance in Swedish domestic politics. The 'Nordic Idea', pushed by Third Reich propaganda, scarcely met with an echo in Sweden; if anything it resulted in an occasional strain on relations with Berlin. The Swedish press in particular voiced extreme criticism and dislike of the ideas of a 'Nordic community of destiny' under German leadership, as championed by Alfred Rosenberg and the 'Nordic Society', just as it did with regard to the National Socialist treatment of the Jews. Hitler's march into Austria led the Social Democrat government to abandon its previous opposition to major rearmament efforts and expenditure, and instead to approve a strengthening of Sweden's defences. This made it possible to embark on a modernization of the Swedish armed forces. Despite divergent party-political opinions, there had been until 1939 a domestic equilibrium in the social, political, and cultural spheres. The Swedish public therefore stood firmly united behind its government's neutral attitude in foreign politics.

As a reflection of its carefully balanced neutrality in foreign and trade policy, Sweden on 7 December and 22 December 1939 had signed new wartime trade agreements with both Britain and Germany.¹⁴⁸ Even after the Soviet attack on Finland it was the consistent aim of the Swedish government under Premier Hansson, despite various actions in support of Finland, not to be drawn into the war against the Soviet Union. In order to buttress that policy by a solid parliamentary majority, the existing coalition government of Social Democrats and Peasant League was broadened in December 1939 into a 'government of national cohesion' under Premier Hansson; this also included representatives of the right wing and of the liberal People's Party. Foreign Minister Rickard Sandler, who after the outbreak of the Finno-Soviet Winter War called for

intervention on Finland's side, was replaced by the diplomat Christian Günther. The new Hansson government was thus able to rely on a massive parliamentary majority. The Swedish government was not prepared to make the country available, as a kind of operational base, for an intended intervention by the Western powers in support of Finland. It repeatedly declined to grant London or Paris permission for the transit of their intervention troops.

With the German operation *Weserübung* Scandinavia found itself directly involved in the military operations of the belligerent great powers; however, Sweden still refused to take any risks and insisted on remaining aloof from the war. At the same time Sweden, after the German occupation of Denmark and Norway, was no more able than Finland had been to prevent herself from coming under increasing military and economic pressure from Germany. This resulted in a gradual reorientation of Sweden through foreign-policy and trade concessions in favour of Berlin. By the middle of April 1940 the Swedish government deviated from valid rules of neutrality by permitting the German Wehrmacht a 'humanitarian' transit of foodstuffs, medical items, and army medical-corps personnel across Swedish territory to the German troops fighting in northern Norway.¹⁴⁹ The conclusion of the fighting for Narvik and the withdrawal of the Western powers from Norway drastically changed Sweden's situation: while invariably emphasizing the country's observance of 'strictest neutrality' as well as its determination to repel any violation of its frontiers, as King Gustav V Adolf formulated it in his letter to Hitler,¹⁵⁰ Sweden was increasingly ready to comply with German demands. This tendency became even more marked after Hitler's victory over France and Germany's resulting hegemony in Europe. In his conversation with the Swedish Vice-Admiral Fabian Tamm on 16 April 1940 Hitler had made it clear that he expected Sweden, even without direct German occupation, to grow progressively into the German sphere of power, the more so as Sweden and the Reich would complement one another as 'natural business partners' within the framework of his concept of a closed economic system of 'the Baltic as a free inland sea'.¹⁵¹ There were in fact times when Sweden's trade with Germany accounted for 80 per cent of the former's total foreign trade. The idea of Sweden as a neutral country, but one subjected to German influences and controls due to the military situation, eventually led Berlin to demand from Stockholm its consent to the transit of German troops and war material to Norway. On 8 July 1940 the Swedish government authorized these 'war' transports.¹⁵² As a kind of collateral Hitler, on the recommendation of the

foreign ministry, authorized the renewal of German deliveries of war material to Sweden; these had been suspended in April 1940 as part of Operation Weserübung and as a means of political pressure to support German transit demands.¹⁵³

The agreements of 8 July 1940 became the contractual basis for continuous Wehrmacht traffic across Sweden, consisting of troops in transit and servicemen going on or returning from leave, which lasted until 1943. Because of their direct effect on the regime of German occupation in neighbouring Norway they soon became a controversial issue in Swedish public opinion.¹⁵⁴

When it became known in Sweden that the country, along with the other states of northern Europe, was being included in German plans, drawn up in the summer of 1940, for an economic new order in Europe, as an integrated economic partner in a proposed new 'greater economic sphere',¹⁵⁵ public reaction was reserved and mistrustful. Berlin, however, remained unimpressed by the statements of Swedish government ministers or by the reservations voiced in the Swedish press about tutelage exercised by the Axis powers, who would hold a leading position in the large-scale economic sphere.¹⁵⁶ At the end of July Hitler believed that his plan for the establishment of a 'Greater Germanic Empire' which would overcome 'Germanic particularism' was meeting with sympathy in Stockholm.¹⁵⁷ Accordingly, in September 1940 he expounded to Grand Admiral Raeder his ideas on the political future of the Scandinavian countries within his expansionist and economically imperialist concept. Within a 'north Germanic community' envisaged by him, Sweden was to enjoy a certain measure of sovereignty but would otherwise be 'politically and economically most closely tied to Germany'.¹⁵⁸ Proposals by German industrial groups and concerns, made within the planning work ordered by Göring for the economic and financial penetration of the Nordic countries, likewise concerned Sweden.¹⁵⁹ Despite all 'verbal approval', the Swedish government maintained its 'essential reserve' *vis-à-vis* such 'plans for a new order'.¹⁶⁰ This attitude did not change when, in a supplementary agreement of September 1940, Sweden consented to an expansion of troop transits, even though the intensified transports through the country greatly facilitated the construction, as ordered by Hitler, of defensive positions by Army HQ Nor-

way. These defences along the Norwegian coast would make it easier to repel landing attempts by the Western powers. The agreement must be viewed as a further Swedish concession to Germany.

Even though the plans for an attack on the Soviet Union, drafted since July 1940, did not envisage or consider participation by Sweden, the country's strategic importance was 'nevertheless being transformed by the military preparations for that war. Hitler therefore opposed the idea, voiced by the Helsinki and Stockholm governments during the latter part of 1940, of a political union between Finland and Sweden. Such ideas ran counter not only to his intention to win Finland over as an independent, active partner in his eastern war, but also to his own conception of a 'new order' for northern Europe.¹⁶¹ The German-Swedish economic agreements on trade exchanges and payments, with their new Swedish concessions, show that Berlin was using the position it had recently gained in Europe and especially in the Baltic Sea as a lever for obtaining appropriate compliance from Stockholm within the concept of the advertised 'community of destiny on the Baltic'. More ambitious economic projects, however—such as the development of an aircraft-engine industry working directly for German armaments—were not realized; Swedish industry declined to be degraded to the status of a mere subcontractor for Germany.¹⁶²

At the 'Führer conference' on 5 December 1940, when the operations plans prepared by the Army High Command were presented to Hitler, and again on 7 December in the conversations between Colonel-General Halder and Colonel-General von Falkenhorst of Army HQ Norway, in charge of directing operations in northern Finland, it became clear that part of the extensive deployment of the units to be launched against the USSR from Finnish territory would have to be effected through Sweden, even though direct participation by Sweden was not envisaged.¹⁶³ At the same time the question was being considered in the Army High Command whether Sweden might not make 3–5 divisions of its own army available as 'assistance to Finland' in the event of Barbarossa.¹⁶⁴ In Directive No. 21 of 18 December (the Barbarossa directive) the Wehrmacht High Command pointed out that the possibility had to be taken into account that Sweden's transport network would be available for the deployment of the German northern group not later than at the opening of operations,¹⁶⁵ although there had never been any negotiations on this with the Swedish government. Likewise, without any contact with Stockholm the Wehrmacht leaders blithely included in the directive a major opera-

tion mounted from Finland against the Soviet Union, although this had to be made expressly dependent on Sweden's willingness to authorize rail transports across its territory.¹⁶⁶ In its 'Deployment Directive Barbarossa' of 31 January the Army High Command pointed out, with some reserve, that it could 'in any case' be expected 'that Sweden [would] itself [ensure] the protection of its own north-eastern frontier with adequate forces'.¹⁶⁷ Active participation in the operations was not envisaged. Army HQ Norway, on the other hand, which was responsible for operations against northern Russia, had in mind a greater measure of involvement of Sweden,¹⁶⁸ causing Halder, at the 'Führer conference' on 3 February 1941, to put the question: 'Is Sweden to be involved?'¹⁶⁹ It was typical of Hitler's plans and his attitude towards states which might become his allies against the Soviet Union that he should now assume, without ever having negotiated with Helsinki or Stockholm, that he could rob Finland of the Åland Islands in order to give them to Sweden as its price and reward for participation in Barbarossa.¹⁷⁰ For the time being, therefore, Sweden, Finland, Hungary, Romania, and Slovakia were included in Wehrmacht and Army High Command considerations as countries earmarked for co-operation or direct participation.¹⁷¹

When the deployment for Barbarossa with its troop movements to northern Norway resulted in a substantial increase of troop and material transports through Sweden, the Swedish government in March 1941 pointed out that such an imbalance in the 'equivalence principle' of rail transports could lead to a total suspension of transits. Simultaneously the country's defence efforts were demonstratively intensified by new call-ups. Stockholm also refused a German request for authorization of the transit of two infantry divisions in addition to leave transports of servicemen; this, the Swedes argued, would cause 'domestic difficulties'. Any further concessions were regarded by the Swedish government as incompatible with its policy of neutrality. Germany was permitted only one seaborne transport through Swedish territorial waters northwards along the Norwegian coast.¹⁷² Simultaneously, the Swedish government again conveyed its dislike of the German plans for a 'new order' in Europe. An official comment by the Swedish foreign ministry clearly voiced Stockholm's rejection of such German power-political and economic ideas.¹⁷³

¹⁷³ See the official statement of the head of the economic division of the Swedish foreign ministry, Gunnar Häggblöf, and of the chairman of the board of the Swedish National Debt

Since the beginning of 1941 the Swedish government had received indications through intelligence channels of a potentially imminent German-Soviet conflict; it was also informed on the build-up of German forces against the Soviet Union. In the spring of 1941, therefore, it was no longer quite so scrupulous about preserving its own neutrality and was also trying to dissuade Finland from making common cause with Germany. However, the meetings of the two foreign ministers Witting and Günther in Stockholm and Helsinki in mid-March and early May 1941 did not lead to any specific political co-operation between the two countries, as Sweden clung to its neutrality and Finland to its alignment with Berlin.¹⁷⁴ At the same time, however, Witting was unable to give the Swedish foreign ministry any information on the possibility of a German-Soviet conflict.

On 17 March 1941 Hitler therefore revised his earlier assumption about Sweden's participation in the war. He now remarked: 'We cannot expect anything from Sweden because we have nothing to offer it.'¹⁷⁵ Even permission for German troops to move through Sweden into northern Norway and Finland now had to be considered in further planning as most unlikely. That left only the sea route. It was by sea, therefore, that German units and command authorities were moved to northern Finland at the beginning of June 1941. At the same time, however, the German embassy in Stockholm was reporting a growing willingness of military circles around the chief of the Swedish general staff, General Olof Thörnell, to participate in a German-Soviet conflict on the side of Berlin and Helsinki; this they considered to be in Sweden's own vital interest.¹⁷⁶ State Secretary von Weizsäcker continued likewise to be very optimistic about winning Sweden over as a partner in the war against the USSR in the event of a Soviet provocation against Finland.¹⁷⁷ Nevertheless, after March 1941 the German high commands in their further plans for military operations no longer counted on an active participation by Sweden; an attempt might, however, be made to achieve the greatest possible compliance with German wishes regarding commercial and military supply traffic through Swedish territory or territorial waters.¹⁷⁸

In view of the Swedish government's continual insistence on its neutrality and Premier Hansson's unequivocal statement that it remained the unalterable aim of Swedish government policy to keep Sweden out of the war,¹⁷⁹ occasional German reflections on whether Sweden and Finland should jointly accede to the Tripartite Pact¹⁸⁰ were pure speculations. This was revealed also when, on instructions from Hitler, Minister Schnurre, on his return trip from a briefing mission in Helsinki, called on Premier Hansson and Foreign Minister Günther in order to discover Sweden's precise attitude to the planned war against the Soviet Union. The Swedish government declined to participate in a German attack on the USSR, but was willing in principle to grant support and assistance to Germany in other areas once a military conflict with the Soviet Union had broken out.¹⁸¹ This piece of information made it possible to include in the Wehrmacht High Command's 'Timetable for Barbarossa', issued on 5 June 1941, a rail transport of German troops through Sweden after the beginning of operations. This directive therefore envisaged the rail-borne deployment across Sweden of a German division to be employed in the attack on the Soviet base of Hanko on Finland's southern coast.¹⁸² It was, however, expressly pointed out that no contact had taken place with Sweden regarding participation in the attack on the Soviet Union.

At the beginning of June transportation for the German deployment in northern Finland was very largely across the Baltic Sea; these movements were very carefully monitored by Stockholm.¹⁸³ Once 163rd Infantry Division, stationed in southern Norway, despite its inadequate equipment with weapons and artillery, had been chosen for the attack on the Soviet-leased military base of Hanko, along with the Finnish 17th Division, the operations staff of the Wehrmacht High Command began to make detailed plans for that unit's transit through Sweden. Together with other ideas about Swedish assistance and support, 'up to the limit of what was possible', these 'wishes' were submitted by Minister Schnurre to the Swedish government at the beginning of the German attack on the Soviet Union on 22 June 1941.¹⁸⁴ Emphasizing

that Germany and Finland had a new war 'forced upon them' by the putative Soviet deployment, the German leadership, while not expecting Sweden to participate, nevertheless hoped that the country, 'if only in the interest of Finland, will do everything to co-operate in the elimination of the Bolshevik armed forces threatening the Scandinavian area' and that it would moreover, with a few units of its army, participate in a war apostrophized as a 'crusade against Bolshevism'.¹⁸⁵ Meanwhile, preparations continued for the transportation and employment of 163rd Infantry Division against Hanko. The division's commanding officer, Lieutenant-General Erwin Engelbrecht, together with Infantry General Erfurth of the Liaison Staff North, had visited the Finnish general staff and the Hanko region before the war to gather information on Finnish operation plans and to reconnoitre the terrain.¹⁸⁶

Schnurre's demand at the beginning of the war for the transit of 163rd Infantry Division (the 'Engelbrecht Division') resulted in a government crisis in Stockholm. Although Foreign Minister Günther had already expressed 'definite understanding' for the German requests, Sweden's parliament and government consented only after the personal intervention of King Gustav V, who supported the German requests and threatened to abdicate if they were not met. On 25 June Sweden eventually authorized the troop transport, but with the proviso that this was a once-only arrangement.¹⁸⁷ The transfer of the German troops from southern Norway began the same day 'under the most favourable conditions imaginable and with the most amicable support of the Swedish military and railway authorities'; on 26 June 1941 the first train ran across Sweden to Finland via Tornio, and on 29 June the first elements of the division detrained in Finland at Joensuu.¹⁸⁸

The Swedish government moreover authorized supply traffic across its territory to Finland 'on any scale technically feasible'. It was further willing to deliver arms and ammunition to Finland, to grant to the German Luftwaffe courier and transport routes, as well as airfields for emergency landings, to assist the German navy by mine-barrages and other services in its war against the Soviet Union, and to channel German intelligence communications to Finland through Sweden. Germany's requests were therefore being 'met in all essential respects' and Sweden's will 'for businesslike co-operation with Germany in the military field' proved in practice.¹⁸⁹

Stockholm's new readiness to co-operate with Germany, acknowledged by Ribbentrop with satisfaction and gratitude,¹⁹⁰ was due largely to the fact that meanwhile, on 26 June 1941, Finland had entered the war against the Soviet Union on the German side. There was no doubt that the Swedish government, with its decision to authorize the transit of a German division from Norway to Finland, had reached the uttermost limit of its policy of neutrality, if indeed it had not exceeded it.¹⁹¹ But even though Sweden's numerous measures of support and assistance were deviations from its officially proclaimed neutrality, Swedish policy generally continued to be governed by a reluctance to be drawn into the war. This fundamental position was unaffected by occasionally voiced views among the Swedish officers' corps, where there was a greater inclination to participate in the German attack on the Soviet Union.¹⁹² The Swedish government, after all, had made it clear that its permission for the transit of the German division did not set a precedent for similar demands in the future.

¹⁹⁰ See Ribbentrop's telegram, *DGFP* D xiii, No. 30, p. 33.

¹⁹¹ See also the account and assessment in Björkman, *Sverige inför Operation Barbarossa*, 422 ff., 479 ff. Wittmann, *Schwedens Wirtschaftsbeziehungen*, 270 n. 46, suspects, in view of 'the intensity of German endeavours', that the demand for the transit of 163rd Inf. Div. 'was, at least in part, designed to draw Sweden over to the [German] side by making her violate her neutrality'.

VII. Operation Barbarossa as a War of Conquest and Annihilation

JÜRGEN FÖRSTER

I. PLANS AND PREPARATIONS FOR SECURING 'LIVING-SPACE'

THE 'dual face of the eastern campaign'—as a military operation and as an ideological war—is fully revealed only when, in addition to operational plans, acquisition of allies, and preparations for economic exploitation, the measures are outlined for the domination of the 'living-space' in the east and for the annihilation of 'Jewish Bolshevism'.

Reflections on securing, exploiting, and administering the conquered Soviet territories began in OKH and OKW in the summer of 1940, simultaneously with the first draft operations plans. Major-General Marcks in his study of 5 August 1940 proposed that initially a military administration should be set up in the occupied territories. Subsequently, administration of the Ukraine, the Baltic countries, and Belorussia would be transferred to 'native non-Bolshevik governments'.¹ Although on 31 July 1940 Hitler had mentioned that the Ukraine, Estonia, Latvia, Lithuania, and Belorussia were to come to Germany, he had left open the question of their juridical attachment to the Reich. Lieutenant-Colonel (General Staff) von Loßberg in his 'operations study East' of 15 September 1940 similarly envisaged for the Ukraine the establishment of a 'government' in line with German requirements, in order to facilitate security for Army Group South in its extensive rear areas.² When the Army High Command on 5 December 1940 submitted its operations plan to Hitler, he envisaged the establishment of three new political entities on Soviet territory, this time described as 'buffer states'.³ Four weeks later he told the top Wehrmacht leaders that as a result of the conquest of the 'Russian space' the Reich would become unassailable and capable 'of waging war even against continents'. That space contained 'immeasurable wealth'. Germany must dominate it economically and politically, but not incorporate it.⁴

In February 1941 Major-General Wagner, the senior Army General Staff officer in charge of 'war administration', issued instructions on military sovereignty, security, and administration in the rear areas.⁵ These envisaged a

military administration as a non-political instrument of the executive. This was not—as in western Europe in 1940—planned as a close network, because, for one thing, the ‘primitive conditions in Russia’ did not seem to make that necessary and, for another, the prerequisites in terms of staff and material were lacking. On the principle that preservation of the army’s mobility was the supreme law of warfare, security and ruthless utilization of the country were to have precedence initially over an orderly administration in the interest of the Soviet population. The main tasks, in Wagner’s view, were: securing of food-supply bases, safeguarding supplies and reinforcements, seizure and utilization of important supply assets for the forces, and relieving supplies from the Reich, as well as the guarding, putting to work, and rearward transportation of prisoners of war. In addition, German forces would have to be quick in ensuring control of the ‘assets of the country for the strengthening of the German war economy’.

The decisive planning phase began when on 3 March 1941 Hitler returned the OKW draft of ‘Guidelines in special fields concerning Directive No. 21’, instructing General of Artillery Jodl, chief of the Wehrmacht operations staff, to revise it:

The impending campaign is more than a clash of arms; it also entails a struggle between two ideologies. To conclude this war it is not enough, given the vastness of the space, to defeat the enemy’s forces. The entire territory must be dissolved into states with their own governments. Any revolution of major dimensions creates facts which can no longer be expunged. The socialist idea . . . alone can form the domestic basis for the creation of new states and governments. The Jewish-Bolshevik intelligentsia, as the oppressor in the past, must be liquidated. . . . Our task is to set up, as soon as possible, and with a minimum of military force, socialist state structures which are dependent on us. These tasks are so complex that one cannot expect the army to perform them.⁶

A few days earlier Hitler had remarked that what mattered in the war against the Soviet Union was ‘first of all to quickly finish off the Bolshevik leaders’.⁷

In unambiguously defining his target as ‘Jewish Bolshevism’ Hitler not only proceeded from his dogma, but he also saw the ‘Jewish-Bolshevik intelligentsia’ as the germ-cell of any resistance to a long-term German occupation of large parts of the Soviet Union. Hitler’s idea of a ‘socialist . . . republic without

allgemeinen [Behaviour of the population generally] (OKH/GenStdH/GenQu/Ib/Qu 2 No. 098/40, 3 Apr. 1940), BA-MA RH 3/v. 132, and OKH/GenStdH/GenQu 1/II No. I/059/41, 10 Feb. 1941, BA-MA RH 2/v. 427. See Müller, ‘Kriegsrecht’, 139 ff., Nos. 2, 3.

⁶ *KTB OKW* i. 341 (3 Mar. 1941). Hitler was not the only one to equate Jewry with Bolshevism. As early as the summer of 1918 Maj. Karl Freiherr von Bothmer, the Supreme Army Command’s plenipotentiary in Moscow, identified the Bolsheviks with a ‘gang of Jews’ and wished ‘to see a few hundred of those Jewish louts, next to one another . . . hanging on the Kremlin wall. If possible in such a way that death takes place slowly, in order to heighten the effect’ (quoted according to Baumgart, *Ostpolitik*, 221 n. 45).

⁷ Minute by Inf. Gen. Thomas on his report to Göring, 26 Feb. 1941, g.Kdos., BA-MA RW 19/185.

Stalin' was no doubt that of a Greater Germanic empire in Europe—as it emerged a few months later—an egalitarian 'people's community' under NSDAP rule. Hitler did not wish to see either Russian *émigrés* or Communists play any part in this. The disenfranchised and decimated Slav masses were to eke out the existence of helots.⁸

In accordance with Hitler's directives Jodl instructed his staff on how the draft for the organization of an administration in the occupied territories of the Soviet Union was to be amended: although the army needed a theatre of operations, this should be limited in depth as far as possible. Behind it no military administration was to be set up. Instead, Reich commissars would take over in large regions to be delineated on ethnic grounds; their duty would be the swift political development of new state structures. They would be assisted by 'Wehrmacht commanders' who, for their purely military matters, would come under the commander-in-chief of the army, and in all other matters under the Wehrmacht High Command. Security in the Reich commissariats would be provided by police forces, the bulk of which would come under the Reich commissar, while the rest would remain under the 'Reich leader of the SS and chief of the German police', who would also be represented by other bodies. For the phase of military administration in the theatre of operations Jodl did not envisage any military jurisdiction, either for punishable acts by the civilian population against the Wehrmacht or for disputes of the local inhabitants with each other. 'Military courts... were to concern themselves only with judicial matters within the army.' The question of whether SS authorities should be employed also in the army's theatre of operations, alongside the army's secret field police, was to be examined in consultation with Himmler, although Jodl believed that the 'need to render all Bolshevik bigwigs and commissars instantly harmless'⁹ would be an argument in favour. Jodl allowed the Wehrmacht operations staff to make contact with the Army High Command about these questions, but regarded contacts with the ministry of the interior as unnecessary for the time being.

Hitler's directives and Jodl's instructions for the revision of the 'Guidelines in special fields concerning Directive No. 21' triggered the usual activities in the relevant departments of OKW and OKH. Military men and jurists set out to formulate the planned limitation of military jurisdiction in legally valid shape. Hitler's determination to conduct the war against the Soviet Union also as a struggle between two antagonistic ideologies did not encounter any resolute opposition in the Wehrmacht or in the army commands. The revised draft went to the high commands of the Wehrmacht services for comment as early as 5 March.¹⁰ Without having undergone any significant amendments, the 'Guidelines in special fields concerning Directive No. 21' were issued by

the Wehrmacht chief of staff on 13 March.¹¹ The occupied territory was to be separated from the army's theatre of operations as soon as military operations permitted and 'dissolved' into states with their own governments. By analogy with the three Army Groups North, Centre, and South, the establishment of three Reich commissariats (Baltic, Belorussia, and Ukraine) was initially envisaged. The political executive would be in the hands of each Reich commissar, who would receive his directives from Hitler. The task of military security, both internally and against any external threat, was assigned to a Wehrmacht commander, who would also be responsible for making use of the country in order to supply the fighting forces.¹² The OKW directives assigned to Himmler 'special tasks on the Führer's instructions' in the army's theatre of operations. These tasks, which arose 'from the final struggle between two opposing political systems', were to be performed by SS agencies independently and on their own responsibility. This represented a limitation of the executive power of the commander-in-chief of the army in the theatre of operations. There is no record of the army command having objected to these arrangements. An official of the naval command, on the other hand, commented on the transfer of those 'special tasks' to the SS with the words: 'Now that means something!'¹³ Objections on the part of the army might indeed have been expected after its unpleasant experiences with the SS in Poland; after all, in 1941 the Army High Command, in contrast to 1939, could no longer assume that it could control the activity of Himmler's agencies in the rear of the operational zone. It seems therefore that the army command viewed the SS as support for the security divisions, which it believed were too weak for the pacification of the conquered territories. As early as mid-January 1941 the operations staff had recommended the deputy chief of staff 'to take up the offer of police regiments made [at the time] by the police for the west',¹⁴ so that as few army formations as possible were lost to the actual combat operations. The operations staff had moreover envisaged the strengthening of the security forces of Army Group South by the Romanian, Hungarian, and Slovak armies, even though neither Hungary nor Slovakia was then included in Hitler's plans as a potential ally.

While the guidelines of 13 March 1941 announced the issue of special orders relating to the troops' behaviour *vis-à-vis* the Soviet population and to the tasks of Wehrmacht courts, the armed forces high command kept silent about Hitler's demand, also made on 3 March, for the annihilation of the 'Jewish-Bolshevik intelligentsia'. That was to prove of significance later on.

¹⁴ OKH/GenStdH/Op.Abt. (I/N) No. 025/40 g.Kdos. Chefs., 15 Jan. 1941, signed Gehlen, BA-MA RH 2/v. 1325.

A fortnight later Hitler repeated to the army the guidelines he had given the Wehrmacht command on the character of the war in the east. After a conference on strategic matters with Colonel-General Halder and Colonel (General Staff) Heusinger, chief of the operations department, and after a report by the deputy chief of staff for supplies, he made clear the further objectives of Barbarossa: 'The intelligentsia put in by Stalin must be exterminated. The controlling machinery of the Russian empire must be smashed... Force must be used in its most brutal form. The ideological ties holding together the Russian people are not yet strong enough and the nation would break up once the functionaries are eliminated.'¹⁵ This ideologically based assumption of Hitler's was not contradicted by the chief of the general staff, even though since the autumn of 1940 he had been aware of a contrary assessment by the German embassy in Moscow. Embassy Counsellor Gebhardt von Walther had pointed out that in a defensive war the Soviet government would not have to fear 'any kind of signs of disintegration among the population or in the army on social or national grounds'.¹⁶ No doubt Halder, Wagner, and Heusinger believed that Hitler's planned policy of extermination of parts of the civilian population did not concern the army, since its participation was not explicitly required. At least Halder and Wagner then realized, since negotiations had already begun between the army and the SS on the use of Himmler's agencies in the theatre of operations, that special commandos of the security police and the SD would hunt down so-called 'enemies of the state and the Reich' in the occupied regions of the Soviet Union. They evidently accepted the need for radical measures by those units against real and putative opponents in the rear areas. Field Marshal von Brauchitsch, addressing the top commanders of the eastern army at Zossen on 27 March 1941, drew their attention to the special character of the war against the Soviet Union. On the treatment of the enemy he declared, anticipating Hitler's speech on that subject: 'The troops have to realize that this struggle is being waged by one race against another, and proceed with the necessary harshness.'¹⁷

The OKW guidelines of 13 March, together with its earlier reflections, provided the basis for the 'Special instructions on supplies, part c' by the Generalquartiermeister of 3 April 1941.¹⁸ These also regulated the organization and security in the operations area behind the combat zone. Because of its size the 'operations area' was to be divided up. Within the *Armeegebiet* ('army area') the army group commanders were to exercise executive power and be responsible for securing and utilizing the country. The provost services em-

ployed on these tasks were to come under the 'commandant of the rearward army area'. Behind these areas, Heeresgebiete ('rearward landforces areas') were to be set up in the sectors of the army groups, where the 'commander of the rearward land forces area' would exercise military sovereignty in accordance with the directives of the commander-in-chief of the relevant army group. For the discharge of their tasks the commanders in the rearward land forces areas each had assigned to them three mopping-up divisions, to each of which one motorized battalion of uniformed police was in turn subordinated. Field or local HQs were to be set up at important supply-bases and transport centres. In addition to field gendarmerie and secret field police, however, the commander was entitled, in case of need, to draw also on the Waffen-SS and uniformed police units employed in his area for the performance of security tasks, though these came under the command of the 'senior SS and police leader'. As for the treatment of the civilian population, the Army High Command had ruled that any active or passive resistance was to be quashed with rigorous punitive measures. 'Self-assured and ruthless behaviour towards anti-German elements will prove an effective preventive means.' As for prisoners of war, other ranks were to be regarded as valuable labour to be immediately employed by the troops for their purposes. 'Willing work' was to be rewarded by adequate nourishment and good care, while rigorous measures were to be taken against 'disobedience'. The 'leadership personnel (officers, political commissars, and NCOs)', on the other hand, were to be urgently separated out and transported to the organization based in Germany established by OKW. Beyond the statement that captured field kitchens were to be left to the POW detachments, nothing was said about the feeding of prisoners. However, the OKW guidelines on prisoners of war, dated 16 June 1941, foreshadowed a special order on the subject.¹⁹ Until then the existing regulations would remain in force. These (i.e. army instruction 38/2 of 22 October 1939) ruled, in line with the stipulations of the Geneva Convention, that the rations of prisoners of war should be 'equivalent in quantity and quality to those of depot troops'. In the treatment of prisoners of war the troops, according to the directives, should proceed from the realization that Bolshevism was the mortal enemy of National Socialist Germany. In consequence, 'extreme reserve and greatest vigilance' were 'called for towards captured Red Army men. Insidious behaviour has to be expected from prisoners of war, especially those of Asiatic origin. Therefore: ruthless action at the least sign of disobedience, especially towards Bolshevik agitators. Total liquidation of any active or passive resistance!'²⁰ The OKW guidelines, however, also pointed out that the Geneva Convention of 27 July 1929 on the treatment of prisoners of war, to which the Soviet Union had not acceded, provided the basis of the treatment of prisoners

¹⁹ OKW/AWA/Abt. Kriegsgefangene No. 26/41 g.Kdos., Chefs., 16 June 1941, BA-MA RW 4/v. 578.

²⁰ Ibid.

of war. 'Leader personnel' (officers and NCOs) were to be separated out and transported back. Directives issued meanwhile on the treatment of political commissars had resulted, through quartermaster channels, in their removal from the list of categories to be transported to Germany. In the organization based in Germany the other ranks were to be sorted according to ethnic criteria. Removal of prisoners of war from the operations area was envisaged as follows: from the collecting-points at division level the prisoners were to be taken to army prisoner collecting-points, and from there to transit camps ('Dulag') in the rearward land-force areas; these camps came under the local district commandant. Only back on Reich territory and in occupied Poland were OR camps ('Stalag') and officers' camps ('Oflag') set up; these came under the prisoner-of-war department of the general Wehrmacht department in OKW. Others were to be established in the Reich commissariats. The camps in Poland, Belorussia, the Ukraine, and the Baltic countries were to be kept filled 'to the utmost limit of capacity' before transports were sent to the Reich, as the camps on Reich territory were ready to take a total of only 790,000 prisoners. Accurate registration and reports on captured Red Army men to the Wehrmacht information centre, which maintained contact with the International Red Cross, were not considered necessary.

Given the strategic deployment of the German army and the assumption that the Red Army would stand and fight west of the Dnieper and Dvina, OKW and OKH were bound to expect large numbers of prisoners. It proved impossible, however, to arrive at any conclusion in precise figures. A supply exercise of the quartermaster-general of Army Group South in February-March 1941, which has been preserved, assumed the taking of 72,000 prisoners over the first four days of the attack, with a further 122,000 over the next six days. Problems of accommodation and food supplies were expected. In order to relieve its supply situation, Armoured Group I in the map exercise urgently requested the removal of 37,000 prisoners as food supplies at Polonnoe were down to one day's provision.²¹ It should be remembered in this connection that the prisoners of war—like the Wehrmacht generally, in fact—were expected to live off the land. Overall responsibility for the economic utilization of the occupied territories was with the specially created 'economic staff East'.²² Administration of the conquered Soviet territory, according to the OKW guidelines of 13 March 1941, was initially to be in the hands of three Reich commissars. Their authority, however, was circumscribed from the outset by the fact that military sovereignty was to be exercised by the Wehrmacht commander in question, with economic duties being discharged

²¹ OKH/GenStdH/GenQu/Qu 1/Abt. Kriegsverwaltung (Qu 4) No. 1/050/41, VII. Angelegenheit, 4 Mar. 1941, BA-MA RH 3/v.132.

²² See sect. I.iii.2(d) at n. 172 (Müller).

by the economic staff East. The Reich commissars were to receive their directives for the political administration from Hitler. On 2 April 1941 he therefore instructed Alfred Rosenberg, Reich leader of the NSDAP, to 'set up a central political office for eastern affairs'.²³ Rosenberg, unaware that approved plans by the armed forces high command were already in existence, demanded in an extensive memorandum responsibility not only for issuing binding instructions concerning occupation, but also concerning security for vital deliveries from the occupied territories to the Reich. In Rosenberg's opinion the 'political shattering of the great empire in the east' was to be along national or geographical lines:

- (a) Greater Russia with Moscow as its centre;
- (b) Belorussia with Minsk or Smolensk as its capital;
- (c) Estonia, Latvia, and Lithuania;
- (d) the Ukraine and the Crimea with Kiev as its centre;
- (e) the Don region with Rostov as its capital;
- (f) the Caucasus region;
- (g) Russian Central Asia or Russian Turkestan.²⁴

The 'Jewish-Bolshevik state administration' was to be totally annihilated, 'undesirable elements of the population'—these also included the Latvian intelligentsia and 'racially inferior' Lithuanians—were to be resettled in 'Muscovite Russia', while the Baltic was to become a 'German settlement region in the future, with the assimilation of the racially most suitable'.

A few days later Rosenberg made personal recommendations for the appointment of Reich commissars: Gauleiter Hinrich Lohse for the 'Baltic provinces and White Ruthenia [Belorussia]', State Secretary Backe for the 'Caucasus', Stabsleiter Arno Schickedanz for the 'Ukraine', Minister President Dr Dietrich Klagges for the 'Don and Volga region', and Gauleiter Erich Koch for 'greater Russia'. Finally, Rosenberg proposed himself as the head of an 'authoritarian' office, directly subordinated to Hitler and furnished with the necessary full powers, to be called the 'Protectorate-General for the occupied eastern territories'.²⁵ On 20 April Hitler appointed Rosenberg his 'Delegate for the central examination of questions concerning the east European space'. He was entitled to call on the closest co-operation of the supreme Reich authorities and to bring in their representatives for consultation. These were primarily the armed forces high command, the Four-year Plan authority, and the Reich ministry of economic affairs.²⁶

On 2 May Rosenberg had himself briefed by OKW on the instructions already issued by the military command concerning the delimitation of the

area of operations, the arrangements between army and SS, and the duties of the army commander attached to the Reich commissar.²⁷

During the time left before the beginning of the war, Rosenberg was anxious to receive the powers he was striving for in order to get his ideas on the structure and tasks of the political administration in the east to prevail. Although special instructions for the Reich commissar for the Ukraine and for the Reich commissar Ostland ('Eastland'),²⁸ as well as general directives for all the Reich commissars, had been issued by the beginning of May 1941,²⁹ Hitler had not yet finally decided on the boundaries and administrative centres of the planned four Reich commissariats. The views of the different authorities—the Rosenberg office, the ministry of the interior, and the Reich leader of the SS—on the political reorganization of the occupied territories diverged considerably. No decisions had yet been made on what parts of the Soviet Union were to be annexed by Germany, or administered by her, or given autonomous governments.³⁰ Although a 'Führer decree on the administration of the newly occupied eastern territories' was available in draft form, Hitler decided on 16 May to leave matters open for the time being and to have separate conversations with the competitors. For the time being, at any rate, he had 'agreed in principle' that there should be four Reich commissariats. Lithuania, Latvia, and Estonia, together with Belorussia and the Smolensk administrative district, were to form the Baltenland (Baltic land); the Ukraine was to be enlarged by the Saratov district and the Crimea; the region of the Caucasus mountains with their foothills as far as the Volga was to form the Reich commissariat 'Caucasia', and the territory inhabited by Russians was to come under the Reich commissar for the 'administrative district Russia' (see Map I.vii.1).

In Rosenberg's view the political objective of Operation Barbarossa was not to conduct a crusade against Bolshevism, but to 'pursue German military policy and make the German Reich secure'.³¹ Organic state structures should be carved out of the USSR's territory and built up against Moscow, 'in order to free the German Reich of its eastern nightmare for centuries to come. . . . Reversing the Russian dynamism towards the east [is] a task [demanding] the strongest characters.' The second 'gigantic task' according to Rosenberg—though this was up to Göring—was to 'safeguard Germany's food supplies and war economy'. There was absolutely no obligation 'to feed the Russian people as well'. A few days earlier Otto Bräutigam, the deputy-chief designate of the political department of the future eastern ministry, had pleaded in an internal memorandum that the war against the Soviet Union

should be 'a political campaign, not an economic war of pillage'. If the sympathies of the broad masses were to be won, the conquered territory 'as a whole must not be viewed as an object of exploitation'. Moreover, a differentiated treatment was necessary for the different peoples of the USSR.³² But against the directives worked out by the economic control staff East (the 'Green Folder')³³ this programme stood no chance of realization.

2. HITLER'S IDEOLOGICAL INTENTIONS TRANSLATED INTO ORDERS

(a) *The Regulation of SS Activity in the Operations Area of the Army*

Negotiations between the army and the SS on the employment of special SS commandos began on 13 March 1941. They were conducted—as before the attack on Poland—between Major-General Wagner, the quartermaster-general, and SS-Gruppenführer Reinhard Heydrich, chief of the security police and the SD. In July–August 1939 they had soon reached agreement on the tasks of the security-police action groups: 'Struggle against all anti-Reich and anti-German elements in the enemy country behind the fighting troops.'³⁴ In his 'Guidelines for the employment of the security police and the SD abroad' Heydrich had defined this formula in the sense that the action commandos were charged, in principle, with all the duties of a state police authority in the Reich. This general statement was subsequently further elucidated. On 19 September 1939 Heydrich had listed to Wagner as the objective of the employment of his agencies in Poland: 'house-cleaning: Jews, intelligentsia, clergy, nobility.'³⁵ At the beginning of July 1940 the chief of the security police and SD had named the following 'anti-Reich elements': *émigrés*, Freemasons, Jews, Communists, and political-clerical opponents.³⁶

Knowledge of the murders committed by the SS in Poland was evidently no obstacle to the negotiations between Heydrich and Wagner in March 1941, during which the quartermaster-general remained in close touch with the chief of the Army General Staff. On 26 March 1941 Wagner—after agreement with Heydrich in principle—was able to submit a draft order.³⁷ This provided that the 'special commandos of the security police (SD)' were to discharge their special tasks outside the armed forces 'on their own responsibility' and that they were entitled 'to take executive measures' against the civilian population. They would receive their specialized instructions from Heydrich; only in matters of movement, supplies, and accommodation would they be subordinated to the army commanders-in-chief or commanding officers in the rearward land-force area. Their tasks in the rearward area of individual armies (Armeegebiet) were: 'Securing of defined objects (material, archives of anti-Reich or anti-state organizations, associations, groups, etc.) and of especially important individuals (leading *émigrés*, saboteurs, terrorists, etc.)' prior to the beginning of operations. In the rearward land-force area their task—much as it had been in Poland—was quite generally to discover and combat all 'anti-state and anti-Reich endeavours, in so far as these were not part of the enemy's armed forces' (*sic*). The last-named task was presumably the preserve of the secret field police. Its duties, in fact, were to be not only 'counter-intelligence'

³⁷ OKH/GenStdH/GenQu/Abt. Kriegsverwaltung No. II o.No./41 geh., 26 Mar. 1941, BA-MA RW 4/v. 575; Jacobsen, 'Kommissarbefehl', No. 2.

tasks within the forces but also their direct protection. The secret field police, whose leaders were composed of Gestapo and criminal-investigation officers, functioned in the operations zone as the 'political counter-intelligence executive'³⁸ of the army, in order to protect and support its operations. The focus of its attention was to be not so much 'spy-catching'—which was the task of *Abwehr III*—but 'preventive security' for the fighting forces.

The draft order of 26 March further stipulated that in each army sector and in each rearward land-force area a 'delegate' of Heydrich's was to be appointed to provide central control of the special commandos. He was obliged to inform the army commander-in-chief or the commander of the rearward land-force area promptly of the directives received by him from the chief of security police and SD, and was directed to co-operate continuously with their enemy-situation analysts. The Ic (intelligence) officer was to co-ordinate the tasks of the special commandos with military counter-intelligence, with the work of the secret field police, and with operational requirements. The military commanders were entitled to ban the employment of commandos in parts of the operations area to avoid interference with operations. That, however, was the only objection raised in OKH to the activity of Himmler's agencies 'on their own responsibility', with regard both to so-called 'enemies of the state and the Reich' and to the civilian population. The army's bad experience with subordinate special squads in Poland was in 1941 no longer sufficient—as it had been before the western campaign—to make it either completely rule out the employment of the security police or the SD in the operations area altogether or at least insist on stricter control of their employment. Despite the high degree of verbal camouflage in the definition of the tasks of the SS, there could be no doubt among the army command, after Hitler's numerous public and private remarks on the connection between Bolshevism and Jewry, after the measures taken in the Reich, and after the murders in Poland, that along with the Communist leadership stratum the Jews in the occupied Soviet territories were also to be exterminated. Whether the Army High Command had been informed before 22 June of the relevant instructions sent by Hitler to Himmler and Heydrich cannot be proved. It is noteworthy, however, that Haider and Wagner, in emending the draft order of 26 March 1941, extended the tasks of the SS forces employed in the Balkan campaign by adding to 'émigrés, saboteurs, and terrorists' two further categories of adversaries: 'Communists, Jews.'³⁹ Did the chief of the Army General Staff and the quartermas-

³⁸ H.Dv. g. 150, 24 July 1939. The GFP's duty was the 'discovery of and fight against all endeavours hostile to the nation and state'. See Gessner, 'Geheime Feldpolizei'; id., *Geheime Feldpolizei*.

ter-general see the sinister forces of Communism and Jewry behind the Serbian officers who overthrew the pro-German Cvetkovic government in Belgrade on 27 March 1941? At any rate, the assumption of Soviet backing for the new Yugoslav government was voiced in Berlin as early as 2 April.⁴⁰ Or did the Army High Command view Jews and Communists generally as potential elements of resistance to Germany's 'smashing of Yugoslavia'?

On another point, too, the order of 2 April 1941 on 'Regulating the employment of the security police and the SD in Operation Marita and Twenty-five'—which Halder signed *per pro.* the commander-in-chief of the army—differed from the draft order of 26 March 1941. By analogy with Heydrich's guidelines of August 1939, it simply stated that the special commandos would discharge their tasks 'outside the fighting forces' within the framework of the duties performed by the security police and the SD 'in the homeland'.

Four weeks after the submission of the draft, on 28 April 1941, the OKH order on the 'Regulation of the employment of the security police and the SD within the framework of the army' was issued for Barbarossa. This time it was signed by the army commander-in-chief and not by Halder.⁴¹ In substance it did not differ from the agreement reached between Wagner and Heydrich, and therefore—in contrast to Halder's order of 2 April—contained no special reference to the 'securing' of Jews and Communists. Two days later the commanders of the rearward land-force area were notified by the quartermaster-general of the impending arrival of one group of secret field police for each security division. They were to be available to the division Ic (intelligence officer) for the prevention of high treason, espionage, and sabotage. Wagner emphasized that the 'main effort' of the field-police employment in the military field would be counter-intelligence police issues and security policy as required for the safety of the fighting forces. In terms of discipline and specialized work these groups of secret field police were subordinated to the division Ic.⁴²

The focus of co-operation between the army's Ic service, the Abwehr (counter-intelligence), and the special commandos was with the Ic officers of the armies and armoured groups. They bore the main responsibility for the practical implementation of the directives issued on the subject.⁴³ This was explained to them at several meetings by the head of the department for 'war

⁴⁰ See German embassy Belgrade, telegram No. 278, 27 Mar. 1941, PA, Büro St.S., Jugoslawien, vol. II, and KTB OKW i. 373 (1 Apr. 1941). Towards the end of March the German military attaché reported from Belgrade that the Serbian people were 'indoctrinated and anti-German' (minute by Otto von Grotes, legation secretary in the foreign ministry, 29 Mar. 1941, PA, Büro St.S., Jugoslawien, vol. II).

administration' on the quartermaster-general's staff, Major (General Staff) Hans-Georg Schmidt von Altenstadt. On 16 May 1941 Wagner's delegate briefed the Ic and Ib officers, senior quartermasters and quartermasters of army groups, armies, and armoured groups, and the commanders of the rearward land-force areas, as well as the Ia officers of the security divisions—all of whom had assembled at the armoured-forces training school at Wünsdorf near Berlin—on the planned exercise of executive power.⁴⁴ The executive, he explained, was divided between army and SS. Anything to do with the Red Army and the safety of the forces was the task of the army; the rest was the task of the SS. Within the army area only insignificant 'special commandos' would be employed by the Reich leader of the SS; major actions would take place only in the rearward land-force area, where the main effort would be away from the roads. These units would perform their tasks on their own responsibility. Employment of the special commandos in the army area could be banned by the army commander-in-chief. For combat employment in the rearward land-force area the commanding officer had all police and SS units at his disposal. Any genuine subordination, however, had been declined by the army commander-in-chief because that would have made the army also responsible for the 'execution of political tasks'.⁴⁵

On 4 June 1941 the quartermaster-general briefed the army and army-group commanders on the political intentions connected with Barbarossa. The conquered territory would be 'split up into individual states'. While socialism would remain the basis, neither the Bolsheviks nor the former leading strata were fit for future leadership. Executive power in the area of operations was subdivided into 'four columns': (a) commander-in-chief of the army (highest level), (b) Reich leader of the SS (politically 'alongside the military posts, *in so far as military requirements permit*'), (c) Reich Marshal (economy), (d) Rosenberg (political shaping). Because of the 'lateral arrangement' of these four columns the chief of the Army General Staff foresaw difficulties and asked the chiefs 'to work against it'. Major-General Wagner pointed out that the army should not concern itself with the 'political executive' of the special commandos; its task remained the protection of roads and supply-lines.⁴⁶ The chief of army administration, Lieutenant-Colonel (General Staff) Radke, announced at the same conference that Brauchitsch and Himmler had arrived at an understanding for finally burying the conflict which had erupted between the army and the SS because of the murders in Poland.

Two days later, at an Ic conference, Schmidt von Altenstadt defined the role of the 'fourth delegate' even more clearly: the Wehrmacht, he explained, was concerned with 'fighting the enemy into the ground', while the SS was concerned with the 'political police struggle against the enemy'. If the great tasks were to be accomplished, co-operation was 'of crucial importance'. SS Standartenführer Nockemann specified the duties of the security police and the SD. The political security of the occupied territories demanded the creation of 'the basis for the final liquidation of Bolshevism'. For that purpose it was necessary in the rearward army area to round up not only the enemy's political material but also the 'politically dangerous individuals (Jews, émigrés, terrorists, political churchmen, etc.)' and in the rearward land-force area to track down all 'anti-state and anti-Reich efforts'. According to the order he had received, 'extreme hardness and harshness are to be applied'. The forces employed for this would be 2,500 men: 500 for each army group, of whom 80 would operate in the forward area of each army.⁴⁷

The arrangements agreed between OKH and the Reich leader of the SS concerning Barbarossa were amplified on 21 May 1941 by the provision that in each of the three rearward land-force areas one 'senior SS and police leader' would be appointed. He would be in charge not only of the 'action squads of the security police and the SD' in his area, but also of one police regiment and of units of the uniformed police. These units were to support the three security divisions under the commander of the rearward land-force area in the pacification of the country. The police units were to be reinforced by Waffen-SS contingents. The 'senior SS and police leader' was obliged to inform the commander of the tasks assigned to him by Himmler.⁴⁸

The permanent staff of the SS action groups were assembled after May 1941 at the frontier police college at Pretsch-on-Elbe. The command personnel were recruited from officers (or aspirants) of the Gestapo and the criminal police, and from members of the SD. The auxiliary personnel, however, also included non-members of the SS. These had been enlisted for 'long-term emergency service' on the strength of the 'emergency-service regulation' of 15 October 1938. The example of Action Group A in particular shows that the command personnel were composed, for the most part, of fairly young 'SS leaders or criminal-police officers with rather above-average abilities, ambitions, and training qualifications',⁴⁹ who had come to National Socialism at an early age. Almost a dozen of the seventeen SS leaders had completed their law studies; the six non-jurists, admittedly, had all failed at school, in their vocational training, or in their chosen occupations.

⁴⁷ Record made by Ic/AO III of Army Group North on the Ic (intelligence officers') conference at OKW/Abw and OKH/OQu IV and GenQu, 5-6 June 1941, Berlin (BA-MA RH 19 III/722); and minute of Ic of Army Command Norway, g.Kdos. (BA-MA, 20. Armee, 20844/5).

⁴⁹ Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 281.

Four action groups were established: Action Group A (headquarters, special commandos 1a and 1b, action commandos 2 and 3) with Army Group North for the Baltic region; Action Group B (headquarters, special commandos 7a and 7b, action commandos 8 and 9, and forward commando Moscow) with Army Group Centre for Belorussia; Action Group C (headquarters, special commandos 4a and 4b, action commandos 5 and 6) with Army Group South for the northern and central Ukraine; and Action Group D (headquarters, special commandos 10a and 10b, action commandos 11a, 11b, and 12) with Eleventh Army for Bessarabia, the southern Ukraine, and the Crimea. The strength of a fully motorized action group exceeded the figure of 500 originally notified to the army. At the start of Operation Barbarossa Action Group B, for instance, numbered 655 men, including 134 members of the uniformed police.⁵⁰

In June 1941 the leaders of the action groups and action commandos were informed by Heydrich, by word of mouth, of Hitler's order that all Communists, Jews, and 'other radical elements' were to be executed.⁵¹ In that connection, anti-Jewish or anti-Communist Poles, Lithuanians, Latvians, Estonians, Belorussians, and Ukrainians were also to be used for 'self-purging operations'. The 'special duties' of the SS in connection with 'preparations for a political administration', however, went beyond the mere execution of 'enemies of the state and the Reich'. The action groups were also responsible for preliminary administrative tasks of the most varied nature, such as the organization of native 'auxiliary police services' (Ordnungsdienste) and the creation of Jewish ghettos.

(b) *The Limitation of Military Jurisdiction*

On 3 March 1941 Hitler, in addition to the annihilation of the 'Jewish-Bolshevik intelligentsia', had demanded a limitation of military jurisdiction. This was to concern itself solely with juridical matters within the armed forces. Criminal offences by the civilian population were therefore to be punished in a different manner. Ministerialdirigent Dr Rudolf Lehmann, head of the Wehrmacht's legal department, when consulted by the quartermaster group of the Wehrmacht operations staff, tried to meet Hitler's demand in his second draft of the 'Guidelines in special fields concerning Directive No. 21', dated 5 March, by restricting the competence of Wehrmacht courts in the theatre of operations to criminal offences by Soviet citizens against the Wehrmacht for which the evidence was clear-cut.⁵² All other cases were to be passed on to the

⁵⁰ Befh. rückw. Heeresgebiet 102 [Commander rear army area 102 (i.e. Centre)], Ia Br.B. No. 284/41 geh., 24 June 1941, corps order No. 18, annexe, BA-MA RH 22/224.

⁵¹ This has been convincingly proved by Krausnick (Krausnick and Wilhelm, *Die Truppe des Weltanschauungskrieges*, 150 ff.). Streim, *Die Behandlung sowjetischer Kriegsgefangener*, 82 ff., on the other hand, believes that the order for the liquidation of all Jews was not issued until several weeks after the start of the operation. See *Mord an den Juden*.

⁵² OKW/WFSu/Abt. L (IV/Qu) No. 44125/41, draft Mar. 1941, BA-MA RW 4/v. 575. On German military judiciary in the Second World War see Messerschmidt, 'Deutsche Militärgerichtsbarkeit im Zweiten Weltkrieg', and Messerschmidt and Wüllner, *Wehrmachtjustiz*.

'nearest agency of the Reich leader of the SS'. This meant that suspects were deprived of all legal protection and that responsibility for their presumable execution was shuffled on to the SS. Underlying Lehmann's proposal was perhaps the intention not to overload the Wehrmacht courts with lengthy proceedings which might conceivably even result in acquittal. The OKW guidelines of 13 March merely foreshadowed a special order concerning the tasks of the Wehrmacht courts. This suggests that the supreme leadership wished to exceed Lehmann's draft.

In Berlin on 30 March 1942 Hitler addressed the assembled commanders-in-chief of the army groups, air fleets, and armies, the commanding officers of armoured groups and air corps, and their chiefs of staff, for nearly two and a half hours. The real purpose of the meeting was the discussion of the strategic intentions of Operation Barbarossa and their planned execution. It had to be postponed twice,⁵³ largely because of the surprising turn of events in Yugoslavia. Hitler used the opportunity for an extensive justification of his decision, skilfully blending political and ideological arguments. Against the background of the coup of Serbian officers and their suspected collusion with both London and Moscow, which had painfully upset the 'peace in the Balkans' necessary for Barbarossa, Hitler had no difficulty in introducing an ideological note to the generals' meeting. Colonel-General Halder made this note for himself:

Clash of two ideologies: Crushing denunciation of Bolshevism, identified with asocial criminality. Communism is an enormous danger for our future. We must forget the concept of comradeship between soldiers. A Communist is no comrade before nor after the battle. This is a war of extermination. If we do not grasp this, we shall still beat the enemy, but 30 years later we shall again have to fight the Communist foe. We do not wage war to preserve the enemy. *War against Russia:* Extermination of the Bolshevik commissars and of the Communist intelligentsia. The new states must be Socialist, but without intellectual classes of their own. Growth of a new intellectual class must be prevented. A primitive Socialist intelligentsia is all that is needed. We must fight against the poison of disintegration. This is no job for military courts. The individual troop commanders must realize the issues at stake. They must be leaders in this fight. The troops must fight back with the methods with which they are attacked. Commissars and GPU men are criminals and must be dealt with as such.

This need not mean that the troops should get out of hand. Rather, the commanders must give orders which express the common feeling of their men... Commanders must make the sacrifice of overcoming their personal scruples.⁵⁴

Although Hitler's concept of an ideological war against Bolshevism had presumably long been familiar to the assembled officers from his many public and private remarks, he was now calling for specific measures against the

⁵³ OKH/GenStdH/Op.Abt. (Ia) No. 447/41, 18 Mar., and No. 479/41, 21 Mar. 1941, concerning conference at OKH, BA-MA RH 19 1/67a.

⁵⁴ Halder, *Diaries*, 846-7; FM von Bock summed up Hitler's remarks as 'Ruthless action. It is not our business to preserve criminals. Commissars: Bock, *Tagebuch*, vol. II (30 Mar. 1941), MGFA P-210. FM Ritter von Leeb, on the other hand, recorded only 'Führer addresses commanders-in-chief on the situation' (Leeb, *Tagebuchaufzeichnungen*, 270).

exponents of the Bolshevik idea, i.e. Soviet state and party officials, as well as political commissars in the Red Army. As for the latter, he denied them military status and wanted to see them 'dealt with' as criminals. Hitler's formula of the 'poison of disintegration' must have evoked among his listeners memories of the disintegration of the eastern army in 1918-19, which in 1936 the official military historians of the general staff had attributed to Bolshevik agitation.⁵⁵ The Jews had been highlighted as the 'principal exponents of Bolshevik propaganda'. The establishment of soldiers' councils, the 'favourite children of the Bolshevik-influenced revolution', had been a fatal mistake which had facilitated the 'elimination of the leadership and the disintegration of the fighting forces'. Against the backdrop of this construed explanation of the causes of the collapse of imperial Germany, Hitler's linkage of the internal enemy then and the external enemy now, the Soviet Union—in other words, 'Jewish Bolshevism'—fell on fertile ground. To many officers it seemed reasonable that the war against the 'Jewish-Communist rulers' and their representatives should not be conducted according to the rules of international law or of military traditions. That was why Hitler succeeded in manoeuvring the army, beyond its strictly military tasks, into a war of annihilation against an ideology and its followers, for which the action groups in particular were earmarked. Because he regarded military jurisdiction as an obstacle to his intentions, he wanted to neutralize it as far as possible.

It was probably at a joint breakfast of the Army High Command with the senior commanders that the first protests were voiced against Hitler's ideologically motivated conduct of the war. But that protest was primarily directed against the exclusion of the courts martial, which the commanders feared might lead to a slackening of discipline and good order. It is exceedingly doubtful whether the army and field commanders seriously considered compelling Hitler to relinquish his demands by threatening collective resignation.⁵⁶ After all, there was agreement on the view that political commissars in the Red Army did not have combatant status. Brauchitsch regarded it as his personal concern to work for the preservation of discipline and good order in this unusual war.

Towards the end of April 1941 the head of the Wehrmacht's legal department submitted a draft of the intended ordinance limiting military jurisdiction in the Barbarossa theatre of operations.⁵⁷ In line with Hitler's intentions he envisaged self-help by the troops against attacks by the civilian population: 'Guerrillas are to be ruthlessly finished off by the forces either in combat or while escaping. Other attacks against the Wehrmacht by civilians must be repelled by the troops ruthlessly and with all means, to the point of annihila-

⁵⁷ WR 30/41 g.Kdos. Chfs., 28 Apr. 1941, BA-MA RW 4/v. 575.

tion of the attacker. . . . Only when, exceptionally, this has not been done are they to be prosecuted in the courts.'

Lehmann wished further to see the abolition of *obligatory* prosecution of punishable actions by Wehrmacht members against the civilian population, even when the action was 'at the same time a military felony or offence'. The judicial authority should prosecute such actions by courts martial only if this were demanded for the maintenance of discipline or the security of the troops.

On 6 May 1941, with time pressing—all preparations for Barbarossa requiring a somewhat longer starting-up time were to be completed by 15 May—Lieutenant-General Müller, 'general for special duties with the commander-in-chief of the army', following conversations with Lehmann and Halder, submitted to OKW his own drafts for the regulation of jurisdiction and the treatment of Soviet commissars within and outside the Red Army.⁵⁸ Significant about this is not only the fact that the army command saw some inner connection between the two measures—which it justified by the need to safeguard the forces against the 'exponents of the Jewish-Bolshevik ideology'—but that on questions of 'the application of criminal law in the field army and *vis-à-vis* the population of the occupied territories' Lieutenant-General Müller received his instructions not from the commander-in-chief of the army but from the chief of the general staff.⁵⁹ Hence it was not the 'general for special duties with the commander-in-chief of the army' who was at the centre of the army command's preparations for the struggle against the ideological enemy, but Halder. On the subject of jurisdiction for Barbarossa Müller asked the homeland defence department of OKW to take note of and expeditiously examine his draft, as the army command wished to issue Hitler's intentions in a juridically unassailable form as an ordinance from the commander-in-chief of the army.

Whereas Lehmann declared himself satisfied that the army's proposal was similar to his own ideas, Major-General Walter Warlimont, head of the homeland defence department, added the marginal gloss: 'Goes beyond WR [Wehrmacht legal department].'⁶⁰ The point was that Halder and Müller proposed that even potential guerrillas, saboteurs, or resisters be shot by the troops 'in combat or while escaping'. The draft was prefaced, in line with Hitler's address to the generals, by an ideological explanation designed to justify the ordered abandonment of international conventions on the law of

⁵⁸ OKH/Gen.z.b.V. b. ObdH No. 75/41, g.Kdos. Chefs., BA-MA RW 4/v. 577; Halder, *Diaries*, 907 (6 May 1941).

⁵⁹ ObdH/GenStdH/GZ (I) 1.St. No. 2182/40 geh., 29 Sept. 1940, app. 1, Dienstanweisung für die Gruppe 'Rechtswesen im OKH (Hauptquartier)' [Service regulation for group 'Law at OKH (Headquarters)'], BA-MA RH 19 III/146. This is the one that Halder signed *per pro.* the C.-in-C., 9 May 1941; see sect. I.iv.1(g) at n. 173 (Klink). Since 1 July 1935 the chief of the general staff had been the permanent deputy of the C.-in-C. of the army 'in ministerial functions': BA-MA RH 2/195.

⁶⁰ WR No. 32/41 g.Kdos. Chefs., 9 May 1941, BA-MA RW 4/v. 577.

war. 'This time', i.e. in contrast to past campaigns, the troops would be confronted not only by the usual guerrillas, but also, 'as a particularly dangerous, disruptive, element from the civilian population, by the exponent of the Jewish-Bolshevik ideology'. On Halder's proposal, therefore, 'collective forcible measures' were envisaged against localities if the individual culprit was not quickly identified. 'It is the demand of self-preservation and the duty of all commanders to act with iron severity and without any delay against cowardly attacks by a deluded population.'

As already envisaged in the second part of Lehmann's draft of 28 April, 'punishable actions committed by members of the army *out of indignation over atrocities or over the disruptive activity* of exponents of the Jewish-Bolshevik system' were not to be prosecuted 'except where, in the individual case, intervention is demanded for the maintenance of discipline'. In instances where the 'motivation of indignation' emerged only in the course of court hearings, commanders-in-chief and commanding officers should confirm only those sentences which were in line with the '*military and political aspects*' of the war in the east. Halder and Müller of course foresaw the risk of arbitrary excesses by individual members of the forces if they relaxed the obligation of the judiciary authority to prosecute criminal offences. They tried to avert the degeneration of the fighting forces by emphasizing in their draft that, on the one hand, a soldier was in all cases bound by the orders of his superiors, and that, on the other, each chain-of-command superior should make full use of the latitude granted him by the wartime criminal-proceedings regulations of 1938 and by the order of the commander-in-chief of the army of November 1939 for imposing disciplinary punishments in all cases where these would be justified by the offence and the person of the offender.

Warlimont ruled that Lehmann, with all due expedition and after consultation with the army and the Luftwaffe High Commands, should submit a new draft. Lehmann therefore, on the basis of the existing drafts of 28 April and 6 May and after consultation with Lieutenant-General Müller and Air Force General Jeschonnek, as well as with the heads of their legal departments, produced a further draft, which he sent to Jodl and Warlimont on 9 May. Lehmann's covering letter, explaining its origin and contents, is exceedingly revealing. It shows that Halder⁶¹ wanted to retain for the Wehrmacht courts certain rights to concern themselves with criminal offences by civilians. Lehmann, on the other hand, like his professional colleagues in the other legal departments, was quite ready, for the duration of hostilities and during the first pacification phase, to eliminate Wehrmacht jurisdiction over local inhabitants completely. But they considered it 'absolutely necessary' to reintroduce Wehrmacht justice 'at the appropriate time'. 'Once we take this step,' Lehmann explained to his superiors,

⁶¹ WFSu/Abt. L IV/Verw. g.Kdos. Chfs., note for report, 11 May 1941, *ibid.*

it must be taken fully. Otherwise there is a danger that the army will pass on to the courts the matters with which it feels uneasy and that in consequence (for these of course will be the doubtful cases) the opposite will happen of what it is intended to achieve... After the conclusion of hostilities and in somewhat calmer conditions it will be impossible to get the army to deal with such matters at all.

General Jeschonnek also believed that the army would let quite a lot of people get away 'who in fact would have deserved different treatment'. Lehmann, in line with the OKH draft, thought it necessary for 'elements suspected of an action' to be immediately brought before an officer, who would decide on their execution by firing-squad. Warlimont was in favour of passing on such cases to the SS special commandos, but Lieutenant-Colonel (General Staff) von Tippelskirch, head of the quartermaster group, objected that even the handing-over to a special commando would have to be subject to the decision of an officer, and that the officer's responsibility in both circumstances 'would probably be the same'.⁶² At that level in the armed forces high command there was therefore no doubt about what being handed over to a special commando would mean for a Soviet civilian. Tippelskirch prepared a synopsis of the drafts of 28 April and 6 and 9 May as a basis for a decision by OKW. From his memorandum and from Lehmann's covering letter of 9 May it emerges clearly that OKW, OKH, and OKL were fully inclined to restrict Wehrmacht jurisdiction temporarily, i.e. until a sufficient pacification of the country was achieved, but that, at the same time, they were relying on an officer corps which wished to adhere to the existing form of military justice. It was also realized that a burden was being placed on line officers by assigning to them the decision over the life or death of individual Soviet citizens or entire village communities. That was why Lehmann had prefaced his second version with an appeal to the forces' security needs in order to make 'the business', i.e. the executions, 'a little more palatable' to the officers.⁶³

On Hitler's behalf Keitel on 13 May issued the 'Decree on the exercise of war jurisdiction in the Barbarossa area and on special measures by the fighting forces'.⁶⁴ Its preamble emphasized that Wehrmacht jurisdiction served 'primarily the *maintenance of discipline*'. Given its small staff, however, jurisdiction could confine itself to that principal task only 'if the troops themselves ruthlessly oppose any threat from a hostile civilian population'. That hostility was presumed from the outset in view of the 'particular nature of the enemy'. The first part, 'Treatment of criminal offences by enemy civilians', stipulated that these would for the time being be removed from the jurisdiction of courts martial and summary courts. 'Guerrillas are to be ruthlessly finished off by the troops in combat or while trying to escape.' All other attacks by the civilian

⁶⁴ The Führer and Supreme Commander of the Armed Forces, 13 May 1941, passed on to the Wehrmacht services as OKW/WFSt/L (IV/Qu) No. 44 178/41 g.Kdos. Chfs., 14 May 1941 (23 copies), *ibid.*; Jacobsen, 'Kommissarbefehl', No. 8; *Fall Barbarossa*, No. 97.

population were likewise to be instantly 'crushed with the utmost means, up to and including the annihilation of the attacker'. Where such measures had been omitted, 'elements suspected of an offence' were to be immediately brought before an officer, who would decide on their execution by firing-squad. Against localities from which the Wehrmacht had been 'insidiously or treacherously' attacked, if 'circumstances' prevented the swift identification of individual culprits, 'collective forcible measures' could be put into effect by any officer not below the rank of battalion commander.

The second part, 'Treatment of criminal offences by members of the Wehrmacht and its train against local inhabitants', laid down that there was no obligation to prosecute, 'not even if the offence is simultaneously a military felony or offence'. In judging such actions the judiciary authority should in each case take into account 'that the collapse in 1918, the subsequent sufferings of the German people, and the struggle of National Socialism with the countless blood sacrifices of the movement were primarily due to Bolshevik influence and that no German has forgotten that'. An artificial justification of criminal offences was thus being created in advance, resembling that in Hitler's amnesty decree of 4 October 1939. At that time it was ruled, alluding to the 'Bromberg [Bydgosć] bloody Sunday', that there should be no punishment for actions committed 'out of indignation over the atrocities committed by Poles'.⁶⁵ The ruling for Barbarossa now was that the judiciary authority should nevertheless start court-martial proceedings if there was a danger of the fighting forces degenerating. Halder's and Müller's proposals for a disciplinary punishment of offences had not been accepted.

The third part held the commanding officers in the field personally responsible for having all officers of the units under their command thoroughly briefed on the principles of part 1. Along with their juridical directives, their legal advisers should also be informed of the 'political intentions of the leadership'. The judiciary authority should confirm only those sentences which were in line with those intentions—meaning the intentions voiced by Hitler on 30 March.

The 'Führer decree' of 13 May 1941 was not only an 'example of the systematic projection of National Socialist "legal thinking" on to an ideological enemy'⁶⁶ but also reflected to a considerable extent the experience of the First World War, 'the sufferings of East Prussia',⁶⁷ after the invasion of Russian troops. Their rigorous behaviour towards the German population had not been forgotten: as early as 1925 it had been pilloried in an official history as the importation of Asiatic customs into German cultural territory.⁶⁸ The

third general-staff officer of Armoured Group 3, when briefed on the provisions of part 1 of the jurisdiction decree, felt likewise reminded of the First World War: 'The Russians in Gumbinnen: execution of all villagers living along the Tilsit-Insterburg track in the event of the track being damaged.'⁶⁹ However, the point to remember is that by means of the 'Führer decree' the purpose of the law of war—protection of the individuals and society of an occupied country against arbitrary actions—had, with the active help of lawyers, been reinterpreted into a tool of political and military intentions. The shooting of civilians on the mere suspicion of guerrilla activity or sabotage was clearly unlawful. Not even reference to the threatened security of the troops 'can ever serve the liquidation of the most fundamental human rights'.⁷⁰ Anxiety about the discipline of the fighting forces was evidently greater than legal scruples about the abolition of obligatory prosecution of criminal actions committed by Wehrmacht members against local inhabitants.

The 'Führer decree' was notified to the army by Brauchitsch on 24 May 1941.⁷¹ He had it distributed in print down to commanders with their own jurisdiction; beyond that the principles were made known by word of mouth. The commander-in-chief of the army, however, extended the decree by two supplements which once more took up the points contained in the OKH draft of 6 May for the maintenance of discipline. With that 'disciplinary decree' Brauchitsch hoped to prevent the threatening degeneration of the troops. Even before—during and after the Polish campaigns—the army commander-in-chief had felt compelled to issue strict orders against indiscipline by officers and other ranks, and to rule that members of the army were forbidden to participate in 'police executions'.⁷²

Now, in May 1941, Brauchitsch in his appendix to part 1 of the 'Führer decree' emphasized that the real task of the forces was to fight the Red Army. Special 'search and purge actions' should therefore 'on the whole' be ruled out by the fighting forces. Hitler's guidelines on the treatment of criminal actions by local inhabitants should apply only to serious cases of rebellion; lesser offences were to be punished by 'improvised measures', such as tying up or setting to work. The commanders-in-chief of the army groups were to seek his approval before reintroducing Wehrmacht jurisdiction in 'pacified regions'. Brauchitsch further announced an impending special regulation on the 'treatment of political figures of authority (*politische Hoheitsträger*)'.

⁶⁹ Minute of a conference with the 'general, special duties' in Warsaw, 11 June 1941, BA-MA RH 21-2/v. 423. This passage is missing from Jacobsen, 'Kommissarbefehl', No. 14.

⁷⁰ Betz, *Landkriegsvölkerrecht*, 192.

⁷¹ OKH/Gen.z.b.V. b. ObdH/Gr.R. Wes. No. 80/41 g.Kdos., Chefs. (340 copies), BA-MA RH 22/155; Jacobsen, 'Kommissarbefehl', No. 10 (with divergences). Important in this context is an earlier ruling by C.-in-C. Army that death sentences should be implemented at once 'for the maintenance of discipline, for the liquidation of violent crime and criminal saboteurs, and for the expiation of crimes by hostile local inhabitants against the security and reputation of the German Wehrmacht' (ObdH/Az 469 Gen.z.b.V./Gr.R. Wes. No. 450/41, 9 May 1941, BA-MA RH 22/183).

⁷² See Umbreit, *Militärverwaltungen*, 169, 189.

In his supplement to part II of the 'Führer decree' on the treatment of criminal actions by Wehrmacht members against local inhabitants Brauchitsch stressed the duty of all superior officers

under all circumstances to prevent arbitrary excesses by *individual* members of the army, so as to be in good time to prevent the degeneration of the troops. The individual soldier must not reach a point where, in dealing with local inhabitants, he does or omits to do whatever seems right to *him*; rather, he is in all instances *bound by the orders of his officers*.

Timely intervention by all officers must '*help*' to maintain 'discipline, the basis of our successes'. Significant incidents under parts I and II were to be reported by the fighting forces to OKH as special occurrences.

This 'disciplinary decree' on the one hand limited the right of an officer to order the shooting of local inhabitants to 'serious cases of rebellion' and, on the other, transferred personal and human responsibility for the choice of means down to company commander level. The army command, however, must surely have realized that by this decree the methods of warfare in the east became dependent on the education, attitude, and ideology of each individual officer. If it had really wished to prevent an undermining of the troops' sense of justice as a result of the ideological precepts of the supreme leadership, then at least it should not have made a contribution of its own towards the bending of international law, and should have more vigorously resisted the limitation of its jurisdiction. Brauchitsch's supplements by no means rescinded the 'Führer decree'.

Even before the 'Führer decree' was passed on with his comments by the army commander-in-chief on 24 May, the fighting forces were briefed on the handling of jurisdiction in the theatre of operations by the head of the 'legal section' on the staff of the 'general with special duties', Oberstkriegsgerichtsrat Dr Erich Lattmann: army jurisdiction was being suspended with regard to local inhabitants. There was no punishment, only military measures and combat. Every guerrilla would be shot. Against localities from which there was any shooting collective forcible measures were necessary: 'No setting on fire, but 30 men to be shot.' Army jurisdiction would not be reintroduced until after the conclusion of operations. Prosecution of punishable actions by soldiers against local inhabitants *might* be dispensed with. 'Prosecution only if discipline demands intervention. (Motivation is decisive, indignation over atrocities).'⁷³

That there was a close connection between the limitation of jurisdiction and

⁷³ Minutes of Ic/AO of Eleventh Army of the conference at OKH/GenQu on 16 May, BA-MA, Alliierte Prozesse 9, NOKW-486. See those of Ia of 285th Security Division, BA-MA RH 26-285/4. As early as 9 May 1941 it had been remarked at a conference of Ic (intelligence officers) at the office of the commander of the rear army area North that the 'experience' acquired during the occupation of France had suggested that court-martial sentences on civilians there had been 'very lenient' and had thus merely encouraged further acts of sabotage. That was why 'measures' were needed to have the severest penalties imposed on civilians from the start (BA-MA RH 19 III/722).

the treatment of Soviet commissars emerges also from the fact that Lattmann, beyond his explanations on the treatment of local inhabitants, also made some observations on that of commissars.⁷⁴

An additional significant factor in the development was the elucidations given by Lieutenant-General Müller in person on the 'Führer decree', and on the army commander-in-chief's supplements, before the third general-staff officers and the army judges of army groups, armies, and armoured groups at Allenstein (Olsztyn) (10 June) and in Warsaw (11 June).⁷⁵ The 'general with special duties' pointed out that in the war against the Soviet Union a 'sense of justice must, in certain circumstances, yield to the requirements of war'. Until army jurisdiction was reintroduced, self-help by the troops against guerrillas was needed, i.e. 'a return to the ancient usage of war. . . . One of the two adversaries must remain dead on the ground; exponents of the enemy attitude must not be conserved but finished off.' A population's right to defend itself against an attack and to take up arms spontaneously and voluntarily, as laid down in article 2 of the Hague Convention on land warfare of 18 October 1907, was out of the question *vis-à-vis* the Soviet Union. The concept of 'guerrillas', in Müller's view, included 'in an extended sense also agitators, distributors of leaflets, saboteurs', as well as all those not obeying German instructions. Punishment of guerrillas should be instantaneous.

'Criminals' not caught until later were to be brought before an officer, who could take only one of two decisions: 'execution or release, but no summary trial or saving for subsequent court proceedings'. As clear evidence would often prove impossible to produce, suspicion would frequently have to be sufficient in case of doubt. In less serious cases flogging of individuals might sometimes be enough. Collective punitive measures against localities or against a group of local inhabitants should not be acts of revenge: the main consideration should always be the safety of the fighting forces and the speedy pacification of the country. The troops should not be 'needlessly put on a hair-trigger or act under the influence of blood-lust. The principal task of the troops, as well as of the security divisions in the rearward land-force area, is military action, not the liquidation of guerrillas.' Even though a harsh war demanded harsh punishment, officers should meticulously ensure that 'measures against enemy civilians' were taken 'after a clash and only on the orders of an officer'.

In his elucidation of part II of the 'Führer decree', which regulated the treatment of criminal actions by Wehrmacht members against local inhabitants, Müller was supported by his legal adviser, Oberstkriegsgerichtsrat Dr Lattmann. Both of them emphasized that the troops should not be informed of the suspension of obligatory prosecution, but only the judiciary authorities and the army judges. Chain-of-command superiors were to act 'as in the past'

⁷⁴ See sect. I.vii.2(c) at n. 82.

⁷⁵ Record of Ic/AO III of Army Group North, 10 June 1941 (BA-MA RH 19 III/722), and of the Ic of Armoured Group 3, BA-MA RH 21-3/v. 423.

and submit a statement of incident. The judiciary authority would then decide whether an obligation to prosecute existed or whether the matter was to be dealt with by disciplinary means. Court proceedings should be instituted in all cases where discipline was threatened and there was a risk of degeneration of the troops, 'especially in the case of sexual offences'.⁷⁶ The 'general with special duties' and his legal advisers once more took up their earlier proposal of 6 May 1941 and called on army judges to remind chain-of-command superiors of article 16a of the wartime criminal-proceedings regulations of 17 August 1938.⁷⁷ Under that article they were authorized to deal with criminal offences by NCOs and other ranks by disciplinary measures. But were these officers sufficiently informed on the application of the disciplinary code? Probably not, as it was found that in the area of Eleventh Army the younger company commanders in particular, and officers commissioned for the duration in general, had no detailed knowledge of the possible extension of their disciplinary powers to offences committed by their subordinates which in themselves were also liable to prosecution in a court.⁷⁸

Although the army had acted against guerrillas with the utmost rigour even during the Polish campaign, the OKW 'Decree on the execution of army jurisdiction in the Barbarossa territory and on special measures by the fighting forces' of 13 May 1941 nevertheless, despite the army commander-in-chief's supplements, marked the formal beginning of a new road. With it, the Armed Forces and Army High Commands largely accepted Hitler's intentions, while simultaneously, against the background of Polish experience, endeavouring to counteract any possible effects which the ideological war against 'Jewish Bolshevism' might have on discipline and good order among the troops. In spite of the supplements of the commander-in-chief of the army, the commander-in-chief of Army Group Centre, Field Marshal Fedor von Bock, still felt that the jurisdiction decree was virtually giving any soldier the right 'to shoot, from in front or from behind, at any Russian he regards—or pretends to regard—as a guerrilla. The ruling waives any obligation to prosecute any action on such lines, even if a military felony or offence has been committed.'⁷⁹ Protest was also voiced in the staff of Fourth Army HQ and in that of LVII

⁷⁶ Note by the army judge of Eleventh Army HQ for the commanding officers' conference on 18 June 1941 (BA-MA RH 20-11/11), minute by Ic/AO III of Army Group North, 10 June 1941 (BA-MA RH 19 III/722), and of the Ic of Armoured Group 3 (BA-MA RH 21-3/v. 423). On 4 June 1941 the general, special duties, had expounded the 'Führer decree' to the army and army-group chiefs of staff, pointing out that the holder of the jurisdiction (*Gerichtsherr*) was entitled to refer criminal offences against local inhabitants back to disciplinary action. Confirmation and execution of death sentences, however, were in the hands of army C.-in-C.s and no longer with the forces in the field (minute of the chiefs of staff of Eighteenth Army and Army Group North, BA-MA 18. Armee, 19601/2).

Armoured Corps. The Fourth Army's Ic, Major (General Staff) Erich Helmdach, enquired about the 'Führer decree' with the army affairs department of OKH and with the Wehrmacht propaganda department in the Wehrmacht operations staff, pointing out that the 'radical measures' ordered would render a sensible businesslike policy in the occupied territories difficult and would 'stun' the local population. Colonel (General Staff) Hasso von Wedel, head of the Wehrmacht propaganda department, promised to inform Jodl along those lines.⁸⁰ In mid-June 1941, at a commanding officers' conference of LVII Armoured Corps (which was commanded by Armoured Troops General Adolf Kuntzen), the passing-on of the army commander-in-chief's instruction was forbidden for the time being and further supplements were foreshadowed.⁸¹ On the other hand, the guidelines for the treatment of political commissars, announced at the same time, did not cause any offence either in the Fourth Army staff or in that of LVII Armoured Corps. That such protests against the 'Führer decree' on the limitation of army jurisdiction were primarily motivated by military concerns on the part of commanders emerges, among other things, from an instruction by the commander-in-chief of the rearward land-force area South, Infantry General Karl von Roques. He drew his subordinate commanders' attention to the fact that Brauchitsch's decree had 'increased their responsibility' for discipline among their men. 'Wherever officers do not show themselves up to that task, and wherever the first signs of degeneration might appear, I expect immediate firm action by the next higher-ranking officer.'⁸²

(c) *The 'Commissar Order'*

Closely linked, both ideologically and legally, with the jurisdiction decree were the OKW 'Guidelines on the treatment of political commissars' of 6 June 1941. It would also be extremely unrealistic to assume that the lifting of obligatory prosecution had not deliberately allowed for a radical treatment of Soviet commissars. That was why the 'general with special duties with the commander-in-chief of the army' on 6 May simultaneously submitted to OKW a draft for the limitation of army jurisdiction and a draft of 'Guidelines concerning exponents of political authority...'.⁸³ In both of them the latter group were described as 'exponents of the Jewish-Bolshevik system' and

held responsible for 'atrocities' and 'undermining and disruptive activities in the past'. Against whom or when was not stated, although, given the measure of ideological agreement between Wehrmacht and National Socialism, the answer could be assumed to be known. Halder's comment on the two drafts of Lieutenant-General Müller and his legal adviser Dr Lattmann was: 'Troops must do their share in the ideological struggle of the eastern campaign.'⁸⁴ The chief of the Army General Staff regarded the draft for the intended shooting of the commissars as entirely 'along the lines of the last Führer address to the generals' on 30 March 1941. In his initiative of 6 May 1941 Müller referred the OKW to an 'instruction given him as early as 31 March 1941'. This cannot have been an order by Hitler, because when the head of the homeland defence department on the Wehrmacht operations staff received the OKH decree, Warlimont wanted to have examined the question of whether a written decree of that kind was actually necessary. It seems, therefore, that the 'general with special duties', who on legal matters received his instructions from the chief of the Army General Staff, had acted on Halder's direction. The OKH draft of 6 May 1941 envisaged the 'liquidation' of all political functionaries captured by the army. Their execution was to be ordered by an officer with disciplinary powers. Only the execution of 'qualified managers of economic and technical enterprises' was subject to the condition that they had opposed the Wehrmacht. The political instructors (commissars) in the Soviet forces were categorized as political functionaries and not accorded combatant status. 'Special importance attaches to their immediate identification among the prisoners and to their separation, because they in particular are able to continue their propaganda as prisoners of war in the homeland.' Their rearward transportation was forbidden. They were, if possible, to be 'finished off' at the POW collecting-points, or at the latest in the transit camps. In the rearward land-force area civilian officials and commissars were to be handed over to the action commandos of the security police and the SD, whereas 'troop commissars' were to be shot on the spot by the fighting forces themselves. The unlawful killing of captured troop commissars and civilian functionaries was justified by the increased threat they represented to the safety of the troops and to the pacification of the conquered territories. With that draft Halder, Müller, and Lattmann fully and unreservedly accepted Hitler's wish that political commissars were not to be regarded as combatants and thus not granted the protection of the Geneva Convention.

It seems that Lattmann gave an exposé of the principal stipulations of the OKH draft to the officers assembled at the Wünsdorf armoured-troops training-centre on 16 May 1941, because the Eleventh Army Ic/AO (intelligence and security officer) made a note: 'Political commissars to be handed over to

⁸⁴ Halder, *Diaries*, 907 (6 May 1941).

SS in the rearward land-force area. Instruction follows for army area.⁸⁵ The treatment of Soviet commissars was also the subject of a conference on the assignments of interpreters in the 'foreign armies East' department on 26 May 1941. The commissars were to be handed over to the SD. 'First of all', however, 'these often clever people (often cleverer than officers!)' were to be interrogated by the Ic officers. 'Many of the non-Jewish commissars are no doubt only fellow-travellers and not convinced of the Communist idea.'⁸⁶ That judgement may be seen as further proof that Hitler's identification of Jewry and Bolshevism was not unique.

On 12 May 1941 Warlimont presented the OKH draft to Jodl.⁸⁷ In doing so he drew his attention to the diverging points of view of OKH and Rosenberg, since 20 April Hitler's 'Delegate for the central processing of questions concerning the east European space', on the treatment of political functionaries. In his third memorandum Rosenberg had proposed that among the municipal and economic functionaries 'only' the senior and top officials should be 'finished off', as he regarded the middle and lower cadres as 'indispensable' to the administration of the occupied territories. In view of these two different concepts Warlimont suggested that a decision be obtained from Hitler. With regard to contents, Warlimont mitigated the OKH draft by proposing that functionaries 'not guilty of any hostile action' should 'for the moment' remain unmolested. Functionaries opposing the forces were to be regarded as 'guerillas' and 'finished off' in accordance with the jurisdiction decree and the guidelines of 19 May. 'Functionaries within the forces will have to be treated according to the OKH proposal. They will not be recognized as prisoners of war and have to be finished off, at the latest, in the transit camps; on no account are they to be moved to the rear.'

It was realized both at OKH and at OKW that the systematic annihilation of the Red Army's political cadres was an infringement of international law. In his search for a justification Jodl suggested that 'the whole action' be presented 'as retaliation' in advance,⁸⁸ but that the shooting of captured commissars should not be made dependent on any alleged precondition. With this in mind he drafted a preamble designed to dispel any human or legal scruples among the officer corps; the argument that commissars threatened the safety of the fighting forces figured only in third place.⁸⁹ Although Jodl's inept bending of the right of reprisal was eventually dropped, his ideological justification—smoothed stylistically—nevertheless formed part of the preamble of the OKH

⁸⁹ As n. 87, published in facsimile in Maser, *Nürnberg*, 312.

'Guidelines on the treatment of political commissars' of 6 June 1941.⁹⁰ 'In the struggle against Bolshevism the enemy *cannot* be expected to behave in accordance with the principles of humanity or international law. In particular *political commissars of all kinds*, as the real exponents of resistance, can be expected to indulge in a hate-filled, cruel, and inhuman treatment of those of our men they have taken prisoner.' The troops should realize that in this struggle any consideration for 'such elements' on grounds of international law would be a mistake. They were not only the 'originators of barbaric Asiatic fighting methods', but also represented a danger to the safety of the troops and the rapid pacification of the conquered territories. Political commissars, therefore, 'if captured in battle or while resisting, are as a matter of principle to be finished off with the weapon *at once*'. The following rules were to apply. First, in the area of operations political commissars of whatever kind or rank, even if only suspected 'of resistance, sabotage, or instigation of these', were to be 'treated' according to the jurisdiction decree. Second, commissars in the Red Army were not to be regarded as soldiers and were to be 'separated' from prisoners of war on the battlefield itself, and 'finished off'. Non-suspect civilian political commissars should initially not be 'harmed'. Only subsequently should a decision be made about allowing them to continue in their post or handing them over to the special commandos of the security police and the SD. 'In reading a verdict the [officer's] personal impression of the political stance and attitude of the commissar has to be given greater weight than the facts of the case, which may be difficult to prove.' Relevant 'incidents' with commissars were to be reported through Ic channels. None of these measures, however, must be allowed to hold up operations; there should be no 'search and purge actions' by the fighting forces. In the rearward land-force area commissars arrested 'for questionable behaviour' were to be handed over to the action group or the action commandos of the security police and SD.

On 8 June 1941 these guidelines, amplified by two supplements, were notified in writing by Brauchitsch to the army groups, armies, and armoured groups.⁹¹ Commanding officers and commanders-in-chief were to be briefed only verbally. The commander-in-chief of the army ruled, first, that the prerequisite of action against a political commissar must be 'that the person in question opposes, or intends to oppose, the German Wehrmacht by a *specific identifiable action or attitude*'. Secondly, Brauchitsch ordered that 'the finishing off of the political commissars in the forces must take place after their separation, *outside the combat zone proper*, inconspicuously, *on the order of an officer*. Brauchitsch—probably more so than Halder—feared the effects of the fighting forces on the state and wished to tie the ordered measures, as he had done in the jurisdiction decree, to the decision of an officer. However, Brauchitsch's

⁹⁰ OKW/WFSt/Abt. L (IV/Qu) No. 44822/41 g.Kdos. Chfs., 6 June 1941, BA-MA H 3/1; Jacobsen, 'Kommissarbefehl', No. 12; *Fall Barbarossa*, No. 100.

⁹¹ OKH/Gen.z.b.V. b. ObdH/Gr.R. Wes. No. 91/41 g.Kdos. Chfs., 8 June 1941; Jacobsen, 'Kommissarbefehl', No. 13; *Fall Barbarossa*, No. 102.

supplements cannot be regarded as a genuine restriction of the OKW guidelines.

On 10 and 11 June 1941 the Ic officers and army judges at army and army-group level were personally briefed by Lieutenant-General Müller on the practical application of that decree. Their task in turn was to brief their subordinate commanders-in-chief and commanding officers, as well as their intelligence officers and legal advisers. The 'general with special duties' pointed out that 'here too', as with the jurisdiction decree, there must be 'no massacres'. The safety of the fighting forces was paramount. The ordinary political commissars were to be treated like all other local inhabitants. They were of interest to the army only if guilty of an attack against the Wehrmacht. Political commissars within the fighting forces were to be separated from the other prisoners, moved to the rear, and 'finished off' on the order of an officer. Provided this was possible without loss of time, they should first be taken to the Ic for interrogation. Reports were to be made to OKH every ten days.⁹²

Summing up the elucidations of the two decrees of 24 May and 8 June 1941, Oberkriegsgerichtsrat Dr Weber declared at a commanding officers' conference of Eleventh Army on 18 June 1941:

Every soldier must know that he has to defend himself against all attacks in battle, and that in cases of doubt he has to bring detained persons to the nearest officer. Every officer must know that he can have detained persons shot or released, that political commissars are to be taken aside and finished off. Every battalion commander must know that he can order collective forcible measures.⁹³

The following examples illustrate the 'packaged' manner in which the decree on the 'treatment of political commissars' was made known among the fighting forces. At a conference of Ic officers and directors of the secret field police of the rearward land-force area North in Elbing on 16 June 1941 the counter-intelligence officer III with Army Group North, Captain Dr Keune, stated: 'The commissars of the Russians are well known, they are to be rendered harmless.'⁹⁴ The commanding officers in LVII Armoured Corps were informed that Hitler had ordered the Russian political commissars to be 'liquidated'. This order was to be passed on by word of mouth.⁹⁵ Infantry General Viktor von Schwedler, the general commanding IV Army Corps, informed his divisional commanders on 19 June 1941 that, even though the commissars in the Red Army wore uniform, they were not recognized as soldiers. They were to be separated from the rest of the prisoners and shot 'on

the spot at the order of an officer'. The commissars in the Soviet civilian administration were to be shot only if they participated 'in hostilities, sabotage, etc.'. ⁹⁶ Following a commanding officers' conference in the 22nd Infantry Division, the Ic briefed the adjutants on the 'treatment of political commissars, Jews, and other prisoners'. ⁹⁷ What the forces knew about the Red Army's war commissars was based on the official publication *The Wartime Forces of the Union of Socialist Soviet Republics* of 15 January 1941 and on an order by the war commissar for defence of 21 January 1941. ⁹⁸ The commissars, these explained, were identified by a red star with a gold-embroidered hammer and sickle on the sleeves of their uniform. But there appeared to be uncertainty about the level at which a commissar was employed. Thus it was announced in the 454th Security Division on 20 June 1941 that there was a political commissar with each company, who, after capture, had to be shot outside the combat zone on the order of an officer. ⁹⁹ That information was incorrect, since at company, battery, and squadron level there was only a political guidance officer, a *politruk*. Not until the end of August 1941 were the guidelines on the treatment of commissars extended to cover *politruks*. ¹⁰⁰

In the discussion on the two unlawful decrees after the war the 'Guidelines on the treatment of political commissars' played a far greater part than the 'Führer decree' on the limitation of army jurisdiction. This was due to the fact that the ordered execution of the commissars within the army was a more conspicuous breach of international law. For a specific group of the Soviet leadership the reinforced obligation of execution no longer depended even on the mere suspicion of 'guerrilla activity' or resistance to the Wehrmacht, but 'solely on the holding of a certain function in the opponent's system of government'. ¹⁰¹ It was quite simply postulated that the field commissar was not a soldier but a party functionary. And the Bolshevik cadres alone were believed capable of organizing resistance in the hinterland. With the additional equation of Bolshevism and Jewry by the Wehrmacht it is not surprising that as early as 1935 the draft of a leaflet defamed the 'gentlemen commissars and party functionaries' as 'mostly filthy Jews'. In it the Red Army men were

⁹⁶ BA-MA RH 24-4/34. In contrast, the entry of 13 June 1941 in the diary of the general commanding XIII Army Corps, Inf. Gen. Hans Felber, states: 'Map exercise with divisional commanders. Commissar order discussed. Rejected' (ibid. N 67/1).

invited to fight against the 'accursed Jewish commissars'.¹⁰² Thus, for German propaganda after 22 June 1941 the commissar, along with the Soviet leadership, was 'enemy Number one'.

3. PROPAGANDA PREPARATIONS FOR THE WAR OF ANNIHILATION AND THE ATTITUDE OF THE MILITARY LEADERS

In contrast to the attack against Poland, Hitler before 22 June 1940 was unable to produce a preventive justification for the German public or the armed forces of his planned war of aggression against the Soviet Union. There were no German revisionist claims on Moscow comparable to the Danzig or 'Corridor' issues, nor did hostile 'provocations' or excesses against ethnic Germans supply German propaganda with the necessary material. The 'otherwise desirable preparation of the German soldier and the German people' had to 'take second place'¹⁰³ to the strategic plan of letting Britain believe in an impending invasion and striking the USSR by surprise. Their, and the outside world's, 'enlightenment' and 'psychological preparation', were to start 'abruptly' only on the day of the attack. Until then the Wehrmacht had to camouflage Operation Barbarossa. The armed forces high command set in motion 'extensive measures of diversion and deception of friend and foe'.¹⁰⁴ It issued its first directive in mid-February 1941,¹⁰⁵ and a week later the Wehrmacht propaganda department was instructed by Jodl to prepare basic propaganda guidelines for the war against the Soviet Union and for the fighting forces' attitude towards Bolshevism, as well as a proclamation to the troops.¹⁰⁶

The 'psychological preparation' of the forces for an ideological war against the Soviet Union was, despite the short time available, readily based on foundations laid ever since 1934 by the Reichswehr and the Wehrmacht leadership. The systematic education of the forces in the National Socialist spirit had initially served to safeguard the Reichswehr's, and after 1935 the Wehrmacht's, monopoly as an armed force. In 1936 Reich War Minister von Blomberg had ensured that National Socialist teaching covered all instruc-

¹⁰⁶ *KTB OKW* I. 333 (21 Feb. 1941).

tional institutions, especially those for officers. Immediately before the outbreak of the war Hitler's real main theses came to predominate in the syllabus over the earlier programme, 'which was to demonstrate to the soldier the identity of military and National Socialist attitudes'.¹⁰⁷ Thus it was stated in an article in *Schulungshefte für den Unterricht über nationalsozialistische Weltanschauung und nationalpolitische Zielsetzung* [Instruction pamphlets for the teaching of National Socialist ideology and national political objectives], published since 1939 by OKW/Inland, that the struggle against Jewry would continue even when the last Jew had left Germany: 'the struggle against world Jewry', which 'is trying to incite all the nations of the world against Germany'.¹⁰⁸ This represented a logical restatement of Hitler's 'prophecy' of 30 January 1939.

Although the Wehrmacht propaganda department had been responsible for the armed forces' psychological welfare since April 1939, Rosenberg, as Hitler's delegate for the supervision of the NSDAP's spiritual and ideological education, succeeded towards the end of 1940, in a 'working agreement' with the OKW chief of staff, in securing his influence on the ideological schooling of the Wehrmacht as well.¹⁰⁹ Brauchitsch had already issued guidelines for the ideological education of officers and other ranks at the beginning of October 1940. Among the main points in five subject areas were: racial purity, Führer state, securing German living-space. As teaching and lecture aids the army commander-in-chief recommended Hitler's *Mein Kampf*, the NSDAP's 'instruction circulars', and OKW's 'instruction pamphlets'. Because of the official German-Soviet alliance, no direct mention was made of the danger of 'Jewish Bolshevism'.¹¹⁰

The 'Guidelines for the behaviour of the fighting forces in Russia', worked out in agreement with OKH, were ready in mid-May 1941 and went out to the Wehrmacht services.¹¹¹ However, they were to be notified to the men only together with Hitler's order of the day. These guidelines were to indoctrinate the troops and ensure the implementation of the jurisdiction decree and the guidelines on the commissars. Their key sentences read:

- I. 1. *Bolshevism is the mortal enemy of the National Socialist German people. Germany's struggle is aimed against that disruptive ideology and its exponents.*
2. *That struggle demands ruthless and energetic action against Bolshevik agitators, guerrillas, saboteurs, Jews and the complete liquidation of any active or passive resistance.*

- II. 3. Extreme reserve and most alert vigilance are called for towards all members of the *Red Army*—even prisoners—as treacherous methods of fighting are to be expected. The *Asiatic soldiers* of the *Red Army* in particular are inscrutable, unpredictable, insidious, and unfeeling.
4. After the capture of units the *leaders* are to be *instantly separated* from the other ranks.

The aspect of a war of annihilation against 'Jewish Bolshevism' was strengthened by the 'Directives on the practice of propaganda in Operation Barbarossa', prepared by Wedel. This was distributed before the opening of the attack to army groups, armies, armoured groups, air fleets and air corps, propaganda companies, and air-force war-reporter companies.¹¹² These 'directives' contained fundamental organizational and practical propaganda guidelines. The main theme of propaganda was that Germany's enemies were not the 'nations of the Soviet Union, but exclusively the Jewish-Bolshevik Soviet government with its functionaries and the Communist Party', which was 'working for world revolution'. The Wehrmacht was entering the country as a liberator and would 'save' the population 'from the tyranny of the Soviets'. Naturally, any resistance would be mercilessly crushed. The 'planned dismemberment of the Soviet Union' as well as the preservation of collectivized agriculture, made necessary for economic reasons, must be concealed. War reporters were to give special emphasis to 'atrocities and infringements of international law' by the Red Army. The armed forces high command confidently expected that a large-scale active propaganda against the Red Army would be 'even more successful than with all previous adversaries of the Wehrmacht'. To ensure that success, each army or armoured group had attached to it a propaganda company of altogether some 2,250 men.¹¹³ While active propaganda against the Red Army would be mainly by leaflets, the Soviet population was to be influenced by posters and loudspeakers on the lines of the political and ideological directives issued by Berlin. Along with the Soviet leadership, the commissar was 'enemy Number One'. He was therefore the 'centre-piece' of German leaflet propaganda against the Red Army. The commissar was reviled as a Jew, liar, tormentor, murderer, etc. Moreover, an attempt was made to drive a wedge between the commissar and his officers in order to loosen the cohesion of Soviet units. The planned propaganda campaign against 'the commissars' developed the foundations laid as early as 1935 by the 'Psychological laboratory in the Reich war ministry', as revealed by a comparison of leaflets.¹¹⁴ Anti-Soviet propaganda in 1941 thus reflected not only pragmatic points of view but also much older ideological attitudes.

Hate propaganda was also channelled into the Wehrmacht. In this context not only did the commissar decree have the 'status of a propaganda dogma',¹¹⁵

¹¹² OKW/WFSt/WPr No. 144/41 g.Kdos. Chefs., June 1941, BA-MA RW 4/v. 578.

but the 'information' on the commissar, prepared by the Wehrmacht propaganda department, was to facilitate the implementation of that unlawful decree. In the first June issue of 'Information for the troops', therefore, the definition of Bolshevism contained in the 'Guidelines on the behaviour of the fighting forces' was extended. Not only was the Bolshevik system presented as infiltrated, pervaded, and dominated by Jews; the propaganda formulas were also designed to facilitate a ruthless conduct of the struggle.

Anyone who has ever looked into the face of a Red commissar knows what Bolsheviks are. There is no need here for theoretical reflections. It would be an insult to animals if one were to call the features of these, largely Jewish, tormentors of people bestial. They are the embodiment of the infernal, of personified insane hatred of everything that is noble humanity. In the shape of these commissars we witness the revolt of the subhuman against noble blood. The masses whom they are driving to their deaths with every means of icy terror and lunatic incitement would have brought about the end of all meaningful life, had that incursion not been prevented at the last moment.¹¹⁶

Machine-guns and bombs were to speak the decisive word. Adolf Hitler was apostrophized as the 'instrument of providence' for the salvation of Europe from Bolshevism.

Hitler moreover thought it necessary at the beginning of June 1941 to draw the forces' attention, by means of leaflets, to all the possibilities of 'treacherous warfare of which we believe the enemy capable'.¹¹⁷ These, however, were to be distributed only at the beginning of operations, as their premature publication might suggest these very possibilities to the enemy. Hitler evidently did not regard as sufficient the 'Memo sheet on the particular nature of Russian warfare', distributed by the department 'foreign armies East' on 25 January 1941 down to platoon level; this had not contained the element of 'treachery'.¹¹⁸ Hitler considered that element to be realistic in that the enemy might poison routes of retreat, food-stores, seed-grain, and wells. As a centralized revision of such leaflets by the department for foreign armies East was no longer possible for technical (printing) reasons, the department asked the army groups, armies, and armoured groups to prepare them locally but not to distribute them before the day of the attack.¹¹⁹ These leaflets bore headlines such as 'Watch out!' or 'Do you know the enemy?'

Although Hitler had ordered the planning and execution of a war of conquest and annihilation, responsibility for the war was nevertheless to be shuffled on to the enemy. The slogans of a war 'forced on Germany' and of Germany's 'encirclement', first used in 1939, were dished up again on 21 and 22 June 1941. In nearly identical proclamations to the German people and to

the soldiers on the eastern front, drafted in the Wehrmacht propaganda department and edited by Hitler, 'the Führer and supreme commander of the Wehrmacht' justified the attack against the Soviet Union with predominantly ideological arguments.¹²⁰ Propaganda resumed the formula of Germany being threatened by 'Jewish Bolshevism', a formula sunk without a trace since the Hitler-Stalin treaty. Responsibility for the German-Soviet war was attributed in a historical perspective to a conspiracy 'between the Jewish-Anglo-saxon warmongers and the equally Jewish rulers of the Bolshevik Muscovite centre'. The 'familiar plot between Jews and democrats, Bolsheviks, and reactionaries' had tried from the outset to prevent the establishment of the 'new German national state'. 'For more than two decades [i.e. since 1917] the Jewish-Bolshevik rulers in Moscow have endeavoured to set not only Germany but the whole of Europe ablaze.' Ceaselessly they had tried to force their domination upon Germany and the rest of the European states. They had also organized the coup in Belgrade on 27 March 1941. The declared task of the German army in the east was 'the security of Europe and thus the salvation of all'; Hitler, in consequence, operated as the guardian of European culture against 'Jewish Bolshevism'. It was intended to produce in Germany the sense of a 'just' war against the Soviet Union, even though the thesis of a preventive war was not fully developed by German propaganda until after 22 June. Among the German population the news of the beginning of the German-Soviet war caused 'the greatest surprise . . . especially the present moment for the offensive in the east'.¹²¹

The ideological justifications of the German attack clearly eclipsed all other explanations, such as reference to the massive deployment of the Red Army along Germany's eastern frontier. The entirely secondary character of the preventive-war argument at that time, as against the ideological argument, emerges from the fact that, while mention was made of Soviet frontier violations, the version of 'fire being returned' used in 1939 was absent. The Wehrmacht propaganda department was nevertheless instructed the same day that reports from the front should 'exploit' the Soviet concentrations in the frontier areas by pointing out 'that the Russians were deployed "ready to pounce" and that the German action' had therefore been 'an absolute military necessity'.¹²²

Because his aggressive intentions were all too clearly governed by other motivations, Hitler had made a further attempt the previous week to convince the generals and admirals, in a 'lengthy political address'¹²³ at the Reich chancellery, of the need for a war against the Soviet Union—even though the

¹²³ Halder, *Diaries*, 958 (14 June 1941).

'Situation Report No. 1' of the department for foreign armies East in the Army General Staff on Soviet intentions, dated 15 March 1941, had assessed the moving up of Soviet troops to the frontier as a 'defensive measure' in response to the identifiable German reinforcements.¹²⁴ The expected victory over the Soviet Union would not only secure Germany's foodstuff and raw-material supplies for the foreseeable future,¹²⁵ but would also ensure Germany's freedom in the rear. Victory over the Soviet Union would induce Britain to abandon the 'hopeless further struggle'. Realization that American aid, in view of Germany's now unassailable position of power on the Continent and of the successes scored by the Luftwaffe and U-boats against British supplies, would now come too late would promote London's readiness for peace.¹²⁶ However, Hitler's optimism, which was widespread also among the officer corps at all levels, was to prove an illusion.

The reason for such a detailed account of the attitude of OKW, OKH, and commanders in the field towards the role assigned to the Wehrmacht by Hitler in his ideological war against the Soviet Union is that it provides additional criteria for the assessment of relations between the army and Hitler. By transforming Hitler's ideological intentions towards the Soviet enemy into military orders, the Wehrmacht and Army High Commands assisted in turning the Wehrmacht into an instrument in the war of annihilation against 'Jewish Bolshevism'. SS operations and military combat were thus linked into an indissoluble whole in order thus to 'ensure a durable guarantee of the conquered living-space'.¹²⁷ The SS's deliberate racial-political operations against the 'Jewish-Bolshevik mortal enemy' were to be supported by the army's display of extreme ruthlessness and the greatest annihilating effect in its operations against the Red Army and its commissars, against Bolshevik functionaries, Jews, guerrillas, and the civilian population. To claim that only the action groups of the security police and SD were envisaged as creating the 'basis for the definitive liquidation of Bolshevism'¹²⁸ would be to distort Hitler's intentions. The army too was regarded as a means to that end. The Army High Command in the spring of 1941 showed itself ready to fight the 'ideological struggle' as well.¹²⁹ In doing so it proceeded from the belief that, although the international law of war would have to be suspended because of the particular conditions of an ideological war, this would be only for a short time, given the expected swift victory over the Red Army. For Hitler, on the

other hand, the guidelines for co-operation between army and SS in the rearward areas, and the execution of commissars and suspect civilians, were of fundamental significance against the background of his living-space policy. To him the annihilation of the 'Jewish-Bolshevik leadership stratum', the extermination of the Jews, and the decimation of the Slav masses in the occupied territories were the most important prerequisite for a racially 'pure' unfolding of Germanism in the newly gained living-space. Along with his 'ideological force',¹²⁰ the SS, the army too was to participate in the annihilation of 'Jewish Bolshevism'. Military combat for the conquest of living-space in the east, political and police measures for its security, and its economic exploitation were only different facets of one great war of annihilation against the Soviet Union and its population. 'For mastering the great tasks outlined, the co-operation of all employed bodies' was specifically ordered.¹²¹

As an explanation of the military leadership's falling into line with Hitler it would be totally inadequate to point to the principle of absolute obedience or to a lack of backbone. Contemporary characterizations of the generals in OKW and OKH as 'military technicians' (H. von Moltke) or as 'hopeless sergeants' (U. von Hassell) are too superficial. Relations between the army and Hitler were determined also by a substantial measure of agreement on ideological questions.¹²² Along with anti-Slavism and anti-Semitism there was also a militant anti-Communism. Although a 'genuine blending of traditional and National Socialist elements in the image of Russia'¹²³ probably existed only for a few officers, a 'partial identity of objectives' (M. Messerschmidt) provided a sufficient basis for collaboration between army and National Socialism in the ideological war against the Soviet Union.

The degree of conformity or affinity with Hitler's ideas achieved by some commanders-in-chief emerges from two examples. Colonel-General Georg von Küchler, commander-in-chief of Eighteenth Army, addressing his divisional commanders on 25 April, observed:

The political commissars and the GPU people are criminals. They are the people who enslave the population. Read or hear the reports by ethnic Germans on the doings and activities of those people. They are to be put before a court martial and sentenced on the strength of the testimony of the inhabitants. There is also the point that these measures should drive a wedge between the political leadership and the probably quite decent Russian soldiers. When it becomes known that we put the political commissars and GPU people straight before a court martial, there is a hope that the Russian troops and the population themselves will free themselves from this servitude. In any case we

¹²³ Hillgruber, 'Rußland-Bild', 302. See Förster, 'New Wine in Old Skins?'

shall apply those measures. It will save us German blood and we shall make headway faster.¹⁵⁴

Küchler thus characterized the Soviet commissars and NKVD members in the same terms which Halder had jotted down during Hitler's speech of 30 March 1941.

The following operations order of Armoured Group 4 likewise dates from before the first OKH draft on the treatment of the commissars and represents an independent transformation of Hitler's ideological intentions into an order. Colonel-General Erich Hoepner had this to say on the basis of combat against the Red Army:

The war against Russia is an essential phase in the German nation's struggle for existence. It is the ancient struggle of the Germanic peoples against Slavdom, the defence of European culture against the Muscovite-Asiatic tide, the repulse of Jewish Bolshevism. That struggle must have as its aim the shattering of present-day Russia and must therefore be waged with unprecedented hardness. Every combat action must be inspired, in concept and execution, by an iron determination to ensure the merciless, total annihilation of the enemy. In particular, there must be no sparing the exponents of the present Russian Bolshevik system.¹⁵⁵

Because the view of Lieutenant-Colonel (General Staff) Henning von Tresckow, the first general-staff officer of Army Group Centre—'if international law is to be infringed it should be done by the Russians and not by us'¹⁵⁶—was not universally shared, Hitler was able to suspend vital norms of the law of war. Many officers quite simply shared his view that the war commissar in the Red Army was not an officer but an extra-combatant political functionary, who supervised the commanding officer and incited the men. That was why the commissar was denied the quality of a soldier and hence combatant status. Since 1933 the army command had supported the principle of sole command responsibility and had repeatedly insisted that political education too should remain in the hands of the officer and not be handed over to the Party. Many officers therefore accepted Hitler's suggestion of 30 March 1941 and regarded themselves as *leaders* in the struggle against a hostile ideology, against 'Jewish Bolshevism'. Thus 'the called-for unity of soldierdom and National Socialism became reality to a high degree'.¹⁵⁷ This made an institution such as the commissars appear unnecessary on the German side. For most officers the Soviet Union, the state of Lenin and Stalin, represented a threat to German hegemony in Europe. They agreed with Hitler

that the future development of the German nation required the attainment of a territorially unassailable and economically self-sufficient great-power status. The slogan of an inevitable preventive war in the east met with unqualified approval among the German officers, not so much because of the modernization of the Red Army, but because of their own—predominantly military and political—concepts of Germany's role in Europe and in the world.

I. The Conduct of Operations

1. THE ARMY AND NAVY

ERNST KLINK

(a) *The Opening of the Campaign*

WHEN, on 22 June 1941 between 3.00 and 3.30 a.m., the Wehrmacht, together with Romanian forces, began the German attack on the Soviet Union and crossed the frontier separating the German and Soviet 'spheres of interest',¹ the European war which had begun in September 1939 acquired a new dimension. On the day of the attack neither Hitler nor the responsible officers of the Wehrmacht doubted that their military forces and the time available until autumn would be sufficient to destroy the enemy.

In view of the enormous extent of the operations area, the planning of the Army General Staff, which reached down to division level, envisaged the conduct of operations by army group commands, which were to direct their formations, including the supporting Luftwaffe units, independently until they reached the objectives set in their deployment orders. It therefore seems advisable to follow this division in the account of the fighting.²

(i) THE OFFENSIVE OF ARMY GROUP CENTRE UNTIL THE CAPTURE OF THE 'LAND-BRIDGE' BETWEEN VITEBSK AND SMOLENSK (See the *Annexe Volume*, No. 5)

The Army General Staff had chosen the central sector of the front as the main area of operations at an early stage in their planning. Army Group Centre thus received a special role, which Halder took into consideration by assigning the chief of his operations department, Major-General von Greiffenberg, to its commander-in-chief, Field Marshal von Bock, as chief of the latter's general staff.³ Assuming basic agreement between the Army High Command and the army group, this arrangement provided an additional guarantee that direct contact between Hitler and von Bock or similar 'cross-fire from the upper atmosphere' would not lead to serious disagreement with regard to the priority of capturing Moscow.⁴ But certain problems in this army group did result

¹ The different starting-times were due to the different times of sunrise along the entire front. The code-word 'Dortmund' had been issued on 20 June.

² Cf. *Annexe Vol.*, Nos. 2 and 1.

³ Greiffenberg was chief of the general staff of Twelfth Army Jan.-May 1941.

⁴ Halder's description of 25 July 1941, *Kriegstagebuch*, iii. 112 (Halder's 'preliminary notes', from which the quotation comes, are not included in the English translation). The extent to which

from the fact that, in addition to the commander-in-chief, it had a second field marshal, Günther von Kluge (commander-in-chief of Fourth Army), and that its two armoured groups were led by colonel-generals who, however, did not have the rank and authority of the commander-in-chief of an army but were merely 'commanders'.⁵

According to the deployment orders for Barbarossa, Army Group Centre was to advance on both sides of Minsk into the area around and north of Smolensk and destroy enemy forces in Belorussia to prepare the way for further advances to the north-east and east.

The enemy's dispositions were:⁶ the bulk of the mobile units under the command of the Soviet Western Front (Army General Pavlov) were organized in three army areas and deployed in a large salient extending far to the west between Brest-Litovsk and the Suvalki area. An additional army, Thirteenth Army, which also included mobile units (mechanized units and armoured brigades), was located around Minsk. Army Group Centre was therefore deployed to form strong, fast pincers on both wings. To capture the river crossings and at the same time co-ordinate the advance of the mobile units and the infantry, Armoured Group 2 under Colonel-General Guderian was assigned to Fourth Army command for the initial operations, and Armoured Group 3 under Colonel-General Hermann Hoth was assigned to Ninth Army command (commander-in-chief Colonel-General Adolf Strauss). Fourth Army was to form an additional group to foil enemy attempts to break through to the west and was then to advance eastward from the middle of the front to close the encirclement ring forming near Białystok, break the resistance of the encircled Soviet units, and eliminate them. 1st Cavalry Division, the only division of its kind the German army still had, was to cover the southern flank towards the Pripiet marshes.⁷ Army reserves consisted of a higher command (*Höheres Kommando*) with four infantry divisions and a corps command with two infantry divisions as well as the motorized Brigade 900.⁸

The offensive on 22 June 1941 surprised the defensive forces of the Red Army.⁹ On the right wing Armoured Group 2 crossed the Bug at Brest-Litovsk, bypassing the fortress, which was to be attacked by XII Army Corps. The divisions of the two armoured corps on this front (XXIV and XXXXVII Armoured Corps) advanced rapidly, ignoring the enemy units on their flanks,

the control of C.-in-C.s of army groups and armies by their superiors could be guaranteed in the event of a conflict between Halder's appeals and their local assessments of the situation was yet to emerge.

⁵ This led to a personal intervention by the C.-in-C. of the army in the question of the assignment of the armoured groups for the attack on 22 June 1941.

⁶ Cf. the Annexe Vol., No. 1. For all movements of the army and objectives reached cf. the daily reports, not cited individually here, of the operations department of the army general staff in *KTB OKW* i. 490-873 (30 Dec. 1941), ii. 181 ff.

⁷ 1st Cavalry Div. was reorganized into 24th Armd Div. on 28 Nov. 1941.

⁸ This brigade was equipped with tanks captured in France.

⁹ Röhrich, *Kesselschlacht*, 21 ff., example III, 'Der Ansatz der Heeresgruppe Mitte bei der Eröffnung des Rußlandfeldzuges im Juni 1941'; for both armoured groups cf. *ibid.* 48 ff.; Hofmann, *Feldzug*, pt. II, 2, MGFA P-114b; Geyer, *IX. Armeekorps*, 28.

which were to be eliminated by the infantry later. On the northern wing of the army group Armoured Group 3 captured intact the three bridges over the Neman at Olita and Merkinė, the essential prerequisite for the rapid fulfilment of its task. On 24 June the armoured group reached Vilnius and prepared to move on to Vitebsk. Its commander believed this would be in accordance with its objective of preventing the enemy's escape over the Dvina and the Dnieper. Moreover, he did not expect that an advance in this direction would encounter any significant resistance. Accordingly, even after receiving the order to turn his attack in the direction of Borisov and Minsk, Hoth attempted to obtain permission from the chief of the army general staff to continue his advance eastward. But his request was rejected and he was instructed, together with Armoured Group 2, to form an outer ring east of Minsk in order to prevent the escape of enemy forces through the thin encirclement formed by the wing corps of Fourth and Ninth Armies east of Białystok. As on 23 June Halder was still uncertain as to whether the Red Army would stand and fight near the frontier or withdraw eastward,¹⁰ he gave priority to the certain destruction of strong enemy forces and not to deep penetrations behind the front. At the same time, however, he sought to limit the use of mobile units on the encirclement fronts to an unavoidable minimum. Strong advance units were to capture the crossings on the upper Dnieper at Mogilev and Orsha as well as the Dvina crossings at Vitebsk and Polotsk.¹¹

The encirclement was not completely successful, and the infantry could not keep up with the advancing armour. Thus those parts of the four Soviet armies which had broken out moved eastward in front of Army Group Centre until the last units were surrounded near Novogrodek on 9 July. But even then numerous Red Army soldiers avoided capture, and their presence as partisans and roaming groups was quickly felt in rear areas. As an undesirable consequence of the protracted resistance in the pockets, mobile units remained tied down there and were delayed in resuming their advance eastward. Not surprisingly, under these circumstances the commanders of the armoured units were suspected of wishing to evade tight control of their movements and, notwithstanding their task of destroying enemy forces, continued to advance as fast as possible.¹² To solve the resulting problems, the main tasks of the army group were given to separate commanders. Field Marshal von Kluge and his staff took over the command of the two armoured groups and two infantry corps, which formed the offensive group as 'Fourth Armoured Army'. The rest of Fourth Army was placed under Second Army command under Colonel-General Maximilian Freiherr von Weichs, which had previously been retained by the Army High Command as a reserve (see Diagrams II.1.1, 2). Its task, together with Ninth Army, was to completely isolate and destroy the encircled enemy units as soon as possible.¹³

On 28 June the two armoured groups reached the vicinity of Minsk, closing the outer ring. Armoured Group 2 was on the right wing facing Bobruysk; Halder hoped that Guderian would advance further to Rogachev and Mogilev on the Dnieper. He was prevented from issuing a direct order for such an operation by Hitler's belief that the diversion of the entire armoured group would jeopardize the success of the encirclement.¹⁴ As Halder had been convinced since 24 June that the mass of the Red Army was not planning a rapid retreat but intended to stand and fight, he considered a thrust to the Dnieper crossings essential for an envelopment of the enemy forces, the capture of the area between Vitebsk and Smolensk, and the opening of the way to Moscow. On 30 June he issued a corresponding order to the two armoured groups to secure the line Rogachev-Mogilev-Orsha-Vitebsk-Polotsk as quickly as possible.¹⁵

When the armoured units reached Minsk, discussions began about the best time for their further advance towards Smolensk, already envisaged in their deployment orders. Armoured Group 3 seemed to meet the prerequisites for this—closing the Novogrodek pocket and forming up of the units for the attack—earlier than the units under Guderian, which were more occupied with containing break-out attempts by Soviet forces. Colonel-General Halder had envisaged 5 July as the date for the resumption of the advance by the armoured groups, but in agreement with the army group he decided on 3 July and was able to defend his decision against the doubts of Brauchitsch and Hitler.¹⁶

Thus on 1 July Army Group Centre ordered the armoured groups to begin their advance on 3 July.¹⁷ Armoured Group 2, after crossing the Dnieper in the Rogachev-Orsha sector, was to advance principally along the Minsk-Moscow highway up to a line running from Yelnya to the high ground east of Yartsevo. Armoured Group 3 was ordered, after crossing the swampy area of the upper Berezina, to attack on both sides of Vitebsk up to the line Berezovo-Velizh and to send some units to advance on Nevel. Second Army was ordered to place most of its strength on its southern wing and continue its advance beyond the line Slutsk-Minsk against and beyond the Dnieper sector from Mogilev to north of Orsha.¹⁸ Ninth Army was to attack the Dvina sector south of the line Vitebsk-Polotsk. The most important objective of both infantry armies was the capture of the land-bridge between Orsha and Vitebsk. To give the attack

factors played a role, and the desire to 'tie down' the armoured group commands was also a major factor. Bock too objected to this command structure (Tagebuch (1, 7 July 1941), BA-MA N 22/9); Halder, *Diaries*, 983, 993 (28 June, 1 July 1941); operations order of Army Group Centre, 1 July 1941 (copy), in Hofmann, *Feldzug*, pt. II, 112, appendix A, MGFA P-114b.

¹⁴ Halder, *Diaries*, 181-2 (29 June 1941).

the necessary momentum, the army group was provided with Higher Command XXXV (with five infantry divisions) behind Second Army and with XXXXII Army Corps (with two infantry divisions) behind Ninth Army.¹⁹

Contrary to expectations, it became evident on the first day of the attack that the enemy had had sufficient time to bring up defensive forces and was even able to launch vigorous counter-attacks. At Borisov, Soviet armoured formations with air support attacked the Berezina crossings. And on the flanks, near Polotsk and Gomel, strong enemy forces were detected; there could be no question of taking Vitebsk in a lightning attack.²⁰ Moreover, movements were hindered by isolated thunder-showers and impassable roads. Armoured Group 3, which was equipped with captured French vehicles, had to report some of its formations incapable of combat. Only 19th Armoured Division was able to cross the Dvina, at Dysna (Verkhnedvinsk), where a bridgehead could be established. Newly brought-up divisions of the Red Army reserve appeared everywhere, equipped with armour and attacking vigorously. Armoured Group 3 still did not have 12th Armoured Division, which had to provide support for the encirclement far to the rear. The encircled Soviet units defended themselves energetically and in places inflicted heavy losses on the attacking German infantry units.²¹ At first Armoured Group 2 was able to break out of the Berezina bridgeheads between Bobruysk and Borisov to the Dnieper only on the right wing, near Rogachev, which was reached on 5 July.²² The following day the right wing of XXIV Armoured Corps had to defend itself against enemy formations attacking south of Rogachev across the Dnieper.

In this situation the effects of the differing importance attached by the various commands to the main objectives of this first phase of the campaign became evident. To carry out the order to advance as rapidly as possible with the armoured forces to the area around Smolensk and stand by for further, 'decisive', attacks required bringing up all mobile forces. On the other hand, the simultaneous order to disarm the encircled Red Army soldiers and prevent them from continuing the fight as partisans tied down precisely these forces. Moreover, between the prongs of the advancing mobile troops large areas remained open in which the infantry could follow up only slowly and not

¹⁹ Organization of Army Group Centre and Army High Command reserves according to operations order of Army Group Centre of 1 July 1941. On orders of the Army High Command a corps had to be transferred to the right wing to eliminate a threat to the inner flanks of Army Groups Centre and South. This was presumably done at Hitler's behest, for Halder considered the relevant reports to be 'horror stories' and believed that, instead of the reported army with three armoured and two infantry corps, at most only two or three divisions were in the Pripiet area. Bock feared that he would 'never again' see this corps: Halder, *Diaries*, 999 (3 July 1941); Bock, *Tagebuch*, 13 (2 July 1941), BA-MA N 22/9.

²⁰ Hoth, *Panzer-Operationen*, 155-6; Armd. Group 3, Ia, group order No. 10 and enemy intelligence sheet 3 July 1941.

²¹ This battle continued for weeks; in the end only the completely exhausted Red Army soldiers who were unable to break out remained in the pocket, which was one of the causes of the large number of deaths.

²² Guderian, *Panzer Leader*, 149; Bock, *Tagebuch*, 15 (5 July 1941), BA-MA N 22/9.

without encountering considerable resistance. While Hitler was primarily concerned with capturing as many of the Soviet troops in the pockets as possible and pacifying the rear areas as a prerequisite for their administration and exploitation, Halder, in his conduct of operations considered the threat to the flanks and the pockets of enemy troops in rear areas as a secondary problem, to be dealt with by the infantry armies. In his view maintaining forward momentum had absolute priority. However, the wording of orders from the Army High Command did not always clearly convey Halder's intentions and had to take into account Hitler's oral instructions, which sometimes led to uncertainty at middle-command levels.

The army group command and the armoured groups were able to refer to concrete planning concluded months earlier and to the repeatedly confirmed instructions for Operation Barbarossa for Army Group Centre, issued in their final form on 28 April,²³ according to which both armoured groups, after annihilating enemy forces between Białystok and Minsk, were to co-operate closely in rapidly conquering the area near and south of Smolensk and Vitebsk to prevent a concentration of enemy troops on the upper Dnieper and the Dvina, thus giving the army group freedom of action for further tasks.

On 7 July Guderian was confronted with a situation in which his attack on the left wing with 17th Armoured Division stalled and was repulsed in a counter-attack (see the Annexe Volume, No. 6). Armoured Group 3, on the other hand, went on the defensive on its left flank between Drissa and Polotsk and concentrated its attack entirely on Vitebsk in the centre of the front.²⁴ With the use of four mobile divisions, the attack led to the capture of the city on 9 July. Now, reinforced by 12th Armoured Division, which was no longer needed for encirclements, the two armoured groups were to make a thrust deep into enemy territory. This movement was planned as an envelopment of enemy forces over a large area with a turning inward east of Smolensk and thereafter as an armoured wedge which, together with the inner corps of Armoured Group 3, would have Moscow as its objective. To maintain the contact indispensable for such an operation it would have been necessary to halt the right wing of Armoured Group 2 and join up with Armoured Group 3 on the left. This, however, was not done. On the contrary, on 7 July, except for covering forces, Guderian withdrew 17th Armoured Division, which had been forced to go on the defensive, back across the Dnieper in order to use it in the attack on Orsha. The situation demanded a decision by the superior high command of Fourth Armoured Army. The commander-in-chief of the army group was inclined to strengthen the group under Hoth and its promising operational start and recommended that Field Marshal von Kluge order Guderian to halt and close up to the left.²⁵ Kluge hesitated to give Guderian

²³ Extract of assignment figures in Hofmann, *Feldzug*, pt. 1, appendix B, MGFA, P-114b.

²⁴ Hoth, *Panzer-Operationen*, 76 ff., 82.

²⁵ On 7 July Bock was compelled to renounce his intention to concentrate his main effort on the sector held by Armd. Group 3 and on the northern wing of Armd. Group 2, but he considered

the order that Bock suggested. On the contrary, he ordered that 12th Armoured Division of Armoured Group 3 should be brought up to Guderian's left wing, where the situation was critical.

Since 7 July Guderian had been energetically preparing to cross the Dnieper between Zhlobin, north of the confluence with the Berezina, and Orsha.²⁶ Thus, when Kluge became aware of the state of Guderian's attack preparations, which were directed away from Armoured Group 3, a dispute inevitably followed. Guderian referred to the still valid directive; he had not received new binding orders.²⁷ Finally, on 9 July Kluge agreed to the attack.

This decision had serious consequences, for it weakened the plan to concentrate the main effort of the attack in the area north of Smolensk, the most direct route to Moscow. Evidently there was no relevant order for both armoured groups. They still assumed that their areas of main effort were Vitebsk and Smolensk, and moreover were not sufficiently informed of each other's strategic and tactical intentions. This situation was a consequence of the lack of unity in the command of the army group, which itself resulted from the formation of 'Fourth Armoured Army'. It made an energetic advance, as Bock wished, almost impossible.

But Kluge's decision, which could be interpreted as evidence of weak leadership, acquires a different significance if one considers Hitler's intentions at this time. He had informed Halder on 8 July that, after the two armoured groups had reached the areas assigned to them in the deployment order, they should ideally be so used that Armoured Group 3 would be available for an attack against Leningrad or against Moscow. Guderian's armoured group, on the other hand, should be employed east of the Dnieper in a southerly or south-easterly direction to co-operate with Army Group South. While Field Marshal von Bock and the commander of Armoured Group 3 evidently agreed on a concentrated thrust of both armoured groups over the Smolensk land-bridge against Moscow, Halder was able to accept for the time being Hitler's 'ideal solution' with regard to Guderian's armoured group. For it served the large-scale encirclement of the 'dry gap between the Dnieper and the Dvina', which he had already noted as a plan in his diary on 29 June.²⁸ As Hitler, and at this point presumably also Halder, assumed that, with the Soviet forces around Smolensk 'finished off', they would be able to simply 'take over' the

Kluge's justification for rejecting his suggestion on grounds of transport conditions to be only a pretext. He believed that Kluge was afraid to stand up to Guderian. Bock again criticized the creation of this level of command as well as the establishment of the new level of Higher Command XXXV on the Priepet flank by the Army High Command: Bock, *Tagebuch* (7, 9, 11 July 1941), BA-MA N 22/9.

²⁶ Guderian, *Panzer Leader*, 96 ff. The problem, however, lay not in waiting for the infantry, but in the clear concentration of the main effort on the left wing, together with Arm'd. Group 3.

²⁷ Kluge's order to Guderian, mentioned by Halder (*Diaries*, 1020), appears to have been in oral form, which Guderian did not regard as binding. Guderian's actions constituted a threat to the intention of the army group to continue the attack eastward on 11 July after combining the two armoured groups on both sides of Smolensk.

²⁸ Halder, *Diaries*, 986 (29 June 1941).

area all the way to the upper Volga without serious fighting, Halder was able to put aside for the moment the idea of using the armoured group and thus ignore Hitler's words of 8 July, especially as he believed that the army group enjoyed an 'overwhelming superiority' over the enemy forces facing it.

The offensive with a spearhead consisting of both armoured groups was intended to encircle numerous enemy formations and break the enemy front by capturing the triangle Orsha-Smolensk-Vitebsk.

On the southern wing Armoured Group 2 with its right corps (XXIV Armoured Corps) was to take the Propoyisk-Roslavl road. The centre corps (XXXXVI Armoured Corps) was deployed in the direction of Gorkiy-Pochinok-Yelnya; the left (XXXXVII Armoured Corps) was to advance south of the highway between Minsk and Smolensk. The Dnieper was successfully crossed; the fortified town of Mogilev and the evacuated bridgehead at Orsha were bypassed. On 13 July the armoured group was fiercely attacked from the area around Gomel, but Halder was of the opinion that the Soviet forces involved did not deserve serious attention. The attacks were also accompanied by sallies from the enemy bridgeheads at Orsha and Mogilev.²⁹ This development, however, forced Guderian's right corps to change the direction of its attack, and the 'Moscow Chaussée' between Propoyisk and Roslavl could not be taken. To secure the easternmost point reached for the thrust towards Moscow, however, the front salient at Yelnya was held, even though this involved heavy personnel and material losses. Strong attacks on Guderian's right flank and Second Army providing cover in the south slowed the advance of the southern encirclement arm of Halder's envelopment operation considerably.

On the left wing of the attack Armoured Group 3 maintained its direction of advance towards Moscow. Its objective was to reach the line of Berezovka-Velizh-Nevel. The main attack was aimed at the ridge between Smolensk and Nevel. After reaching this objective the armoured group with XXXIX Armoured Corps was to pursue the enemy via Velizh and bring up LVII Armoured Corps via Nevel. The intention of this extensive encirclement via Rzhev and north of Moscow is clear.³⁰ 12th and 7th Armoured Divisions were to cover the developing encirclement near Smolensk from a distance and stop enemy break-outs in the north and east. On Kluge's orders, however, 12th Armoured Division remained assigned to the Smolensk ring and was thus not available for the pursuit envisaged by Hoth after the breakthrough of the enemy front.³¹ The other two divisions of the corps reached Demidov and

²⁹ Guderian, *Panzer Leader*, 98: order of Army Group Centre for the continuation of operations, 14 July 1941 (copy): Hofmann, *Feldzug*, pt. II, appendix B, MGFA P-114b.

³⁰ On 13 July Bock objected strongly to the armoured groups being pulled out in order to encircle enemy forces facing the inner wings of Army Groups South and Centre (*Tagebuch*, 24 ff.: 13 July 1941), while Halder was already considering complying with Hitler's wish (*Diaries*, 1032: 12 July 1941).

³¹ Hoth, *Panzer-Operationen*, 88 ff.

Velizh on 13 July. LVII Armoured Corps advanced on Nevel from the Drissa bridgehead and then marched on Velikie Luki.

On 13 July Hoth had to abandon the attack, which had diverted his forces from the main objective of the army group's attack, and, with XXXIX Armoured Corps, to concentrate on the encirclement north of Smolensk.³²

Apart from Hoth's own intentions, however, the diverted direction of the attack was actually in line with Hitler's wish to support the attack on Leningrad by reducing the pressure on Sixteenth Army of Army Group North, which was involved in heavy fighting. For this purpose 19th Armoured Division, which was the nearest, could be brought up.³³ As a result of Hitler's constant urging to speed up operations on the wings of the eastern front, Halder seems to have accepted the idea on 12 July of encircling more enemy forces by diverting the armoured groups in the centre from a direct push towards Moscow, provided that they first achieved freedom of movement towards the east. However, the order to the chief of the operations department defined these conditions more precisely: in the north the enemy falling back before the right wing of Army Group North (II Army Corps of Sixteenth Army) was to be cut off with such forces of Armoured Group 3 as were able to advance on Velikie Luki and Kholm 'notwithstanding the order to reach the area north-east of Smolensk'. In the south a group from Armoured Group 2 was to be sent against Roslavl. On 23 July Halder informed the chief of the general staff of Army Group Centre of these plans. His oral report to Hitler the following day³⁴ showed again his compliance with Hitler's wishes with regard to Army Group North. For Army Group South, however, he first required the crossing of the Dnieper. In particular, he minimized the importance of the Korosten group (Soviet Fifth Army) in order to avoid early use of Guderian's armoured group.

This fragmentation of the armoured groups led to a protest by the commander-in-chief of Army Group Centre. Bock considered the prospects for a thrust towards Moscow to be very favourable, but it would require all available forces. Halder thereupon instructed Greiffenberg not to permit 19th Armoured Division to attack beyond Nevel in the direction of Velikie Luki before Sixteenth Army had been successful there.³⁵

Halder's deliberations with the chief of the general staff of Army Group

³² Halder had in mind a thrust via Nevel to Velikie Luki, considerably further than Bock wanted to go. See n. 30 above and sect. II.1.1(b) at n. 146.

³³ Halder, *Diaries*, 1036-7 (13 July 1941). ³⁴ Ibid.

³⁵ This was the basis of Hoth's decision to employ stronger forces against Smolensk (*Panzer-Operationen*, 94). 19th Arm. Div. was sent against Velikie Luki on 17 July, captured the town, and then abandoned it on Kluge's orders on 18 July. This represented a concession to Bock, who wanted to avoid tying the division down on the left wing, as an annihilation of the enemy was impossible because Army Group North lacked sufficient forces. On the disputes concerning this question cf. Bock, *Tagebuch*, 31-8 (17-21 July 1941), BA-MA N 22/9. On 21 July Halder expressed his profound regret that the city had been abandoned (*Diaries*, 1066). For Hoth's views cf. Hoth, *Panzer-Operationen*, 99.

Centre, which assumed division of the army group into a 'front group' consisting of Ninth and parts of Second Army with Armoured Group 3 on the northern wing and a 'group for turning movement to the south-east'³⁶ consisting of Second Army (for an inner ring) and Armoured Group 2 (for an outer ring), were probably less an expression of strategic planning than an acceptance of Hitler's demands, which are presented elsewhere.

The 'expedition' of Armoured Group 3 ended on 19 July with the arrival of 19th Armoured Division in Velizh. Now the entire armoured group was again in a continuous front between Smolensk and Belev. Fierce attacks against the pocket near Smolensk to free the encircled Soviet formations tied down large parts of both armoured groups. Attacks on the southern flank of Second Army and Armoured Group 3 achieved deep local penetrations that had to be eliminated. The basic plan remained, however, not to tie these units down for a long period of time in a direction that would seriously affect the attack on Moscow.

These decisions about the further operations of Army Group Centre³⁷ were influenced primarily by the delay in the conclusion of current operations. With the capture of Yartsevo north-east of Smolensk by the spearheads of Armoured Group 3, and of Smolensk itself by Armoured Group 2 on 16 July 1941, the second great battle of encirclement approached its end.³⁸ However, the Germans were not able to prevent the break-out or timely withdrawal of strong enemy forces, especially motorized units. The 'hole' east of Smolensk was not closed until 24 July. When the army group issued the order 'for ending the battle of Smolensk and reaching the starting position for new operations' on 22 July, the territorial objectives mentioned in the deployment order for Barbarossa had been achieved.³⁹ The double battle of Białystok-Minsk had resulted in the capture of 324,000 prisoners, 3,300 tanks, and 1,800 artillery pieces; after the battle of Smolensk these figures were doubled. But the stubborn resistance of the Red Army became stronger; there were no signs of an exhaustion of the enemy's 'vital fighting strength'. The way to Moscow was still not open. After a visit to the Army Groups Centre and North by Lieutenant-Colonel (General Staff) Reinhard Gehlen, chief of the operations department and group leader North, Halder considered on 21 July how to meet Hitler's demands to speed up operations on the wings and at the same time continue the advance towards Moscow. He planned to attach the southern wing of Army Group North to the left wing of Army Group Centre, Ninth Army, to enable Field Marshal Ritter von Leeb to concentrate entirely on Leningrad without receiving additional armoured formations. The thrust to-

³⁶ Halder, *Diaries*, 1056-7 (18 July 1941). On the other hand, on 18 July Bock decided that the main task of Second Army was to continue the advance to the north-east and not to turn sharply south. He also considered Guderian's advance on Yelnya, at that time, to be a mistake. He believed that the enemy east of Smolensk should be completely cut off first. Cf. Bock, *Tagebuch*, 33 ff. (18-20 July 1941), BA-MA N 22/9.

³⁷ Cf. sect. II.1.1(b) at n. 150.

³⁸ Halder, *Diaries*, 1048 (16 July 1941).

³⁹ Army group order in Hofmann, *Feldzug*, pt. 1, appendix E, MGFA P-114b.

wards Moscow was to be carried out in a 'one-armed' fashion—with armour from Armoured Group 3, Ninth Army, and the reinforced Second Army—with the objective of encircling the city. On the right wing Kluge was to advance on Stalingrad with Armoured Group 2 and the southern part of Second Army 'in accordance with Rundstedt's instructions'. But Halder continued to believe that this regrouping of Army Group Centre would generally have to wait until after the objectives set out in the deployment order had been reached, i.e. after Army Group South had crossed the Dnieper. On the whole, with the exception of the southern sector, Halder was satisfied with the progress made on the way to a 'decisive battle before Moscow'.⁴⁰ The assumptions made in German campaign-planning about enemy operational decisions seemed to have been confirmed. Halder believed that the German forces still retained their freedom of action.

(ii) THE OFFENSIVE OF ARMY GROUP NORTH

On the basis of its enemy estimate and the largely known fortifications and terrain, the Army High Command had calculated that the German forces in the attack sector of Army Group North would enjoy a superiority over the Soviet forces facing them.⁴¹ In the Baltic Special Military District 29 Soviet infantry divisions, 4 cavalry divisions, 4 armoured divisions, and 7 armoured brigades had been identified, of which 18 infantry divisions, 1 armoured division, and 4 armoured brigades would oppose Army Group North; the rest would face Army Group Centre. The organization of these units under a front staff (in Riga) in two army headquarters (Eighth Army in Jelgava (Mitau) and Eleventh in Kaunas (Kovno)) with one group as an operational and one as a strategic reserve did not permit any conclusions about a point of main effort in the event of a conflict; details of their organization were not known. It was assumed that the population in the countries to be freed from Soviet rule would be friendly.⁴² It was uncertain whether the Baltic States would be defended at all. Intelligence indicated that the strong frontier defence forces had been pulled back. It was therefore all the more important to engage the bulk of the enemy forces rapidly while still west of the Dvina.⁴³

The organization of the army group and the orders to its units were intended to secure under all circumstances the fastest possible free movement of

the armoured divisions.⁴⁴ For this reason, unlike the other army groups, Armoured Group 4 under Colonel-General Hoepner was not placed under an infantry army.⁴⁵ Sixteenth Army on the right and Eighteenth Army on the left had to adjust their respective wings to the movements of the rapidly advancing armoured group, cover its flanks, and 'round up' remnants of overrun enemy forces. The armoured group had only two armoured corps, LVI Corps under General von Manstein and XXXXI Corps under General Georg-Hans Reinhardt. Manstein's corps had only one armoured, one motorized, and one normal infantry division. XXXXI Armoured Corps, in whose attack sector strong opposition was to be expected and which was able to deploy and advance on a broad front, had two armoured divisions, one motorized, and one normal infantry division. As a reserve the armoured group had only one motorized division (SS Totenkopf: 'Death's Head').⁴⁶ The armoured group advanced towards the Dvina with one corps in each of two spearheads, Manstein on the right towards Daugavpils (Dünaburg, Drinsk) and Reinhardt on the left towards Jekabpils (Jakobstadt). After establishing bridgeheads the two were to reach the area of Opočka rapidly and from there turn north or north-east. (See the Annexe Volume, No. 5.)

Under the command of Colonel-General Ernst Busch, Sixteenth Army on the right wing was to break through the enemy positions towards Kaunas, cross the Neman, and secure a crossing-point as early as possible south of Daugavpils. Eighteenth Army under the command of Colonel-General von Küchler was ordered to concentrate its efforts on the right wing to capture Jekabpils and Saungeljava, force a crossing, and cut off the enemy troops remaining west of the Dvina. The ports of Liepaja (Libau) and Ventspils (Windau) were to be taken with minimum forces and, after the crossing of the Dvina, forces were to be made available for an attack on Riga. Estonia, because of its large size, was at first excluded from this order. Air support was to be provided by Air Fleet 1, which, for naval targets, included an 'Air Leader Baltic'.⁴⁷

The role of the navy, especially important for the supplying of Army Group North and for operations against the Baltic islands, was at first limited to the promise of providing transport capacity for logistical purposes and to supporting an attack on the islands with motor torpedo-boats and transport ships. The navy wanted to provide two batteries of coastal artillery and 'additional per-

⁴⁴ This meant that the mobile troops were not to wait until the infantry caught up. Cf. deployment and battle orders for Barbarossa of Army Group North, 5 May 1941, in Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix A3, also for the following account.

⁴⁵ Chales de Beaulieu, *Panzergruppe 4*, 14.

⁴⁶ In considering the weakness of the armoured group, however, it should be taken into account that in accordance with Hitler's wishes armoured units of Army Group Centre were to be brought up for the decisive attack on Leningrad. Moreover, the terrain in front of Army Group North was not suited to armoured warfare.

⁴⁷ On the planning and mission assignments of the Luftwaffe cf. sect. I.IV.2(c) at nn. 353ff. (Boog).

sonnel'.⁴⁸ After the Dvina line had been reached, Finnish troops were to move in from the north to complete the encirclement of Leningrad and link up with the German army group east of the city.⁴⁹

As on other sectors of the front, the start of the German offensive on 22 June surprised the enemy forces opposite Army Group North. This is all the more astonishing as it had been quite impossible to conceal the masses of German troops crossing the lower course of the Neman to reach their assembly area, not to mention the conspicuous bridge-building activity.⁵⁰ The armoured spearheads were able to cross the Neman, the Dubisa, and the Venta, which would have constituted serious and time-consuming obstacles had the bridges there been destroyed.⁵¹ After this initial success LVI Armoured Corps quickly fought its way through to Daugavpils and captured the Dvina bridges intact on 26 June; then it was ordered to wait there until the infantry could catch up. To the right, Sixteenth Army took Kaunas but then found itself threatened on the right flank by the withdrawal of the left wing of Ninth Army of Army Group Centre, which had been sent to complete the encirclement east of Białystok.⁵² The left spearhead, XXXXI Armoured Corps, became involved in a battle with a strong enemy armoured force of around 200 tanks at the Dubisa bridgehead near Raseiniai, which, however, it was able to annihilate. It then continued its attack on the Dvina line. To secure as broad a crossing as possible for the German units following, Reinhardt's corps occupied the west bank of the Dvina between Livani (Liwenhof) and Jekabpils. Military bridges and ferries were established, as the enemy defence was concentrated around Daugavpils. Heavy fighting prevented the expansion of the bridgehead, the main crossing-point for Manstein's armoured corps and Sixteenth Army, until 30 June.⁵³

On 1 July most of the Dvina was in the hands of Army Group North, Riga was captured, and new bridgeheads were established. 291st Infantry Division, under direct Eighteenth Army command, had taken Liepāja (Libau) and Ventpils (Windau). The stiffening of Soviet resistance after 23 June and the increasing use of armoured formations in Soviet counter-attacks eliminated German doubts about Soviet intentions to conduct a forward defence. But the

⁴⁸ On 21 June 1941 the naval commander D decided that no further units could be provided to protect the coasts: AOK 18/1a, KTB 3b, BA-MA, 18. Armee, 19601/2. On the naval shock-troop battalion placed under the Eighteenth Army command on 1 June (291st Inf. Div.), see *ibid.*, KTB (1 June 1941), BA-MA, 18. Armee, 17562/17.

⁵² Cf. Leeb, *Tagebuchaufzeichnungen*, 275.

⁵³ To strengthen the right wing, I. Army Corps with two infantry divisions was brought up on 27 June. Cf. Leeb, *Tagebuchaufzeichnungen*, 281 (27 June 1941); Halder, *Diaries*, 983 (28 June 1941); sect. II.11.1. at n. 12 (Hoffmann), and sect. II.1.2(a) at n. 798 (Boog). Salisbury, *Leningrad*, 158 ff.

Germans remained uncertain as to whether large enemy formations should be expected between the Dvina and the old Russian frontier.⁵⁴

The supply situation in the north proved to be considerably less difficult than on the other fronts as a result of the large quantities of Red Army supplies that were found, and the fact that numerous bridges and railway lines were captured undamaged. The general-staff officer in charge of supply estimated that from Daugavpils, to be built up as a base, Armoured Group 4 could be supplied until it reached Leningrad and the infantry corps until it reached the line between Opochka and Marienburg. On 1 July Army Group North was able to go over to the second operations sector.⁵⁵ (See the Annexe Volume, No. 6.)

On 29 June Field Marshal Ritter von Leeb ordered Armoured Group 4 to prepare for a thrust to the area of Opochka-Ostrov. Reconnaissance was then to be extended beyond the line Velikie Luki-Lake Ilmen to the east and beyond the line Lake Ilmen-Lake Peipus to the north. The armoured group reported that it would be ready to move off on 2 July; Sixteenth and Eighteenth Armies were to move off on 4 July. Advancing against the area south of Opochka, Sixteenth Army also had to employ a corps as flanking echelon on the right wing in contact with Ninth Army. For this reason it was not to be expected that the infantry would rapidly follow the armoured group from this army. Army Group North therefore limited the advance of Eighteenth Army towards Estonia to two infantry divisions to take Tallinn (Reval), so that most of the army could closely follow the armoured units after reaching Ostrov and Pskov.⁵⁶

On 3 July the Army High Command ordered the mobile units of Army Group North south of Pskov to be so organized after reaching the line Opochka-Ostrov that they would soon be able to move north with the objective of blocking the land-bridge between Lake Peipus and Narva Bay. Thereafter Leningrad was to be cut off between the Gulf of Finland and Lake Ladoga.⁵⁷

Apart from strong resistance on the right flank, operations after Armoured

⁵⁴ Halder, *Diaries*, 973 (25 June 1941); assessment of enemy's situation in army group order of 27 June 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix B2, MGFA P-114a.

⁵⁵ Halder, *Diaries*, 994 (1 July 1941); H.Gr. Nord/1a, *Heeresgruppenbefehl*, 1 July 1941; Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendices c1, c2; Leeb, *Tagebuchaufzeichnungen*, 283 ff. (22 June-1 July 1941).

⁵⁶ Halder took a rather grand view of the situation: the infantry divisions were to eliminate enemy resistance in Estonia and secure the coast, advance in as great a strength as possible towards Leningrad and the south shore of Lake Ladoga, and still cover the eastern flank in the direction of Nevel. Cf. Halder, *Diaries*, 997 (2 July 1941). The directive of the Army High Command of 3 July has not been found; cf. however, the directive of 8 July 1941, RH 2/v. 1326, fos. 155-6. At the same time the three divisions of XXIII Army Corps (Army High Command reserve) were to be used to cover the gap between Army Groups North and Centre, and two divisions were to secure the rear areas. Cf. Leeb, *Tagebuchaufzeichnungen*, 285 (2 July 1941).

⁵⁷ *KTB OKW* i. 426 (3 July 1941); Leeb, *Tagebuchaufzeichnungen*, 286 (3 July 1941), with the note that Hitler attached importance to an early capture of Tallinn, which agrees with his remarks to Halder of 30 June 1941 (Halder, *Diaries*, 991).

Group 4 moved into battle proceeded with little interference from the enemy. On 4 July both corps reached the old Latvian-Russian frontier. Then the spearhead division of LVI Armoured Corps became bogged down in the swampy forested area; the corps had to shift the main effort of its attack to Porkhov. On 5 July the armoured group took Ostrov and pushed on in the direction of Pskov and Porkhov.

The further conduct of operations was prepared by the guidelines of the Army General Staff, in accordance with a briefing by the commander-in-chief of the army at the headquarters of the army group on 7 July; they were finalized in an army-group order of 8 July.⁵⁸ This order assumed that a Finnish offensive between Kronshtadt Bay and Lake Ladoga and an advance of Armoured Group 3 of Army Group Centre via Nevel towards Velizh could be expected after 10 July. These operations would tie down the enemy facing the army group's own right flank.

The object of the new thrust by Armoured Group 4 was to be Leningrad; the city was to be cut off from the south and south-east. Until Sixteenth Army could come up, the armoured group had to defend itself against enemy forces attacking from the area east of Lake Ilmen. At the same time it was to occupy the Narva crossings to prevent a withdrawal of enemy units from Estonia. To protect the eastern flank of this attack and the rear area of the armoured group around Porkhov, Sixteenth Army was to advance on Kholm and send a flanking force against Velikie Luki. Advance units were sent against Kholm, Staraya Russa, and Novgorod. Eighteenth Army was ordered to turn north after reaching the area west of the road between Ostrov and Pskov to follow Armoured Group 4. Its task remained to conquer Estonia and capture Tallinn and Paltiskis.⁵⁹

On 8 July the Army General Staff issued a directive significantly changing the plan of the army group with its concentration on the line between Leningrad and Narva, which would have required Armoured Group 4 to make a new thrust of more than 250 kilometres.⁶⁰ This instruction was the result of a discussion of the situation with Hitler on 8 July, at which Halder was primarily concerned with the beginning of the battle of envelopment of Army Group Centre in the triangle Orsha-Smolensk-Vitebsk. At this conference Hitler accepted Halder's plan of concentrating entirely on Moscow in so far as he described as the 'perfect solution' the possibility that Army Group North might carry out its orders with its own resources.⁶¹ This meant that Armoured

⁵⁸ On 5 July 1941 Jodl informed Brauchitsch of Hitler's thoughts on the future conduct of operations. Guidelines in *KTB OKW* i. 429 (8 July 1941); Leeb, *Tagebuchaufzeichnungen*, 287; army group order of 8 July 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix D1, MGFA P-114a; teletype message OKH/GenStdH/Op.Abt. (IN) No. 1345/41 (8 July 1941) to Army Group North, BA-MA RH 2/v. 1326, pp. 155-6.

⁵⁹ With the above directive of the Army High Command recipients were informed that Army Group North could not, for the time being, expect to receive the mobile units of Army Group Centre promised in the deployment order. Cf. Halder, *Diaries*, 212 (8 July 1941), and sect. II.1.1(b) at n. 145.

⁶⁰ Leeb, *Tagebuchaufzeichnungen*, 289-90 (9 July 1941).

⁶¹ Cf. above, n. 59.

Group 3 would not support Army Group North. Moreover, Hitler also wanted Armoured Group 4 with a strong right wing to cut off Leningrad especially in the east and south-east. And Halder, who assumed that the army group enjoyed a 'clear' numerical superiority and had always placed special emphasis on giving it a strong right wing, readily agreed to this plan.⁶² This shift of the point of main effort of the German attack to the Novgorod-Luga or the Volkhov-Shlisselburg line was also intended as support for the Finnish attack from the north. Moreover, the Army General Staff also ordered strong advance infantry units to be moved towards Leningrad from the south to make the mobile units south and south-west of the city available for other tasks as soon as possible.

Army Group North accepted the order calmly. This can only be explained by its continuing belief that the enemy would withdraw if he were attacked with sufficient ferocity, that the enemy forces south-east of Leningrad were his last units in the area capable of offering serious resistance, and that the German force was clearly superior. It still wanted to prevent the Red Army from withdrawing strong units eastward and welcomed the opportunity to halt and bring up fresh troops.⁶³ The commander-in-chief of Army Group North doubted that the defenders were determined to hold the area around Leningrad under all circumstances.⁶⁴ On the other hand, the experience of Armoured Group 4, which showed that the terrain to the north-east was not suited for a thrust by mobile units in that direction, was not taken into consideration.

The armoured group began its advance on 10 July, with the two corps using different roads: LVI Armoured Corps advancing on the right in the direction of Porkhov-Novgorod-Chudovo; on the left XXXXI Armoured Corps advancing along the road Pskov-Luga-Leningrad. This direction would inevitably lead Manstein's corps very quickly into an almost impassable marsh along the Volkhov, but the armoured group was determined to cover the distance to the starting-position for the encirclement of Leningrad within about four days. This represented a thrust of about 300 kilometres, which could succeed only if the formations involved were stopped neither by the enemy nor by difficult terrain. The six mobile units of the armoured group were not able to protect the 200-kilometre-long eastern flank and the equally long rear of the army group between Novorzhev and Lake Ilmen. SS

⁶² Halder, *Diaries*, 211-12 (8 July 1941). On the vacillation concerning the use of Armcd. Group 3 cf. sect. II.1.1(b) at n. 145.

⁶³ On 10 July 1941 the armoured group command took a similar view of the situation; in spite of all doubts, this seemed to be the only course that promised success (Chales de Beaulieu, *Panzergruppe 4*, 60). The general commanding XXXXI Armcd. Corps had serious doubts because of the difficult terrain: report to Armcd. Group 4, Müller-Hillebrand, Nordabschnitt, pt. 1, appendix D3, MGFA P-114a, printed in Chales de Beaulieu, *Panzergruppe 4*, 157-8, annexe 8.

⁶⁴ Pz.Gr.-Befehl [armcd. gp. order] No. 11, 9 July 1941, and directive of the commander of the armoured group, 10 July 1941, BA-MA, Pz.Gr. 4, 18738/2; Chales de Beaulieu, *Panzergruppe 4*, 61—here also the assessment of difficulties involved in the attack. Leeb did not press for a change. cf. Leeb, *Tagebuchaufzeichnungen*, 290 (9 July 1941); cf. also below, n. 78.

Totenkopf Division, located to the right of LVI Armoured Corps and involved in hard fighting in Sebezh since 5 July, was also dependent on their support.⁶⁵ The commander of the armoured group therefore decided to skirt the difficult terrain and break strong enemy resistance by employing *all* his forces if he encountered serious difficulties.

As early as the second day of the attack it became evident that enemy resistance was stiffening and that the marshy forested terrain did not permit a rapid advance. Colonel-General Hoepner thereupon decided after reaching Zapole to have XXXXI Armoured Corps turn north about 40 kilometres from Luga to capture the ridge north of the lower Luga for an attack on Leningrad from the south-west. On 12 July the three mobile divisions began their advance in this direction; 269th Infantry Division took over the defence of the position already reached. This change of direction succeeded after two days and the corps advanced on the lower Luga and established bridgeheads across the river.⁶⁶ But this meant that direct contact with LVI Armoured Corps, which was pushing through equally difficult terrain towards Leningrad, had been lost. After capturing Porkhov on 11 July, 8th Armoured Division advanced towards the Mzha sector and was subjected to fierce attacks from all sides on 15 July. For a time it was cut off and had to withdraw. With the help of two divisions of I Army Corps of Eighteenth Army, the situation was stabilized.

It has already been pointed out that the order of the Army High Command of 9 July was incompatible with the original intentions and preparations of the army group with regard to the expansion of the operations area to the north-east as well as to the point of maximum effort. The immediate decision of the armoured group command to divert XXXXI Armoured Corps after realizing the difficulties involved in the advance on Luga and Novgorod was presumably also due to the desire to keep at least that corps intact for the attack on Leningrad.⁶⁷ The decision to keep back SS Totenkopf Division in spite of the critical difficulties Manstein was encountering supports this assumption. Halder's ready acceptance of the plan to use the armoured corps for a widely fanned-out attack in unsuitable terrain was probably due to the guiding principle of all previous German operations in the Soviet Union, the encirclement of enemy forces from both sides. Halder presumably considered the operation by Manstein's corps not only as the prelude to the creation of an eastern spearhead of an attack on Leningrad, but also as the future northern flank of an attack on Moscow. The constant 'removals' of units from Sixteenth Army, which were quite incompatible with its stated primary task of securing

⁶⁵ Cf. Manstein's account in *Lost Victories*, 193-4, and the statement of Chales de Beaulieu in *Panzergruppe 4*, 51-2.

⁶⁶ Chales de Beaulieu, *Panzergruppe 4*, 64 ff.; note of conversation between Leeb and Reinhardt, 13 July 1941, *ibid.*, annexe 9; Manstein, *Lost Victories*, 196-7; Halder, *Diaries*, 1040-1 (14 July 1941).

⁶⁷ Collection of opinions on the continuation of the attack by Armd. Group 4 according to the diary of the armoured group, 15-18 July 1941: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix D8, MGFA P-114a; Pz.Gr. 4/Ia, KTB, BA-MA 18738/1.

the attack on Leningrad, can also be understood in this light.⁶⁸ On 14 June Hitler noticed that Armoured Group 4 was operating in a way completely contrary to his orders and reacted angrily.⁶⁹ He sent his adjutant, Colonel Robert Schmunt, to the army group and the armoured group. In answer to the question why the armoured group had not attacked Novgorod with a stronger right wing, Leeb replied that this situation had been an inevitable result of the fact that XXXXI Armoured Corps had made good progress while LVI Corps had encountered fierce resistance.⁷⁰

In his order to the army group of 15 July Leeb assumed that enemy resistance would now be centrally directed and that the period of surprise thrusts was past.⁷¹ Marshal Voroshilov was recognized as the driving force behind the increasingly stubborn Soviet resistance and counter-attacks along the front of Army Group North. At the same time the army group was tied down by hard fighting against enemy units which had been bypassed during the finger-like advance of the German armoured forces and were now being activated as part of a reorganization of the Red Army's defences. Leeb therefore ordered Armoured Group 4 to secure first the general line Novgorod-Luga-Narva and then to begin cutting the city off with the main effort in the south-east. The start of the attack by the right wing (LVI Armoured Corps) depended on the arrival of I Army Corps from Eighteenth Army to protect the flank. Two-thirds of Sixteenth Army were still tied down on the southern wing, co-operating with Ninth Army in the envelopment of the group of enemy forces around Nevel. Eighteenth Army was first to defeat the enemy in Estonia and then take Tallinn and Paltiski, and occupy the islands Hiiumaa (Dagö) and Saaremaa (Ösel) in the course of Operation Beowulf. It was also to send a corps to the area of Kingisepp subsequently to relieve the west wing of Armoured Group 4.

On 17 July the command of Army Group North summed up its assessment of the situation and future possibilities and came to the conclusion that the operations area, the strength of the German forces, and the stiffened enemy resistance made it advisable to carry out further operations in stages, and not at one stroke.⁷² Consequently, Sixteenth Army would have to encircle the enemy forces confronting it or force them to withdraw eastward. The attack

⁶⁸ Manstein (*Lost Victories*, 197, 202) reports early knowledge of the intention to have Sixteenth Army attack in the direction of Moscow; Halder, *Diaries*, 1032-3 (12 July 1941). Cf. sect. II.1.1(b) at n. 145.

⁶⁹ Halder, *Diaries*, 1043-4 (14 July 1941).

⁷⁰ Leeb, *Tagebuchaufzeichnungen*, 296 (15 July 1941); Chales de Beaulieu, *Panzergruppe 4*, 22-3. On 11 July Hitler had already demanded that the left wing of Army Group Centre should be used to shorten the fighting of II Army Corps of Sixteenth Army; this was contrary to Halder's efforts to hold the forces of the army group together for the attack on Moscow; Halder, *Diaries*, 1032-3 (12 July 1941).

⁷¹ Army group order, 15 July 1941, in Müller-Hillebrand, *Nordabschnitt*, pt. I, appendix D7, MGFA P-114a; excerpt in Chales de Beaulieu, *Panzergruppe 4*, 160.

⁷² Situation assessment of Army Group North, 17 July 1941, in Müller-Hillebrand, *Nordabschnitt*, pt. I, appendix D9, MGFA P-114a; assessment of 19 July 1941, *ibid.*, appendix D10; Leeb, *Tagebuchaufzeichnungen*, 298-9.

across the line Novgorod–Narva could take place only when I Army Corps had been reinforced with one or two additional corps. Until then it would be the task of Armoured Group 4 to push forward to that line. And for the attack on Estonia available forces were for the moment too small.⁷³ The army group command believed it could carry out the resupplying and especially the reorganization of its formations in such a way that a new attack in the direction of Leningrad could be started about 25 July.⁷⁴

On 21 July Hitler arrived at Leeb's headquarters.⁷⁵ The commander-in-chief of the army group delivered an oral report on the situation and his plans. The armoured group would begin to cut Leningrad off from the rest of the Soviet Union as soon as sufficient infantry forces had been brought up. The capture of Tallinn, Paltiskis, and the islands of Hiiumaa and Saaremaa were secondary objectives. As a third objective Leeb mentioned the advance of Sixteenth Army along both sides of Lake Ilmen to cut the railway line between Moscow and Leningrad. Hitler pointed out the urgent need to capture Leningrad. Because of the uninterrupted flow of iron ore from Sweden the situation in the Gulf of Finland had to be 'taken care of'. The advance on Leningrad also had to result soon in the severing of the railway line to Moscow to prevent the transfer of Soviet forces there to other fronts and to the Soviet capital itself. For this purpose he was considering bringing up Armoured Group 3. Hitler expected stubborn resistance, as Leningrad had a symbolic significance for the Soviet regime.⁷⁶ This formulation, which reflected Hitler's basic conviction of the leadership function of the Communist Party as the decisive element in the resistance of the Red Army as well as the mobilizing of the civilian population, cannot, however, be separated from his assessment of the area around Leningrad as a strategic factor of primary importance. Not only did the last bastion of the Red Fleet in the Baltic have to be eliminated and a direct rail link between Germany and Finland established, but in and around Leningrad were located the most modern Soviet facilities for the production of tanks, artillery, and ammunition, which covered a substantial part of the requirements of the Red Army.

Army Group North did not include this possible armoured support in its 'Order for the Continuation of Operations' on 22 July.⁷⁷ Presented in the form of an oral report on the group's plans, this order had already been approved by Hitler. Points of friction between Hitler's headquarters and the army group could only concern the use of the forces available, and Hitler had already

⁷³ Chales de Beaulieu, *Panzergruppe 4*, 78–9; Manstein *Lost Victories*, 196–7; Leeb papers according to Leeb, *Tagebuchaufzeichnungen*, 298–9 n. 149; Brauchitsch's report after visit to army group command in Halder, *Diaries*, 1053–4 (17 July 1941).

⁷⁴ Halder, *Diaries*, 1054 (17 July 1941).

⁷⁶ Objectives of Armd. Group 4 for the continuation of operations, 22 July 1941, in Chales de Beaulieu, *Panzergruppe 4*, 161–2, annexe 11.

⁷⁷ Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix E2, MGFA P-114a.

explained his ideas in this respect in detail. Leeb sought a workable solution between the two points of main effort demanded for the attack and the single, concentrated thrust of an armoured spearhead demanded by Hoepner. First he placed an army corps under the command of each of the two attack spearheads, XXXXI and LVI Armoured Corps. The main point of the attack was between Lakes Ilmen and Peipus. There LVI Armoured Corps was to make the first thrust, advancing as far as the line Novgorod-Luga. Then XXXXI Armoured Corps with the attached XXXVIII Army Corps was to launch its attack from the west. As the attack progressed, Sixteenth Army headquarters would take over command of the entire right wing, including LVI Armoured Corps. But nothing had been said about the composition of the corps. Through reorganization and assignment of reserves most of the mobile troops could thus, after all, be united under one command, in the group formed by Hoepner.⁷⁸ Leeb believed that now, after the heavy casualties suffered by the enemy in the recent fighting, he could afford to keep the right flank relatively weak in favour of giving the group at the point of maximum effort more depth and perhaps employing the forces to the north-east, if that should become necessary.

Leeb's intentions show that at the end of July 1941 the German offensive in the sector for which Army Group North was responsible could be continued beyond the initial objectives but also that the enemy's fighting strength had still not been broken decisively. The main operational objectives would have to be addressed individually after the reorganization of the army group and systematic preparation. It became increasingly evident that the 'ideal solution'—isolating Leningrad while securing the long eastern front and at the same time taking the pressure off the northern flank of Army Group Centre with the forces of Army Group North alone—was unrealistic. Nevertheless, with regard to the near future the strategic results of Wehrmacht operations in the northern sector of the German eastern front were positive. Confining the 'Red Banner Baltic Fleet' to the area of Kronshtadt Bay and the conquest of the Baltic coast to a point west of Narva secured the vital Swedish iron-ore shipments, the sea links with Finland, and the supplying of the army group by sea.

(iii) THE BATTLES AT THE FRONTIER IN THE SECTOR OF ARMY GROUP SOUTH AND THE GERMAN ADVANCE INTO THE UKRAINE
(See the *Annexe Volume*, Nos. 1 and 7)

Army Group South was under the command of Field Marshal von Rundstedt and, according to 'Deployment Order Barbarossa', had the task of 'destroying the Soviet forces in Galicia and the western Ukraine still west of the Dnieper and capturing the Dnieper crossings at and south of Kiev at an

⁷⁸ Agreement had already been reached between Leeb, Busch, and Hoepner: Müller-Hillebrand, *Nordabschnitt*, pt. 1, appendix 53; Leeb, *Tagebuchaufzeichnungen*, 303-4 (22 July 1941).

early stage'.⁷⁹ Halder's original plan of achieving these objectives with a large envelopment operation from southern Poland and Romania, combined with a pincer operation by German and Hungarian formations in Galicia, had been abandoned for various reasons after Hitler's decision of 17 March 1941.⁸⁰ Now the main thrust of the army group was concentrated on the line Lublin-Kiev, with the intention of reaching the same general objectives of this initial phase.

Nevertheless, within the German general staff the idea of a large-scale envelopment continued to form the basis for operational decisions made after the initial German attack.⁸¹ Colonel-General Ritter von Schobert, for example, who had taken command of Eleventh Army in Romania on 24 May, informed the army group of his intention, in addition to defending and securing Romania's frontiers, of preparing the attack across the upper Prut to the north-east.⁸² The army group left it to the Army High Command to decide when the rather risky dispersion of defensive forces along the Prut, which such preparations would require, could be carried out. The order for the attack was to be issued at the earliest five days after the reorganization.⁸³ The attack objective, Vinnitsa or the area north of it, was to be reached in co-operation with the adjacent Seventeenth Army.⁸⁴ This represented a return to at least a variant of Halder's draft plan of 5 December 1940,⁸⁵ but the delay, the basically different start of the attack, and the lack of the 'Carpathian Group' should not be overlooked.

Army Group South command assumed that after the German forces had broken through the weak Soviet frontier defences enemy resistance would be concentrated along the rivers at right angles to the direction of the attack and along fortified lines. It was believed that a broken line of fortifications existed along the Dniester from the river mouth via Mogilev to Novograd Volynskiy and Petrikov. Further west was the old Austrian and Polish line from Khotin via Ternopol, Brody, Kishinev, Hołowczyce (Golovchitsy), the course of the Rokhod, and Pinsk. Little was known about how well it had been maintained and strengthened. Kiev, Kolomyia, Lvov, Sambor, and Stanislaw were

⁷⁹ Halder, *Kriegstagebuch*, ii. 465, and deployment order for Barbarossa, 31 Jan. 1941 (not in trans.).

⁸⁰ Cf. sect. I.v.1(f) at n. 156.

⁸¹ Cf. sect. II.1.1(a), at n. 88; H.Gr. Süd/Ia, KTB, 2 May 1941, BA-MA, RH 19 I/6, where, after Hitler's rejection of Halder's solution, in addition to the 'main case' the 'variant' of a double envelopment of the enemy in the area east of Lvov is mentioned as a possibility: Hauck, *Südliches Gebiet*, pt. 1, 207 ff. (appendix 2), 223 ff. (appendix 4), MGFA P-114c.

⁸² Schobert, however, considered the prospects for an attack to be, with few exceptions, unfavourable, and in some cases non-existent: AOK 11/Ia, KTB, BA-MA, RH 20-11/4a.

⁸³ On 3 June 1941 Army Group South had changed the orders for Eleventh Army accordingly. Instead of an incipient attack, only an imminent attack was to be feigned, which did not require a significant transfer of troops. This was the result of an order Halder had issued to Eleventh Army on 28 May 1941: H.Gr. Süd/Ia, KTB, BA-MA, RH 19 I/66.

⁸⁴ Order for preparation of deployment for Barbarossa, 28 May 1941, with annexes, BA-MA RH 20-11/4 a K.

⁸⁵ Cf. sect. I.v.1(e) at n. 125.

thought to be fortified and would possibly slow the German advance. South-east of the Carpathians the main obstacles were the lowlands with their numerous rivers west of the Dniester, the Dniester itself, and its tributaries. Further east strong resistance was expected along the Dnieper and especially around Kiev.

For the attack Army Group South disposed of thirty-eight divisions, including armoured units, against eighty known enemy divisions. The deployment of the enemy units, especially the strong massing of troops near Lvov, indicated a defence planned close to the frontier. Because of the open right flank of Seventeenth Army (the frontier with Hungary) and the fact that Eleventh Army was not ready to attack, success depended on the mobile forces of Armoured Group 1 in the northern deployment area under Colonel-General von Kleist breaking through Soviet defences at a strategically important point and then operating independently in the enemy's rear area. This basic idea dominated the conduct of operations. Sixth Army under Field Marshal Walter von Reichenau was to force an opening for the armour in enemy positions near the frontier and then follow the armoured units closely to destroy the enemy, provide assistance at river crossings, and cover the northern flank of the army group in the direction of the Pripet marshes. To accomplish the first task the armoured group was placed under the commander-in-chief of Sixth Army⁸⁶ and itself took over several infantry divisions of Sixth Army to ensure that transport movements could be carried out smoothly. The army group sought to forestall the danger of armoured formations getting tied down in tactical tasks by issuing a directive that they were to be so used only on its orders.

Seventeenth Army under General Carl Heinrich von Stülpnagel was to cut off the area around Lvov and later, under cover provided by Armoured Group 1 and Sixth Army, to advance in the direction of Ternopol and Vinnitsa. Most of the German forces in Romania under Eleventh Army command were concentrated in the area north of Iași for the planned attack across the Prut. After the government of Romania had declared its readiness to participate actively and offensively in the war, the question of the command of Romanian forces and German forces assembled in Romania was solved by Marshal Antonescu being made their nominal commander, while the headquarters staff of Eleventh Army was to plan and supervise the actual execution of operations.⁸⁷ After a new agreement between Antonescu and the commander-in-chief of Eleventh Army had been reached on 19 June, the sector of the Romanian Fourth Army, which was entrusted with the security of the coast and the lower Prut, was left under the Romanian army command. The Romanian Third Army command and that of the Romanian IV Army Corps were excluded from controlling their units; they were placed under the direct

⁸⁶ The same resistance and doubts arose here as in Arm'd. Groups 2 and 3. It was up to the C.-in-C. of the army to devise a compromise.

⁸⁷ Cf. sect. I.v.3 at n. 87 (Förster).

command of Eleventh Army. The staff of the Romanian Third Army retained responsibility only for supply operations.

On the first day of the attack the enemy seemed to be completely surprised along the entire front. Neither the tactical leadership nor measures taken by higher commands of the Red Army indicated a readiness for battle on short notice. German and Romanian forces were able to penetrate the enemy's most forward positions.⁸⁸ Even the Romanians were able to capture bridgeheads on their section of the Prut front. Halder's view that no enemy attack was to be expected there and his plan to reorganize Eleventh Army for an attack to the north-east as early as 24 June were thus confirmed.⁸⁹ But it was not yet possible to obtain a clear picture of Soviet intentions—whether to hold the area near the frontier under all circumstances or to withdraw. After the initial surprise, however, Soviet resistance also stiffened considerably in this sector. Counter-attacks with large forces significantly slowed the progress of the German advance. In contrast to the thrusts by the armoured units of the two army groups further north, the advance by Armoured Group 1 to the Styr between Dubno and Lutsk had to be carried out against frontally defending Soviet units, which also mounted dangerous attacks on the German flanks. The infantry divisions of Seventeenth Army attacking in the direction of Lvov also made only comparatively slow progress.⁹⁰

The army group, however, still assumed that the enemy intended to evacuate the 'Lvov pocket'. On 24 June this assessment of the situation seemed to permit the cancellation of the subordination of Armoured Group 1 to Sixth Army and to enable its free operation east of the Styr. The commander-in-chief of the army group, Field Marshal von Rundstedt, decided, however, to wait until strong units of the two armoured corps involved (XXXXVIII and III) had crossed the river. By the evening of 24 June it was clear that the enemy had no intention of disengaging and that stubborn resistance had to be expected everywhere.⁹¹ On the whole, however, the Army High Command believed that a disengagement in the area of Lvov could be expected. It was to be prevented by a thrust of Eleventh Army, which had to be ready to attack on 2 July.

On 25 June the dangerous extension of the right flank of Armoured Group 1 as a result of the slow progress of Seventeenth Army caused the army group command and the commanders of the two armies to consider whether the strong enemy forces west of Lvov could be cut off and the enemy front made to collapse by sending XIV Armoured Corps and XXXIV Army Corps (1st

moured group, for which a third spearhead had been envisaged in the area of Seventeenth Army once the 'armour road South' had been cleared.⁹² In this situation the participation of Hungarian forces was of the greatest importance. But the Hungarian government wanted to receive an official German request for assistance. Along its Carpathian frontier only German radio-deception units were attempting to tie down enemy forces. But the attack of the Hungarian units was already being prepared in accordance with operational requirements of the German conduct of the war.⁹³ On the other hand, on 25 June the addition of three Italian divisions for Eleventh Army was announced, although their combat-readiness was considered limited.⁹⁴

⁹² This 'armour road' was to be constructed from Tomaszow to Ternopol and on towards Proskurov; a second was to extend from Sokal towards Berdichev, and a third via Lutsk and Zhitomir towards Kiev.

The realization that, in regard to his will to fight, toughness, and leadership, the enemy had to be taken seriously and that the crisis of the frontier battles still had to be faced caused the chief of the general staff of the army group, General Georg von Sodenstern, to consider new operational

measures.⁹⁵ If it was not possible, before the momentum of the German attack and the limited German reserves were exhausted, to defeat the enemy around Lvov and in front of Sixth Army, which was continuously bringing up reinforcements, the army group would not be able to fulfil its task of encircling and destroying Soviet forces west of the Dnieper. Then a considerably more limited attack by Eleventh Army would have to be carried out, not across the Dnieper but to the north against Proskurov, and, moreover, the armoured groups would have to attack considerably earlier towards the south-east in order to encircle the enemy east of Lvov.

This revision of the army group's original operational intentions was expressed in its Directive No. 1 of 26 June.⁹⁶ On the one hand the armoured

⁹⁵ H.Gr. Süd/Ia, KTB, 25 June 1941, BA-MA RH 19 I/71, situation assessment, 26 June 1941, early morning (copy); Hauck, Südliches Gebiet, pt. 1, 228 ff., appendix 5, MGFA P-114c.

⁹⁶ Copy in Hauck, Südliches Gebiet, pt. 1, 233 ff., appendix 6, MGFA P-114c.

group was removed from the command authority of Sixth Army and ordered to thrust eastward as rapidly as possible to encircle the enemy in front of the army group and in the Carpathian bend in co-operation with Eleventh Army. On the other hand, a more limited envelopment was recommended as an alternative. This required the armoured group first to reach the area of Shepetovka and then turn south-east. It also had to adjust to the new situation in so far as it was required to advance with three spearheads on Berdichev-Zhitomir without taking into consideration its long flanks. XIV Armoured Corps, the southern group, was to advance as early as possible and with 'all available forces' against Brody and then cross the Goryn on a broad front. Seventeenth Army was ordered to continue its attacks with the main point of effort north of Lvov. In its deliberations Eleventh Army was to assume that the Italians would arrive about 10 July and that they would be used in the offensive against Kishinev. By then the Romanian forces on the lower Prut were to be brought forward to the Dniester.

This directive of the army group took into account the greatly reduced fighting power of the infantry units, but it also called into question the task of the army group as a whole. Instead of along the Dnieper, enemy forces were to be annihilated solely along the Ukrainian Bug. Halder also based his plans now on this more narrow encirclement, for which Eleventh Army would be barely adequate.⁹⁷ This attack plan, which seemed to be the most probable at the time, contained the partition of the armoured group into a spearhead turning to the south-east and a second one attacking in the direction of Kiev. In addition to advancing eastward towards Kovel and securing the railway between Khelm, Kovel, and Lutsk, Sixth Army, which felt threatened on its left flank, was now to secure both flanks of the armoured group as long as Seventeenth Army was still fighting west of the area around Grodze and Tsolkeev.

On 27 June, the day after this adjustment of the operational plan of Halder and Army Group South to the changed situation, it became evident around Lvov that the Soviet armies were withdrawing.⁹⁸ The Soviet defenders in front of Seventh Army withdrew to the east, covered by strong protecting forces and local counter-attacks, including armoured units. The armoured group succeeded in crossing the Goryn against strong resistance by rearguard units and ambushes by Soviet formations that had been overrun. Sixth Army pushed its northern wing further in the direction of Kovel. Two divisions (168th Infantry Division and 99th Light Division) had to be brought up from the reserves to eliminate strong enemy groups in the rear area between the Bug and the Luga.

An analysis of the situation showed that the enemy intended to establish a new front modelled on older positions in the line from Novograd Volynskiy to

⁹⁷ Halder, *Diaries*, 979-80 (27 June 1941). This attack had been discussed with Brauchitsch on 26 June at Army Group South command: H.Gr. Süd/Ia, KTB, 26 June 1941, BA-MA RH 19 I/71.

⁹⁸ H.Gr. Süd/Ia, KTB, 27 June 1941, BA-MA RH 19 I/71.

Shepetovka and Setsuveni (Dniester). The army group ordered an immediate pursuit by Seventeenth Army to prevent the enemy from occupying positions in the new line. Through his adjutant, Colonel (General Staff) Schmundt, Hitler informed the army group that reaching a set geographical objective was less important than destroying the 'vital strength' of the enemy. Where that was done was not important. Hitler thus agreed to drop the rigid requirement that Kiev should be captured before the army group could turn south. The army group then chose Berdichev, a town behind the line of Soviet fortifications, as the new point at which the armoured group should turn south.

On 28 June the idea of using XIV Armoured Corps, which had not yet seen action, on the right flank of the armoured group to broaden the armoured wedge, an idea first considered on 26 June, was revived. The armoured group command would have preferred to send this corps to the two other armoured corps in order to be able, in deep echelon, to attack and break through the line of fortifications near Novograd Volynskiy. Mainly, however, the armoured group wanted to avoid being tied down in the tactical fighting on the left wing of Seventeenth Army.⁹⁹ But Rundstedt ordered the corps to be employed only after the 'armour road south' had been cleared by Seventeenth Army. This also seemed advisable with regard to the decision to be taken as to whether, after the breakthrough had been achieved, one or two armoured spearheads should attack towards Kiev or to the south-east. The Soviet positions in the line of fortifications were to be penetrated 'without engaging in major frontal attacks', which caused Halder to consider how the army group could best be organized for this purpose.¹⁰⁰

At this time Armoured Group 1 and Sixth Army were involved in repulsing persistent enemy counter-attacks, which achieved deep penetrations near Dubno and prevented a rapid advance to the east. Directive No. 2 of the army group,¹⁰¹ issued on 30 June, was, however, based entirely on the idea of pursuing the enemy as quickly as possible and penetrating the fortified line along with him to prevent him from occupying the fortifications there. Only then was the large envelopment movement to be begun that was intended to create the conditions for ending the campaign in the operational area of Army Group South before the onset of winter. Eleventh Army was to advance from the south towards Vinnitsa, break the defence of the fortified line together with Seventeenth Army, and cut off the retreat of the enemy troops to the south-east. The Italian corps would be used on the west wing; the Romanian units would provide flank cover along the Dniester. A new arrival was the Hungar-

⁹⁹ H.Gr. Süd/Ia, KTB, 28 June 1941. A strong argument against bringing XIV Armd. Corps up behind III Armd. Corps (in the direction of Kiev) was that the 'armour road' to the north would be needed for supply transports of the field office of the General Staff Supply Officer South as soon as supply facilities in Rovno were completed.

¹⁰⁰ H.Gr.-Befehl [army gp. order], 28 June 1941, copy: Hauck, Südliches Gebiet, pt. 1, 238, appendix 7, MGFA P-114c; Halder, *Diaries*, 985-6 (29 June 1941).

ian VIII Army Corps, which, via Stanislav, was to advance across the Carpathians towards the Dniester after 2 July. Seventeenth Army would move towards Proskurov via Ternopol and tie down enemy forces 'with unremitting attacks'. Sixth Army would thrust towards Berdichev with most of its forces, while at the same time protecting the northern flank. III Armoured Corps, advancing towards Zhitomir, was to be given sufficient infantry forces capable of closely following the corps. After the successful breakthrough towards Berdichev, this corps was to be employed near Kiev to establish a bridgehead across the Dnieper. If the armoured divisions were not able to break through, they were to go on the defensive and wait for the arrival of the infantry of Sixth Army. If the breakthrough succeeded, most of the armoured group was to turn south-east. But first the breakthrough had to be achieved. In the sector of Seventeenth Army, Lvov was taken on this day.¹⁰²

A reorganization of Army Group South was undertaken for the phase of the attack beginning on 2 July. Except for indispensable covering forces, the seven German divisions in Romania—another was being transferred there—were moved forward to the northern wing of Eleventh Army. Two Slovak divisions replaced the two covering divisions with Seventeenth Army. The Slovak motorized brigade, on the other hand, was placed under LII Army Corps.¹⁰³ Additional corps commands and divisions as well as artillery from Army Group Centre were intended to guarantee the success of the group at the centre of Sixth Army's attack. An armoured corps command with 2nd Armoured Division was envisaged for Seventeenth Army. The total result was a considerable increase in the number of strong formations, to which it was planned to add three Italian formations under a corps command and three Hungarian mobile brigades of the 'Mobile Corps'.¹⁰⁴

The question of a single command of the infantry and armoured units in the attack sector of Armoured Group I was settled by a compromise. For the time being, the armoured group was not placed under Sixth Army. But Rundstedt did order that the army should immediately take over command of the armoured group if a more massive support of its attack by infantry units should become necessary and it were not able to operate independently.¹⁰⁵

The addition of fresh divisions was intended not only to strengthen the stronger wing of the attack for the planned breakthrough of the Stalin line, but also to secure the left wing against Soviet units operating from the Pripet area. Information gathered by signal intelligence indicated that seven divisions were located there under the command of the Soviet Fifth Army. At the same time the continuing fighting in the rear operations area required the use of combat

¹⁰² H.Gr. Süd/Ia, KTB, 30 June 1941, BA-MA RH 19 I/71.

¹⁰³ This international contingent created several problems, as the Italians could not be sent into action on the Black Sea and the Hungarians and Romanians could not be used in neighbouring sectors. The Drogobych oilfield had to be protected from seizure by the Hungarians; the Slovak Army Group was to be used for this purpose. Cf. sect. II.iv.1(c) (Förster).

¹⁰⁴ Cf. the development of the structure of Army Group South, Diagrams II.1.3-6.

¹⁰⁵ H.Gr. Süd/Ia, KTB, 30 June 1941, BA-MA RH 19 I/71.

troops in addition to the security forces there. Although Halder did not see any danger to operations in this situation, he intensely disliked using for such tasks any infantry divisions urgently needed for the attack.¹⁰⁶ Hitler was also worried about the danger of flank attacks; an 'offensive mopping-up' of the area, using troops of both army groups, was ordered.¹⁰⁷

The attack of Sixth Army was obstructed by vigorous attacks of the Soviet Fifth Army, supported by armoured troops, from the Pripet marshes, attacks which were dangerous primarily because they severed supply-lines.¹⁰⁸ Halder released army reserves on the left wing of the army group to eliminate these disruptions. Sixth Army headquarters ordered XVII Army Corps to use four divisions to comb the forested area. In the north Army Group Centre sent Higher Command XXXV against Pinsk in a move to meet the forces of Sixth Army.¹⁰⁹ By very skilful tactical manœuvring the Soviet Fifth Army was able to avoid a decisive encounter with these groups and concentrated on flank attacks against Sixth Army, which was advancing towards Kiev. After reaching Slutsk on 7 July, Sixth Army abandoned attempts to fight its way through the impassable area, suffering further losses, and continued its advance along the southern edge of the marshes. The resulting uncertainty on the left flank of Army Group South with the constant threat to the vital communications lines to Zhitomir, and the hard and costly fighting with 'nests of Russians' in the rear area, affected not only operations but also the fighting ability of small units and even individuals. Troops who were neither trained nor equipped for combat in the marshy forests were easily ambushed, and the terrain presented almost insurmountable obstacles to the movement of vehicles and heavy weapons. This combination of the individual German soldier's insecurity against the possibility of surprise attack and an extremely hostile natural environment led to the use of the 'most brutal methods' to defeat the enemy, who for his part found ideal conditions in the marshes not only for regular troops but also for partisan groups.

In spite of these difficulties, the offensive of the German forces at the main

¹⁰⁶ On the intentions of Army Group South cf. Halder, *Diaries*, 985 ff. (29 June 1941). On 1 July penetrations of the flank of the armoured group by enemy forces from the Pripet area were reported: *ibid.* 995 (2 July 1941).

¹⁰⁷ *Ibid.*; H.Gr. Süd/Ia, KTB, 1 July 1941, copy, Hauck, Südliches Gebiet, pt. 1, 248, appendix II, MGFA P-114c.

¹⁰⁸ Halder, *Diaries*, 1008 (6 July 1941). Cf. also the text preceding n. 125 above, and the first passage of sect. III.1(b)(ii) below. According to a report of Army Group South of 3 July and the talk between Halder and Sodenstern of 6 July 1941, the army group was to employ strong forces of the Army High Command reserve on the left wing in order to keep the left flank of III Armd. Corps free for the thrust to Kiev. Moreover, the commander of rear army area 103 (south) was to be involved by Eleventh Army headquarters. It should be noted that in his draft plan for the operation Sodenstern wanted to launch an independent army group against the Soviet forces in the Pripet marshes (cf. sect. I.IV.1(d) n. 117); Hitler considered this plan, but Halder rejected it. Cf. Philippi, 'Das Prijetproblem', 14-15. Philippi does not seem to have had access to the two versions of the Prijet study by Foreign Armies East.

¹⁰⁹ Report by Col. (ret.) Zerbels on the difficulties of this operation in Philippi, 'Das Prijetproblem', 32-3.

point of attack (Armoured Group 1 and Sixth Army) achieved a penetration of the Stalin line on 5 July. On 7 July the armoured group reached Berdichev and on 9 July Zhitomir. The right wing of Sixth Army advanced on Ternopol with Seventeenth Army, which was under less pressure because of the advance of the Hungarians from the Carpathians.¹¹⁰ On the southern wing, however—contrary to the assumed general withdrawal of Soviet armies in front of the army group—Soviet forces slowed the progress of Eleventh Army by staging fierce attacks with motorized formations against the Romanian Fourth Army and the German units remaining there. Heavy rains created additional problems and made the movements of the army group more difficult. In any case, it was clear that Eleventh Army would no longer be able to reach the area around Vinnitsa in time to co-operate tactically with Sixth Army.¹¹¹

To understand the decisions that had to be taken after the capture of Zhitomir, it is necessary to take a closer look at the thinking of Hitler, Halder, and the army group command. When Army Group South resumed its advance and the Białystok pocket was closed in the sector of Army Group Centre, Hitler began to consider the next strategic objectives of the campaign in the east and the required forces.¹¹² He assumed that after Fourth Armoured Army had reached Smolensk a decision would have to be taken as to whether the main thrust of further operations should be towards Leningrad, Moscow, or the area around the Sea of Azov. Hitler demanded that, if Armoured Group 1 did not have sufficient forces after reaching Zhitomir to turn the enemy's flank in the south-east, strong armoured forces from Army Group Centre should be brought up, as this would be most in accord with the idea of annihilating the enemy.¹¹³

Halder intervened early in the deliberations of Army Group South about decisions to be taken after the breakthrough towards Zhitomir and Berdichev had been achieved. From the beginning of the offensive, on 3 July, the army group believed that, after breaking through the fortified line with the bulk of its armoured formations, it would be able to advance to the south-east from the area of Berdichev to link up with Eleventh Army. At the same time Kiev was to be attacked by an armoured corps and infantry.¹¹⁴ The question of the attack on Kiev was at first closely connected with the question of whether most of the enemy forces would withdraw behind the Dnieper or whether the order to encircle large enemy forces 'west of the Dnieper'—estimated at twenty-

¹¹⁰ These reached the Dniester near Zaleshchiki and Nizhniev on 6 July. On 7 July Army Group South was informed that the Hungarian army continued fighting and that the mobile brigades, combined under a corps command, would be placed under the army group as of 9 July. The remaining mobile units became occupation troops under the 'Carpathian Corps': H.Gr. Süd/Ia, KTB, 7 July 1941, BA-MA RH 19 I/71.

¹¹¹ Hauck, *Südliches Gebiet*, pt. 1, 55, MGFA P-114c; *KTB OKW* i. 509 ff. (5-11 July 1941).

¹¹² *KTB OKW* i. 1020 (66), (67), (68), 3-5 July 1941; Halder, *Diaries*, 1000 (3 July 1941). Cf. sect. II.1.1(b).

¹¹³ *KTB OKW* i. 1021 (69), (70), 8 July 1941.

eight divisions—could still be carried out. If the enemy withdrew beyond the Dnieper, the spearhead achieving the breakthrough towards Berdichev and Zhitomir would then advance on Kiev and Cherkassy and Eleventh and Seventeenth Armies would move directly eastward towards the Dnieper, with cover provided by Romanian forces in the south and Hungarian forces in the north. The great battle of annihilation could then take place east of the Dnieper, perhaps in the area of Poltava. These considerations formed the background for the measures of the army group command and were reported to Hitler by his army adjutant, Major Gerhard Engel, who visited the army group on 4–5 July.¹¹⁵

Because of supply problems, the attack on Kiev could have as its objective only the establishment of a bridgehead, as the armoured group estimated that it would not be able to conduct a large-scale action until after a pause in operations. The thrust west of the Dnieper towards the south-east was considered the only realistic possibility. The army group command shared the view of the armoured group but insisted, for the operational reasons mentioned above, that III Armoured Corps should attack Kiev. This view was supported by the operations department. For this reason the creation of an 'attack group Kiev' was begun on 7 July. As the Army High Command rejected the creation of a special operations staff because of the shortage of reserves, the command of XVII Army Corps, under General Werner Kienitz, was placed in charge of the attack group ('attack group Kienitz'). The group was to consist of III Armoured Corps and XXIX and XVII Army Corps with the divisions assigned to them. LI Army Corps with four divisions might also be assigned to the group later.

But Halder had still not decided whether the withdrawal of the enemy (to avoid encirclement by Eleventh and Seventeenth Armies) would end far beyond the Dnieper or was mainly intended to make possible the establishment of a strong defence and the creation of reserves.¹¹⁶ Late in the evening of 7 July he pressed the commander of Army Group South to carry out a close encirclement with the armoured group, as Hitler desired. Afterwards the group was to push on to the Dnieper between Kiev and Cherkassy.¹¹⁷ This splitting of the armoured group necessitated the definitive abandonment of the breakthrough of the enemy front near Kiev, envisaged in the operations plan.

The successful breakthrough of the armoured group and Sixth Army on 8 July meant that a decision about the course of further operations could not be

¹¹⁵ H.Gr. Süd/Ia, KTB, 4–5 July 1941, BA-MA RH 19 I/71.

¹¹⁶ Halder, *Diaries*, 1011–12 (7 July 1941).

¹¹⁷ '... as preparation for a new operation to be ordered by the Army High Command beyond the river': H.Gr. Süd/Ia, KTB, 7 July 1941, BA-MA RH 19 I/71; teletype message OKH/GenStH/Op.Abt. (IS) No. 1347, 8 July 1941, to H.Gr. Süd, BA-MA RH 2/I 326. According to this message, elements of Armd. Group 1, in co-operation with Eleventh Army, were to cut the enemy off west of Vinnitsa; a second group was to be moved against Dnepropetrovsk to attack enemy lines of communication. Other elements and infantry were to establish a bridgehead near Kiev: Halder, *Diaries*, 1021, 1023 (9, 10 July 1941).

postponed. Before the decision could be taken, however, Field Marshal von Reichenau suggested to the army group command that the direction of the attack on Kiev should be entrusted to his command and that IV Army Corps (of Seventeenth Army) should be placed under Sixth Army to form a group named after the general commanding the corps, General Viktor von Schwedler, which, initially also under the command of Sixth Army headquarters and then under Armoured Group 1, was to advance to the south-east. Rundstedt agreed to this proposal.¹¹⁸ (See the Annexe Volume, No. 6.)

After agreement with the Army General Staff, Army Group South issued its directive for the continuation of operations on 9 July.¹¹⁹ The main objective of the army group, the annihilation of the encircled enemy forces west of the Dnieper in a co-ordinated effort by all armies in the area of Vinnitsa, was retained. An additional, new objective was, however, the establishment of a deep bridgehead east of the Dnieper near Kiev. In accordance with these plans the armies, or their corps divided into groups, were sent into battle. It was typical of the organization of the German forces that the northern group of Sixth Army, which was to attack Kiev, was additionally to take over command of the armoured corps only when the infantry divisions went into action in the battle to capture the city. The aim of this plan was to prevent the mobile units from being tied to the infantry army. The main task of the bulk of the armoured group remained, however, to annihilate enemy forces near Vinnitsa and advance to the line Gaysin-Uman. At the same time lesser forces were to push on to the south-east to cut the main lines of communication across the Dnieper and thus prevent the removal of important industrial and other equipment by the Red Army. The request to Air Fleet 4 to give most of its tactical support, especially that provided by Stuka (dive-bomber) formations, to the parts of Armoured Group 1 and Sixth Army attacking Kiev, and to concentrate its strategic support on the sector of the enemy front assigned to Armoured Group 1, shows clearly the different priorities given to these two objectives.

The resulting argument about whether to attack Kiev requires a more detailed analysis. It can be assumed that at first Hitler was not primarily interested in occupying the city of Kiev, but rather in destroying all enemy forces west of the Dnieper.¹²⁰ This idea was also reflected in Halder's previously mentioned suggestion of 9 July¹²¹ that the army group should not concentrate from the very beginning on forming a large encirclement ring, but

¹¹⁸ This meant the end of the 'Group Kienitz'. Reichenau wanted to advance against Kiev with III Armd. Corps, XXIX Army Corps, and LI Army Corps under his direct command; 'Group Schwedler' was to be formed from IV, XXXIV, and LV Army Corps: H.Gr. Süd/1a, KTB, 8 July 1941, BA-MA RH 19 I/71. Cf. structure of Army Group South, Diagrams II.1.3-6.

¹¹⁹ Cf. teletype message OKH No. 1347 (above, n. 117); army group directive in Hauck, Südliches Gebiet, pt. 1, 249, appendix 12, MGFA P-114c.

¹²⁰ For this purpose he wanted to use Armd. Group 2 east of the Dnieper to the south or south-east: Halder, *Diaries*, 1015-16 (8 July 1941); cf. paragraphs preceding nn. 135 and 146 below.

¹²¹ Cf. n. 117 above.

rather on smashing the enemy in a close encirclement with a direct thrust to the south from the area of Berdichev. The army group, on the other hand, wanted to include the area around Belaya Tserkov in a larger envelopment. On the basis of the experience gained in operations around Bialystok, Halder concluded that the enemy could succeed in breaking out of an encirclement if sufficient infantry forces did not closely follow the advancing armoured units.

On the morning of 9 July it became evident that the forces of the army group were perhaps not sufficient for the double task it had been given. The operations department of the Army General Staff informed the army group that Brauchitsch and Halder had doubts about the wisdom of withdrawing XVII Army Corps from covering the northern flank along the Pripet marshes. These doubts were given concrete support by a report from Sixth Army command which arrived at the same time and which stated that both the commander-in-chief and the chief of the general staff were 'very impressed' by the immense expanse of the area. They demanded that XVII Army Corps with at least three divisions be used to cover the northern flank east of Novograd Volynskiy. The army command doubted that XXIX and LI Army Corps alone would be sufficient for an attack on Kiev and suggested that LV Army Corps should be brought from the start. But, excluding reserves, that would leave the army with only two corps for the turn to the south-east. This situation would develop only if III Armoured Corps did not succeed with the first assault in capturing the bridgehead at Kiev, which would therefore necessitate a systematic attack with strong infantry forces.¹²³

The army group command agreed with this reasoning but still argued that the attempt had to be made to take Kiev by surprise with III Armoured Corps. Halder approved 'with reservations' the view which Sodenstern expressed with such certainty. But at the same time he repeated the urgent wish of the commander-in-chief of the army that most of the armoured group should not turn south-east but, after reaching Belaya Tserkov, to the south, towards Uman, to form a 'safe' pocket.¹²⁴

The decisive factor was the demand of the army group to place LI Army Corps and the army reserves assigned to Sixth Army under its command to enable Sixth Army if necessary to take Kiev in an infantry attack. Asked by the operations department what forces would then be available to secure the rear area, Sodenstern replied that none were available and that therefore at least two additional divisions would be necessary. But they were not available.¹²⁴ After these deliberations became known, Hitler reacted immediately. Early in the morning of 10 June, two hours after Halder's discussion with Sodenstern, he forbade an attack on Kiev with armour but without sufficient infantry support. Sixth Army command was informed immediately and claimed that sufficient infantry forces for an attack on Kiev could not be expected until the

¹²³ H.Gr. Süd/Ia, KTB, 9 July 1941, BA-MA RH 19 I/71, directive No. 3 for the continuation of operations.

¹²⁴ Ibid.

end of July, unless the weather and thus the terrain became more favourable and there were no further major battles west of Kiev. Headquarters also pointed out the 'unimaginable difficulties' in penetrating the forest area east of Sarny and the need to bring up new covering forces to free XVII Army Corps on the northern flank.¹²⁵

With Hitler's order and the report from Sixth Army headquarters, the decision against a double offensive by the army group—against Kiev and Belaya Tserkov—had been taken. By comparison the reports of the commander-in-chief of the army during his visit to the command of Army Group South on 10 July had only an interpretative character. Brauchitsch brought Hitler's order that after reaching the line Zhitomir-Berdichev the most forward units of Armoured Group I should be turned south immediately to block the Bug at and south of Vinnitsa for the enemy's retreat, and if possible to link up with Eleventh Army. The parts of Armoured Group I further to the rear were to provide cover in the direction of Kiev; an attack on the city with insufficient forces was expressly forbidden. But Hitler left the final decision about the future conduct of operations in the hands of the command of Army Group South: 'Should it become apparent that there are no large bodies of enemy forces left to cut off west of the Bug, Armoured Group I will be massed for an advance on Kiev and the Dnieper line to the south-east. Investment must be executed in such a way as to bar enemy reinforcements from reaching the city from the north-west.'¹²⁶

Perhaps Rundstedt and Sodenstern, given their roughly comparable responsibility in the decision about the encirclement of the British Expeditionary Force at Dunkirk, would have reached a clear decision on their own. For the army group wanted to take Kiev and saw no chance to destroy the bulk of the enemy forces even in a close encirclement to the south. The slow progress of Eleventh Army as well as of the formations of Sixth Army envisaged for the encirclement were reasons to choose a broader envelopment operation. But the fact that the enemy units west of Kiev would have to withdraw through the city and across the bridges there represented a good reason for capturing the town. Rundstedt was able to point out that Hitler's written order, unlike Haider's telephoned instructions, did not absolutely forbid any attack on Kiev.¹²⁷ Brauchitsch favoured postponing the decision on a close or broad encirclement. After the capture of Belaya Tserkov the then available picture of the enemy's position and intentions would determine whether the direction of

¹²⁵ Ibid. The Slovak army group was envisaged for the southern part of the rear army area and 294th Inf. Div., which was being brought up, for the northern part.

¹²⁶ Halder, *Diaries*, 1022 ff. (10 July 1941). The main idea was thus the encirclement of strong enemy forces. Details of this development in war diary of Army Group South, 10 July 1941, BA-MA RH 19 I/71. On the comparison with Dunkirk cf. Jacobsen, *Dunkirchen*, 70 ff., and *KTB OKW* i, 179E.

¹²⁷ Halder, *Diaries*, 1022 ff. (10 July 1941). The operations department was represented by two officers accompanying Brauchitsch. Hitler took his decision after Halder's oral report; Halder strongly emphasized the tasks given Army Group South in the deployment directive.

the attack would be south or south-east. Hitler approved this solution and requested that care be taken to draw the armoured group together there and avoid endangering its northern flank.

With regard to Kiev the commander-in-chief of the army was of the opinion that 'an advance on Kiev' would definitely 'be in line with appropriate cover for the northern flank'.¹²⁸ If an opportunity presented itself to capture the city, that would be compatible with the army group's orders. This interpretation provided no help. Neither Reichenau, who was at first absolutely certain and whose doubts and demands have already been described, nor the army group command could accept the idea of capturing the city by surprise. The units indispensable for infantry fighting were not available, as the encirclement of the bulk of the enemy forces in co-operation with Eleventh and Seventeenth Armies had priority.¹²⁹

This meant that, for various reasons, the army group had failed in its efforts to carry out both operations at the same time. This fact was taken into account in a supplement to Directive No. 3.¹³⁰ But the way Brauchitsch had pointed out was left open. The army group ordered III Armoured Corps to provide flank cover in the area north-east of Zhitomir, but thereafter the corps was to continue the attack against the Kiev bridgehead within the framework of Sixth Army's operations. The armoured group command was informed that a surprise capture of Kiev could be carried out if a favourable opportunity presented itself which the commander on the scene believed he could exploit without exposing himself to the danger of a setback. Thus the decision was finally left to the lowest-ranking commander.

Before this decision to be taken in advance could actually be put into effect, the basis had to be prepared. In the days before 14 July fierce attacks by two Soviet armoured divisions on the armoured spearhead of the German advance brought the attack to a halt. And Sixth Army had to face the attack of the newly refreshed Soviet Fifth Army from the area around Korosten. The Pripet marshes again provided a secure assembly area for the enemy; for this reason Army Group South decided to attack Korosten. But without the assistance of the divisions on the right wing of Army Group Centre, which had just begun an attack on Smolensk, success could not be achieved. On 9 July Eleventh Army and the Romanian Fourth Army had to defend themselves against heavy attacks on their southern flank, which forced Eleventh Army command to turn a corps towards Kishinev to capture the city. The northern group of Eleventh Army with the units of the Romanian Third Army was now between Soroki

¹²⁸ Cf. Halder's entry of 10 July 1941. According to a quote in the war diary of Army Group South (BA-MA RH 19 I/71, p. 200), Brauchitsch decided to compromise by avoiding a clear yes or no with regard to the attack on Kiev.

¹²⁹ On the question of forming an 'inner ring' near Uman against the wishes of Army Group South, compared to which the capture of Kiev was of secondary importance, cf. Halder, *Diaries*, 1013 (7 July 1941, 11.00 p.m.), 1022-3 (9 July 1941).

¹³⁰ Amendment of Directive No. 3 in H.Gr. Süd/Ia, KTB, 10 July 1941, BA-MA RH 19 I/71; Hauck, *Südliches Gebiet*, pt. 1, 256-7, MGFA P-114c.

and Mogilev and was about to cross the Dniester. Halder's general impression was that the arrival of new commanders along the enemy 'Fronts'—in the south Marshal Semën Budënný—had stiffened Soviet resistance and that the general retreat had been replaced by fierce counter-attacks.¹³¹ Only Seventeenth and the north wing of Eleventh Army still viewed the fighting on the Soviet side as mainly rearguard actions. German advances were limited to those by 13th and 14th Armoured Divisions towards Belaya Tserkov.

As a consequence of these defensive battles, the attack date for the armoured group was postponed, as the group would not be ready before 14 July. Because of supply difficulties and operations to protect its southern flank, Eleventh Army reported that it would not be able to attack before 17 July. On 13 July reconnaissance of the fortifications and troop concentrations around and in Kiev showed conclusively that the city could not be occupied in a surprise operation. By 14 July the armoured group had overcome its tactical crises and the attack on Belaya Tserkov was resumed. Seventeenth Army observed the reinforcement of enemy units in the Stalin line but still believed it would be able to carry out its orders to encircle the enemy.¹³²

Hitler intervened once again in the orders of the army group. On 13 July he ordered 25th Infantry Division (mot.) and SS Leibstandarte Adolf Hitler, which he himself had ordered to reinforce the protective forces on the northern flank, to be replaced by infantry forces from Sixth Army. The two mobile units were then to be reassigned to the attack group.¹³³ But until the arrival of the infantry units of Sixth Army, which were still 160 kilometres away, the mobile units were indispensable and thus not available for the thrust to the south-east.

On the northern flank, on the edge of the Pripet marshes, the situation was becoming threatening. Sixth Army command assumed that an advance to the south or against Kiev would only be possible when the forces of the Soviet Fifth Army operating from that area had been destroyed. Beating back the continuing attacks from within the marshes cost considerable casualties. The situation in the area of Novograd Volynskiy and Korosten urgently needed to be brought under control, but that seemed possible only in co-operation with Army Group Centre. As, however, in spite of a request to that effect on 15 July, Army Group Centre was not in a position to help, Reichenau and his northern group had to force the Soviet Fifth Army away from the Dnieper alone. At the same time they were to attempt to reach a crossing north of Kiev. It is understandable that the divisions of III Armoured Corps, which were far ahead of other units—13th Armoured Division was about 200 kilometres in

¹³¹ Halder, *Diaries*, 1027 (11 July 1941); H.Gr. Süd/Ia, KTB, for the following days, BA-MA RH 19 I/71.

¹³² It was therefore not to make a direct attack on the fortified line but to prevent the withdrawal of the enemy with his movable equipment.

¹³³ H.Gr. Süd/Ia, KTB, 13 July 1941, BA-MA RH 19 I/71.

front of the leading infantry units—and with Kiev before them, should have believed that they were in a position to take the city by surprise. For the commander of Sixth Army, however, the elimination of the danger to the northern flank, which tied down army reserves to protect the highway to the north, had priority for the moment.¹³⁴ But this new attempt to eliminate the Soviet Fifth Army by an encirclement from the south and west failed, as the Soviet units attacked were always able to withdraw into impassable terrain and no counter-force could be employed in the north to contain such movements. (See the Annexe Volume, No. 8.)

Armoured Group 1 meanwhile moved the mobile units, 25th Infantry Division (mot.) and SS Leibstandarte Adolf Hitler, towards III Armoured Corps. Subsequently all mobile units near Kiev were replaced by LV Army Corps and XXIX Army Corps of Sixth Army, which cut the city off between Vasilkov on the Dnieper and the lower Irpen sector from the south and west by the beginning of August.

On 18 July the Army General Staff and the army group agreed¹³⁵ to start the attack to encircle the enemy with III and XIV Armoured Corps with the main effort towards the south-east, in the direction of Kirovograd. To achieve a closer encirclement XXXXVIII Armoured Corps was to advance towards Uman. This attack was repeatedly disturbed from the east by the Soviet Twenty-Sixth Army, and by 21 July it had been stopped. In the west XXXXVIII Armoured Corps reached the area north of Uman at this time. By 3 August the encirclement there, for which only 11th and 16th Armoured Divisions were available, was completed with the 'Group von Schwedler' in the north and Seventh Army and Hungarian units in the west. Eleventh Army, which had crossed the Dniester near Mogilev-Podolskiy and Soroki, broke through the Stalin line from the south but failed to reach the encirclement area in time. Its role was confined essentially to providing flank protection for Seventeenth Army. The disputes between Hitler, the Army High Command, and the army group between 18 July and the end of the battle of Uman cannot be described here. In view of the enemy forces already cut off, the army group had doubted the wisdom of the encirclement and the commitment of mobile units at Uman. In the end Hitler and Halder had their way; they considered the encirclement around Uman to offer a more certain victory than the attempt to annihilate the enemy at Kirovograd with Seventeenth Army and cut

¹³⁴ Philipp (Pripjetproblem, 36) agrees with Halder on the lack of strategic significance of the Soviet Fifth Army and on Reichenau's excessively tactical thinking. That army, however, had already been reconnoitred on 2 July with the aid of captured documents and information provided by prisoners, and not, as Halder states (*Diaries*, 1036-7: 13 July 1941), only by radio intelligence. It was clearly more than a collection of cut-off troops. Cf. III. Pz.K./Ia, KTB, BA-MA RH 24-3/134.

¹³⁵ The war diary of Army Group South from 16 July to 15 August 1941 is missing from BA-MA. It is therefore necessary to base the account of this period on Hauck, Südliches Gebiet, pt. 1. Army high command. directives up to 23 July are also missing from RH 2/v. 1 326. On 18 July 1941 cf. Hauck, Südliches Gebiet, pt. 1, 69-70, MGFA P-114c.

his retreat route with the armoured group, which the army group had outlined in its Directive No. 4 of 21 July.¹³⁶

Hitler evidently regarded the battle of Uman as the achievement of the first objective of the campaign in the sector of Army Group South.¹³⁷ About twenty divisions of the Soviet Sixth, Twelfth, and Eighteenth Armies were destroyed, about 103,000 prisoners were taken, and large quantities of equipment and supplies were captured.¹³⁸ But the second task—establishing and securing bridgeheads on the eastern bank of the Dnieper¹³⁹—was not fulfilled.

Unlike the situation of the armoured groups of the two northern army groups, the operations of Army Group South were at no point marked by thrusts of armoured spearheads unhindered by enemy resistance on the flanks. Halder described the fighting in the south very vividly when he spoke of the 'weeks of grinding at the Russian front in the Ukraine'.¹⁴⁰ As the operations department of the Army General Staff observed,¹⁴¹ success was finally achieved in the south more slowly than had been hoped. And in the first phase of operations Army Group South had been even less successful than the other two army groups in achieving the general objective of destroying most of the Soviet armed forces west of the Dnieper and Dvina. Several factors contributed to this development. The poor roads and unfavourable terrain in the south created difficulties for the motorized units that were made considerably worse by rainfall in the decisive operational phase. But the Germans had been aware of these natural conditions, with which both sides had to contend, since the First World War, if not earlier. More important was the fact that the abandoning of Halder's original plan meant the renunciation of the chance to encircle the enemy from both sides. This gave the enemy the opportunity to concentrate his defensive operations against just one thrust of the attacking German units. It was, however, decisive that the Soviet military leaders were able to exploit energetically the chances this situation offered and, together with the Soviet forces still operating in the western Ukraine and the Pripet marshes, either to stop the German attack head-on or repeatedly to endanger its flanks. Thus the main reason why the objectives of Army Group South could not be achieved was the energetic and skilful Soviet defence (which, however, involved high losses). This development was all the more significant

¹³⁶ Ibid. 259-64 (appendices 14, 15, 16), army group directive No. 4: pp. 265 ff., appendix 17.

¹³⁷ Halder, *Diaries*, 1154-5 (5 Aug. 1941), Hitler's directive to cut off enemy forces west of the Bug and to transfer available German forces to the east (towards the Dnieper). He considered this to be a indication of his views. Cf. sect. II.1.1(b).

¹³⁸ According to *KTB OKW* i. 560 (8 Aug. 1941): 103,054 prisoners, 858 artillery pieces, 317 tanks, 186 anti-tank guns, 5,286 vehicles. The number of Soviet wounded and dead was estimated to be twice as high as the number of prisoners.

¹³⁹ Since 20 July, because of the deployment order, Army Group South had always given priority to the fulfilment of this task. Cf. conference between the chief of the Army General Staff and the army group command, 20 July 1941, and the resulting 'ideas on the further conduct of operations' of 21 July and their formulation in army group directive No. 4; cf. n. 136 above; Halder, *Diaries*, 1057-8, 1062 ff., 1065-6 (18, 20, 21 July 1941).

as the most important objectives of Operation Barbarossa in the Soviet war and armament industry were located in the south.

(b) *Disputes about the Further Conduct of Operations*

(i) THE QUESTION OF THE DEPLOYMENT OF FORCES FOR THE
SECOND PHASE OF THE CAMPAIGN

(See the *Annexe Volume*, No. 9)

After developments had gone according to plan in the first days of the campaign against the Soviet Union, Hitler on 26 June 1941 began to consider the conduct of the second phase. In addition to plans to accelerate the advance of Army Group South by increasing its air support, especially against the enemy's transport routes to the front, the regrouping he had envisaged of the forces of Army Group Centre was now his main concern. On 27 June he again emphasized that not the capture of Moscow, but the destruction of the fighting strength of the enemy, was the most important objective. Because of the need to eliminate the Soviet Baltic Fleet as a threat to iron-ore imports from Sweden, Leningrad remained the main objective.¹⁴²

On 4 July he realized that this 'most difficult decision of the war' would require a weakening of the central sector of the front, so as to be able to send strong armoured forces against Leningrad and the eastern Ukraine. Only infantry armies were to advance towards Moscow until operations in the north and south had been completed. Hitler thus confirmed again the strategic perspective that had dominated his planning for the campaign in the east from the very beginning.

Numerous statements by Hitler and Halder at this time clearly show that both men considered the military campaign against the Soviet Union to be essentially won. On 3 July Halder noted that the objective of the army, 'to shatter the bulk of the Russian army this side of the Dvina and the Dnieper', had been accomplished.¹⁴³ In terms of the operational objectives in the directives, the campaign had been accomplished according to plan within fourteen days. When the great rivers had been crossed, the most important objective would be to prevent the enemy from creating new divisions from his enormous human reserves and equipping them with the help of his remaining production facilities. Achieving this objective would require pursuit of the enemy over a large area and the occupation of considerable territory. Even if one considers the justified optimism and euphoria of the moment, which prevent us from viewing these notes as evidence of rational military judgement and intention in the narrow sense of those terms, they must be seen in the perspective of the demands placed on the army groups and armies. Halder was fully aware that the first objectives of the operations, the complete destruction of the enemy's fighting strength and reaching the Dnieper line all the way to the Black Sea,

¹⁴² KTB OKW I, 1019 (61, 62) (26-7 July 1941).

¹⁴³ Halder, *Diaries*, 1000-1 (3 July 1941). The deliberate belittling of the enemy forces in the Pripet area was typical; reports on their strength were considered to be 'old wives' tales'.

had not been achieved. And Hitler's remark about 'perhaps the only . . . really important decision in this war'¹⁴⁴ indicates that although there was no doubt as regards the achieving of victory within the period set, the sequence of operations and the corresponding distribution and use of forces were still being rethought. The determining factor in all deliberations was the emerging picture of the condition of the Red Army.

On 8 July the judgement of the German army leaders was based on the assumption that of the previous 164 large enemy units known to be ready for action, 89 could be considered destroyed, while 46 were believed to be still capable of fighting; 18 units on 'secondary fronts' had to be included. No information was available on the location of 11 other units, which were presumably being kept in reserve. An important factor in this picture of the enemy was the assumption that of the 29 Soviet armoured divisions encountered at the front, 20 were completely or partially out of action and only 9 still fully fit for combat. Because of the high losses of officers and technical personnel, it was believed that the Soviet Union would not be able to restore the combat-readiness of the defeated divisions, although it was to be expected that the time gained through the heavy defensive losses at the front would be used to create new units and mount counter-attacks.¹⁴⁵

On the basis of this assessment of the military situation, the following conclusions were reached on 8 July: the offensive of Army Group Centre was to be continued until the bulk of the enemy forces west of Moscow had been destroyed. Then the two armoured groups were to halt their advance. If necessary, Armoured Group 3 was to provide support for Army Group North—something which, to judge by Hitler's remarks, seemed probable, though he considered the 'desirable ideal solution' to be for Army Group North to fulfil its task with its own forces. But he obviously doubted that these forces would be sufficient. Nevertheless, he had also considered a second possible use for Armoured Group 3, a drive to encircle Moscow from the north. Halder was completely satisfied when he noted that Hitler had approved his conduct of operations. Hitler had also developed the new idea of using a 'strong right wing of Group Hoepner' to isolate Leningrad in the east and south-east. This idea seemed to Halder to be correct, but the discrepancy remains between it and Hitler's remarks of 5 December 1940, when he approved Halder's planning. Hoepner's 'right wing' was part of Armoured Group 4, while Hitler was clearly referring to the left wing of Armoured Group 3.

In Halder's view sending Guderian's armoured group to the south or south-east to co-operate with Army Group South beyond the Dnieper presented fewer difficulties. For the army group still had to cross the Dnieper, and by then Guderian would have conquered enough territory further east to create

¹⁴⁴ *KTB OKW* i. 1021 (68) (5 July 1941).

¹⁴⁵ *Ibid.* 1021 (70); Halder, *Diaries*, 1015 (8 July 1941); cf. text preceding n. 158 below.

a good starting-position for the right wing of the attack on Moscow. Beyond that, the armoured group could be employed merely with partial forces and without significantly weakening the attack group to be directed against Moscow.¹⁴⁶

The differences between Hitler's and Halder's views concerning the distribution and use of German forces were also evident on 13 July. Unlike Hitler, Halder saw in the area of Army Group North only a 'defence group consisting of forces hastily gathered up and strengthened by improvisations, showing no operational ability'. On the other hand, in the area of Nevel and Velikie Luki he perceived strong, in part fresh, enemy forces which would have to be eliminated by 'a special operation'.¹⁴⁷ He therefore proposed to advance to Velikie Luki and towards Kholm with parts of Armoured Group 3, while Hitler was clearly thinking of an operation with all or part of the armoured group to support Army Group North to isolate Leningrad.

The argument about the use of the mobile units no longer involved in an offensive towards Moscow became more intense. At this point Hitler and Halder were both aware of the need to close the existing pockets and eliminate strong enemy forces before continuing the rapid advance to the east. It is a matter of secondary importance how far Halder's insight in this regard was due to military necessity, i.e. the urgent need of many German units for a rest and replenishment of supplies, while Hitler, on the other hand, wanted to secure the area already conquered for purposes of economic exploitation and to prepare parts of the German army to spend the winter in the east.

In any case, immediately after the plan to halt Armoured Group 3 became known, Army Group Centre objected strenuously.¹⁴⁸ As the group could have received its information only from Halder, it can be assumed that he supported its protest. As the situation was described in the army groups, Hitler did not confine himself to making suggestions for general-staff planning; although he was prepared to change his views, he intervened with directives to the Army High Command and with changes in the target-planning of the Luftwaffe to such an extent that his basic plan, which was diametrically opposed to Halder's views, was preserved. At the conclusion of the first phase of the campaign Halder had to force a decision contrary to Hitler's original intentions, which he prepared in the form of a memorandum. The note on the draft that it was approved by the chief of the general staff on 30 June shows that it was written as a preventive measure.¹⁴⁹ With the start of the final phase of the first part of the campaign, Hitler, on the other hand, realized that the Army General Staff had set a definite course towards Moscow. As he considered that city to be only the third most important objective, he intervened energetically in the planning process.

¹⁴⁶ Cf. sect. II.1.1(c) at n. 230.

¹⁴⁷ Halder, *Diaries*, 1036 (13 July 1941).

¹⁴⁸ Ibid. 1037-8 (13 July 1941).

¹⁴⁹ *KTB OKW* i. 1031 (79); the fact that the date of the memorandum was left open also indicates that it was written with an eye to a foreseeable crisis in operations.

(ii) VACILLATION IN THE DIRECTIVES FOR THE CONDUCT OF THE WAR FROM 19 JULY UNTIL THE END OF THE MONTH

The directive of 19 July 1941 for the continuation of the war in the east clearly reflects Hitler's realization that the large-scale encirclement operations which had marked the campaign until then had not fulfilled the expectations placed in them.¹⁵⁰ In spite of the enormous number of prisoners taken—most of the Soviet forces in the west—and the huge amount of equipment captured, the fighting strength of the Red Army had by no means been destroyed. Neither was that to be expected from the elimination of still existing pockets of Soviet troops. For this reason, the directive confined itself to describing the outcome of 'the second series of battles' as the breakthrough of the Stalin line and the thrusts of the armoured groups. But in the sectors of the Army Groups Centre and South the forward movement had been slowed by the creation of pockets and by continuing enemy presence in the rear area (the Pripet flank). The aim of operations in the coming weeks was therefore limited to preventing the enemy units still within reach from withdrawing further into the vast spaces of the enormous country and to destroying them. In contrast to the broad, ambitious plans of the 'grand strategy', the directive prescribed how the Soviet Twelfth and Sixth Armies were to be encircled at Uman; it laid down that the Soviet Fifth Army in the Pripet marshes was to be eliminated by the co-ordinated efforts of the inner wings of Army Groups Centre and South, and that, in addition to the southward turn of infantry from Army Group Centre, mobile units were to be sent south-eastward to cut off the enemy who had crossed over to the east bank of the Dnieper. Having completed their present task, the encirclement at Smolensk, these mobile units were to be detached from the centre of the army. This meant the removal of at least strong parts of Guderian's armoured group. In the total strategy Army Group Centre was to assume a secondary role by continuing its advance towards Moscow with the mobile units that had not turned south-eastward (Armoured Group 3), cutting the lines of communication between Moscow and Leningrad, and thus covering the right flank of Army Group North in its attack on the latter city. Army Group North was to continue its attack on Leningrad only after its right flank had been secured and Eighteenth Army had joined up with Armoured Group 4. The main task of the Finnish front remained co-operation with Army Group North, which required the mountain corps in Lapland to neglect its objectives there for the time being. The Luftwaffe was to make forces available from the centre of the army, support the southern front, and carry out 'reprisal attacks' on Moscow to demoralize the population there. The navy was assigned the task of preventing the escape of the Soviet fleet from the ports of the eastern Baltic, ensuring the transport of supplies by sea, and disrupting shipments of supplies to the enemy via the Arctic Ocean.

¹⁵⁰ *Hitler's War Directives*, No. 33, pp. 85 ff.; 'Führererwägungen am 17. Juli 1941' and note on Hitler's visit to Army Group North on 21 July 1941 in *KTB OKW* i. 1029 (76, 77).

Using the arguments in his memorandum mentioned above, Halder must have expressed his reservations to the Wehrmacht High Command immediately after the directive was issued, or indeed while it was still being written.¹⁵¹ The commander-in-chief of the army also sought to induce Hitler to cancel the directive, which in the eyes of the Army High Command was premature and even disastrous, as it required abandoning the plan to concentrate the main effort of the German attack on Moscow. Moreover, the direct issuing of operational and tactical orders to the branches of the Wehrmacht in the form of Führer directives seemed to mark the beginning of a development that could deprive the general staffs of freedom in planning and real command authority in supervising the execution of operations.¹⁵²

Brauchitsch's oral report induced Hitler to issue a 'supplement to Directive No. 33' on 23 July, which sharply restricted the instructions contained in the directive itself.¹⁵³ Reflecting Halder's views, the co-operation between Army Groups Centre and South to destroy the Soviet Fifth Army was eliminated. And the planned 'turning' of parts of Army Group Centre to annihilate Soviet forces east of the Dnieper was restricted and defined more precisely. The transfer of armoured units was made dependent on the operational and supply situation. After capturing the industrial area around Kharkov, the armoured army newly created from Armoured Groups 1 and 2 was to cross the Don and push on towards the Caucasus.¹⁵⁴ After the conclusion of other tasks and the elimination of enemy resistance to the south, the central sector, the most affected part of the eastern front, was to defeat the enemy between Smolensk and Moscow with 'sufficiently strong infantry units' and capture Moscow. Armoured Group 3 was to be placed under Army Group North only temporarily. The group was expected to participate in a thrust to the northern Volga, to be accompanied by an 'accelerated advance of the left wing', intended as part of the encirclement of Moscow.

Brauchitsch presumably also pointed out the lack of a long-range objective in the directive. Only in this way can the addition of such objectives in the supplement be explained—which, however, led to Halder's protest and Brauchitsch's lodging a complaint with Keitel, as they would have required troop movements incompatible with the envisaged concentration on Moscow.

¹⁵¹ Cf. n. 149 above. Because of the new Directive No. 33a and Jodl's alignment of his views with those of Halder, the memorandum was not sent off.

¹⁵² That Brauchitsch appeared personally is clear from the first sentence of the following directive and from Halder's remarks (*Diaries*, 1065: 20 July 1941) about low spirits of the C.-in-C. of the army and the worsened mood 'in the highest leadership'. Halder was of the opinion that there was no reason for this and that it was necessary to await the 'ripening' of the results of the battle to achieve a breakthrough.

¹⁵³ *Hitler's War Directives*, 89–90; *KTB OKW* i. 1031 (79). On 21 July 1941 Halder adapted his views to Hitler's ideas. Cf. sect. II.1.1(c) at n. 219 and the source given in n. 160 below.

¹⁵⁴ Thus clearly in accord with Halder's views, who wanted to avoid tying Guderian tactically to Sixth Army, e.g. to help during the Dnieper crossing. This had been preceded by a discussion at Army Group South on 20 July, in which Halder assumed that the northern wing of Sixth Army would link up with the southern wing of Higher Command XXXV east of the Pripiet marshes by 26 July: Halder, *Diaries*, 1062 ff. (20 July 1941); cf. sect. II.1.1(c) at n. 219.

For this reason Brauchitsch urged the head of the Wehrmacht High Command to withdraw the supplement to Directive No. 33, in spite of the changes that had been made, until the battles in progress had been concluded. This new attempt was unsuccessful, although Brauchitsch and Halder were given the opportunity to present their dissenting opinions to Hitler on the evening of 23 July.¹⁵⁵

Halder began his carefully prepared report with a survey of the assumed strength of the enemy. He estimated that 20 infantry and 3½ armoured divisions were facing Army Group North; 32 infantry and 3½ armoured divisions Army Group Centre, and 26 infantry, 6 armoured, and 2 cavalry divisions Army Group South. Halder's sums, therefore, were quite different from the ones he had presented on 8 July.¹⁵⁶ At that time he had told Hitler that of 164 known Soviet infantry divisions only 46 were considered ready for combat. This picture was intended to persuade Hitler that it was to be expected that most of the enemy's forces would confront Army Group Centre and that the Wehrmacht should also concentrate its strength in that sector.¹⁵⁷ Halder estimated the fighting strength of the German divisions at, on average, 80 per cent for the infantry and 50 per cent for the armoured divisions and motorized infantry.¹⁵⁸ In developing his own operational plans, Halder carefully weighed numerous elements. Supplying his own troops played a central role in his thinking, but he had to assume that not all armies could be adequately supplied with necessities at the same time.¹⁵⁹ Halder concluded that on the whole the enemy had been 'decisively weakened', but not yet 'completely defeated'. Each new operation had to 'achieve its own freedom of movement by breaking anew the enemy's resistance'. The aim of all future operations had to be the 'destruction of the enemy's arms-production plants' (around Moscow), as the human reserves of the Soviet Union were inexhaustible. He assumed that the German troops would reach the Leningrad and Moscow areas as well as the line between Orel and the Crimea around 25 August. It would be possible to reach the Volga by the beginning of October and Baku and Batum by the beginning of November. But Hitler refused to change his directive stipulating that after the conclusion of the battle of Smolensk Armoured Groups 2 and 3 should be withdrawn from the

¹⁵⁵ *KTB OKW* i. 1034-5 (80) (23 July 1941). Halder's plan for his oral report in 'notes for oral reports' (*Vortragsskizzen*), *Kriegstagebuch*, iii. 103 ff. (23 July 1941; not in trans.). It is not possible to determine which ideas in these notes were presented to Hitler.

¹⁵⁶ Oral report on situation of the enemy: *KTB OKW* i. 1030 (78), figures of 8 July. Cf. sect. II.1.1(b) at p. 144.

¹⁵⁷ The widths of the sectors of the army groups should be borne in mind, as well as Halder's expectation that the Red Army would withdraw forces from other fronts to defend Moscow.

¹⁵⁸ This rough estimate provides no information on the condition of the units of Army Group Centre and probably also served to justify the bringing up of additional forces later.

¹⁵⁹ This reflected the supply and transport situation, but it was also clearly aimed at securing the release of production held back by Hitler and against an early withdrawal of units, which had been considered since 14 July. Cf. *KTB OKW* i. 1022 ff. ('Führer erwägungen und Vortragsskizzen Op.Abt.'). Detailed plans in *Hitler's War Directives*, No. 33a (supplement to Directive No. 33), which Halder rejected for that reason.

central sector of the front to support the other army groups in the north and south.

Nevertheless, at the general-staff level Halder continued his efforts to prevent the realization of Hitler's plans. A comparison of the 'supplement to Directive No. 33' with the working paper which Halder sent to the general staffs of the army groups shows that he quickly mastered the feelings of resignation still noticeable after his report to Hitler on 23 July.¹⁶⁰ In accordance with Hitler's directive, Army Group South combined Armoured Groups 1 and 2 to form Fourth Armoured Army, which was given the task, in co-operation with Army Group South, of advancing via Kharkov to the Don and the Caucasus. Moreover, co-operation between the southern wing of Army Group Centre and Army Group South to annihilate the enemy around Korosten was to be prepared, but in such a way that Armoured Group 2 was to turn south only after crossing the general line between Bryansk and Gomel, i.e. without achieving a close envelopment with forces of Sixth Army south of the Pripet marshes.

More important were Halder's views concerning the sector of Army Group Centre. Hitler intended to use infantry units to defeat the enemy forces defending the road to Moscow after the end of the battle of Smolensk and the elimination of enemy resistance on the southern flank. Armoured Group 3 was to be available on the left wing of the attack, but only after completing its part in the attack on Leningrad. However, Halder believed that, as preparation for a pincer movement, the industrial areas north and south of Moscow could be captured only with armoured troops. While Hitler wanted to use Armoured Group 3 as flank cover and a driving force in the conquest of Leningrad, Halder limited its use essentially to cutting the railway line between Moscow and Leningrad. For him there could no longer be any question of using the group to cover the flank of the attack on Leningrad. Moreover, he expected to use Armoured Group 3 and 'possibly' Armoured Group 4 in Army Group Centre for the attack on Moscow. Hitler had not mentioned assigning the latter group to the central sector.

Hitler wanted to strengthen Army Group North to the point where Leningrad could be taken in the shortest possible time. Halder, on the other hand, considered that to be primarily a problem to be solved by redistributing forces within the army group. In the framework of his plan, strong forces were to capture the northern Valday hills to cover the flank of the main attack group and sever the above-mentioned rail link early.¹⁶¹ For this purpose Armoured Group 3, as soon as it could be detached from the current operations of Army Group Centre, was 'in addition' (*sic*) to be placed under the tactical command

¹⁶⁰ On 23 and 24 July army groups were informed of Hitler's decisions and received new directives. They were required to submit time estimates and operational plans: OKH/GenStdH/Op.Abt. (I) No. 1390/41, BA-MA RH 2/v. 1326.

¹⁶¹ This interruption of supplies for Leningrad was also intended to prevent the bringing up of reinforcements for the defence of Moscow in the event of a possible evacuation of Leningrad.

of Army Group North. The scheduling of its attack for the middle of August at the earliest and the fact that it was to attack in such a way that 'its use planned for later in the area of Army Group Centre in the general direction of Moscow will still be possible' meant nothing less than that Army Group North was not to use the armoured group in the attack on Leningrad.

Halder's next step in the conflict about the future conduct of operations was to call a meeting of the army-group chiefs of staff on 25 July.¹⁶² More important than the exchange of situation assessments and operational plans, which in any case could be made orally or by teletype on a daily basis, was the 'rallying' of these responsible general-staff officers behind Halder's claim to have the final word in operational matters. He hinted that Hitler and the Wehrmacht High Command had to be borne with patience, but 'checked in good time'. Moreover, the flow of information to Hitler was to be channelled through special 'emissaries', for Hitler was more prepared to believe front officers than those on the general staff. He emphasized that the army-group chiefs of staff were the 'branch representatives' of the Army High Command and requested an exchange of ideas on a long-term basis. Therefore closer control had to be exercised in the armies in this regard. Like the armoured groups, they were not to deviate from the basic operational guidelines they received, for reasons such as tactical difficulties or the behaviour of the enemy. This appeal was clearly aimed at Army Group North.

Halder was able to achieve a consensus on basic principles and thus obviate the danger that the commanders-in-chief would make contrary demands or claims to Hitler. The chief of the general staff of Army Group South, General von Sodenstern, believed that he would essentially be able to complete operations west of the Dnieper by the end of the month and then begin his attack across the river, where it would be possible to combine Armoured Groups 1 and 2 later, perhaps near Kharkov.

The chief of staff of Army Group Centre, Major-General von Greiffenberg, reported that, after some rehabilitation and replenishment, he would be able to start his attack with the two infantry armies on the wings of his army group on about 10 August. Halder had already assigned him the objective of the industrial areas north and south of Moscow on 24 July. Army Group Centre expected to be able to use at least parts of Armoured Group 3 in future on the left wing it was to push forward north of Moscow. And Armoured Group 2, which had not been expected to link up with Armoured Group 1 until it had reached the longitude of Kharkov, had not been written off yet. The almost insoluble supply problems in the area of the Valday hills were an additional reason for not using Armoured Group 3 with Army Group North. The ground was thus prepared for also solving this problem as Halder desired.

On the following day Halder attempted to win the support of Brauchitsch and Field Marshal von Bock for his opposition to a possible withdrawal of

¹⁶² Halder, *Diaries*, 1073-4 (25 July 1941).

forces towards Gomel away from the main direction of attack towards Moscow. He rejected an attack, together with the northern wing of Army Group South, against the 'enemy group Gomel' as a change from operational to tactical command. This amounted to a rejection of Hitler's point of view. Halder was able to reach agreement with Bock without difficulty, as both men considered Moscow to be the most important objective.¹⁶³

But on 26 July Hitler returned to his operational and tactical deliberations in Directive No. 33. Although he fully appreciated the importance of the unexpectedly rapid territorial gains,¹⁶⁴ he was disturbed that, as Halder formulated it in the language of a military expert in his memorandum, the Red Army could not be defeated with operational successes, 'because they simply do not know when they are defeated'.¹⁶⁵ Halder did not deny that this argument was in some respects quite valid, but he saw clearly the danger that the 'strategy of imaginative operations' could lose its momentum and doubted that Hitler's tactic of pursuing more limited objectives would be successful.

Hitler, however, emphatically rejected new large-scale envelopment operations and demanded that the operation along the Dnieper be abandoned if it were not completely successful in the immediate future. The group of enemy forces in the triangle between Army Groups Centre and South was to be eliminated immediately; the army group facing Moscow need not hurry. Again Hitler demanded the shift of Armoured Group 3 from the Valday hills to provide support for the attack on Leningrad.¹⁶⁶ On the same day, 26 July, Halder sent Lieutenant-General Paulus to Army Group North. As Halder expected, Paulus reported that between Lake Ilmen and Lake Peipus there was no terrain suitable for mobile units. In that area infantry units, followed by Manstein's corps, should be employed. Halder pointed out the danger that if the idea of a fast attack on Moscow, for which it would be necessary to concentrate all available forces, were abandoned, the enemy might succeed in halting the German offensive before the beginning of winter. This would permit him to regain his strength, and the military objective of the war against the Soviet Union would not be reached.¹⁶⁷

On 27 July the commander-in-chief of the army had a talk with the commander-in-chief of Army Group Centre, the army group most affected by the directive. Field Marshal von Bock expressed his fears that Hitler's order for an attack by Guderian's armoured group on Roslavl as the first step in an advance on Gomel, and the consequent weakening of the right wing of Army Group Centre in the direction of Moscow, 'the crucial objective', would leave it with inadequate forces. Clearly accepting Halder's arguments, the head of the Wehrmacht operations staff, General Jodl, also supported a continuation of

¹⁶³ This is evident from the fact that Bock was informed immediately: *ibid.* 1074-5 (26 July 1941).

¹⁶⁴ *KTB OKW* I. 1041 (29 July 1941).

¹⁶⁵ Halder, *Diaries*, 1076-7 (26 July 1941).

¹⁶⁶ *KTB OKW* I. 1040 (28 July 1941) and Halder, *Diaries*, 1077 (26 July 1941). On Paulus's trip cf. n. 361 below.

¹⁶⁷ *KTB OKW* I. 1031 ff.

the attack on Moscow, but at the same time he accepted Hitler's principle of 'first destroying the vital strength of the enemy wherever it is found'.¹⁶⁸ The convergence Halder had observed between his own views and those of the Wehrmacht operations staff was obvious.

But Halder's attempts to persuade Hitler directly and indirectly of the incorrectness of his basic strategic idea were unsuccessful.¹⁶⁹ On 28 July Hitler issued instructions completely in line with the ideas of Directive No. 33: slowing of the large-scale operations, destruction of the enemy west of the Dnieper, attacks on Leningrad and the group of enemy forces near Gomel.¹⁷⁰ There, after the necessary rehabilitation, Armoured Group 2 was to prevent the escape of the enemy to the east or south-east. To carry out this order, Hitler envisaged the formation of an 'Army Group Guderian' consisting of Armoured Group 2 and parts of Second Army (IX Army Corps with three infantry divisions). Armoured Group 3 was to be placed under Ninth Army and replaced at the front by its formations. These mobile units were to be sent to Army Group North, which was to take Leningrad as rapidly as possible and link up with the Finnish army on the Karelian isthmus. The large-scale operations of Army Group South were all postponed. They were to be carried out only after the annihilation of the enemy west of the Dnieper 'in co-operation with the mobile units and infantry divisions of Army Group Centre'.

All these ideas were diametrically opposed to the planning of the Army General Staff. Halder feared that the German attack would become bogged down in positional warfare and miss the only opportunity to defeat the enemy in the east decisively before dealing with the main enemy, Britain, who was still determined to carry on the war.

The directive of the commander-in-chief of the army of 28 July for the continuation of operations took account of Hitler's unequivocal will.¹⁷¹ But there was a clear differentiation between the intentions of the 'supreme commander' and those of the Army High Command. The former were based on Hitler's 'security ideas' but took up again the additional objectives mentioned in the supplement to Directive No. 33 that Hitler had left open in his 'considerations and instructions': the Ukraine west of the Volga, Tula and Gorkiy, Rybinskoe, and Moscow. In presenting the plans of the Army High Command, the directive merely listed the tactical operations to destroy enemy forces in the near future and then set further goals: for Army Group South the Donets basin; for Army Group Centre the industrial area around Moscow, for

¹⁶⁸ Bock, *Tagebuch*, (27 July 1941), BA-MA N 22/9; report of C.-in-C. of the army: Halder, *Diaries*, 1080 (27 July 1941), quote *ibid.* 1082 (28 July 1941); Jodl's comment in *KTB OKW* i. 1036 (82).

¹⁶⁹ Halder's negotiating technique was very strenuous. The resulting tension is frequently reflected in his diary.

¹⁷⁰ 'Erwägungen und Anordnungen des Führers', 28 July 1941, in *KTB OKW* i. 1040-1 (86, 87).

¹⁷¹ OKH/GenStdH/Op.Abt. (I) No. 1401/41, BA-MA RH 2/1326, pp. 163-84. For Halder's efforts to bring about a change by sending Paulus to the Wehrmacht High Command cf. Halder, *Diaries*, 1084 (29 July 1941).

which, if necessary, Armoured Group 3 was to be brought in as soon as it could be released from Army Group North. Army Group North was to prepare to transfer its mobile forces (including Armoured Group 4) to Army Group Centre after encircling Leningrad and linking up with the Finns. The objectives and the related organization of the large formations of the army thus seemed set. Again Halder sent Paulus to the Wehrmacht operations staff, primarily because of the order to cut the retreat route to the east of the enemy at Leningrad, for which VIII Air Corps was to be removed from the centre of the front and sent to Leningrad.

The unclear reaction of the Wehrmacht High Command indicated that Hitler had changed his mind. On 30 July he decided to postpone all instructions issued regarding the reorganization and to order the army to complete all encirclements already begun and then to rehabilitate the mobile units.¹⁷²

In the sector of Army Group North the attack on Leningrad was to be continued. The German forces on the central sector of the front would essentially confine themselves to preparing for the next attack and improving their starting-positions.

Army Group South was to complete the encirclement of Uman and then establish bridgeheads near Kiev and south of that city. The Soviet Fifth Army in the Pripet marshes was to be eliminated by Sixth Army alone. Thus the 'July crisis' in the German military leadership was ended for the time being. But it was clear that after the replenishment period of approximately ten days a decision would have to be taken and pushed through. Halder hoped that by then favourable developments at the front would strengthen his position. Then Hitler's restrictions on large-scale tactical operations, which were basically due to tactical considerations, would take care of themselves. The broader objectives Hitler had included in the supplement to Directive No. 33 clearly showed, however, that for him the operational idea 'against Moscow' meant occupying the lines of communication from the city to the north (the route to the Arctic Ocean and other supply-lines), to the interior of Russia (Gorkiy), and along the middle and upper Volga. This idea still played a role in Hitler's thinking at the peak of the crisis at the front in December. The city of Moscow itself, however, remained for him, as it had been since he began planning the campaign against the Soviet Union, merely 'a geographical term'.

The 'supplementary directive' issued by the Army High Command¹⁷³ adhered essentially to Hitler's orders, much to the disgust of Halder, who accused the commander-in-chief of the army of having failed to show any trace of a will of his own.¹⁷⁴

But Directive No. 34 and the 'supplementary directive' were not completely identical. The latter ordered the period of replenishment for Army Group

¹⁷² *Hitler's War Directives*, No. 34, pp. 90 ff.

¹⁷³ OKH/GenStdH/Op.Abt. (I) No. 1401/41, 'Supplementary directive', 31 July 1941, BA-MA RH 2/v. 1326, p. 185.

¹⁷⁴ For Halder's reaction cf. Halder, *Diaries*, 1089 (31 July 1941).

Centre to be conducted in such a way that 'appropriate forces' would be ready to deal with 'unforeseen local tasks'; orders for later use of this group were still to be issued, but they were to be prepared in such a way that Armoured Group 2 could be sent in the direction of Gomel, while Armoured Group 3 would be sent towards the Valday hills. These orders took into account the weakness of both infantry armies, which were exposed to strong attacks on a rugged and over-extended front. The plan to attack the Valday hills also implied the use of the armoured forces in a northern encirclement of Moscow. Although it took Hitler's directive into account, the attack on Gomel was also intended to prepare a thrust against Moscow from the south.

The attack on Roslavl was the first step in an offensive to be carried out later by Armoured Group 2 to stabilize the situation on the southern flank of the army group. It was to be continued against Rogachev. For that purpose, according to Halder's plans, an armoured division at most would be required.

On the left flank of the army group, where deliberations had already begun on the use of Armoured Group 3, enemy resistance was to be eliminated under the command of Ninth Army with one or two divisions of II Army Corps (of Army Group North) by a thrust to Toropets. Afterwards the left wing of Ninth Army was to advance to the highlands south of the Valday lakes to cover the lines of communication to Army Group North and 'prepare possible further operations of Army Group Centre towards the east'. This instruction prepared the inclusion of the southern area under Army Group North in the attack on Moscow by Army Group Centre. The directive to Army Group North was in accordance with Hitler's wishes, apart from the placing of parts of II Army Corps under Ninth Army. It pushed the left wing of Army Group Centre as far north as necessary to provide flank protection for the right wing of Army Group North, but without transferring to that army group the additional forces Hitler demanded.

Directive No. 34 of 30 July represented a new postponement of the decision about the future conduct of operations, with which Hitler had concerned himself since the end of June. Halder had not succeeded in pushing through his plan to give priority to the attack on Moscow, but he had prevented Hitler from paralysing the centre of the German front by radically weakening the forces there and shifting the main effort of the German offensive to Leningrad and the eastern Ukraine. 'This decision', Halder wrote in his diary, 'frees every thinking soldier of the horrible vision obsessing us these last few days, when the Führer's obstinacy made the final bogging down of the eastern campaign appear imminent.'¹⁷⁵ But Halder was probably aware that his 'solution' only put off a final decision.

It must be remembered that when the directive was issued, neither the fighting in the Smolensk pocket, which tied down most of Ninth Army, nor the encirclement of Uman had been concluded. The stable situation at the

¹⁷⁵ Ibid. 1088 (30 July 1941).

front necessary for replenishing supplies and preparing to start new operations did not exist.

The completion of the operation at Uman, with hard defensive fighting near Kiev and the slow advance of Reichenau's group with the bulk of Sixth Army against Korosten, was accompanied on the southern flank of Army Group Centre by the continuing attack of VII and IX Army Corps against Roslavl.¹⁷⁶ On the left wing of Army Group Centre parts of Ninth Army moved against Velikie Luki. The attack failed, evidently because of errors by the commander in charge, for Halder had placed the forces involved under the command of XXXX Armoured Corps, commanded by General Georg Stumme. The advance on Toropets had to be abandoned for the time being. In this sector of the front, as also in the Yelnya salient, consistently high losses had to be accepted for the sake of the future offensive against Moscow.¹⁷⁷

(iii) THE ASSESSMENT OF THE ENEMY AT THE BEGINNING OF AUGUST

In view of this development, the assessment of the enemy's strength and options was especially important for the impending decision.¹⁷⁸ It was assumed that the Soviet leaders intended to halt the German advance by ruthlessly throwing their reserves into battle without regard to losses in order to save the industrial centres in the Ukraine, Moscow, and Leningrad as the basis for a reorganization.¹⁷⁹ It was expected that new Soviet defensive positions would be encountered along the line of the Bug, the Desna, the upper Volga, the Valday hills, Lake Ilmen, and Luga. Subtracting the Soviet divisions considered already destroyed, the units in northern Finland, the Caucasus, Central Asia, and the Far East, German military leaders assumed a Soviet strength of 150 infantry divisions, 25 armoured divisions, and 5 cavalry divisions, of which only 6 divisions had little or no combat experience. Because of their high losses, most of the Soviet units were considered exhausted, with an effective fighting strength of fewer than 80 infantry divisions, 13 armoured divisions, and 2 or 3 cavalry divisions. The existence of 23 new divisions had been established, and a large number of others were believed to have been created, but inadequately armed and without sufficient equipment. Soviet defensive forces were believed to be concentrated south of Kiev, west of Moscow, and near Leningrad.

The individual intelligence estimates do not contain any indication of the size of the partisan movement behind the German lines. While in the first days of the offensive partisan attacks may have seemed to be actions of bypassed

¹⁷⁶ Ibid. 1140 (2 Aug. 1941); on Bock's doubts cf. *ibid.* 1145 (3 Aug. 1941). Cf. also Bock, Tagebuch, 2 Aug. 1941, on the urgency of rehabilitating the armoured division and the nervousness of the senior officers, BA-MA N 22/9.

¹⁷⁷ Cf. sect. II.I.1(b) at n. 206.

¹⁷⁸ Estimate of strength and condition of enemy forces, annexe 1 to directive of Wehrmacht High Command, 28 July 1941, BA-MA RH 2/v. 1326, p. 173.

¹⁷⁹ The convergence of the ideas of Halder and Foreign Armies East with the 'Assessment of Situation Red' by Maj.-Gen. Marcks is clear. Cf. sect. I.v.1(d) at n. 103.

Soviet units or individuals, the appeal of the Central Committee of the CPSU and Stalin's speech of 3 July clearly showed that an organized military front was being prepared. Stalin's speech contained the specific order to resist the enemy in the areas occupied by German forces and described the individual forms of such resistance. It was hardly possible to view Stalin's words as purely political propaganda, and when the report of the head of the political propaganda directorate on the north-west front, Army Commissar First Class Mekhlis, to the Red Army's Chief Directorate of Political Propaganda became known, there could no longer be any doubt regarding the operational objectives of the resistance.¹⁸⁰ The captured document provided insight into the organization of the partisan movement, the units already organized, and their tasks, methods, and weapons. Political functionaries sent to partisan units, and local party and state organizations, were ordered by the Chief Directorate of Political Propaganda of the army front to promote the expansion of the partisan movement behind German lines.

At first the German Army High Command reacted with a legalistic statement¹⁸¹ that members of Soviet partisan organizations 'which, as regards respect for the laws of war, uniforms, equipment, or identifiability, do not clearly qualify as a regular military unit, militia, or volunteer corps' were to be treated as guerrillas. Civilians who aided such partisan units thus supported irregular combat operations and, 'in accordance with the customs of war', were also to be regarded as guerrillas. The next step by the Army High Command was a decree on the treatment of enemy civilians and Russian prisoners of war in the rear areas occupied by the German army.¹⁸² This decree proclaimed the maximum degree of security for the German soldier to be the guiding principle of all measures to be taken. For this reason the decree

¹⁸⁰ Cf. sect. II.n.7 (Hoffmann), and sources; Hesse, *Der sowjetrussische Partisanenkrieg*, 51 ff.; Mekhlis's order No. 81, BA-MA, 18. Armee, 13767/20.

¹⁸¹ OKH/Gen. z.b.V. beim ObdH/Gr. Rechtswesen, Az. 454, No. 1260/41, 18 July 1941, BA-MA RH 22/271. This directive referred to the report OKH/GenstdH/Abt. Fr. H. Ost (II) No. 3016, 15 July 1941, which consisted of an analysis of the courier post of an aircraft that had made an emergency landing on 14 July. It contained the report addressed to the 'Chief Political Propaganda Directorate of the Red Army, for Political Commissar 1st Class Gen. Mekhlis' on the direction of partisan operations by the head of political propaganda on the north-west front and the organization of partisan detachments (BA-MA RH 22/271). The directive of the general for special tasks at the office of the C.-in-C. of the army, No. 1332, 25 July 1941 (*ibid.*), referred explicitly to the planned operation against partisans. The numerous reports of murders of prisoners of war since the beginning of the campaign against the Soviet Union confirmed in the eyes of German officers and men the propaganda leaflets about the insidious tactics of Red Army soldiers and thus the first part of the 'jurisdiction decree': cf. Leeb, *Tagebuchaufzeichnungen*, 281 (25 July 1941). In line with OKH/Gen. z.b.V. beim ObdH/Gr. Rechtswesen, No. 1215/41, 9 July 1941, the C.-in-C. of the army ordered German forces to refrain from retaliation. On 17 July 1941 Second Army headquarters issued analogous instructions on the treatment of the civilian population (BA-MA RH 20-2/1090, annexe 242). For the Ukraine: Befehlshaber rückw. Heeresgebiet 103/Ic No. 968/41, 11 July 1941, Besondere Anordnungen für die Behandlung der ukrainischen Frage, BA-MA RW 41/4.

¹⁸² Cf. n. 181, directive of 25 July 1941.

essentially repeated the rules of the decree on jurisdiction.¹⁸³ But the Army High Command also realized that pacification of the occupied areas could be most rapidly achieved if it were possible to induce the civilian inhabitants to work. All possibilities to achieve this aim were to be exhausted. Experience with the inadequate guarding of prisoners of war was reflected in a ban on fraternization and in the instruction to resort immediately to the use of arms in the event of insubordination.

The use of partisans behind the German front proved to be tactically effective, as it tied down German forces that would otherwise have been available at the front itself or in other operations. In July 1941, in addition to the security units and Germany's allies, these forces consisted of six divisions. When one considers how difficult it was for Halder to accept that the left flank of Sixth Army was still pinned to the Pripet front, where ambushes played a significant part in tying down large numbers of German troops for long periods of time, the difficulty of the German army leaders in incorporating such unconventional forms of warfare into their operational thinking becomes clear. Depending on local conditions, the task of finding a solution to the partisan problem was at first left to the army headquarters and subordinate commands. The lack of proper training for such a task and the inadequacy of the security forces soon became evident. Certainly at this time the size of the danger represented by partisan units operating behind the German lines was not yet understood. Halder still refused to consider it a serious threat to normal military operations.¹⁸⁴

A few days after the issuing of Hitler's directive of 30 July, difficulties in moving supplies emerged as an important factor in an extensive exchange of ideas between Halder, the commander-in-chief, and the chief of the general staff of Army Group Centre.¹⁸⁵ The discussion was mainly concerned with preparations for Hitler's visit to Army Group Centre on 4 August, during which the general question of the aims and the distribution of forces for the second phase of operations would once more arise.¹⁸⁶ With the help of the commanders of the armoured groups, Colonel-Generals Guderian and Hoth,

¹⁸³ Cf. sect. I.iv.1(g) at n. 173; Anordnung OKH/GenQu/Abt. Kr. Verw. (W) No. II/11035/41, 31 July 1941, betr. Arbeitseinsatz von Arbeitslosen [Putting unemployed to work], BA-MA, 18. Armeekorps, 13767/20; *ibid.*, translation of propaganda instruction of the army commissar of the Soviet Eighth Army, 15 July 1941.

¹⁸⁴ In fact, however, considerable reserves were tied down with Army Groups Centre and North.

¹⁸⁵ 'Zustand der schnellen Verbände' gem. Besprechungspunkten für Heeresgruppen Chef-Besprechung ['Status of the Mobile Units': agenda for conference of Army Group chiefs of staff], 25 July 1941, Halder, *KTB* iii, 115-16 (1 Aug. 1941; not in trans.).

¹⁸⁶ Halder, *Diaries*, 1144ff. (3 Aug. 1941). It is interesting that Greiffenberg was instructed to point out to Bock the differences between the directive of the Wehrmacht High Command and that of the Army High Command and to present the situation at Yelnya as cautiously as possible so as to prevent Hitler from ordering the evacuation of this exposed position, whose defence had proved to be very costly; for Halder wanted not only to hold but also to expand it. For Guderian's doubts, see *ibid.*

who were brought in for the meeting, Hitler was persuaded to release 400 new tank motors, which were considered essential for any new large-scale operations.¹⁸⁷ But in the decisive question Hitler remained inflexible. The important thing was, he explained, to deprive the enemy of the 'vital areas'. Among these he still considered Leningrad to be the most important. He expected Army Group North to seal off Leningrad by 20 August; after that most of the units and the parts of the relocated Air Fleet 2 would be available to Army Group Centre.¹⁸⁸ The second most important area, in Hitler's view, was the 'south of Russia, especially the Donets region', which he described as the 'basis of the entire Russian economy'.¹⁸⁹ For him, Moscow ranked only third as an objective of the campaign,¹⁹⁰ and he refused to change his views in spite of Field Marshal von Bock's objections. When Hitler visited Army Group South on 6 August, Field Marshal von Rundstedt, the commander-in-chief, was likewise unable to convince him of the importance of an attack on Moscow, as Halder had proposed.¹⁹¹

Halder again had to accept that as an objective Moscow ranked behind Leningrad and the Ukraine. He evidently did not believe in the feasibility of this sequence of operations. The hard fighting and the newly created units of the Red Army would inevitably tie down such large German forces that it would not be possible to attack Moscow early enough and with sufficient strength.¹⁹² As late as 4 August he pressed Brauchitsch to take a clear decision: either to attempt to annihilate the enemy in a battle for Moscow, or to conquer the Ukraine and the Caucasus for economic reasons. If the annihilation of the enemy were given priority, everything had to be concentrated on that objective. The following day, Brauchitsch was able to interpret remarks by Hitler in such a way that, in Halder's view, an all-out offensive against Moscow was still possible.¹⁹³ After Hitler had again clearly stated his priorities at the headquarters of Army Group South on 6 August, and demanded the annihilation

¹⁸⁷ Using informal contacts, Halder had been able to obtain their immediate delivery by air, which corresponded to the urgency of the situation but not to Hitler's directive. Cf. Halder (*Diaries*, 1151: 4 Aug. 1941), who mentions 350 engines. Hitler's reasons for holding them back (as well as 2nd and 5th Armd. Divs.) were his fear of a British landing and his desire to hold fresh forces in reserve for the occupation of the Caucasus and the Urals industrial region: minute of Hitler's visit to Army Group Centre, 4 Aug. 1941, *KTB OKW* i. 1041 ff. (88), and study for operation across the Caucasus, *ibid.* 1038 ff. (84).

¹⁸⁸ i.e. VIII Air Corps.

¹⁹⁰ Cf. sect. II.1.1(b) at n. 142.

¹⁹¹ Halder, *Diaries*, 1151, 1157 (4, 6 Aug. 1941).

¹⁹² Primarily because of the dissipation of fighting strength. Cf. Bock, *Tagebuch*, 49 (31 July 1941), 52 (4 Aug. 1941), BA-MA N 22/9. It should be mentioned that Bock took advantage of the opportunity to intercede with Hitler on behalf of the 'friendly and co-operative population'. He referred to the labour question. After this conversation he had the intelligence officer of the army group, Maj. Rudolf-Christoph Freiherr von Gersdorff, request the 'senior SS and police officer' (who was not his subordinate) 'to issue instructions that executions in the area of my command should be carried out only when armed bandits or criminals are involved. Gersdorff reports that Nebel has agreed to this request.'

¹⁹³ Halder, *Diaries*, 1152, 1154-5 (4, 5 Aug. 1941).

of the Soviet Fifth Army in a joint operation between Army Groups South and Centre,¹⁹⁴ Halder on 7 August called on the head of the Wehrmacht operations staff, General Jodl, in an attempt to use the most direct official way available to him to persuade Hitler to change his mind.¹⁹⁵ Halder convinced Jodl that the choice between Moscow and the Ukraine was an illusion: both had to be taken. After its victory at Uman, Army Group South still had sufficient forces to conquer this last objective,¹⁹⁶ just as Army Group North was entirely strong enough to take Leningrad. Moscow and the Ukraine had to be conquered, 'or else we shall not be able to eliminate this source of the enemy's strength before autumn'. The concentration of Soviet forces east of the Pripet marshes was not an operational objective. They had to be made to 'rot away'.¹⁹⁷ In the end both generals agreed that Hitler had to be persuaded to concentrate all available forces in Army Group Centre. They also agreed to play down the importance of the enemy forces north of Kiev.

Jodl kept his word. He presented Hitler with a summary of the situation in which the bulk of the Red Army was concentrated around Moscow and advocated a concentrated thrust in the central sector of the front towards the Soviet capital. Flank attacks with limited objectives had already been started with the thrust by Second Army and parts of Guderian's group (this was the draft plan Halder had presented at Bock's headquarters).¹⁹⁸ In the north of Army Group Centre, Jodl supported an attack by Armoured Group 3, but without a further advance towards the Valdai hills. He thus conceded at the very beginning a grouping of forces against Velikie Luki which Hitler considered necessary. Halder's influence was also reflected in Jodl's concluding proposal to let Army Groups North and South defeat the enemy units confronting them alone in order to be able to support them more effectively after the victory of Army Group Centre over the Soviet forces around Moscow.¹⁹⁹

Details of Jodl's description of the situation cannot be reconstructed, but situation reports of the department Foreign Armies East of the Army General Staff from this period are available. They permit a rough estimate of the extent of agreement between Jodl and Halder, i.e. the extent to which the two generals were able to influence Hitler's decision.²⁰⁰ As early as the end of July, when the battles of encirclement at Uman and Smolensk were approaching their conclusion, Foreign Armies East had reported the reorganization of the Soviet defences facing Army Group Centre with the creation of a Soviet Front Staff Centre and a Front Staff Western Front, each with three armies. More-

¹⁹⁹ Jodl's oral report, 10 Aug., *KTb OKW* 1043-4 (89); Guderian's view, *Panzer Leader*, 101.

²⁰⁰ OKH/GenStdH/OQu IV, Abt. Fr. H. Ost, situation reports East under the following dates, beginning with No. 46, 31 July 1941, BA-MA RH 19 I/121.

over, the radio-intercept service reported the deployment of 28 divisions in the wider area of Moscow. Stubborn enemy resistance was expected along the line formed by the Desna, the Uzha, the Dnieper, and the upper Volga after the end of the battle of Smolensk. The divisions around Moscow seemed to be moving towards the west and south-west to be sent into action against, and on the right flank of, Army Group Centre. On 6 August a copy of an order was captured for the creation of a front staff of the Soviet reserve armies to prepare an in-depth defence. This staff, to which Forty-third, Thirty-second, Thirty-first, and Thirty-third Reserve Armies were subordinate, was given the task of constructing a rallying-position near Ochakov north-west of Bryansk and west of Vyazma. Army Group North also reported strong enemy units approaching the front. In the south long columns of enemy troops were sighted moving from Krivoi Rog towards Dnepropetrovsk, which indicated preparations for a defence. The assessment of the enemy's situation of 8 August agreed upon by the generals for the oral report to Hitler presented the following picture.

After the successes of Armoured Group 2 at Roslavl, the enemy forces facing Army Group South were also defeated. Approximately 15 divisions and 5 armoured divisions had been annihilated. The Red Army leaders were confronted with new tasks. It was hardly to be expected that the enemy would evacuate Kharkov, Moscow, and Leningrad. For that would also mean the evacuation of the huge government apparatus, which could hardly be set up again in another location, as well as the isolation of the Red Army from its vital food-growing areas and supply-bases.

Forces available along the entire front to the Red Army for the continuation of the war had a fighting value of 60-5 divisions and, at most, 10 armoured divisions. In rear areas about 40 divisions were being organized, but with inadequate leadership, arms, and equipment.

They did not represent a usable, stable structure. And the limits of Soviet human reserves would also be reached in the foreseeable future. Generally speaking, one million civilians could provide soldiers for two divisions at war strength; therefore the European part of Russia, with 160 million people, could provide 320 large formations, and the Asian part, with 30 million people, could provide a total of only 50.²⁰¹ This number had now been reached or exceeded. (For German estimates of the number of Soviet divisions already at the front or in other parts of the country see Table II.1.1.)

The fighting spirit and value of the Red Army were described as declining. Supply problems, inadequate nutrition, news about hardship on the home front, threats against their dependents if they were captured, and a feeling of inferiority against the German Wehrmacht all contributed to the poor morale

²⁰¹ These figures were provided by Foreign Armies East and yielded a total of 366 divisions at war strength: letter of Capt. Eberhard Graf zu Münster to the intelligence officer of III Armd. Corps, Maj. von Graevenitz, 7 Oct. 1941, BA-MA RH 24-3/136. The 366 divisions mentioned by Halder (*Diaries*, 1170) on 11 Aug. 1941 represent all identified enemy units according to their numbers, rather than combat-ready divisions. Comparison with the rough estimate of 200 enemy divisions at the beginning of the campaign is therefore misleading.

TABLE II.I.I. *German Estimate of Maximum Potential Soviet Strength, Autumn 1941*

At the front:	approx. 260 infantry and motorized divisions
	approx. 50 armoured divisions
	approx. 20 cavalry divisions
Behind the front:	approx. 40 divisions
On other fronts:	approx. 20 divisions
TOTAL	approx. 390 divisions

of the Soviet soldiers. Pressure from commissars and officers seemed to be losing its effect.

Total Soviet forces are no longer sufficient for a large-scale attack or for the establishment of a continuous defensive front. The creation of a front in the rear area along the general line of Lake Ilmen, Rzhev, and Bryansk may have the following aims:

1. defence against a German attack on Moscow;
2. a rallying-position for a withdrawal from the existing front;
3. the formation of a new front to pull out forces for use against Army Group South.

In summary the report observed:

1. The number of new units being organized may have reached its peak. The creation of more new units is hardly to be expected.
2. Available forces are sufficient only to delay the German advance on vital bases of the army and the state, in the hope of protracting the fighting until the arrival of bad weather in winter in order to revive and reorganize Soviet forces with British and American help. Continued fighting and new heavy losses will lead to a further decline of morale in the Red Army.

After the battle of Uman, the enemy forces confronting Army Group South seemed to be defeated. Only isolated cases of heavy fighting were still reported. In the area of Army Group Centre enemy attacks concentrated on Guderian's army group and the eastern front of Ninth Army.

The following seven Soviet reserve armies of the Front Staff of the Reserve Armies were identified facing the Army Groups Centre and North:

- Thirty-eighth Army east of Lake Ilmen (4 infantry divisions)
- Thirty-fourth Army in the Valday hills (2 infantry divisions)
- Thirty-first Army between Rzhev and Ochakov (1 armoured and 2 infantry formations)
- Thirty-fifth Army in the area north-west of Gzhatsk (number of divisions unknown)
- Thirty-second Army around Vyazma (6 infantry divisions)
- Forty-third Army (1 armoured and 3 infantry formations)

Thirty-third Army around Spas-Demensk (1 armoured and 4 infantry formations)

perhaps 1 additional infantry and armoured formation

Foreign Armies East concluded that these reserve armies had the task of protecting Moscow and providing personnel and material replacements for the formations at the front. There were indications that these armies were to send not only complete formations, but also individual regiments to the front. In their operations areas they were to construct defensive positions and, in the event of an enemy breakthrough, receive troops of retreating Soviet forces.

Comparison of the results of reconnaissance and intelligence findings presented here with Jodi's 'agreed' report to Hitler clearly shows Halder's intention to marshal convincing reasons for his operational planning. His task was to prove that Army Groups North and South were able, with the forces available to them locally, to overcome the enemy forces opposing them. In reality, however, he was well aware that the Soviet colossus had been underestimated and, in spite of great losses, would always have enough human reserves to create new divisions in an emergency.²⁰² Moreover, with every kilometre he retreated the enemy approached his arms-production centres and an extensive transportation network, while every demolished bridge and every road made impassable by bad weather increased the difficulties facing the German army.

(iv) HITLER'S ACCEPTANCE OF THE NEED TO ELIMINATE MOSCOW

(See the *Annexe Volume*, No. 10)

At first the oral situation report to Hitler seemed to have had the desired effect. With a supplement to Directive No. 34, issued on 12 August, Halder achieved a certain success.²⁰³ For Hitler now ordered that Moscow, as the enemy's 'government, armament, and traffic centre', must be captured 'before the coming of winter'.²⁰⁴

Hitler thus accepted Halder's thesis of the importance of Moscow, but he failed to draw all the necessary conclusions. He still assumed that the destruction of enemy divisions and the capture of objectives important for Germany's war economy must determine the sequence of operations. But now he used arguments based on the assessment of the enemy's situation: if the bulk of the Red Army had been massed to defend Moscow, and Soviet forces on other fronts were really as weak as claimed, German attacks obviously had to be directed at these points. Jodi and Halder had assumed that in Hitler's eyes the main objective was to destroy the 'vital strength' of the enemy, but now it

²⁰² Halder, *Diaries*, 1170 (11 Aug. 1941). The intention to tailor a picture of the situation to Hitler's assumed mental state is evident. The fact that figures on the enemy side were not recorded until this day is not a result of new intelligence of the enemy's strength, but rather evidence of German disappointment.

²⁰³ *Hitler's War Directives*, No. 34a, pp. 93 ff.

²⁰⁴ But not the expected bulk of the Red Army's vital strength, as Halder and Jodi expressed it.

became clear that his primary objectives were securing control over the areas already conquered and capturing the sources of raw materials. Destroying those parts of the Red Army that could still be forced to accept battle before the beginning of winter was of only secondary importance.

Nevertheless, Moscow was now clearly the main objective. But in his directive Hitler had included several significant obstacles. After the battle of annihilation at Uman, Army Group South was now, 'with its own strength' and employing forces of Germany's allies, to fulfil its new tasks—the occupation of the Crimea and the industrial areas of the Donets and around Kharkov.²⁰⁵ The co-operation between the inner wings of Army Groups Centre and South, eliminated from the directive on 30 July, had been reintroduced and clarified with an order to cut the enemy supply-routes to Ovruch and Mozyr with the objective of annihilating the Soviet Fifth Army. This could easily tie down strong forces, which would inevitably make extremely uncertain the use of parts of Army Group South to provide flank protection for the attack on Moscow.

A second obstacle was Hitler's insistence that the attack on Moscow should be dependent on progress in the attack to encircle Leningrad. The directive no longer placed Armoured Group 3 under Army Group North, but it demanded the use of mobile units to defeat the enemy west of Toropets. The left wing of Army Group Centre was then to be pushed far to the north to enable Army Group North to divert additional infantry divisions to the attack front against Leningrad. Regardless of this, attempts were to be made to transfer 'some division or other' to Army Group North even earlier.

Halder immediately grasped the importance of these conditions and frequently expressed his view that they were obstructive and unnecessary. When, on 9 August, the command of Army Group Centre reported that the elimination of enemy resistance at Velikie Luki did not require the use of armoured forces, Halder deliberately pointed out that a 'combat group strong enough to be launched eastward through Toropets' should be detached for the possible overall attack.²⁰⁶ He thus excluded an attack in a northerly direction, e.g. as part of an attack on Leningrad, but the transfer to the extreme left wing of Army Group Centre was to be prepared. Finally, Bock and Halder supported the use of Armoured Group 3 against Toropets, but if possible only after 20 August. Then the group could be expected to reach Toropets by 28 August. This meant perhaps an operation of one week (pushed through by Hitler) within the deployment for a northern encirclement of Moscow, which would result in a corresponding postponement of the general attack by Army Group Centre.²⁰⁷ Halder thus believed that in spite of the 'obstacles' he could still begin the offensive against Moscow in August. But for that it was essential that no demands were made by Army Groups North and South which might

²⁰⁵ The relevant directive of the Army High Command to Army Group South was issued on 12 Aug. 1941. Cf. n. 226 below.

²⁰⁶ Halder, *Diaries*, 1165 (9 Aug. 1941).

²⁰⁷ *Ibid.* 1171 (11 Aug. 1941).

interfere with the reorganization and build-up of supplies at the central point of the envisaged attack on Moscow. In this regard the most vulnerable point in the German front was the southern flank of Army Group Centre.

On 1 August 'Army Group Guderian' had begun its attack on Roslavl with VII Army Corps and XXIV Armoured Corps.²⁰⁸ By 3 August the enemy forces there, with a strength of four divisions and armoured formations, were encircled. The armoured group had thus reached a point between Krichev and the upper Desna south of the road to Moscow. An expansion of the deployment to secure the southern flank was prepared by Second Army, which was to advance via Rogachev to Gomel in order to eliminate the Soviet Fifth Army for good in co-operation with Army Group South.²⁰⁹ This operation as a whole met the requirements of the tactical situation of the army group as well as Hitler's conditions for an attack on Moscow. It therefore had to be completed with large forces in the shortest possible time to permit regrouping from the newly captured starting-points to be carried out by 20 August.

But developments of the situation in the sector of Army Group North marked the beginning of a new, seemingly decisive, turn of events against Halder's intentions. On 14 August the army group reported a dangerous concentration of enemy forces on its southern flank, which could further delay the encirclement of Leningrad. This development so alarmed Hitler that he again intervened in the use of the mobile units before the attack on Moscow and ordered the immediate transfer of major elements of Armoured Group 3 to Army Group North.²¹⁰

At first Halder was powerless to take any measures against Hitler's order of 15 August. Not only the transfer of Armoured Group 3, but also the abandoning of operations by Army Group Centre to improve its starting-positions and the withdrawal from exposed positions such as the Yelnya salient were incompatible with his plans.²¹¹ In Halder's opinion the effects of Hitler's directive required a reaction by the commander-in-chief of the army, but he was evidently not prepared to express his views.²¹²

It can be assumed that Halder immediately contacted Jodl. At the same time he ordered the operations department to formulate all points of view for the future use of Army Group Centre as 'operational proposals'.²¹³ The

²⁰⁸ Guderian, *Panzer Leader*, 99 ff.; Halder, *Diaries*, 1144 ff. (3 Aug. 1941). The renaming as an 'army group' (*Armeegruppe*) was for the assignment to capture Gomel (assignment of VIII Army Corps with 7th, 23rd, 78th, and 197th Inf. Divs. as well as IX Army Corps with 263rd, 292nd, and 137th Inf. Divs.). Cf. sect. II.1.1(c) at n. 219. To relieve the mobile units still in the Yelnya salient, XX Army Corps with 15th and 268th Inf. Divs. was also placed under the 'army group'.

²⁰⁹ Halder, *Diaries*, 1088 (30 July 1941); Guderian, *Panzer Leader*, 100. With the cutting of the Mozyr-Gomel-Bryansk railway line the retreat of the Soviet Fifth Army from the Pripet area became unavoidable.

²¹⁰ Cf. sect. II.1.1(d) at n. 362; *KTB OKW* i, 1045 (91).

²¹¹ Halder, *Diaries*, 1176 ff. (14, 17 Aug. 1941).

²¹² Ibid. 1181, 1184 (15, 17 Aug. 1941).

²¹³ Assessment of the situation in the east by OKW/WFSt/Abt. L on 18 Aug. 1941 and 'Proposal for the continuation of the operation of Army Group Centre in connection with the operations of Army Groups South and North' of the C.-in-C. of the army, same date: *KTB OKW* i, 1054 ff. (94, 95).

Wehrmacht High Command's assessment of the situation in the east, signed by Warlimont, expressed in diplomatic form, and with a certain understanding for Hitler's drive to capture the tempting east Ukrainian industrial region, the same views as the extensive analysis by Halder's operations department.

From the 'operational proposal' of the commander-in-chief of the army it is clear that Halder believed the decisive moment had arrived to obtain Hitler's final consent to this campaign and was no longer prepared to tolerate 'interference from above'. He did describe the objectives of Army Groups South and North as the conquest of the east Ukrainian industrial areas and the Baltic coast, but this constituted at the same time a rejection of all more ambitious objectives. Even the conquest of the Crimea was to be postponed if serious resistance were encountered there. Army Groups North and South had to reach their objectives, for only these successes combined with the conquest of the industrial area around Moscow would deprive the enemy of his last human and material reserves for further resistance. And conversely, without the conquest of Moscow successes in the north and south would not be decisive. To assist in the offensive against Moscow, Army Groups North and South were to advance simultaneously and follow Army Group Centre relatively closely in echelons staggered towards the centre of the front and assume the task of providing cover for the two wings of the attack. It is not necessary to present this operational proposal in detail here. It expressed more clearly than all previous ideas and drafts Halder's strategy during the preparatory and execution phase of Operation Barbarossa, which he now openly tried to realize against Hitler's wishes. The basic assumption of this strategy was that the annihilation of the enemy's 'vital strength' and the conquest of the sources of his strength around Moscow in 1941 had to remain the objective of German military operations. For this purpose it was necessary to keep all forces together and 'set aside other tactical, isolated actions not decisive for operational success'. What in Halder's view, however, were 'tactical successes' were in fact Hitler's main objectives—pushing on to the lower Don and the Caucasus, as well as defeating the Soviet Fifth Army with Guderian's forces. Halder did not have to wait long for an answer. Hitler must have studied exhaustively the ideas and proposals of the general staff, for his answer was impulsive but also very detailed.²¹⁴

Hitler tersely rejected Brauchitsch's (and Halder's) proposal with the explanation that it was not Moscow or the strong Soviet forces there which were important, but the conquest of industrial centres. Moreover, he wanted to be able to put pressure on Iran in the south because of Anglo-Soviet plans there. Similarly, it was necessary to eliminate the Crimea as an air-base against the Romanian oilfields as soon as possible.

In a long letter to the commander-in-chief of the army, Hitler also rejected the operational proposal of the general staff and explained that the most

²¹⁴ *KTB OKW* i, 1061 contains two notes, 20 and 21 Aug. 1941 (97, 98); in addition, letter (1062-8) of C.-in-C. of the army, 21 Aug., and Hitler's 'study' of 22 Aug. 1941 (99, 100).

important objectives—the conquest of the Crimea and of the Donets industrial and coal area, cutting off Soviet oil supplies from the Caucasus, and linking up with the Finns on Lake Ladoga—had to be achieved before the beginning of winter. He also ordered that strong forces from Army Group Centre should help Army Group South cross the Dnieper and encircle and eliminate the enemy facing the boundary between the two groups. Only after the conclusion of these operations could the necessary forces be made available for an attack on Moscow.

Hitler's 'study' of 22 August was evidently not edited by the Wehrmacht operations staff, as it contains indications of agitation as well as passages in which Hitler took direct issue with Halder's arguments for an attack by the army on the eastern front. Hitler justified his operational priorities in detail with the well-known political and war-economy arguments, but also with military arguments. For example, in his view the necessity of crossing the Dnieper on a broad front south of Kremenchug was a logical step required for the conquest of the Crimea, itself essential to fulfil the most important task of protecting the Romanian oilfields against air attack. He also rejected Halder's argument that a large encirclement movement to the east of Army Group South would weaken Guderian's army group, as the elimination of the threat to the southern flank of the attack on Moscow could be achieved only by destroying the enemy forces there. The impending concentrated attack by armoured forces should not continue endlessly but, in accordance with his orders for the conduct of the campaign often repeated in the past weeks, should consist of short encirclement operations to destroy enemy units as they were encountered. Hitler's general instructions about the conduct of army operations undoubtedly seemed quite grotesque to Halder, who had always refused to consider strictly local requirements and wanted to concentrate forces for the attack on Moscow in the centre of the German front. Hitler's reproach that the army stubbornly insisted on an organization based on large units completely ignored the methods actually practised by the army leaders. As early as 25 July, Brauchitsch had stressed to the chiefs of the general staffs of the army groups that neither armies, nor armoured groups, nor corps formed indivisible units. And the creation of larger combat groups for special tasks disproved this reproach in practice.²¹⁵ For Göring Hitler's comparison of his tight command of operations of the Luftwaffe with the alleged situation in the army was undoubtedly a source of satisfaction, but the army leaders found it offensive. The concluding part of the 'study' was more conciliatory than the general tendency of Hitler's rather 'explosive' criticism gave reason to expect. He explained that, for the reasons stated, he could not, 'in general', accept the draft submitted by the army for the further conduct of operations.

What was in fact decided? Firstly, the disposition of XXXIX Armoured Corps of Armoured Group 3 within the framework of Army Group North was

²¹⁵ Halder, *Kriegstagebuch*, iii, 118 (25 July 1941; not in trans.).

retained, with the objective of advancing the encirclement of Leningrad. Secondly, Hitler decided that Army Group Centre with Guderian's army group should facilitate the Dnieper crossing of Sixth Army and Armoured Group 1 by engaging the enemy on their front and then subsequently annihilating enemy forces east of the Dnieper in a great battle of encirclement. Thirdly, he decided that the subsequent attack on Moscow should be carried out in stages, in which it would be more important to destroy as many enemy units as possible than to capture Moscow quickly. In his orders Hitler assumed that Army Group North would shortly be able to fulfil its task of cutting Leningrad off from the east.

Hitler's rejection of their views caused great dismay among the army leaders, but the officers concerned obeyed him.²¹⁶ On 23 August Halder flew to the headquarters of Army Group Centre to discuss the situation with Field Marshal von Bock, whose army group was most affected by Hitler's decisions. Bock explained that he could not halt his advance on the existing front. Guderian was also consulted and criticized the new attack direction, especially because of the road conditions, supply problems, and resulting wear and tear on vehicles it would involve.²¹⁷ But Guderian too was unable to persuade Hitler to give up his plan; the decision for a 'battle of Kiev' had been taken. The disputes about the conduct of operations between Hitler and the Army High Command, in which Jodl had generally supported Halder, had come to a 'temporary' conclusion.

Apart from this conflict about operational objectives, which had been smouldering since plans for the war in the east were first considered, the controversy between Hitler and the Army General Staff, which continued for more than a month, was also a result of the growing realization that a number of mistakes had been made in the basic planning for the war against the Soviet Union. The objective stated in the deployment order for Barbarossa—to destroy 'the bulk of the Russian army in western Russia'—had not been achieved to the extent that a withdrawal of strong Soviet forces into the vast expanse of the country further east could be prevented. Contrary to German expectations, the Soviet leaders had been able to organize an effective defence in spite of the catastrophic losses of the first few weeks of the campaign. In contrast, the size of the area to be conquered and the declining strength of their own forces presented increasingly difficult problems for the German leadership. Halder's intention to reach the operational objectives of each of the three army groups within approximately the same period of time had clearly not been realized in the sector of Army Group South. It was no longer possible to maintain the original time plan for this 'rapid campaign'. At the end of August 1941 a survey of the strategic situation by the Wehrmacht High Command, which was approved by Hitler, expressly mentioned the possibility

²¹⁶ Halder, *Diaries*, 1195 (22 Aug. 1941).

²¹⁷ *Ibid.* 1196–7 (23, 24 Aug. 1941); Bock, *Tagebuch*, 71 (23, 24 Aug. 1941), BA-MA N 22/9; Guderian, *Panzer Leader*, 101.

that additional operations might be necessary completely to crush Soviet resistance in 1942 and made this consideration the basis of further strategic deliberations.²¹⁸ It seems that Halder, more than Hitler, resisted this view and believed that a final effort to capture Moscow would lead to the collapse of Soviet defences. Hitler, on the other hand, drew the correct (in his view) operational conclusions dictated by his priorities. Military-economic necessity was the decisive factor; he never considered a Cannae around Moscow. But the German leaders still hoped—even if they no longer expected with certainty—to conclude the campaign against the Soviet Union satisfactorily in 1941 in so far as they might manage to deprive the enemy of the basis to rehabilitate and redispense his forces and to reduce the German army in the east to the size which they had envisaged and for which alone they had prepared. With these objectives in mind, they concentrated their attention on Leningrad and the industrial area of the Ukraine.

(c) *The Battle of the Ukraine and the Crimea*

(See the *Annexe Volume*, No. 11)

On 21 July, even before the conclusion of the battle of Uman, Army Group South command had informed the commanders-in-chief of its armies of the task of destroying enemy forces west of the Dnieper and of the direction of coming operations.²¹⁹ The main point of offensive effort was to be on the northern wing, which, possibly in co-operation with parts of Army Group Centre, was to advance on the Donets industrial area. Zaporozhye, Dnepropetrovsk, and Cherkassy were envisaged as possible bridgeheads for crossing the Dnieper, depending on the point of main effort, for Seventeenth Army and Armoured Group 1. After capturing bridgeheads south of Kiev, Sixth Army was also to advance to the south-east. Because of the distant operational objectives, the army group wanted to reach the Dnieper as rapidly as possible and extend its envelopment as far eastward as possible, while the Army High Command insisted on a close encirclement near Uman.²²⁰ While the army group was thus intent upon assembling its mobile units in the Dnieper bend for rehabilitation before the impending operations, Hitler and Halder insisted on pursuing the enemy to the south via Pervomaysk in order to force him to accept battle west of the Bug and to reach the Black Sea as quickly as possible.²²¹

Between 4 and 7 August the situation of the army group changed as a result of strong, dangerous enemy thrusts from the area around Kiev and from the direction of Ovruch. The commander-in-chief of Sixth Army believed that the

²²⁰ Army High Command, directive for the continuation of operations, 28 July 1941, and supplementary directive, 31 July 1941, BA-MA RH 2/v. 1326, fos. 163 ff., 185 ff.

²²¹ Halder, *Diaries*, 1150 (4 Aug. 1941): Sodenstern's report on this action and Halder's arguments. Cf. also *ibid.* 1171 (11 Aug. 1941).

Soviet Fifth Army could cause the collapse of his northern wing.²²² He based his judgement on identified transport movements between Chernigov and Ovruch, which, however, Halder correctly interpreted as evacuation measures. Reichenau viewed the exhaustion of his own troops as the main danger and therefore demanded mobile units and an earlier attack by the southern wing of Army Group Centre. This demand again raised the problem of eliminating enemy resistance at the boundary between the two army groups in the Pripet area, still a controversial subject between Hitler and the army leaders. Since Hitler's directive of 19 July,²²³ the elimination of that resistance had been assigned primarily to Second Army and Second Armoured Army. On the basis of a directive of the commander-in-chief of the army of 28 July, itself based on Hitler's directive, and the supplementary directive, XXIV Armoured Corps of Armoured Group 2 launched a large-scale attack on 12 August to support and cover the attack of Second Army in the direction of Gomel. The aim of this attack was to cut off the Soviet Fifth Army and support a thrust by Sixth Army north of Kiev. As described above, however, Sixth Army was under heavy attack and thus not able to carry out such an offensive movement.²²⁴

On the whole the army group command considered the situation in front of Seventeenth Army, Armoured Group 1, and Eleventh Army on 8 August to be favourable. Halder spoke of a complete destruction of the southern wing of the Red Army, now too weak to undertake an offensive operation in the Ukraine, in the battle of Uman. From the number of destroyed and shattered enemy units he concluded that Army Group South was sufficiently strong to fulfil its task; perhaps it would even be able to support Army Group Centre (i.e. by transferring troops).²²⁵

The intensification of Soviet attacks against Sixth Army completely changed this favourable picture. Now the transfer of mobile units (I Armoured Corps), to be replaced in Armoured Group 1 by Hungarian and Italian mobile units, seemed necessary to support this army, which was to halt its attack on Kiev. Moreover, 'Group Schwedler' had to be strengthened by army group reserves and transfers from Seventeenth Army for a counter-attack against the enemy penetration at Boguslav. This unexpected splitting of the armoured group for thrusts across the two wings of the army group and its involvement in defensive battles was carried out primarily at the expense of preparations for the fast operation beyond the Dnieper, which formed the centre of the German concept.

²²³ *Hitler's War Directives*, No. 33, pp. 85 ff.

²²⁴ Cf. n. 220 above; situation conference Army Group Centre, 27 July 1941. Cf. sect. II.1.1(b) at n. 167; Guderian, *Panzer Leader*, 98-9; Halder, *Diaries*, 1076-7 (26 July 1941). Bock (Tagebuch, 26 July 1941, BA-MA N 22/9) emphasizes the lack of a clear objective, as the offensive elimination of a threat to a flank had developed into an encirclement attack.

²²⁵ Halder, *Diaries*, 1163-4 (8 Aug. 1941).

On 12 August the use of mobile units Hitler demanded against Nikolaev and the mouth of the Dnieper—about which the army group had serious reservations as the enemy facing Eleventh Army was withdrawing towards Odessa in the south and important enemy units could no longer be encircled—led to a directive of the commander-in-chief of the army to Army Group South intended to take into account its intentions with regard to a continuation of the attack beyond the Dnieper as well as Hitler's desire for the attack to be directed towards the Black Sea.²²⁶ The directive ordered Army Group South to prepare to cross the Dnieper and to establish bridgeheads across the river early where sufficient forces were available. In conjunction with this operation Eleventh Army, together with Armoured Group 1, was to defeat the enemy between the mouth of the river and Zaporozhye and gain bridgeheads for the crossing to the Crimea as well as towards the Sea of Azov. For the fighting in the Crimea, three mountain divisions were to be transferred from Seventeenth Army. The occupation of the coast was to be left to the Romanians.

Reinforced with mobile units of Germany's allies, Armoured Group 1 was to reach the Dnieper between Zaporozhye and Kremenchug and conquer Dnepropetrovsk as a bridgehead as soon as possible; the armoured corps sent to take Nikolaev was, after fulfilling its task, to attack in the general direction of Zaporozhye, to prevent an enemy escape to the south, and gain river crossings for Eleventh Army near Kherson, Berislav, Nikopol, and Zaporozhye. Parts of the group were to reach the Dnieper between Kremenchug and Cherkassy and hold their positions there until the arrival of Seventeenth Army. In contrast, Sixth Army was to wait; instead of III Armoured Corps, as had been planned, only an armoured division was to be brought up, but in accordance with Sixth Army's changed task—to bring about the 'disintegration' of the Soviet Fifth Army—it was to abandon its attack on Kiev. The further tasks east of the Dnieper were outlined as follows: occupation of the Crimea and the industrial area around Kharkov, and later the Donets basin. The point of main effort of the army group thus shifted to Seventeenth Army, which was to advance 'in the general direction of Voroshilovgrad and Stalingrad'. For this purpose Eleventh Army had to provide several of its own units to cover the flanks of the advance, and on the left wing Sixth Army, with cover in the direction of Kiev, was to advance north of Seventeenth Army in echelon to the left. The main task of Armoured Group 1 was to push forward the attack on Kharkov.

The directive clearly shows that at this point the Army High Command was thinking neither of co-operation between Army Group South and 'Guderian's army group' in the form of an encirclement operation nor of a concentration of the main effort around Kiev, as envisaged in the directive. The main objective of the attack was to drive a wedge across the Dnieper towards the

²²⁶ OKH/GenStdH/Op.Abt. (IS) No. 1436/41, 12 Aug. 1941 to H.Gr. Süd, BA-MA RH 2/v. 1326, fos. 192 ff.

east Ukrainian industrial area. Eliminating enemy resistance at the boundary between the two army groups was considered to be a tactical problem.

Beyond the operational objective, it is interesting that, with the attack of the Italian and Hungarian mobile units, the detaching of an armoured corps from Armoured Group I was already envisaged for the attack on Moscow, and that Halder obviously expected primarily to pursue the defeated enemy beyond the Dnieper and not to encounter organized resistance on a large scale from the Red Army there.

The attack of XXXXVIII Armoured Corps with 16th Armoured Division and the Leibstandarte—i.e. a mobile brigade—succeeded in capturing Nikolaev and Kherson. Halder therefore envisaged an attack on Odessa as early as 16 August and did not exclude an evacuation of the Crimea. Ostashkov was taken by 50th Infantry Division, but the Romanian attack on Kiev came to a halt short of its objective. On 21 August Halder concluded: 'No Odessa, no Crimea.'²²⁷

While, with the exception of Odessa, the situation in the area of Eleventh Army, Seventeenth Army, and Armoured Group I developed largely as expected during August—that is, the Dnieper had been reached and bridgeheads established at Dnepropetrovsk, Kremenchug, and Cherkassy—Sixth Army remained tied down under the pressure of the attacks on Kiev and those from the Pripet marshes. The possibility of an offensive co-operation with Second Army emerged only on 20 August, when Second Army had captured Gomel. Now the Army High Command also urged such action, though pointing to the danger that the right wing of Army Group Centre could be halted 'by highest authority', which would entail a delay of its own plans to have Army Group Centre advance towards Moscow.²²⁸

While as late as 18 August Sixth Army command did not expect the Soviet Fifth Army to avoid contact, Halder and the army group command pressed for a rapid pursuit of the enemy. In spite of the addition of 11th Armoured Division, Sixth Army hesitated to start this action because of the condition of roads and bridges in the area. The army group command now clearly shifted the point of main effort of future operations, and the bulk of its forces, to Seventeenth Army, to which it also assigned the reorganized 'Group Schwedler'.²²⁹

This was the situation obtaining at the time of the arrival of Hitler's decision of 21 August on co-operation between Army Groups South and Centre, which was to go far beyond the previously envisaged close co-operation of their inner wings.²³⁰

Hitler's directive contained no basically new ideas; it was rather an expression of impatience with the long delay in eliminating enemy resistance in the Pripet area, an objective now stipulated in the form of a clear order, taking into

²²⁷ Halder, *Diaries*, 1192 (21 Aug. 1941).

account the situation only in so far as it no longer demanded the encirclement of the enemy in his previous combat area but rather the encirclement and destruction of the Soviet Fifth Army, even if it attempted to avoid contact, by the inner wings of Army Groups Centre and South before it could regroup in a new position along the Desna and the Sula. Army Group Centre was ordered, regardless of later operations, to employ as much force as might be necessary to achieve this objective. Hitler expected only a limited intervention of Army Group South in this encirclement operation, in which Armoured Group 2 was to take a major role, as Sixth Army had to cross the Dnieper and in any case would arrive too late to concentrate significant forces on the right wing. Again making clear the difference between his views and those contained in the Army High Command's memorandum of 18 August,²³¹ Hitler designated the rapid conquest of the Crimea as the next objective of Army Group South.

In his directive to Army Group Centre, Halder evidently did not assume that Hitler's decision was final and insusceptible of interpretation. For he merely ordered those parts of Gomel and Chernigov that could be reached to be captured in order to intercept the Soviet Fifth Army.²³² He limited the use of Armoured Group 2 to those parts of Guderian's mobile units which were 'not needed for other tasks of the army group and were ready for action or mobile'.²³³ Guderian, who was probably scarcely aware of the background of this limitation, argued against this action. He referred to the road and fuel situation and to the need for the mobile troops to be replenished, assuming that they would be needed for the coming advance on Moscow.²³⁴ A conversation between Guderian and Hitler, suggested by Halder and Bock, about the technical difficulties of the operation ordered for the armoured group ended with the confirmation of the new objective. Guderian's proposal there and then to use the entire armoured group²³⁵ led to a dispute with Bock and

²³¹ Ibid. 1055 ff. (95). In his 'study' of 22 Aug. Hitler had already rejected as 'not worth considering' the idea of making an envelopment movement east of Kiev dependent on the participation of Army Group South. Cf. n. 214 above.

²³³ Cf. n. 232 above and directive OKH/GenStdH/Op.Abt. (IM), 23 Aug. 1941 to H.Gr. Mitte, BA-MA RH 2/v. 1326, p. 202.

²³⁴ Guderian, *Panzer Leader*, 101. Bock had attempted to 'slow' Guderian as late as 21 Aug.; he sought primarily not to expand the success away from the main direction of attack but to push for rehabilitation. The first papers for the operation eastward were ready on 22 Aug. Cf. Bock, Tagebuch, 69 (22 Aug. 1941), BA-MA N 22/g; there also Bock's conversation with Brauchitsch as the basis of the Army High Command directive of 24 Aug. 1941 cited in n. 232 above.

²³⁵ Halder (*Diaries*, 1196: 24 Aug. 1941) severely criticized Guderian's 'caving in'. Guderian resolutely defended himself in *Panzer Leader* (101). It cannot be assumed that Guderian considered it his task to debate with Hitler the war-economy aspects involved in deciding on the point of main effort. He evidently did not bring himself to state simply that his armoured units were no longer mobile or ready for action (as the Army High Command assumed on 24 Aug.). On 22 Aug. he had flatly rejected this operation in a conversation with Bock. Cf. Bock, Tagebuch, 22, 23 Aug. 1941, BA-MA N 22/g.

considerable friction in regard to the envisaged operation.²³⁶ No joint command was established for those parts of both army groups that were supposed to co-operate in the new operation.

After Guderian had brought up XXXXVII Armoured Corps from the area around Roslavl, the offensive of Armoured Group 2 made rapid progress. With 17th Armoured Division on the left wing, the armoured group advanced towards the Desna on a broad front on 25 August. XXIV Armoured Corps advanced with 3rd Armoured Division towards Novgorod-Severskiy and was able to capture the local bridge over the Desna intact, an essential condition for a rapid continuation of the advance.²³⁷

Second Army continued its attack with 7th Infantry Division towards Chernigov but was not able to advance as rapidly as the right wing of the armoured group, which was thus exposed to Soviet counter-attacks and did not reach its first objective, to cross the Desna at Korop. In the following days Armoured Group 2 suffered heavy attacks on its flanks against the Desna bridgehead, which was still being developed, and against the attack spearheads pushing out from it. The threat on the eastern flank proved to be so great that Guderian requested the release of his third armoured corps, of which the SS division 'Das Reich' and the reinforced infantry regiment 'Großdeutschland' were sent to join him.²³⁸

At the end of August Army Group South had reached its assembly areas for the crossing of the Dnieper by Seventeenth Army and Armoured Group 1. It considered the strong enemy artillery fire as a feint to conceal the basic intention to withdraw from the Dnieper after the completion of positions further to the east. The logical conclusion for the German forces was to cross the river rapidly and pursue the enemy to avoid having to attack another deep system of enemy positions. In reality this meant that the army group command had decided to order its exhausted troops to undertake this operation with 'their last remaining strength' and without a rest.²³⁹ Seventeenth Army was to make the main effort of the attack and cross the Dnieper near Kremenchug at as many places as possible. The bridgehead Dnepropetrovsk, which still had to

²³⁶ Bock held XXXXVI Armd. Corps back—Guderian demanded it on 27 Aug.—so as to have at least one mobile unit for Moscow and for crisis situations. Cf. Bock, *Tagebuch*, 75 (27 Aug. 1941), BA-MA N 22/9; Halder, *Diaries*, 1203 (27 Aug. 1941). On that day Hitler wanted to use an additional armoured corps (XXXX) on the left wing of Army Group Centre to envelop the enemy facing Sixteenth Army. Bock on the other hand wanted to have II Corps of Army Group North begin its attack to the south-east in order to keep his own forces together for the attack on Moscow.

²³⁷ For Halder's criticism of Guderian's ambitious reach towards the east see *Diaries*, 1198 (25 Aug. 1941). Cf. also Guderian, *Panzer Leader*, 102-3.

²³⁸ Guderian, *Panzer Leader*, 105; Halder, *Diaries*, 1204-5 (28 Aug.-5 Sept. 1941).

²³⁹ Cf. the directive of Army Group South, No. 7, 28 Aug. 1941: Hauck, *Südliches Gebiet*, pt. 1, 348 ff., appendix 36, MGFA P-114c; H.Gr. Süd/la, KTB, 28 Aug. 1941, BA-MA RH 19 I/72, with the conclusion that the enemy was beginning to withdraw from large areas. Guidelines of Army High Command, 28 Aug., envisaged placing Guderian's army group under Army Group South once Sixth Army had crossed the Dnieper, in accordance with the closer encirclement ordered by Hitler, while Army Group South considered co-operation with Armd. Group 2 to be probable only in the Kharkov area.

be supplied largely over a captured floating bridge and a footbridge, was to be expanded by the three formations of III Armoured Corps there to eliminate the enemy artillery and make possible the crossing of at least one armoured and one motorized division with their heavy equipment. In fact, however, in the following days it was not possible to reduce enemy activity to an extent that would permit an orderly transfer of units to the east bank of the Dnieper. On the contrary, the three divisions lost a total of about 300 men each day.²⁴⁰

On 1 September the chief of the general staff of Army Group South contacted Second Army command to co-ordinate the issuing of orders on the left wing, and immediately made clear that because of the river plains and the lack of river-crossing equipment Sixth Army was dependent on assistance from Second Army.²⁴¹ He mentioned the area of Sumy as the objective for Armoured Group 2 and the line between Priluki and Romny for Second Army.²⁴² He justified this operation again as being in the best interests of Army Group Centre, because the elimination of enemy forces between the Dnieper and Kharkov would secure the southern flank for the great attack on Moscow. The expected 'battle of Poltava', as Sodenstern called it, thus appeared decisive for the campaign. After this battle, Sodenstern expected only 'expeditions' to occupy the country, as the enemy would be completely and definitively eliminated by the operation now beginning.

Sodenstern's remarks were caused by an order from the operations department of the Army General Staff received on 30 August to the effect that Army Group Centre was to make preparations to place the divisions of Second Army under Guderian's armoured group after Second Army had crossed the Desna 'for further operations with Army Group South'. The army headquarters and 'parts of Second Army not needed for further operations south of the Desna' were to be placed at the disposal of Army Group Centre. The number of 'parts needed' therefore depended also on the demands of Army Group South.²⁴³ This decision seemed to recognize that the coming operation would be directed by Army Group South and no longer be merely an intensified effort, for which Army Group Centre would be responsible, to eliminate enemy forces at the boundary between the two groups.²⁴⁴

With the conquest and expansion of the bridgeheads across the Dnieper between Berislav (Eleventh Army) and Kremenchug (Seventeenth Army) on

²⁴⁰ Report III. Pz.K., 7 Sept. 1941, BA-MA RH 24-3/51.

²⁴¹ H.Gr. Süd/Ia, KTB, 31 Aug. 1941, BA-MA RH 19 I/74; Hauck, Südliches Gebiet, pt. 1, 356, appendix 38, MGFA P-114C.

²⁴² Copies were sent to the chief of staff of Army Group Centre and the chief of the operations department. Sodenstern believed he would be able to free at least twelve divisions for the attack on Moscow, provided Second Army and Armd. Group 2 pushed on across the Desna: H.Gr. Süd/Ia, KTB, 1 Sept. 1941, BA-MA RH 19 I/72.

²⁴³ OKH/GenStdH/Op.Abt. (I) No. 31754/41, 30 Aug. 1941 to Army Groups Centre and South, BA-MA RH 2/v. 1326.

²⁴⁴ On the other hand, Halder expected Second Army (of which elements would continue to move eastward) and Armd. Group 2 to be available after the 'intermezzo' as of 10 Sept. (*Diaries*, 1210 ff.: 31 Aug. 1941).

30-21 August and 2 September, the army group gained starting-positions south of Kiev. The stiffening of enemy resistance and the realization that he was bringing up strong units from other sections of the front and areas further to the east changed the German assessment of his position after the end of August. It became clear that Stalin had ordered the Dnieper line to be held and that large numbers of enemy troops were confronting the army group. On 4 September Army Group South ordered Seventeenth Army to attack from its bridgehead near Kremenchug in the direction of the general line Mirgorod-Lubny in order to encircle the enemy forces on the middle Dnieper and in Kiev. Armoured Group 1 was to cover this movement on its right flank and advance via Krasnograd towards Poltava.²⁴⁵ (See the Annexe Volume, No. 12.)

On 6 September, in an order largely identical with the plans of the Army General Staff and its directive of 10 September 1941,²⁴⁶ the Wehrmacht High Command instructed Armoured Group 1, now reinforced with infantry divisions (but without III Armoured Corps), to carry out the encirclement and Seventeenth Army to carry out the attack on Poltava. The purpose of that change was the fastest possible accomplishment of the envelopment. Only two corps of Seventeenth Army were engaged against Poltava and Krasnograd. As a consequence of this distribution of forces strong mobile units were tied down in protracted operations against the pocket east of Kiev, and the army group advanced more slowly than planned after the conclusion of the battle.

Of course Army Group Centre and Guderian pressed for the bringing up of the armoured forces of Army Group South after Armoured Group 2 for its part had several times found itself hard pressed. But the command of Army Group Centre was concentrating its attention only on the operation against Moscow—which, according to Brauchitsch and Halder during a visit to Bock's headquarters on 2 September, would now certainly be carried out—and insisted that all available forces be released soon for that objective.²⁴⁷

On 9 September Guderian with his XXIV Armoured Corps crossed the Szym, and on 10 September 3rd Armoured Division reached Romny and thus the objective for the meeting with Armoured Group 1. But this group had not been able to make sufficiently rapid progress because of the difficulty of the Dnieper crossing and the almost impassable muddy roads; Guderian's units therefore proceeded to Lovitsa. On 6 September Second Army attacked towards the Desna and was able to take Chernigov three days later. The first

²⁴⁵ H.Gr. Süd/la, KTB, 4 Sept. 1941: Hauck, Südliches Gebiet, pt. 1, 359, appendix 39, MGFA P-114c.

²⁴⁶ *Hitler's War Directives*, No. 35 (6 Sept. 1941), pp 96 ff. On the acceptance of the operational idea 'Moscow' cf. Halder, *Diaries*, 1208-9 (30 Aug. 1941); also sect. II.1.1(b) at n. 205. The operation of Army Group South was to be carried out as fast as possible, which explains the employment of 3 armoured and 3 motorized infantry divisions in the direction of Romny. The bulk of Seventeenth Army was to attack in the direction of Poltava and Kharkov, supported by 1 armoured and 1 infantry division (mot.). This confirmed the plan of 12 Aug., H.Gr. Süd/la, KTB, 6 Sept. 1941, BA-MA RH 19 I/72.

²⁴⁷ Bock, Tagebuch, 81-2 (2 Sept. 1941), BA-MA N 22/9.

signs of disintegration became apparent in the Soviet units now threatened by envelopment on several sides. From the west, Sixth Army attacked on 3 September and was able to establish the first contact with the spearheads of Second Army seven days later.

Nevertheless, the decisive thrust by Army Group South was delayed. After building up the necessary supplies and constructing a suitable bridge, the spearhead of Armoured Group 1 attacked from the bridgehead at Kremenchug with XXXXVIII Armoured Corps on 12 September.²⁴⁸ The bridgehead at Dnepropetrovsk, which had been held with heavy losses, was to be opened from the rear by 13th Armoured Division of III Armoured Corps, attacking likewise from Kremenchug along the Dnieper. On 13 September the part of the pincer movement of Armoured Group 1 attacking from the south-west had already reached Lubny, where both armoured spearheads met. The first ring, albeit still weak, was closed near Lohvitsa on 15 September. In addition to this broad envelopment of the main forces of the Soviet south-west front, the Dnieper crossing by the right wing of Sixth Army at Rechitsa made possible a complete encirclement of Kiev, which fell on 19 September. Protected on the left flank by XIV Armoured Corps, south of Kremenchug beyond the Dnieper, Seventeenth Army attacked Poltava.

In addition to purely operational and tactical questions, the capture of Kiev raised serious problems concerning the safety of the troops in the city.²⁴⁹ On 13 September Sixth Army command ordered that until the area of the city had been completely cleared of all forms of enemy resistance, German troops would be permitted to remain there only with written permission of the army headquarters. At the same time an order was issued concerning the securing of stocks and the maintaining of order in Kiev. After the fighting in the city came to an end on 19 September, it became evident not only that all important material had been removed and the railway lines destroyed but also that extensive acts of destruction had been prepared for the time after the fighting by the use of numerous explosive charges to be detonated by remote control. As a result of a tip from an anonymous source, on 19 September 99th Light Division learnt of explosive charges planted in large buildings suitable as quarters for staffs and troops. An extensive, partially successful, search was begun, but on 24 September an explosion next to the main post office in a depot for captured equipment and ammunition started a large fire which spread rapidly and could not be extinguished by Fire Brigade Regiment Sachsen. To contain the fire, Sapper Battalion 99 and demolition squads from

²⁴⁸ OKH/GenStdH/Op.Abt. (I) No. 1494/41, 10 Sept. 1941, Weisung für die Fortführung der Operationen [Directive for the continuation of operations], BA-MA RH 2/1326, pp. 209 ff. Hauck (Südliches Gebiet, pt. 1, 128-9, MGFA P-114c) offers a summary of the coming battles from the perspective of the army group, which for reasons of space can be treated here only very briefly. Cf. Röhrich, *Kesselschlacht*, 59 ff.; Haupt, *Kiew*, 109 ff., with literature on the history of numerous units.

²⁴⁹ Gen.Kdo XXIX. AK/Ia, KTB, 1 July-31 Sept. 1941, annexe 1, BA-MA, XXIX. AK, 15147/3.

99th and 71st Infantry divisions cleared large fire-breaks.²⁵⁰ The conflagration was finally put out on 29 September, by additional German soldiers, technical emergency units, and city and German fire brigades. Sapper Battalion 99 was proud of having 'rendered in exemplary fashion a great service in saving the city of Kiev through the personal efforts of every individual involved'. The losses in dead and injured in this incident caused Hitler to forbid the taking of such risks again. 'Partisans and Jews' were blamed for the original fire and repeated flare-ups, and were shot on the spot. This marked the beginning of one of the most ghastly massacres of the war. Military Administration Headquarters 195 had to be removed; the commander of 113th Infantry Division was to take over the role of commandant of the city. These incidents of arson with the resulting losses—among others, Colonel Freiherr von Seidlitz und Gohlau of the Army General Staff died in the fire in Kiev—were one of the reasons for the order concerning the behaviour of German troops in the east issued by the commander-in-chief of Sixth Army, Field Marshal von Reichenau, on 10 October 1941.²⁵¹ They also confirmed Hitler's view that large fortified cities should not be taken by direct attack, especially not with armoured units, but should be bypassed, encircled, and forced to surrender by means of artillery fire and air attacks. Referring to Kiev, on 7 October 1941 Hitler expanded this principle to include not only Moscow and Leningrad but also other large Soviet cities, and repeated his prohibition against sending troops into these cities, so as not to expose them to losses through enemy explosive devices or other forms of sabotage. The effects of Hitler's often repeated basic order on this procedure will be examined at the appropriate point. It should, however, be noted here that neither Kiev nor Dnepropetrovsk nor Kharkov was destroyed and 'obliterated' by bombing and shelling, as the German forces needed these transportation centres and their buildings for staffs, depots, and other supply installations. Moreover, the common interest of the occupiers and a large part of the native population in maintaining a functioning infrastructure led to relations based to a considerable degree on mutual agreement in this regard.

On 25 September most of the fighting in the pocket east of Kiev ended. The end of the 'battle of Kiev', as this operation was later called, gave rise to the hope among German military leaders that, with relatively slight forces, they would be able to conquer the Crimean peninsula and cross over to the

²⁵⁰ Report on fire-fighting by Sapper Bn. 99: 99 Lgt. Div., war diary, annexe to vol. v, BA-MA RH 26-99/16; also XXIX Army Corps, war diary, annexe, reports of 20 Sept.-19 Nov. 1941, BA-MA, XXIX. AK, 15192/7. Generally orders were to seek out 'party activists and Jews' as instigators and hostages after acts of sabotage. This was justified by references to existing guidelines and to evidence provided by the population.

²⁵¹ Other militarily justified reasons were Soviet atrocities against German prisoners of war and reports of attacks on military hospitals, individual sentries, and similar incidents mentioned in 'Erfahrungen aus den jüngsten Kämpfen' of 28 June 1941. Individual passages of this order can be found in previous instructions from Foreign Armies East as well as from the general for special tasks in the Army High Command. However, the rounding up and subsequent execution of the Jewish population of Kiev cannot be justified by any reference to a military threat.

Caucasus before the beginning of winter. In their view, the enormous losses suffered by the Red Army in the three months of the campaign justified the assumption that the attack on Moscow, 'Operation Typhoon', could still succeed in spite of the advanced season.²⁵² For the necessary massing of forces, Army Group South was required to transfer two corps commands and ten divisions—among them one armoured division and two motorized infantry divisions—to Army Group Centre immediately after the victory east of Kiev. It thus retained only two armoured corps for operations over the great distances to the Caucasus.

For its new tasks the army group was reorganized; the Romanian units which remained under its command were assigned to Eleventh Army Headquarters, but with the important change that the Romanian Fourth Army was withdrawn completely from the German area of command and placed under the sole command of Antonescu for the siege of Odessa. Along with their corps command, the three Hungarian brigades were placed under the 'Group von Roques', which at the same time exercised command authority in the rear area of the army. In this capacity it also contained two additional Hungarian brigades with a corps staff, the Slovak security division, and three German security divisions. The Italian expeditionary corps, only partially motorized and assigned to III Armoured Corps, was not an adequate replacement for XXXXVIII Armoured Corps, which had been transferred. In accordance with the plans for further operations, Army Group South took III Armoured Corps under its command even before the new attacks in the east in order to have a mobile formation, 'Group Mackensen', ready for use as the situation required.²⁵³ (See the Annexe Volume, No. 13.)

The advance of Eleventh and Seventeenth Armies at first assumed the form of a pursuit. On 17 September this caused Halder and Sodenstern to consider ordering Armoured Group 1 in future to advance not to the east or north-east, but to the south-east on the shortest route to Rostov.²⁵⁴ Halder estimated that the armoured group could reach the Donets industrial region at approximately the same time as Seventeenth Army, which was advancing rapidly from Kharkov and was supposed to reach the city before the enemy could construct new defensive positions and reorganize his units. With the main task of securing the northern flank of the army group, Sixth Army was to follow Seventeenth Army in echelon. The problem of protecting the flanks of the two army groups in the event of a rapid advance of Seventeenth as well as Second Army towards Kursk was to be solved by having Sixth Army follow after them, moving towards the Donets industrial region. Army Group South, while

²⁵² According to figures of Army Group South (Ia, KTB, 26 Sept. 1941, BA-MA RH 19 I/73), this battle resulted in the capture of 665,000 Soviet soldiers, 3,018 artillery pieces, 884 tanks, and 418 anti-tank guns. On the question of the expected duration of the war in connection with the late start of Typhoon cf. sect. II.1.1(b) at n. 216.

²⁵³ H.Gr. Süd/Ia, KTB, 16 Sept. 1941, BA-MA RH 19 I/73.

²⁵⁴ *Ibid.*, 17 Sept. 1941, and order No. 2216/41, 20 Sept. 1941. According to this order, Arm. Group 1 was first to open the bridgehead of Dnepropetrovsk and capture the Samara bridges as a precondition for the transport of supplies beyond the river.

recognizing the need to employ a mobile unit along this boundary to provide flexible cover for the area, was not able to detach forces for that purpose from the now reduced Armoured Group 1³⁵⁵—except possibly XXXXVIII Armoured Corps, which was to be transferred to Army Group Centre—until Sixth Army arrived. It should be noted that, because of the great success in the 'battle of Kiev', Halder regarded the danger of a Soviet thrust from the south-east and east to be so improbable that he believed the transfer of an additional armoured group to this flank, as had been considered by the Wehrmacht High Command and thus by Hitler, to be unnecessary, and that it was also Halder who planned and approved the eccentric attack by Kleist's armoured group.³⁵⁶ Indeed, he considered the rapid thrust of Armoured Group 1 to be necessary 'not because of concern that the enemy will organize stronger resistance—for lack of the necessary forces he is no longer able to do that—but because he may withdraw large forces which can then no longer be caught'. Halder did not rule out a Soviet withdrawal as far as the Don.

Army Group South was optimistic but believed that the situation was not without problems and that heavy fighting still lay ahead.³⁵⁷ Enemy resistance was also stiffening along the Dnieper between Melitopol and Zaporozhye. This development was believed to be connected with a build-up of enemy forces around Kharkov. Although these forces were not considered to have a very high combat value, it was to be expected that Seventeenth Army would experience heavy fighting before reaching the industrial area.³⁵⁸ At the bridge-head in Dnepropetrovsk, however, enemy pressure began to decline as a result

³⁵⁵ The idea of transferring Arm'd. Group 1 to Army Group Centre to provide flank cover for the offensive against Moscow came from the Wehrmacht High Command and was presented to Arm'd. Group 1 by Warlimont on 21 Sept.: H.Gr. Süd/Ia, KTB, 21 Sept. 1941, BA-MA RH 19 I/73. On the other hand, as early as 18 Sept. Halder had discussed with Jodl the use of parts of Arm'd. Group 1 in co-operation with Eleventh Army to attack Rostov: Halder, *Diaries*, 1244. On 21 Sept. this approach seemed to the army group to offer the only chance, in the event of favourable weather, of occupying the oilfields north of the Caucasus in 1941.

³⁵⁶ Chief of the operations department to the operations department (Ia) of Army Group South, 20 Sept. 1941, regarding the question of whether the Army High Command intended to issue a directive confirming that 'the approval of the Führer and Supreme Commander has yet to be obtained regarding the intentions of the C.-in-C. of the army, and especially for the use of Arm'd. Group 1 to reach the Sea of Azov and Rostov on the Don, which has not yet been proposed to him'. Hitler gave his consent: H.Gr. Süd/Ia, KTB, 21 Sept. 1941, BA-MA RH 19 I/73; OKH/GenStH/Op.Abt. (IS) No. 1523/41, Weisung für die Fortführung der Operation der Heeresgruppe Süd [Directive for the continuation of the operation by Army Group South], 21 Sept. 1941, *ibid.* For Halder's assessment of the enemy's situation and quote, 23 Sept. 1941, see *ibid.*, fos. 94 ff.

³⁵⁷ Situation analysis of Army Group South, 23 Sept. 1941, *ibid.*: Hauck, Südliches Gebiet, pt. 1, 376 ff., appendix 46, and intelligence (Ic) assessment of enemy's situation, *ibid.* 379, MGFA P-114c.

³⁵⁸ On 21 Sept. Heusinger and Sodenstern discussed whether Kharkov or the industrial area further south should be attacked. According to the directive of the Army High Command, both were to be attacked by Seventeenth Army, Kharkov to be taken first, then Voroshilovgrad with the industrial area, and subsequently the Don crossings. This task was similar to that given them on 12 Aug. (cf. n. 226 above). The operations department of the army group and Seventeenth Army headquarters were agreed that the industrial area had priority and that Kharkov possessed more prestige value. The quick capture of Kharkov would depend on the addition of a mobile unit to Seventeenth Army: H.Gr. Süd/Ia, KTB, 21 Sept. 1941, BA-MA RH 19 I/73.

of the withdrawal of the siege forces, which were then transferred to the front facing Seventeenth Army.

The indications of the future line of operations given to the commanders-in-chief of the armies and the commanders of the armoured group and 'Group von Roques' in a preliminary orientation on 21 September were defined more precisely by the Army High Command.²⁵⁹ Generally, while keeping its northern flank covered, the army group was to occupy the Crimea and the eastern Ukraine and establish positions for advancing into the Caucasus by crossing both the strait of Kerch and the Don. A new element, compared with earlier deliberations, was the planned attack by Armoured Group 1 from the area around Kremenchug, first along the Dnieper to the south in order to turn the flank of the Soviet Dnieper defences, including Cherkassy and Dnepropetrovsk. Subsequently the armoured group was to turn east and concentrate on the industrial area on the north bank of the Don. Eleventh Army was still to occupy the Crimea and advance along the northern coast of the Sea of Azov towards Rostov. Seventeenth Army's orders were expanded to include, in addition to Kharkov, a thrust towards Voroshilovgrad to occupy the Don crossings between the mouth of the Sal and the Tsirskaya, not far from the narrowest point between the Don and the Volga at Stalingrad. Sixth Army was to cover the deep northern flank of Seventeenth Army and to advance via Belgorod and occupy the bank of the Don on both sides of Pavlosk. There was no order to secure the southern flank of Army Group Centre.

The attack by Eleventh Army on the isthmus of Perekop had as its objective the Crimea, but the situation around Odessa had not developed favourably for the Romanians. As without Odessa the urgently needed supply-route via the Black Sea could not be used,²⁶⁰ the use of German units to capture the city seemed to be the logical solution. The army group suggested transferring two or three units from the west, but the Army High Command immediately rejected this. The vague hope remained that the occupation of the Crimea would induce the enemy to abandon Odessa. In the end the surrounded Soviet troops evacuated the city in the middle of October. As the besiegers failed to notice this action in time, they were unable to interfere effectively with the removal of troops and equipment.²⁶¹

All tentative objectives mentioned here were summarized in a directive of the army group command on 25 September.²⁶² The 'Group von Roques' was

²⁵⁹ Sources as in n. 256 above.

²⁶⁰ Forstmeier, *Odessa*, 125 (strength of Soviet Black Sea Fleet during the fighting for Odessa).

²⁶¹ The deliberations of Halder and the army group regarding the capture of the Crimea can be followed in both relevant war diaries after 15 Aug. As early as 20 Aug. the army group doubted that the Romanians alone would be able to take Odessa. Hitler decided to leave the capture of the city to the Romanians under Antonescu's command, but the Army High Command simultaneously alerted the army group that Eleventh Army should be held ready to intervene if necessary: H.Gr. Süd/Ia, KTB, 20 Aug. 1941, BA-MA RH 19/73. Not until 5 Oct., however, did Hitler decide to urge Antonescu to accept German assistance: KTB OKW i. 1069-70 (102). On the course of events as a whole cf. Forstmeier, *Odessa*, 33 ff.

²⁶² H.Gr. Süd, Directive No. 9, 25 Sept. 1941, for the continuation of Operation Barbarossa in

additionally ordered to secure the sector of the Dnieper between Melitopol and Dnepropetrovsk, still held by the Red Army, and to tie down the enemy at the front by feints or real attacks until the attack by Armoured Group I began to take effect. The Slovak Mobile Division, 132nd Infantry Division, and, after Kharkov had been reached, a division of Seventeenth Army formed the reserves of the army group. A special instruction was issued concerning allied units; on Hitler's orders, they were to be employed as parts of larger German forces or together with them.

The attack on the isthmus of Perekop began on 24 September with LIV Army Corps and 73rd and 46th Infantry Divisions (see the Annex Volume, No. 14). Lack of cover and enemy air supremacy led to heavy losses among the German troops. The other two corps of the army were involved in defensive fighting in the east. Within a few days the assessment of the enemy's situation and intentions had changed completely. While Halder had assumed a week earlier that the Crimea could be taken in a surprise attack and the enemy also cut off west of Kerch,²⁶³ Manstein was not able to capture the strongly fortified, narrow isthmus in one attack with only two divisions and all available artillery.²⁶⁴ The mountain corps, actually intended for the fighting in the Caucasus after the crossing of the Kerch strait, was sent into action immediately on the northern wing of the army.²⁶⁵ After the southern part of the isthmus had been penetrated near Ishun, the advance came to a halt when a crisis arose in the Romanian Third Army following an attack by the Soviet Ninth Army. The offensive forces had to wait until a thrust by Armoured Group I weakened the position of this army and the Soviet Eighteenth Army.

Because one of its armoured divisions was tied to Seventeenth Army, the attack of Armoured Group I across the Orel river and from Dnepropetrovsk did not advance as rapidly as expected. Nevertheless, on 1 October Zaporozhye was taken. The following day, the Soviet forces facing Eleventh Army found themselves in danger of being cut off and withdrew to the east. The two inner wings of the attack by Armoured Group I and Eleventh Army were able to encircle large elements of the enemy force near Berdyansk, thus opening the way to Mariupol. On 11 October III Armoured Corps reached the

the Donets industrial area: Hauck, *Südliches Gebiet*, pt. 1, 386, appendix 49, MGFA P-114c. Deliberations between Halder and Sodenstern after 23 Sept. in war diary of the army group, BA-MA RH 19 I/74; the authority was Hitler's Directive No. 36, 22 Sept. 1941, pp. 154 ff.

²⁶³ Halder, *Diaries*, 1240-1 (17 Sept. 1941); H.Gr. Süd/1a, KTB, same day; Lehmann, *Leibstandarte*, ii, 155. This was the only mobile unit available for the capture of Perekop. Because of the failure of the breakthrough attempt by 73rd Inf. Div., the division was pulled out and transferred to the defensive battles on the Sea of Azov.

²⁶⁴ Manstein, *Lost Victories*, 211-12; report AOK 11/1a, 25 Sept. 1941. On 26 Sept. Eleventh Army demanded XXXXIX Mountain Corps for the Crimea, which left only one German corps for the thrust on the northern shore: H.Gr. Süd/1a, KTB, 25, 26 Sept. 1941, BA-MA RH 19 I/73.

²⁶⁵ The heavy artillery and anti-tank battalions of 1st and 4th Mountain Divs. continued to support the Romanian Third Army; moreover, 170th Inf. Div. was added to the army, which since August had been offered to the Romanians attacking Odessa.

Mius north of Taganrog. After 14 October cold weather and rain prevented a further advance.²⁶⁶

On the northern wing of the army group, Seventeenth Army, whose units could be withdrawn only gradually from the encirclement front and which began its attack along the line between Krasnograd and Poltava on 23 September, was also unable to reach its objectives in anything approaching the time planned. Accepting heavy losses, the 'motley' forces fiercely resisted the attempt to take the industrial area. The attack on Kharkov as well as against Lozovaya so completely dissipated the strength of the offensive that a division from Armoured Group 1 had to be transferred to the army.²⁶⁷

Because of the long period it had remained in the area of Kiev, its numerous transfers to other formations, and the exhaustion of its troops, Sixth Army was not able to afford adequate protection to the left wing of Seventeenth Army. This necessitated a widening of the latter's sector of the front, since in addition Armoured Group 2 on the left was moving further away. On 4 October the head of the operations department observed that in the further course of operations it would no longer be possible to maintain contact between the army groups.²⁶⁸

Heavy rain and the onset of cold weather, in addition to the increasing number of counter-attacks, slowed all movements at the end of September and the beginning of October. Hitler had to abandon the rapid thrust to Kharkov. On 1 October he ordered that priority should be given to the attack on the Donets basin. It would be in order for Sixth Army to take Kharkov later.²⁶⁹ As it was not possible to detach troops from the fighting, it was necessary to wait until Sixth Army arrived. The two corps of Seventeenth Army on the left were placed under Sixth Army, and Seventeenth Army headquarters now concentrated on preparing for the attack in the direction of Izyum. Having begun its attack, Sixth Army forced the enemy back across the Vorskla and reached Akhtyrka and Sumy on 10 October. On that day Seventeenth Army reached Lozovaya. The army group's further advance was halted by mud and exhaustion. Because of the destruction of the Dnieper bridges, supplies were often delayed. Road conditions, a lack of maintenance of vehicles, and general exhaustion forced a halt.²⁷⁰

²⁶⁶ The armoured group was now called First Arm'd. Army: Pz.Armeebefehl No. 2, 8 Oct. 1941, BA-MA RH 24-3/56. On 2 Oct. 1941 the 'battle of the Sea of Azov' had resulted in the separation of the tasks of occupying the Crimea and pushing on to Mariupol between Eleventh Army and First Armoured Army.

²⁶⁷ Halder, *Diaries*, 1257 (26 Sept. 1941); H.Gr. Süd/1a, KTB, 27 Sept. 1941, BA-MA RH 19 I/73. After a tussle with the army group the Army High Command decided on 29 Sept. that 'only weak parts of Arm'd. Group 1' were to be withdrawn temporarily to eliminate the threat to the flank of Seventeenth Army. The C.-in-C. of that army, Gen. von Stülpnagel, was relieved of his command on 9 Oct. and replaced by Col.-Gen. Hoth. Cf. Halder, *Diaries*, 1268 (2 Oct. 1941), 1263-4 (Stülpnagel).

²⁶⁸ H.Gr. Süd/1a, KTB, 29 Sept.-4 Oct. 1941, BA-MA RH 19 I/73.

²⁶⁹ Halder, *Diaries*, 1267 (1 Oct. 1941); the fact that 13th Arm'd. Div. was not ready for action played an important role in this decision.

²⁷⁰ Assessment of the situation by Army Group South, 12 Oct 1941: Hauck, Südliches Gebiet,

From intelligence reports on the enemy's situation, especially around Kharkov and Valki, the army group concluded that the Red Army had probably decided to evacuate the western part of the Donets industrial area and to establish a new line of defence along the river. At the same time, however, it was determined to hold Rostov at all costs, for III Armoured Corps encountered extremely fierce resistance on the Mius.²⁷¹

Because of this assessment, Hitler intervened on 14 October. Again he feared that Soviet forces would escape beyond the Donets, and so ordered Seventeenth Army to send two divisions northward to prevent, in conjunction with the divisions of Sixth Army advancing on Bogodukhov, the Soviet defensive forces west of Kharkov from withdrawing into the city and to encircle them.²⁷² The army group protested against having to withdraw important parts of Seventeenth Army from the attack to the south-east, as that would prevent it from being able to carry out its orders. The almost immobilized southern sector of the army group was completely dependent on co-operation of the right wing of Seventeenth Army with the left corps of First Armoured Army in its efforts to capture the Donets area. Any change of direction would require an enormous effort and was simply unworkable. The operational aspect of the envisaged later thrust by First Armoured Army towards Maykop, which was dependent on the progress made by Seventeenth Army, was also presented as an argument against weakening the latter. A strong enemy armoured attack against the spearheads of Sixth Army near Bogodukhov confirmed the assumption that Kharkov and the Donets line would require considerable defensive forces. At the same time, because of the great distances, the movement of supplies collapsed in many areas; fuel had to be flown in to maintain the anti-tank defences of Sixth Army.²⁷³

While the army group and the operations department were marshalling all arguments against the planned new attack, which was repeated as an order from Hitler by the Army High Command on 15 October, Seventeenth Army believed that in view of the weak defences in front of the industrial area it would be able to continue the attack even after some of its units had been diverted to the north. Aerial reconnaissance indicated that the enemy forces west of Kharkov were preparing to withdraw. The army group accepted this view. The left wing of Sixth Army was now to be sent against Belgorod. Although it was pointed out that the enemy movements spotted by aerial

pt. 1, 395 ff., appendix 50, MGFA P-114c; H.Gr. Süd/Ia, KTB, 12 Oct. 1941: BA-MA RH 19 I/74. Transport problems were aggravated after 1 Oct. by the removal of 30,000 prisoners daily from the battle of Kiev; this required 4,500 German soldiers for a whole fortnight: *ibid.*, 2 Oct. 1941.

²⁷¹ Report, H.Gr. Süd/Ia, KTB, 14 Oct. 1941 and following days, BA-MA RH 19 I/74. On 13 Oct. First Arm'd. Army headquarters had ordered that use must be made of every opportunity to attack, on the assumption that only a few more weeks of fair weather remained before the beginning of winter. On 15 Oct. the army ordered that the objectives remained unchanged in spite of reports that muddy road conditions had rendered them unrealizable: BA-MA RH 24-3/56.

²⁷² Hitler's wish and report, H.Gr. Süd/Ia, KTB, 14 Oct. 1941, BA-MA RH 19 I/74.

²⁷³ Hitler's wish and report, H.Gr. Süd/Ia, KTB.

reconnaissance might only be transports of replacements, the army group did not change its view that the situation as a whole strongly supported the belief that the enemy was withdrawing beyond the Donets.

The assessment of the situation given to the operations department suggested that Hitler's order had been overtaken by events, as an encirclement of large enemy forces west of Kharkov was no longer possible.²⁷⁴ The operations department reported Halder's agreement, provided the assessment of the enemy's situation was confirmed, and expected the advance of the outer wings of Sixth and Seventeenth Armies into the area east of Kharkov. The southern group of Seventeenth Army was now to advance to the south-east to link up with First Armoured Army at Stalino.²⁷⁵ If necessary, the Hungarian Mobile Corps was to move in a northerly direction to provide flank cover, for Hitler's plans required the northern attack group of Seventeenth Army to cross the Donets and attack along the line Kupyansk-Chuguev so as to link up with the right wing of Sixth Army there and cut off the enemy's withdrawal to the east. The army group demanded attacks 'everywhere' and the pursuit of the defeated enemy 'as far as endurance permits'.²⁷⁶

The next objective of First Armoured Army was Rostov; Eleventh Army was to conquer the Crimea. Hitler confirmed these orders with the remark that every opportunity should be taken to cut off enemy forces. For this reason the front of First Armoured Army was to be extended to the north to make sure of destroying the enemy forces there by an envelopment from the north, should it not be possible to break out of the bridgehead at Taganrog.²⁷⁷ In this confirmation Hitler again demanded the destruction of any enemy forces still west of the Donets. The army group pointed to its situation assessment, the supply problems, and the possibility of enveloping the retreating enemy east of the Donets. As, in view of the condition of the troops, it was not to be expected that the enemy could be 'annihilated' even there, the army group proposed that the left wing of Seventeenth Army should attack in the direction of Chuguev to prevent the enemy establishing defensive positions along the Donets.

The directive of the Army High Command of 16 October 1941, based on this exchange of ideas with Army Group South, assumed therefore that a defence of the industrial area in the Donets basin was no longer to be expected.²⁷⁸ The army group still rejected the idea of having IV and XXXXIV

²⁷⁴ Even if this favourable evaluation of the situation was doctored to avoid the exhausting transfer of the main point of attack, the judgement of Seventeenth Army headquarters of 16 Oct. was still that the enemy facing IV Army Corps 'is fighting without any enthusiasm and running away'. First Arm. Army came to a similar conclusion: H.Gr. Süd/Ia, KTB, BA-MA RH 19 I/74; situation assessment of Army Group South, 19 Oct. 1941 (excerpt), in Hauck, Südliches Gebiet, pt. 1, 400, appendix 52, MGFA P-114c.

²⁷⁵ H.Gr. Süd/Ia, pursuit order, 16 Oct. 1941, BA-MA RH 19 I/74. ²⁷⁶ Ibid.

²⁷⁷ Ibid. As after the battle of Smolensk, the main idea here was to dispense with conquest of territory in favour of preventing an escape and regrouping of the Red Army.

²⁷⁸ OKH/GenStdH/Op.Abt. (I) No. 1588/41, to H.Gr. Nord, Mitte, Süd, 16 Oct. 1941, BA-MA RH 2/1327.

Army Corps of Seventeenth Army turn north-east. The group command pointed out the possibility of enveloping the enemy west of Kharkov with advance units only and, on the evening of 16 October, ordered an attack by mobile forces via Merefa against Kharkov, to be followed by XI Army Corps. Hitler, however, followed every change on the situation map, and on 17 October again demanded the encirclement of the enemy forces still west of Kharkov.

Oddly enough, the army group justified the subsequent order to Seventeenth Army command by the withdrawal of the enemy forces defending Stalino; this would now permit the occupation of the industrial area by weaker German units.²⁷⁹ On the other hand, it proposed to the operations department a reformulation of the orders for Seventeenth Army so as to take into account this most recent change. The draft submitted on 18 October was not without a certain grim humour, considering the reports on the condition of the troops and the supply situation at this time. It recommended that First Armoured Army should be ordered to occupy a bridgehead near Rostov as well as an area extending to the Don south of the line between Voroshilovgrad and Stalingrad. Seventeenth Army was to conquer the area west of the Don and north of that line, and Sixth Army the area north of the line between Kharkov and Novaya Kalitva and on the Don between the latter town and Voronezh.²⁸⁰ The impression still prevailed that the enemy would withdraw before the advance of Sixth and Seventeenth Armies. The events of 19 October seemed at first to confirm this assumption. First Armoured Army and Seventeenth Army reached the western edge of the industrial area; in its thrust towards Belgorod Sixth Army reached Borisovka.

(i) THE ADVANCE TO THE CRIMEA

After the battle on the Sea of Azov it would have been possible to restart preparations for the battle for the Crimea.²⁸¹ But the new deliberations of the army group concerning the attack of First Armoured Army had also changed the situation of Eleventh Army. Its task was now confined to the conquest of the Crimea. This resulted in a new distribution of forces. Manstein kept LIV and XXX Army corps with a total of six divisions, of which parts of 50th Infantry Division were facing Odessa. To provide cover, the Romanian Mountain Corps with one mountain and one cavalry brigade was also placed under his command.²⁸² Manstein was also given the rest of the Romanian Third Army with renewed orders to secure the coast to Mariupol. Attention was primarily concentrated on strengthening the units to be used in the attack on Odessa, which was taken by the Romanian Fourth Army on 16 October.

²⁷⁹ H.Gr. Süd/1a, KTB, 18 Oct. 1941, BA-MA RH 19 I/74.

²⁸⁰ Ibid.

²⁸¹ Cf. the paragraphs preceding n. 267 above.

²⁸² H.Gr. Süd/1a, KTB, 7, 8 Oct. 1941; supplement to Directive No. 9 of army group, BA-MA RH 19 I/74; Manstein, *Lost Victories*, 216 ff. The request to bring up Hungarian units had already been rejected on 4 Aug.

The fall of Odessa made more difficult the attack on the Crimea by Eleventh Army, as Soviet units evacuated from that city were now used in the defence of the peninsula. Manstein therefore requested that all German units now no longer needed against Odessa, as well as the army troops and 132nd Infantry Division, be assigned to his army.²⁸³

In the attack begun by the divisions of LIV Army Corps on 18 October the strong enemy defences and the complete lack of armoured units quickly led to heavy losses on the German side. Soviet air supremacy had an especially disastrous effect on the German troops. The efforts of fourteen German dive-bombers were unable to substantially change this situation. After urgent requests Fourth Air Corps sent additional air units, which had to be withdrawn from other sectors of the army group's front, to silence enemy batteries in fortified positions, destroy airfields, and disrupt assemblies of enemy troops. The highly respected Colonel Werner Mölders was placed in charge of the fighter escorts.²⁸⁴ The penetration of the narrow neck of land north of Ishun on 19 October seemed to mark a decisive turn in the attack, but the fighting remained hard and costly until a breakthrough of the enemy's positions had been achieved. The attacking divisions were completely exhausted. Manstein demanded that he be sent a mobile unit, and on 22 October Army Group South reported to the Army High Command that a rapid conquest of the Crimea was not possible with the German forces fighting there.²⁸⁵ For in addition to the conquest of the peninsula, on 20 October Manstein had been ordered to assemble a corps with three divisions to cross over to Tuapse and Krasnodar, which would require at least one additional corps.²⁸⁶ The army group at first requested a mobile division, which, as it was well aware, was not available. Explaining the connection between the crossing from the Crimea to the Caucasus via Kerch and the intended operations of First Armoured Army, it therefore suggested that 60th Motorized Infantry Division of III Armoured Corps should be transferred to Eleventh Army, as a three-week break in operations would be indispensable after the Don had been reached.²⁸⁷

A decision by Hitler was required as to whether the main German effort should concentrate on conquering the Crimea or on crossing the Don. Hitler agreed to the transfer of the motorized division, but only if the remaining units

²⁸³ H.Gr. Süd/Ia, KTB, 17 Oct. 1941, BA-MA RH 19 I/74; Manstein, *Lost Victories*, 220.

²⁸⁵ H.Gr. Süd/Ia, KTB, 22 Oct. 1941, BA-MA RH 19 I/74. Moreover, no Romanian troops were to be used in the Crimea as a matter of principle—but if that should become unavoidable they were not to be used on the west or south coasts. Owing to the lack of sufficient security forces, the Romanian brigades, like the SD, were indispensable for combating partisans and for other tasks in rear areas.

²⁸⁶ *Ibid.*, 20 Oct. 1941.

²⁸⁷ *Ibid.* The request of Army Group South to the Army High Command, 22, 25 Oct. 1941, was due largely to expected supply problems, which, because of the considerable loss of vehicle transport capacity, made the construction of supply-dumps unavoidable. For the detailed report of the army group to the Army High Command on the situation, the urgent need for rehabilitation, and the impossibility of reaching operational objectives in the Crimea and towards the Don at the same time, see H.Gr. Süd/Ia, KTB, 22 Oct. 1941, BA-MA RH 19 I/74.

of III Armoured Corps had sufficient fuel reserves to ensure that they would be able to fulfil their tasks. In view of the fuel situation of First Armoured Army, this condition amounted to a rejection of the transfer request.²⁸⁸ First Armoured Army also resisted having to transfer its only remaining 'full-strength' unit and argued that it would not be able to reach Rostov if the division were transferred. Thereupon, on 26 October, Hitler decided that Rostov should be given priority.

The promised Luftwaffe reinforcements arrived on 24 October, and of these three fighter and two dive-bomber Gruppen were used to support Eleventh Army. Two fighter Gruppen and one dive-bomber Gruppe were sent to Rostov; one fighter Gruppe and two Italian fighter squadrons were deployed in the combat area of Seventeenth and Six Armies.

After a crisis on 25 October, German forces succeeded in breaking through the Soviet positions into the Crimea. At the same time Manstein repeated his urgent demand for a motorized unit, pointing out that if the attack stalled an armoured corps with at least two armoured divisions and one motorized division would be necessary to resume it. But the army group could promise only to send him an infantry division as of the middle of November. On 28 October the defence of the Crimea collapsed, and the divisions of LIV and XXX Army Corps were able to begin the pursuit of the enemy.

(ii) THE ADVANCE TO THE DON

(See the *Annexe Volume*, No. 13)

Differences in the evaluation of the situation by the field army commands, the Army High Command, and Hitler delayed agreement in assessing the situation of the enemy and resulted in divergent command decisions. This in turn led to Hitler issuing direct, even tactical, orders far from the front.²⁸⁹ Because of the absolutely necessary rehabilitation period for First Armoured Army, the army group command proposed to Halder that operations should be confined to eliminating enemy resistance west of the Don before the beginning of winter. But Halder demanded the crossing of the Don to secure a base for future operations. Only if that did not succeed could the turning of the left wing of First Armoured Army to the north be considered. Seventeenth Army was to continue to concentrate the main effort of its advance on reaching Stalingrad, with Sixth Army providing cover to the north (around Kursk) and north-east (towards Voronezh) for this operation. The army group command incorporated these orders into its directive of 20 October 1941.²⁹⁰

²⁸⁸ According to a report of First Arm'd. Army, the following quantities of fuel were available on 25 Oct.: 330 m.³ received, 600 m.³ *en route*, 550 m.³ in the dump at Zaparozhye. Even an increase to 1,000 m.³ would only mean that half the fuel thought necessary for reaching the Don would be available: BA-MA RH 19 I/74, p. 163.

²⁸⁹ Cf. sect. II.1.1(b) at n. 150.

²⁹⁰ H.Gr. Süd/Ia, Directive No. 10 for the continuation of the operation; H.Gr. Süd/Ia, KTB, 20 Oct. 1941, with notes on the talk between the army group and the operations department before the directive was written, BA-MA RH 19 I/74, fols. 127 ff.

With the approach to Kharkov, the army group command and Sixth Army were confronted with a problem which, although having nothing to do with operational considerations, was nevertheless of considerable importance. On 20 October the Army High Command informed subordinate commands of Hitler's decision that, after the problems experienced in Kiev, no German soldier was to enter cities in which hidden explosive charges could be expected. Such cities were to be 'worn down' by artillery bombardment and air attacks and the population induced to flee. Because of the danger involved, fire-fighting was forbidden, as was the feeding of the population 'at the expense of the German homeland'.²⁹¹ As this order also applied 'in a general sense' to Kharkov, Sixth Army was confronted with a dilemma. It needed the rail connections and quarters the city could provide, and therefore decided to interpret the order with strong emphasis on 'general', even more so as the population would then be more inclined to welcome rather than reject the German occupation.

The problems of lodging and supplies for the coming winter came to play an increasingly important role in German deliberations. In this respect the conversion of the gauge of the railway line to Kharkov was essential. On 22 October Sixth Army headquarters reported that weather forecasts indicated that the roads could no longer be expected to dry out, while lasting frost would arrive only in December. This meant that operations had to be halted. The number of vehicles and horses ready for action had sunk to a 'no longer acceptable level'. It was therefore not possible to reach the objectives the army group had set.²⁹²

As it based its assessment on the same information, the army group agreed with this report.²⁹³ On the Donets, Sixth Army had reached its provisional objective. Thrusts beyond that point would be possible only when the railway between Kharkov and Belgorod had been converted to standard gauge. Because of the transport situation, which was essentially dependent on the typical horse-drawn wagons, this meant in practice that the supply-depots of German units had to be within 50 kilometres of a railhead. In its report to the Army High Command on 22 October the army group command urged that, in view of the situation assessment by Sixth Army, a three-week pause in operations should be ordered.

The commanders of the armies were informed that the objectives set out in Directive No. 10 from the army group were for the long term. After the Donets and the mouth of the Don had been reached, operations would come to a halt at least until the period of hard frost set in around the middle of December. Seventeenth Army was to attempt to capture a bridgehead at Izyum, while Sixth Army would push on towards the area around Belgorod, where it would have usable rail connections.²⁹⁴ The troops were ordered to lay in supplies

²⁹¹ H.Gr. Süd/Ia, KTB, 20 Oct. 1941, BA-MA RH 19 I/74.

²⁹² *Ibid.*, 22 Oct. 1941. ²⁹³ *Ibid.*

²⁹⁴ *Ibid.*, 25 Oct. 1941, report to that effect to operations department, with the rider that the

from the country for the winter. Only after adequate stocks of supplies had been built up would it be possible to advance along the railway lines with mobile units further to the east. Colonel Alfred Baentsch of the general staff, head of the army supply department under the quartermaster-general, confirmed that it was impossible to supply the troops using the normal lines of communication and that they would have to be supplied from the respective army areas. What could not be obtained there would be provided from the western Ukraine.²⁹⁵ Supply considerations also induced First Armoured Army to reject the offer to have the Romanian Third Army placed under its command to protect the coast, as it had already established various supply-bases near the coast and begun replenishing its stores.²⁹⁶

But First Armoured Army still had not reached its objective, the Don. On 19 October III Armoured Corps command sent its subordinate units information on the situation and the plans to take Rostov, in order to explain the importance of the 'last effort'.²⁹⁷ After emphasizing the political and economic importance of the city, the command described the situation of the enemy and the fortifications that had to be overcome. To cover the operation to the north, XIV Armoured Corps was standing by. Because of the fuel situation, however, only troop movements essential to the carrying out of the operation could be undertaken. Objectives were to be decided according to circumstances and in such a way that they would not place excessive demands on fuel supplies.

On 19 October the armoured army ordered the conquest of the industrial area of Stalino and the capture by surprise attack of the bridges at Rostov. It was also important to capture fuel stores in the city.²⁹⁸

Strong counter-attacks forced III Armoured Corps to go on the defensive, while on the left XIV Armoured Corps crossed the Mius. On 28 October First Armoured Army, like Sixth Army, found it necessary to send a memorandum to the Army High Command summarizing all difficulties and shortages in the supply situation.²⁹⁹ It concluded that, in spite of the firm will to reach the objectives set, it would be irresponsible to continue the attack without adequate supplies. The high command simply had to realize when its demands no longer bore any relation to what the troops could actually achieve. Such a situation had now arisen with the reaching of the Donets. If it were not taken into account, the troops would be condemned to helplessness, their fighting

Don could no longer be reached as supplies were not being received and winter clothing would not arrive until the end of November.

²⁹⁵ Ibid.

²⁹⁶ Ibid. An order of III Armcd. Corps (23 Oct. 1941) is revealing: units were to prepare to survive on their own for several days with regard to food, ammunition, and fuel. The troops by then were responsible also for road construction. The main form of transport was the horse-drawn wagon. Each team cost 50-70 pfennigs a day. In relays, e.g. between Zaporozhye and Mariupol, 2,500 such wagons transported 60 t. a day: BA-MA RH 24-3/57.

²⁹⁷ BA-MA RH 24-3/56.

²⁹⁸ BA-MA RH.

²⁹⁹ H.Gr. Süd/1a, KTB, 28 Oct. 1941, BA-MA RH 19 1/74; Hauck, Südliches Gebiet, pt. 1, 406, appendix 56, MGFA P-114c.

ability would decline rapidly, and their combat-readiness even after the return of good weather would be endangered. The chief of the operations department, Colonel Heusinger of the general staff, shared this view of the situation but nevertheless proposed to advance at least to the lower Don and replace the attack on Rostov with a thrust from the north. For this it would be necessary to reinforce First Armoured Army, something which the army group opposed as long as the situation remained 'unclear'—i.e. until the industrial area of Voroshilovgrad had been captured—as it would be at the expense of Seventeenth Army. Heusinger still considered the 'ideal final objective' for the operation to be the line Maykop-Stalingrad-Voronezh, while the head of the army group general staff retorted that one would have to accept the fact that this line could not be reached until spring.³⁰⁰

In its analysis of the situation, however, First Armoured Army went even further. It pointed out to the Army High Command that after 10,000–20,000 kilometres army vehicles were no longer fit for service and that their combat-readiness and that of the tanks was rapidly declining. Thorough rehabilitation to full usability in the coming year would be possible only in Germany. For smaller operations during the winter, overhauls and repairs requiring one to two months were possible in the army areas, but these would preclude full usability in the spring.³⁰¹ The operational conclusions to be drawn from this report were obvious.

Halder therefore once more intervened directly in the deliberations and expressed his fear that a halt in operations after the Don had been reached, as announced in the army group order of 22 October, would create the wrong impression in midlevel commands and among the troops.³⁰² They might lose the momentum necessary to make every effort to reach the strategic objectives—if possible Stalingrad—in the event of a snow-free period of frost in the current year. Instead of depicting openly and forcefully the limits of the troops' endurance and the conclusions to be drawn, Sodenstern stated that he was basically of the same opinion and that the army chiefs of staff had been informed accordingly. 'In the opinion of the army group command, however', it could not be ignored that a four-week operations halt for resupply purposes was becoming necessary. Halder accepted this view but stressed clearly that a snow-free period of frost, which was to be expected in December, had to be taken advantage of at all events.

The conference of the chiefs of staff of the army group and the armies on 31 October was conducted in a similar spirit.³⁰³ The participants were in accord concerning the difficulties of shifting forces³⁰⁴ and the general transport and supply situation. On the question of providing protection for the flanks of the spearhead against the lower Don, the chief of staff of the army group envisaged the need for forces which he did not even have.

³⁰⁰ H.Gr. Süd/Ia, KTB, 29 Oct. 1941, BA-MA RH 19 I/74.

³⁰³ *Ibid.*, 31 Oct. 1941.

³⁰⁴ *Ibid.*

The question of the chief of staff of Seventeenth Army, whether it was perhaps the intention of the enemy to draw the pursuers into an even more difficult supply situation in order to destroy them in a counter-attack, was answered in the negative. The explanation was: 'The Army High Command no longer expects the greatly weakened enemy to take active measures. He will try only to withdraw and reorganize his forces undisturbed.'³⁶⁵ The question can be left open as to how much consolation the probably surprised general-staff officers were able to draw from Sodenstern's assurance that the commander-in-chief of the army group would not permit Halder's demand that they reach the Don in the current year to involve the divisions in an insurmountable crisis.³⁶⁶

The lack of suitable vehicles and fuel forced the German commanders to entrust necessary military movements to 'pursuit detachments', which in reality meant that fighting requiring any movement was reduced to a minimum. In the opinion of the Sixth Army chief of staff, even these detachments were to consist of infantry and peasant carts. Only the accompanying anti-aircraft detachments were to be motorized. Skis and other winter equipment still had to be provided. Because of the transport time required, there could be no question of the urgently needed rehabilitation of First Armoured Army being effected in Germany. All still usable equipment was therefore to be collected and repaired and the personnel sent to Germany for re-equipment.³⁶⁷ In the end a consensus was reached that it would be better to halt operations now and have refreshed troops ready in the spring than to reach distant objectives and permit the fighting value of the German divisions to decline to a point where they would no longer be usable.³⁶⁸

The next opportunity for the army group command to present its assessment of the situation to its responsible superiors was the visit of the commander-in-chief of the army on 3 November.³⁶⁹ Referring to his already

³⁶⁵ This belief originated with Halder (*Diaries*, 1284-5: 3 Nov. 1941). It might be assumed that knowledge of the enemy increased in direct proportion to proximity to the front. Abstract speculation among the general staff, however, evidently flourished most in Army Group South, a level of command that should have had an adequate overall view of the situation.

³⁶⁶ Sodenstern did not doubt that the demand 'in its present sharp form' had been made not by Hitler, but by Halder, who was mainly interested in separating Soviet forces in the north from those in the south and thus destroying the operational unity of enemy operations: BA-MA RH 19 I/74, 31 Oct. 1941. Hitler's view is in Halder, *Diaries*, 1289 (7 Nov. 1941): 'What is not possible this year, will have to be taken care of next year.'

³⁶⁷ An armoured division required about 80 trains, while only 30 could be provided on a daily basis. Gen. von Mackensen, commanding III Armd. Corps, considered more powerful anti-tank weapons more important than new tanks. Otherwise, faced with superior Soviet armoured forces, German soldiers would lose confidence in their leaders: Gen.Kdo. (mot.) III. AK/Ia No. 1097/41 gch., 28 Oct. 1941, BA-MA RH 24-3/57.

³⁶⁸ It evidently did not occur to Sodenstern to try to persuade Halder to accept this view, although he also came to the conclusion that strategic considerations did not play a 'very important role' in the Red Army, as it constantly raised new units, which then had to be defeated. The crisis of confidence which thus became inevitable between the Army High Command and the senior front staffs will be considered below: cf. sect. II.1.1(c) at n. 381, sect. II.1.1(f) at nn. 515 ff.

³⁶⁹ H.Gr. Süd/Ia, KTB, 3 Nov. 1941, BA-MA RH 19 I/87. Halder complained on 3 Nov.

submitted memorandums, Rundstedt again explained his decision to halt all operations when the lower Don and the Donets were reached. Brauchitsch, who had obviously been sent by Halder after Sodenstern had cautiously expressed reservations about the latter's strategy, acknowledged all difficulties. He 'believed, however'—and this was another formulation for an order soon to be issued—that it must be possible nevertheless 'to reach parts of the Don in the foreseeable future, at least near and south of Voronezh, with specially organized, relatively small units, if necessary only with raiding parties'. He also had the bright idea of equipping and supplying the detachments carrying out this thrust not with motor-vehicles, but with convoys of peasant carts. He assumed that not even strong resistance, let alone offensive activity, was to be expected from the enemy between the Donets and the Don. Although he expressed 'understanding' for the situation of the army group, he expected a more favourable development of the supply situation than the one which the army group and Sixth Army had used as the basis of their planning. Then he stressed the decisive importance the Army High Command attached to an early capture of a line along the Don and the elimination of the railway line via Stalingrad. The oilfields of Maykop were also to be captured, even if that considerably reduced the combat-readiness of First Armoured Army in the spring.³¹⁰

When Brauchitsch mentioned the possibility of an attack by First Armoured Army via Shakhty to bypass fortified Rostov, he was informed that this was impossible because of the lack of fuel. The subsequent discussion among the three field marshals von Brauchitsch, von Rundstedt, and von Reichenau was evidently rather outspoken. At any rate, Halder noted Brauchitsch's concern about Rundstedt's health, frequently an indication that the commander-in-chief of the army was considering relieving the individual involved of his duties because of differences of opinion on command questions.³¹¹

Rundstedt reaffirmed his views, expressed in his conversation with Brauchitsch, with a report to the Army High Command, in which he again pointed out the connection between operations, supplies, winter clothing, and the general condition of the troops.³¹² The continuation of operations would lead to almost complete immobility of First Armoured Army and most of the

(*Diaries*, 1285) about the pessimism of Army Group South: 'Some energetic "persuading" would be in order to knock the lead out of them.'

³¹⁰ H.Gr. Süd/Ia, KTB, 3 Nov. 1941, BA-MA RH 19 I/87. It is difficult to understand what Brauchitsch meant by the combat-readiness of an armoured division, if it were subjected to more wear and tear in large-scale operations. Cf. n. 524 below.

³¹¹ Halder, *Diaries*, 1287 (4 Nov. 1941); H.Gr. Süd/Ia, KTB, 3 Nov. 1941, BA-MA RH 19 I/87.

³¹² H.Gr. Süd/Ia, KTB, 3 Nov. 1941, BA-MA RH 19 I/87. Cf. also report of III Armd. Corps on the situation and morale, 29 Oct. 1941. According to this report, the soldiers did not want to be preached at; the capture of Kharkov and that of Odessa were matters of indifference to them as long as they did not have enough to eat and could not hear their own artillery. On 3 Nov. 1941 First Armd. Army responded by referring to numerous economic initiatives to improve supplies for the troops, e.g. noodle, margarine, and sock factories. Report and response in BA-MA RH 24-3/57.

infantry divisions in the spring. He again urged that offensive operations on the lower Don and the Donets be stopped, but he failed to receive a positive answer.

The Army High Command did not abandon plans for a thrust to the lower Don and for the occupation of Rostov by First Armoured Army. Seemingly unimpressed by developments, the chief of the army group general staff, to some extent as a result of the discussion with Brauchitsch, informed the chiefs of staff of First Armoured Army and Seventeenth Army of the orders of the commander-in-chief of the army for the near future—the operations against Maykop ('Winter Sport') and Stalingrad.³¹³

On 5 November First Armoured Army began its attack on Rostov with XIV Armoured Corps. The attackers succeeded in breaking through and advancing 30 kilometres to the east; then the corps turned south towards the city and established a bridgehead near Atamanovskiy Vlasovo across the Krepkaya. Rain beginning on 7 November paralysed all movement and gave the defenders the opportunity to construct defensive positions at this unlikely spot. The armoured army regrouped and was able to resume its attack only on 17 November after the rain had given way to temperatures as low as -22°C .³¹⁴ This time the main effort of the attack was made by III Armoured Corps, which, coming from the west, at first attacked north of Rostov and then turned towards the Don. The city fell on 20 November. The expected enemy forces, mostly east of the city, were preparing for a counter-attack on 18 November.

On 22 November the attack of the Soviet armies began against Rostov from the south and east and, at the same time, against the rest of the front of First Armoured Army. Army Group South expected an enemy movement with the objective of encircling the army from the north and cutting it off with a thrust towards Taganrog.³¹⁵ On 21 November First Armoured Army had pointed out that there could be no question of destroying the identified enemy forces offensively; it planned to hold Rostov but also to fall back to the Tuzlov and, if the enemy pressure there were still too great, to take up positions on the Mius.³¹⁶ In accordance with this plan, it first evacuated the area up to the Tuzlov and abandoned Rostov on 28 November. The decision on a further withdrawal had to be taken on 30 November.³¹⁷

³¹³ H.Gr. Süd/Ia, KTB, 3 Nov. 1941, BA-MA RH 19 I/87.

³¹⁵ Assessment of enemy's situation by Army Group South, 21 Nov. 1941; Hauck, *Südliches Gebiet*, pt. 1, 424–5, appendix 62, MGFA P-114c. 13th Armcd. Div. had to be withdrawn from the front on this day. It was assumed that the following enemy forces (excluding the Crimea and the Caucasus) were facing the army group: 7 armies with approximately 40 infantry divisions, 13 cavalry divisions, 7 armoured brigades, and 1 airborne corps (facing Sixth Army).

³¹⁶ Hauck, *Südliches Gebiet*, pt. 1, 426–7, appendix 63, MGFA P-114c; Halder, *Diaries*, 1311 (22 Nov. 1941).

³¹⁷ Ibid. 1322–3 (29 Nov. 1941); H.Gr. Süd/Ia, KTB, 21–8 Nov. 1941, BA-MA RH 19 I/87. Order of the day of III Armcd. Corps, 21 Nov. 1941; order No. 31 of First Armcd. Army, 22 Nov., printed in Lehmann, *Leibstandarte*, ii, 235 ff., according to BA-MA RH 24-3/58.

The army group had little chance of avoiding a withdrawal by providing more troops and material help. Operational assistance was also unavailable. Halder and the army group command attempted several times, unsuccessfully, to induce Reichenau to undertake a thrust with Sixth Army towards Kupyansk. The discussion about this operation continued until 28 November, when Reichenau bluntly stated his own point of view and argued convincingly that such an attack with his exhausted divisions would be irresponsible and in any case could not be supplied.³¹⁸ Halder was so angry at Reichenau's behaviour that on 29 November he ordered an investigation to determine possible shortcomings in the functioning of the Army General Staff.³¹⁹ A realistic assessment of available troops and equipment and the impossibility of providing significant forces from other sectors of the eastern front or from Germany itself led to the conclusion that a withdrawal from the hard-won Don crossing was inevitable. The situation assessment by First Armoured Army on 21 November made this fact clear to all commands involved.³²⁰ It would therefore have been necessary to prepare a line of retreat for this eventuality. But on 21 November the first general-staff officer of the army group discussed with the operations department the initiation of 'all measures of the army group that would make possible a later offensive solution'.³²¹ In addition to the bringing up of the light divisions ordered long before, these measures included the request to the Army High Command for a motorized corps and mobile units. Both officers agreed that there was no prospect whatever that such requests would be granted. Evidently, however, the idea of restraint and the withdrawal of an armoured army was for them unthinkable, even though the tanks of the army were almost immobilized, fuel supplies were inadequate, the army was being supplied largely by starving horses, and one of its commanding generals (Mackensen) considered even a successful defensive action to be a matter of luck. Anyway, the first general-staff officer of the army group explained that, while 'how' the enemy group should be destroyed was still unclear, a crossing of the Kerch strait by Eleventh Army seemed to him to be of great importance in this regard. This meant nothing less than an encirclement of the Caucasus or at least a penetration of that area. Even if the individual operations were to be ordered only when the supply situation permitted, the directive issued by the army group on 21 November 1941 for the occupation of the oilfields around Maykop and of enemy transportation lines along the Volga, as well as for reaching the Don near Svoboda, was so completely unrealistic that in the

³¹⁸ Halder's urging of Reichenau to attack, *Diaries*, 1315 (26 Nov. 1941); H.Gr. Süd/Ia, report to Army High Command, operations department, 28 Nov. 1941: Hauck, *Südliches Gebiet*, pt. 1, 420-1, appendix 60, MGFA P-114c.

³¹⁹ Halder, *Diaries*, 1286-7 (4, 5-29 Nov. 1941). This procedure was abandoned after Reichenau assumed command of the army group. Contrary to Halder's assumption that both armies were ready for action at the beginning of December, the general-staff officer in charge of supply and administration observed on 10 Nov. 1941 that ordering them to go beyond the Donets could not be justified: H.Gr. Süd/Ia, KTB, 10 Nov. 1941, BA-MA RH 19 1/87.

³²⁰ H.Gr. Süd/Ia, KTB, 21 Nov. 1941, BA-MA RH 19 1/87.

³²¹ *Ibid.*

actual situation it is difficult to regard it as a piece of serious military planning.³²²

At this time command procedures were still a purely internal matter for the Army General Staff. No binding order had been received from Hitler to attack the Caucasus at all events in the current year, nor were the commanders of the army group and the armies or the chiefs of their general staffs convinced of the feasibility of such an operation. On the contrary, the chiefs of staff seem to have been operating under a double strain in that they believed they had to take into account not only the obvious situation at the front but also Halder's general strategic picture, as he had impressed it upon them again in Orsha on 13 November.³²³ It is abundantly clear that Halder considered himself and his chiefs of the army group general staffs to be, in the final analysis, the real pillars of the entire conduct of the war. This conviction also manifested itself in the serious situation in which Army Group South found itself at the end of November 1941 when he—and, as a direct result, the army group command—insisted that Sixth Army should undertake an offensive against Kupyansk and the lower Oskol. Reichenau's personal appearance at the headquarters of the army group on 27 November and his description of the situation of the army and the impossibility of carrying out the envisaged attack eventually persuaded Rundstedt to accept his arguments. Rundstedt then demanded a report to the commander-in-chief of the army.³²⁴ Reichenau's readiness to undertake a temporary offensive with two divisions via Chuguev to the south-east was a concession to Halder's strategic plans made in spite of his awareness of the current situation.

The sobering encounters with reality in the Pripet fighting and in the morass of the black-earth region left little room for the type of general-staff thinking, always confronted with the 'will of the supreme war lord', in which a decision could be won by throwing the very last battalion into battle. In this situation deliberations about whether the Soviet attack of 26 November represented a co-ordinated operation against Rostov, as Foreign Armies East believed, or a concentrated attack to be expected 'in the foreseeable future, perhaps this very day' were rather academic. What was obvious was 'the enemy's unified command'. First Armoured Army had long planned an evacuation of Rostov as soon as the army group recognized the correctness of its assessment of the situation, if enemy pressure became too strong.³²⁵

Hitler discussed with Brauchitsch troop transfers and countermeasures in the event of possible negative developments; he also demanded a report from Army Group South.³²⁶ The Wehrmacht High Command did not provide

³²² H.Gr. Süd/Ia, Directive No. 11, KTB, 21 Nov. 1941.

³²³ Cf. sect. II.1.1(f) at nn. 526 ff.

³²⁵ H.Gr. Süd/Ia, KTB, 27 Nov. 1941, BA-MA RH 19 I/87.

³²⁶ Ibid., memorandum of telephone conversation between Halder and Sodenstern, 28 Nov. 1941.

sufficient help, nor did the situation require that the city should be held at all costs. On 28 November, when the situation demanded a decision, Hitler explained logically that he was of the same opinion as the army group command: it was the responsibility of the commander of First Armoured Army to decide whether to give the order to abandon Rostov.³²⁷ He thus agreed with Halder that Army Group South no longer had the mobility or the strength to mount attacks.³²⁸

On the other hand, Hitler considered the location of the defensive positions to be extremely important. On 29 November First Armoured Army reported that it was withdrawing to the Kolmytskaya sector; the army group agreed to this plan. The withdrawal continued under strong enemy pressure on 30 November; it led to feverish activity in the command apparatus above the army-group level and to an intervention by Hitler.

Because the effects of this development, which led to the commander-in-chief of an army group being relieved of his command, were more important than the event itself, not least because of the mistrust it expressed in an erratic leadership, it will be treated at somewhat greater length here.

Hitler objected to an intended line of withdrawal, reported to him by Halder, namely Taganrog-Mchus-Mius-mouth of the Bakhmut, and demanded that the retreat from Rostov should stop further east. This reported line did not, however, truly reflect the intentions of First Armoured Army, which wanted to withdraw 'behind the sector Sambek-Mius-Mchus-Glukhaya'. (The name 'Mchus' was an invention of the cartographer, who misread it for the Mius. This was not without consequences, as on the German situation map the Mius flowed into a *liman* (coastal salt lake) west of Taganrog and into the Sea of Azov. On the army map the same river became the Mchus north of that point.)

Rundstedt approved the decision of First Armoured Army to withdraw III and XIV Armoured Corps to the prepared positions along the line Varenovka-Sambek-Pokrovskoe-Mius and wanted Seventeenth Army to close up to the left wing of First Armoured Army (XXXXIX Mountain Corps) with an attack by IV Army Corps on 3 December, as the armoured army considered the withdrawal of Seventeenth Army to the Bakhmut sector a danger to its left flank.³²⁹ The operations department of the Army High Command was informed of this plan at 5 p.m. Hitler's reaction, through Keitel, was an enquiry at 7.15 p.m. as to whether an enemy penetration had occurred, which the army group answered in the negative. Thereupon Keitel proposed not to withdraw

³²⁷ Ibid., 'According to information provided by Maj. (Gen. Staff) Philipp, operations department'.

³²⁸ Halder, *Diaries*, 1323 (29 Nov. 1941).

³²⁹ Line according to Halder, *Diaries*, 1327 (30 Nov. 1941). According to the report of Army Group South to the operations department, the withdrawal of First Armoured Army 'behind the sector of the Mchus [Mius] and the Kryinka to the general line between Taganrog and Gorlovka' and of the eastern wing of Seventeenth Army behind the Bakhmut sector 'should be considered. For the entire course of events cf. H.Gr. Süd/Ia, KTB, 30 Nov. 1941, BA-MA RH 19 I/87.

to the Mius in one movement but to choose an intermediate position where the Sea of Azov would provide flank protection. This plan offered the important advantage of keeping the air-base at Taganrog usable. Sodenstern explained that the withdrawal was proceeding step by step. Apparently he said nothing about the intended line of the future positions on the Sambek, which was far east of Taganrog and would in any case be better protection for the city than Hitler's intermediate position. This misunderstanding explains why Keitel ordered the operations department to ask again, at 7.25 p.m., whether the Leibstandarte had been breached, whether 13th Armoured Division was under attack, and whether it was really necessary to withdraw to the Mchus (Mius), or would it be 'possible to hold an intermediate position to keep Taganrog?'

Sodenstern then explained that neither unit had been broken through and that both were still repelling enemy attacks. Holding an intermediate position was not possible, but it was planned to hold a bridgehead east of Taganrog; the southern wing of First Armoured Army would remain in front of Taganrog. He did not mention the Sambek position, as he was already considering a further withdrawal, unlike First Armoured Army. Heusinger now explained that Hitler had planned to hold the line from Merzhanovski to south of Maksimovka because this would eliminate the threat to Taganrog and 'a withdrawal in a large, single movement (to the Mius) would also represent a considerable blow to the morale of the troops'. This raised the question of a position which in the next several hours completely vitiated the work already done, i.e. the construction of a position to protect Taganrog. First Armoured Army, when questioned, declared 'such a solution not to be possible'. The rear guard would resist the enemy's advance, but the bulk of the German troops would be withdrawn to the Sambek-Mius position. The operations officer of the army group informed the operations department of the Army High Command accordingly at 8.00 p.m. Sodenstern added that an operational danger was developing on the southern wing of the army group; it was necessary to take radical decisions. In conclusion, he stated unambiguously that the proposal conveyed by the head of the operations department of the Army High Command was not feasible.

This report, without any further explanation of the line, probably reached Hitler, who immediately ordered that the right wing was to halt at and 'hold for the time being' its present position. Informed of this order, the armoured army command responded that there could be no question of holding the position and that it would consider itself lucky if it were able to build the defensive position along the Mius in an orderly manner.³⁰ The army group

³⁰ Ibid., 30 Nov., and RH 19 I/88, 1 Dec. 1941; Halder, *Diaries*, 1327-8 (30 Nov. 1941). Heusinger reported that Rundstedt had declared that Hitler's order could not be carried out. The nervousness and confusion of the reports and orders are evident in Halder, *Diaries*, 1328 ff. (30 Nov.-2 Dec. 1941). Cf also the account in Lehmann, *Leibstandarte*, ii. 258, according to which Hitler's permission to occupy the Mius position was given as a result of Reichenau's report that the enemy had broken through this unit (Halder's report, *Diaries*, 1327 ff.); Lehmann states that

sent a corresponding report to the operations department of the high command, requesting the rescission of the order. At 11.15 p.m. Heusinger conveyed proposals to the army group, presumably on Hitler's orders, to support First Armoured Army, but these did not change the situation in terms of time or forces available and were therefore not given a positive reception.

Hitler concluded from the rejection of the completely unsuitable 'intermediate position' he had ordered that the commander-in-chief of Army Group South was stubbornly refusing to carry out his orders and, on 1 December at 2.00 a.m., relieved him of his command and replaced him by Field Marshal von Reichenau.³³¹ In consideration of the condition of his troops, however, Reichenau had been the most articulate critic of any offensive operations, which Halder's strategy would have required. Very soon, at 5.50 a.m., Reichenau received Hitler's order to halt the withdrawal of the two corps of First Armoured Army or to permit it to go no further than the line between Merzhanovska and Maksimovka. Moreover, he was to take all necessary measures, including air-lifts, to bring up the necessary reinforcements in the shortest time possible, as the operations department had already suggested the previous day. Finally, the army group was to make preparations to start an offensive from the areas held by IV Army Corps and XXXIX Mountain Corps against the Voroshilovgrad area, intended to threaten the flank of any further enemy advance and to secure starting-positions for future attacks. Reichenau ordered the first two points to be carried out immediately but refrained from ordering the execution of the third.³³²

In spite of his personal efforts, Reichenau was unable to carry out Hitler's order to hold the completely open line.³³³ The reports from the commanders concerned made it very clear that the units involved would simply have to be 'written off' if they were not withdrawn immediately to the prepared Sambek-Mius line. General von Mackensen, commanding III Armoured Corps, emphasized the same point. Hitler took note of the corresponding reports from Reichenau and wanted to speak to him later about his declared intention to avoid the offensive Hitler himself had demanded.³³⁴ But a short time later Hitler approved Reichenau's order for the southern wing of First Armoured Army to withdraw to the Sambek-Mius line.³³⁵ On 2 December Hitler flew to

in reality this report was fabricated for that purpose, as the unit had had no contact with the enemy at the time.

³³¹ Reichenau was officially appointed on 5 Dec. 1941.

³³² The thought of an offensive against Voroshilovgrad had arisen as a spontaneous idea of Hitler's on 30 Nov. Halder immediately labelled it an 'idea ground out in a vacuum' (*Diaries*, 1327: 30 Nov. 1941). The day before, after being informed of Halder's views, Army Group South had demanded in a memorandum that all operational movements be stopped, which was exactly what Reichenau had already demanded: H.Gr. Süd/Ia, KTB, 30 Nov. 1941, BA-MA RH 19 I/87.

³³³ H.Gr. Süd/Ia, KTB, 1 Dec. 1941, BA-MA RH 19 I/88. Cf., however, n. 330 above.

³³⁴ *Ibid.*

³³⁵ Without attaching too much importance to the report procedures described, it seems reasonable to assume that clearer information about the course of the Sambek-Mius position would have prevented the senseless act of relieving Rundstedt. After being briefed by the C-in-

the headquarters of First Armoured Army to form an opinion about the situation on the spot. The commander-in-chief of the army group and the chief of staff of Air Fleet 4 also participated in the discussions. The commander of the Leibstandarte, the unit most directly affected, reported on the condition of his troops and the inevitability of a withdrawal. The following day Hitler visited the headquarters of the army group in Poltava to exchange views on the causes of the retreat as well as on future operations. In the course of his visit he stated that he had first heard of the serious crisis near Rostov in the last days of November, otherwise he could have sent reinforcements of 6,000 men (*sic*) in time. The army group was able to point out that it had been sending relevant reports to the Army High Command since 21 November.³³⁶

Even after Hitler's visit, the operational objectives of Army Group South remained the Caucasus and Stalingrad. But as a next step the front had to be consolidated. The situation on the northern sector of Seventeenth Army's front, held by the Italian expeditionary corps, was critical.³³⁷ Reports from radio intelligence indicated that an attack with airborne troops across the sea against Mariupol and Taganrog had to be expected. To shorten the front, Seventeenth Army attacked with IV Army Corps on 4 December. In view of the weak enemy defence, Sixth Army pushed out of the Chuguev bridgehead with LV Army Corps to the south-east and reached the line Savintsy-Pechenegi, thus consolidating the link-up with Seventeenth Army. Now the army group was to change to basically static defensive tactics to gain time to restore the fighting power of its units.

The chief of the general staff of Army Group South assumed that the Red Army intended to break through to the Dnieper and cut off the entire southern wing of the eastern front in the course of the winter. The army group had to prepare for this development and use a mobile defence to gain time to bring up forces for a counter-attack.³³⁸ Sodenstern even considered withdrawing to the line from Melitopol via Zaporozhye towards Kupyansk if necessary, his guiding principle being that the essential prerequisite for resuming the offensive was to avoid defeat. Probably after being informed of the talk between

C. of First Arm'd. Army, Hitler declared his agreement with Rundstedt's measures and shortly afterwards made him 'Commander-in-Chief, West'. On Rundstedt's dismissal cf. Zeitzler papers, BA-MA N 63/53.

³³⁶ H.Gr. Süd/Ia, KTB, 3 Dec. 1941, BA-MA RH 19 I/88. Sodenstern's direct report to Hitler had no unpleasant consequences for Halder, but he was clearly taken aback by Hitler's failure to consult the Army High Command about his trip (*Diaries*, 1331-2, 1334-5: 2, 3 Dec. 1941). Cf. generally in this regard the observation in sect. II.1.1(f) at n. 517. Clearly the internal reporting practice of the general staff with the regular phrase 'measures being taken' gave Hitler the impression that unpleasant news was being played down. Together with similar reports from Army Group Centre, these events caused Hitler to issue an order on honesty in reporting on 26 Dec. 1941. Cf. sect. II.1.1(g) at n. 625.

³³⁷ Assessment of situation of Army Group South, 4 Dec. 1941, BA-MA RH 19 I/88; Halder, *Diaries*, 1333 (3 Dec. 1941).

³³⁸ Sodenstern's statement to the head of the operations department, 4 Dec. 1941. Sodenstern submitted this assessment without first making sure of the agreement of Reichenau, who was more inclined not to surrender any terrain: BA-MA RH 19 I/88.

Sodenstern and Heusinger on 6 December, Halder ordered the latter to examine the question of what should be done if First Armoured Army had to be withdrawn even further.³³⁹

(iii) THE CONQUEST OF THE CRIMEA

(See the *Annexe Volume*, No. 14)

In the extreme south of the army group, Eleventh Army was pursuing the Soviet Fifty-first Army after breaking through the defensive positions at Ishun.³⁴⁰ Three army corps advanced via Simferopol—one towards Sevastopol, the other towards the south coast, and the third towards the Feodosiya-Kerch line. The Romanian Mountain Corps followed via Simferopol, the capital and most important transportation centre of the Crimea.³⁴¹ Eleventh Army Headquarters was confronted with the necessity of deciding whether first to attack Sevastopol as the dominant fortress or Kerch as the crossing-point to the Caucasus. Manstein assumed that the enemy would attempt to escape via Feodosiya and Kerch and that delaying actions west and north of Feodosiya would enable the bulk of the Soviet troops to embark there. He saw no difficulties in mounting a pursuit in this direction, whereas the crossing at Kerch would require long, thorough preparations.³⁴² He therefore decided to concentrate the bulk of his forces, four infantry divisions, against Sevastopol and to limit the pursuit in the direction of Kerch to three divisions under a corps command. The Romanian Mountain Corps was assigned to providing cover in the Yayla mountains.

The 'western group' against Sevastopol, LIV and XXX Army Corps, quickly encountered increasing enemy resistance and difficult road conditions that delayed its progress. On 8 November Eleventh Army reported that a temporary halt in the advance of LIV Army Corps could not be avoided.

But the enemy on the tongue of land at Kerch seemed to be fighting only a delaying action after Feodosiya was taken on 3 November, and the enemy forces in the Crimea had been split by the German thrust to the south coast. On 16 November the defence of Kerch collapsed. With the exception of the fortress of Sevastopol, the Crimea was now in German hands, although well-organized partisan groups consisting of soldiers from scattered Soviet units continued fighting from their protected and inaccessible hiding-places in the Yayla mountains.

At Sevastopol everything indicated that the enemy was preparing to offer determined resistance. The fortress could clearly not be taken in a running attack; Manstein added 22nd Infantry Division to the right wing of his en-

³³⁹ Ibid., 6 Dec. 1941. On 7 Dec. Sodenstern discussed these questions with the chief of staff of First Armoured Army, Col. Zeitler, who wanted to avoid a further withdrawal even under enemy pressure and to form strong mobile reserves as soon as possible.

³⁴¹ H.Gr. Süd/Ia, KTB, BA-MA RH 19 I/64, 87.

³⁴² Telephone conversation between Manstein and Sodenstern, 1 Nov. 1941, KTB, H.Gr. Süd/Ia, BA-MA RH 19 I/87.

circlement front and prepared to deploy heavy artillery to soften up the defences. The lack of a bridge across the Dnieper and the extremely limited transport capacity greatly slowed the bringing up of the necessary artillery and ammunition. In addition, the rainy period beginning in November further limited all ground movements.³⁴³

Apart from the need to prevent a possible reinforcement of the enemy, Eleventh Army had no reason to hurry, for the attack on Maykop via Kerch was dependent on First Armoured Army gaining a starting-position between Shakhty and Rostov and on the resting and resupplying of the units intended for the attack.³⁴⁴ And the front against Sevastopol did not remain quiet. The siege-ring had to be extended through the mountains around the fortress, and sorties by the defenders had to be repulsed.

After 20 November a transfer of forces from the Crimea to replace the losses suffered by other armies of the army group was considered. On 23 November Heusinger suggested to the army group that forces for the crossing at Kerch, which would not take place for the time being, could be released to First Armoured Army. Sodenstern at first rejected this proposal, but added that the army group would initiate the transfer of these divisions with an official announcement that the crossing had been abandoned.³⁴⁵ This marked the beginning of a long, increasingly bitter, dispute among the commands involved about the withdrawal of units of Eleventh Army.³⁴⁶ In the end Eleventh Army had to transfer 73rd Infantry Division; however, at the beginning of December there was a danger that a second division, 170th Infantry, might have to be transferred. But Manstein's urgent appeals led to a reversal of this last decision, primarily because of the imminent attack on Sevastopol.

On 13 December Eleventh Army began the bombardment of enemy positions and port facilities in Sevastopol. That evening Reichenau decided to postpone the attack by twenty-four hours, as all dive-bombers of IV Air Corps were needed to halt the enemy penetration on the eastern wing of Seventeenth Army.³⁴⁷

Manstein now considered the prospects of success to be favourable only for the first phase, provided that air support and supplies were guaranteed. But on 14 December air support was again refused because of new tasks in the sector facing Seventeenth Army, and the attack on Sevastopol had to be postponed by another twenty-four hours. Manstein was now inclined to start the attack without the dive-bombers, whose use might be ruled out in any case by bad weather. The attack on the fortress finally began on 17 December and, with heavy losses, some penetrations were achieved with the first surprise of the defenders. The weather ruled out any dive-bomber support. To strengthen his

attack, Manstein repeatedly requested that 73rd Infantry Division not be taken from him, but the army group refused his request with the pointed remark that holding the eastern front was more important than capturing Sevastopol.³⁴⁸

The low combat strength of the infantry and the possibility that the enemy could at any time obtain reinforcements by sea were a cause for concern. Manstein considered it very important to conclude the hard and difficult fighting for Sevastopol at an early date, as landings at other points in the Crimea were to be expected. On 21 December Hitler enquired how much time the attack on the fortress would still require. He was told that that would be known only after some days, but the attackers were hoping for early success.³⁴⁹

The attackers were also able to press forward in the northern part of the fortress area and to reach the coast north of Lyubimovka. Manstein hoped to advance further at this point by reorganizing his forces. He assumed that he would be able to repel any landings near Kerch with the forces already there: two batteries and one infantry regiment with artillery.

When, on the morning of 26 December, the enemy landed on a broad front on the Kerch peninsula and rapidly established beachheads there, the attack on Sevastopol had to be halted. Reichenau decided to make available to Eleventh Army one regiment of the disputed 73rd Infantry Division with a light artillery battalion, as the forces of 46th Infantry Division and the two Romanian brigades deployed near Kerch were not sufficient to carry out the order to XXXXII Corps to 'throw the enemy off the Kerch peninsula again'. The army group also ordered the thorough destruction of the port of Kerch in the event of an evacuation.
